It will probably surprise many of our readers to learn that until the opening of the Tsuno-hazu Sanitarium, described in our correspondence columns, no such thing as a Sauitarium for Japanese ladies existed in Japan. There are hospitals in plenty, but, strange to say, an absolute dearth of Sanitariums. The fact was responsible for a curious difficulty in connexion with the Tsuno-hazu institution. When the place came to be opened, a licence had to be obtained, of course. But the laws make no provision for licensing a Sanitarium: they do not recognise such an affair. Hence it became necessary at last to resort to the subterfuge of calling the Sanitarium a "branch hospital," for purposes of registration. Our correspondent says that the Sanitarium was " established by Japanese and Christian ladies." That is doubtless correct, in so far as much of the labour connected with its building and organization was done by Japanese ladies. But we are inclined to think that the funds came entirely from the United States. The great promoter of the enterprise was the late Mrs. True. By her exertions and representations charitable people in the States were induced to contribute money sufficient not only for the construction of the spacious building spoken of by our correspondent, but also for its maintenance during a year. would have been opened twelve months ago but for the death of Mrs. True. A time had actually been fixed for the opening, we believe, and that most philanthrophic lady was looking forward to the speedy consummation of her work when death sud-denly overtook her. The sad event seems to have paralysed her co-workers for a time, and the Sanitarium remained unopened, but those interested in the enterprisenotably the ever-active Miss Tsuda-took it up again and carried it to completion. Our correspondent speaks of the Sanitarium as though it were intended for Japanese ladies only. It is open, however, to foreign ladies also, and as each inmate has a roomy, well-furnished chamber all to herself, and as arrangements exist for providing food, there is every inducement for foreign ladies also to seek in the institution a period of rest and health-restoring regimen. The charges appear to be very moderate. Two yen per diem pays for everything, including foreign food. Ladies are allowed to have the attendance of any physician they please, but of course the services of the regular staff alone are procurable without extra payment-that is to say, the services of the lady physicians attached to the institution. The building is very large, but as each inmate has her own room, and as many chambers are required for the purposes of parlours, reading-salons, and so forth, there is accommodation for twenty persons only. "Tsuno-hazu" is a name probably unfamiliar to many of our readers, but it is a well-known suburb on the south-west of a well-known suburb on the south-west of regretted. Their hospitality was always Tokyo, easily accessible from the Shinjuku of the most warm hearted description, station on the Circular Railway. speak thus in detail, because we believe that the Sanitarium is calculated to be of much use to foreign ladies as well as to lapanese.

#### PAYMENT OF THE INDEMNITY.

There seems to be an idea in some quarters that the peace of the Far East may be on the eve of disturbance through China's failure to pay the installment of the Indemnity due in May. The Japan Times, indeed, departs somewhat from its usually circumspect tone and refers in ominous terms to the contingency that "events will soon force Japan to come forward as a principal party" on the stage, and that should China's efforts to raise the necessary funds prove unsuccessful "things may easily come very nearly to the point of explosion." It must be assumed, of course, that Japan will insist on holding China to her engagements, but we do not, for our own part, imagine that there will be any occasion for extreme measures. The sum to be paid over in May is only 17-13 million taels. Can it be supposed that the Imperial Edict of which we published a translation on the 16th instant will fail to bring that amount into the Peking exchequer? We do not think so. The class of persons whose purchase of the "Sincerity Bonds" may be described as virtually compulsory, is very large—
"Princes, Dukes and Nobles downwards in Peking, and from the Tartar-Generals, Viceroys and Governors in the Provinces down to their civil and military subordinates of every rank grade and class, whether substantive or expectant "-all these folks have to buy the Bonds "by way of setting an example to the business men of the country," and, further, the de-puties charged with the function of selling the Bonds to the people are to have extraordinary promotion in pro-portion to their success. The credit of the securities will be clearly established by the fact that they are to be received, at the periods of redemption, in payment of land taxes and salt duties, and in many. perhaps most, parts of the empire the Edict will be welcomed as a means of enabling officials to enrich themselves in connexion with the purchase and sale of the Bonds. It is scarcely conceivable that such a measure should fail to produce a large sum of money. We anticipate no difficulty in raising the 17½ million taels due on May 8th. There is little probability, indeed, that China will be able to pay over at that time the sum-83 million taels-which would completely clear off her indebtedness, but the mere installment of 17 millions ought to be an easy matter.

#### DEPARTURE OF CAPTAIN MUNTER.

Captain Münter and Miss Münter left Yokohama by the Empress of Japan on the 15th instant. Captain Munter, who acted as the Agent of Lord Armstrong and Company in Japan for many years, lived throughout the greater part of the time in Tokyo, where he and his accomplished daughter made a host of friends, by whom their departure will be sincerely and their absence will create a large gap in the social world of the capital.

Sunday night's earthquake appears to have been feit over a wide uren. Telegrams are published in the vernacular papers this morning from Maisumoto, Mayebashi, Chiba, Mito, Urana, Wakamatsu, Ashikaga, and Utsunomiya, all reporting a severe shock at 11.55 to 12 o'clock. No damage of consequence is, however, recorded. Original from

#### NAVIES OF THE GREAT POWERS.

N the 20th of January, Sir MICHAEL HICKS-BEACH, Chancellor of the Exchequer, speaking at Bristol, said that " the Navy estimates would provide for more sailors, and that England would more than keep pace with the additions to the fleets of other Powers." Reuter telegraphed to us that brief epitome of the Chancellor of the Exchequer's speech, and folks in the Far East were probably a little perplexed when they read the telegram, for there did not seem to be any adequate reason why a British statesman should go out of his way at that particular time to make such an announcement. Great Britain's naval policy is based on the principle expounded by Lord GEORGE HAMILTON when introducing the Naval Defence Act of 1889, namely, that "the establishment should be on such a scale as to be at least equal to the naval strength of any two other countries." That is a very "tall order "-to use a slang expression-, but England has filled it faithfully ever since she formulated it. Now, however, both France and Russia, the two Powers standing next to her in maritime fighting capacity, are making great efforts to increase their navies, and England is called upon to keep pace with them. Of course the British Government has all along been fully conversant with every detail of the French and Russian programmes, and has shaped its own course accordingly. But the public was not equally enlightened, and since it is only in deference to public opinion that official declarations like that of Sir Michael Hicks-Beach at Bristol are made, we are not surprised to learn that the question of French naval expansion was brought forward prominently and in full detail by The Times of January 1st, and that the result of the great journal's action was to arouse interest so general and so keen as to call for some official notice. A correspondent of The Times, in whose accuracy full confidence is said to be placed, analyses France's project at such length that nearly three columns of the paper are occupied by his letter. Our are required "to replace earlier vessels limited space precludes us from repro-that have proved unsatisfactory or that ducing it, nor, indeed, is reproduction are considered unworthy of repair." In necessary, for the salient facts can be very easily epitomized.

Up to the year 1897, France gave her adherence to the principle of powerful Britain's recent and now-in-hand conbattleships. There had not, it is true, been much continuity in her policy of naval construction. One obstacle to continuity was that thirty changes took place in the control of the Ministry of Marine in includes 11 destroyers and 89 torpedotwenty-seven years, the inevitable results boats. being "a heterogeneous fleet and slow progress." On the whole, however, the than quote the figures of The Times' cormajority of prominent French naval ful battleships were essential in a fleet lity on ships and armanents in course of course of some English critics, and that swift cruisers while not less new construction," to be completed by 1905, near of physical policy of sheet of sheeting at Great UNIVERSITY OF ILLINOIS AT

necessary, could not serve as sub-Hence there stitutes for battleships. were always a considerable number of battleships on the stocks, side by side with cruisers and torpedo vessels. At the close of 1896, there were six battleships in various stages of construction-the Bouvet and Massena (ordered in 1892 and to be completed in 1898), the Charlemagne, St. Louis and Gaulois (to be ready in 1899), and the Henri Quatre (to be finished in 1901-; in 1897, the Jéns, a twelvethousand-ton iron-clad was ordered; and in the project prepared by the Minister of Marine for 1898, three more first-class battleships of the Féna type were included. But before the 1898 project had received final approval, Mr. GOSCHEN, speaking in the British House of Commons, announced a new departure in cruiser construction—the building of four armoured cruisers for the British Navy-, and the French seem to have been influenced by English example, for they modified their programme, in the sense that only one battleship should be laid down during 1898, but that eight cruisers should be commenced at once, six of them to be of 9,500 tons and two of 7,600 tons. All these cruisers are to be of 21 knots speed and powerfully armed, with large coalcarrying capacity. It is expected that they will be completed by 1902. If we add to this list five other first-class cruisers with protective decks, three of which are approaching completion, and the Jeanne d'Arc-a cruiser of over 11,000 tons with a maximum estimated speed of 23 knots- which was commenced on the building-slip in October 1896, it appears that France will have a batch of fourteen first-class cruisers on the stocks during the present year, together with seven battleships, to say nothing of smaller cruisers. Further, the 1898 project includes eight torpedo-destroyers, six seagoing torpedo-boats and thirty-five firstclass torpedo-boats of 24 knots for the defense mobile. The torpedo-boats will not go to actually swell the strength of the French Navy, for the official reports show that 112 first-class torpedo-boats point of fact, the activity shown by France in equipping herself with torpedo craft is inspired by England's example, for Great structions represent 100 first-class torpedo-boats costing 41 millions sterling. It may be noted here that the Japanese post-bellum programme of naval expansion

As to expenditure, we can not do better respondent:-

24% millions are proposed to be spent. This is a grand scheme, but in view of what has happened to previous programmes it may be thought desirable to testrict investigation to the period ending in 1902, when most of the ships above-mentioned are to be in service. For the period 1898-1902 it is estimated that the average annual expenditure on new ships and their acmaments will be about 42 millions. This year over four millions are to be spent, and in 1901 it is anticipated that nearly be spent, and in 1901 it is attricipated that nearly £4,800,000 will be required. For the five preceding years the corresponding average annual expenditure has been about £3,600,000, so that the proposed increase is, roughly, 25 per cent. This wery significant.
In order to compare these figures with those in

English returns, deductions must be made for armaments and torpedues. Thus corrected, the armanents and torpedues. It is corrected, the French expenditure on halls, engines, &c., for new ships in 1898 will be about £3,650,000, or about 20 per cent, more than in 1897. In our Estimates for 1897-98 the corresponding provision exceeds seven millions, so that the increased French estimate in little above 50 per cent. of our provision.

It has to be remembered, of course, that the mere figures-7 millions sterling for England in the fiscal year 1897-8 and £3,650,000 for France in 1898-do not convey the whole truth. England gets more for her money than France does: she builds her ships more cheaply. For example, France estimates that she will have to to pay £710,000 for each of the 9,500-tons cruisers, laid down this year, the speed of which is to be 21 knots. England's largest cruisers, the Powerful and Terrible, which have a displacement of 14,200 tons and a speed of 22 knots, cost only £700,000 each. Moreover, France can not yet build as quickly as England does. There is a marked difference in favour of the latter Power.

It was, as we have said, the publication of this French programme in The Times that led to the statement made by the Chancellor of the Exchequer. Whatever efforts France and Russia make, England is determined to keep her fleet up to their combined strength. Russia's Budget for 1898 shows an expenditure of 27 millions of roubles-24 millions sterling-for shipbuilding, an increase of 20 per cent. on 1897. Thus the joint expenditures of France and Russia on new ships (excluding armaments) in 1898 is to be about six millions sterling, the English figure for 1897-8 having been seven millions. It is a race of colossi. England leads easily, and we may doubt whether it is not ber example that furnishes the chief incentive for these huge increments. Her Naval Defence Act of 1889 was followed by an outburst of energy on the part of France and Russia, and her big expenditure in 1897-8 seems to have roused the two Powers to fresh rivalry. Germany will probably come in to force the pace, for if the KAISER'S scheme be approved by the Reichstag, France will doubtless put more battleships on the stocks, and thus England must make a fresh effort.

These figures and statements suggest one reflection-not a new reflection, indeed, but a reflection that seems to be fre-

#### GAMBLING IN JAPAN.

7 E observe that a local contemporary expresses uneasiness about the asked, " will the administration of the law of the foreigner that he should expect = special licence for his "guilty doings" as Consular Jurisdiction be that offences committed by foreign residents with impunity so long as they are exempted from the operation of Japanese laws, will not be possible to them when they pass under those laws-if that be one of the objections, Consular Jurisdiction is introduced to the public in a new character, the character of a protector of wrong-doing. That, however, is a phase of the problem betting houses and gaming houses are The efforts of the Japanese police are which need not concern us, for certainly our contemporary would repudiate it, and so would every respectable foreign residing clubs like Tattersall's are permitted, interference into the sphere of private life dent. The point made by the prophets and no attempt is made to interfere with of evil is that Europeans and Americans gambling in private houses. In fact, if are addicted to card-playing, especially the Victorian statutes be examined closely, such games as whist, poker, cribbage and it will be found that their motive is to by a police raid upon the suburban villa so on; that these amusements are virtually prevent, not gambling generally, but of a certain well-known Tokyo merchant, harmless and are carried on in the best gambling in which the advantage of the where gambling with cards for big stakes society, but that, when Consular Jurisdic- chances is with certain persons-as the was going on. Among the players were

reserved for people of social position. But, by a player would not render them unlawon the whole, there was no recognition that ful, though a law court would not assist gambling should be regarded as a vice. By the winner to recover his bets. But in and by, when his gracious Majesty HENRY Japan a game becomes unlawful from VIII. came to the Throne, the authorities the moment that money is staked on its found that, owing to the invention of new results, and while folks are free to play possibilities of police procedure after the games of chance, men's minds were diver- with cards or dice-as in hana-awase or Revised Treaties go into operation. Bat- ted from archery and other warlike pur- sugoroku-so long as they make no bets, ches of Japan gamblers are from time to suits, "to the detriment of the realm," they subject themselves to police intertime arrested and carried off to the nearest and statutes were accordingly enacted ference from the moment that they put up magistrate to be summarily dealt with, interdicting games of chance to "artificers, a money stake. It will thus be seen that and in view of that fact the question is craftsmen, husbandmen, apprentices, la- when we pass under Japanese jurisdiction, bourers, fishermen or serving men." In we shall run a certain measure of risk if against gambling be made partial, and short, the upper classes were permitted we play for quarter-dollar points at whist Japanese offenders alone be punished for to gamble, the lower forbidden. So things or ten-sen counters at poker, but inasmuch infractions thereof, while foreigners' guilty remained until the days of GEORGE II., as money is never visibly passed from doings are to be winked at." It is cer- when the law became paternally solicitous, hand to hand at these games, it is difficult tainly a quaint commentary on the mood not about the people's morals, but about to see how the police could obtain evidence their pockets, and it was enacted that if of its being staked. A great many persons any man were convicted of winning or will probably say that an excellent reform well as for his innocent pastimes after he losing at play or by betting £10 or £20 is placed under Japanese jurisdiction. If within 24 hours, he should be fined five one of the objections to the abolition of times the sum for the benefit of the poor of the parish. Bets were then recognised by law as equally valid with any other kind of contract. Coming to the Victorian era, of which Englishmen are justly so proud, we find that the general principle underlying the laws against gambling is a most invidious one. Practically, games of chance are forbidden to the poor and connived at in the rich. It is true that all interdicted, and that betting or gaming in directed almost entirely against the proany public place is prohibited. But bet-

which should give them any concern. It is are found there. In England, again, would be achieved if all games involving money were driven out of existence, and will welcome the extension of the Japanese system as a step in the right direction. Let us refrain from discussing that fundamental question, our immediate object being rather to consider what practical difference will be experienced by the foreign resident when he passes under Japanese jurisdiction. We venture to say that it will be an imperceptible difference, so far as games of chance are concerned. fessional gambler: they do not carry their except on occasions so rare as to be manifest exceptions. moral philosopher were to undertake a pro-

to have been understood that the villa in question had attained unwholesome notoriety as a place for gambling, and people appreciated very well that the police could not enforce the anti-gaming law with strictness against professional gamblers and their victims, while suffering it to remain a dead letter in the case of the "upper ten." An unpleasant prospect can certainly be derived from that experience. The police may by and by learn that poker, whist, and such games are regularly played for money at clubs frequented by foreigners, and that, although hard cash does not actually change hands during the course of the play, payments are made in the sequel. Whether it might be considered necessary to interfere in such cases, we can not venture to predict. But we know, as a matter of fact, that cardplaying for money is indulged in by Japanese of good social position quite as extensively, on the average, as it is indulged in by the foreign residents, and that the players are not interfered with, In fact, sanctity of domicile exists almost as effectually in Japan as in England. The police know nothing of what takes place in private houses or social clubs, and without such knowledge as would enable them to surprise offenders in flagrante delicto, they have no authority to interfere. The case of the suburban villa quoted above would never have occurred had not political jealousy and commercial rivalry furnished information otherwise inaccessible to the guardians of the law. Still, certain broad facts must be recognised; namely, that there is more professional gambling among the middle and lower orders in Japan than in most European countries; that the prohibitions of the law are exceptionally strict with regard to games involving money bets; that the police enforce the law zealously, and that there is not likely to be any discrimination in favour of foreigners. The outlook does not alarm us at all, but our readers are in a position to judge for themselves.

By devoting so much space to this matter, we may, perhaps, create an impression that gambling is prevalent among the foreign communities at the open ports, and that its possible suppression after the abolition of Consular jurisdiction is regarded with general uneasiness. That would be a most erroneous inference. The question was raised originally by local and who viewed with either contine or all such reflections, and, even though some revelling at But when positive displays of Digitized by UNIVERSITY OF ILLINOIS AT

in the capital, and a serious scandal was simulated apprehension the contingency of apprehended for a moment. The police, police raids upon private houses where a however, failed to prove their case at the rubber of whist or a game of poker was preliminary inquiry, and nothing more going on. But the truth is that these was heard of the matter, but public points have interest for only a very limited opinion, so far as any expression of it section of the foreign communities. There became audible, was entirely on the side are not a score of men in Yokohama who of the guardians of the law. It appears play whist; probably not even as many who care for poker, and doubtless not a dozen who make a habit of playing either. These "rare birds" will, we believe, find that they can pursue their pastime just as uninterruptedly after July 17th, 1899, as they can to-day, but since we have set down the bases of our belief plainly enough, our readers can judge for them-

#### INHUMAN SPORTS.

HE officers of the Seventh Army Division, which has its head-quarters in Sapporo, recently organized a day's winter sports at that place. One of the amusements was the pursuit of a pig on the ice by ten youths who, after m good deal of slipping and falling, finally beat the poor porker to death. This event is narrated in the columns of the Japan Times, and has evoked severe comments from some of the local foreign newspapers; one regarding it as an "evidence of inextinct barbarism"; another calling it "a remarkable display of savagery." We, too, on reading the account in the Japan Times, were revolted by such abominable cruelty, and had taken pen in hand to denounce it when suddenly we recalled fox-hunting, coursing, and flyfishing, to say nothing of cock fighting, badger-baiting, and dog-fighting. What shall be said? Whether is it crueller and more savage that a party of gentlemen should turn out with a pack of hounds to hunt a fox, and should run the animal down until it becomes too exhausted to fly any farther and is torn to pieces by the hounds, or that half a score of men with clubs should pursue a pig over the ice and cudgel it to death? Truly the death by appallingly cruel methods for question is difficult to answer. Death the sake of an insurance or because of from blows of sticks and death under the teeth of a dozen dogs differ, probably, in rapidity. The pig's case seems the harder. But physiological research suggests that But we do hear of married women upon neither animal would be conscious of Even a man does not feel his wounds prefer a hundred kicks from hob-nailed host of relentless pursuers is doubtless far almost unvarying kindness, the animals more intense than the physical pain felt yoked to carriages and carts in the cities and Ireland fox-hunting is the pastime of ways are often brutally ill-used. For purall the upper classes. From the Prince of WALES to the petty farmer, everybody that horses affords no data. Everyone knows can keep a mount rides to hounds. No one how things fared with the London cabjournalists who seemed to see a duty in can keep a mount rides to hounds. No one how things fared with the London cab-inspiring apprehensions about the results thinks of what the fox suffers. The imme-horse until very recent years. We doubt of passing under Japanese jurisdiction, morial habit of the sport has banished whether Japan furnishes any examples so

Renard propaganda with pen and speech, he would probably be answered by arguments based on the training of nerve and muscle, the benefit to health, and the promotion of equestrianism that result from fox-hunting. We are by no means sure that the victory would not rest with the fox-hunter in the discussion. He might justly urge that the law of nature has obviously placed certain creatures at the mercy of others, and that if the killing of a fox can contribute to the bodily vigour, the amusement, and the equestrian skill of mumber of men, while at the same time tending to improve the breed of horses in a country, the fox may be sacrificed with as little compunction as attends the slaughter of a calf for veal or of a deer for venison. It would be difficult to marshal similar arguments in defence of the clubbing of a pig on an icefield, but so far as humane instincts are concerned, the one performance appears to be as shocking as the other. Then, again, few of the pleas that extenuate foxhunting apply to coursing or fly-fishing. The pursuit of a hare by greyhounds, though not without spectacular attractions, is an intensely painful sight to any thoughtful person, and it may be doubted whether anything more barbarous has ever been conceived than hooking a fish by the mouth and holding it thus until its wild struggles for freedom end in exhaustion and death. People who indulge in such pastimes, and who but recently loved to bait badgers, fight cocks or dogs, and cluster round a ring where pugilists battered one another into helplessness, must besitate before they denounce as "a remarkable display of savagery" the hunting of a pig over ice and its slaughter with clubs. The question whether the Japanese are more or less humane than the average European is difficult to answer. We do not hear in this country of children purposely maimed or otherwise deformed to serve as objects for exciting charity; we do not hear of boys and girls done to some strange lack of parental instinct on the part of their fathers or mothers; we do not hear of wives kicked to death, whom their husbands' conduct inflicts much suffering at the supreme moment. Imoral agony to which they would certainly when he is battling for life. The agony boots. Again, though in the rural disendured during the race to escape from a tricts farmers treat their horses with when the blow falls at last. In England and settlements and on some of the highposes of comparison, however, the case of

philanthropy and humanity come to be considered, a marked deficiency shows itself on the side of the Japanese. Instances of noble men and women who devote their lives to the care of orphans or wanting, but they are few and far between, and if figures could be obtained showing the amounts contributed annually for charitable and philanthropic purposes, the total would scarcely equal even one of the many magnificent donations made every year in England and the United States for such aims. Every foreigner travelling or residing in Japan must have been shocked, from time to time, by the method of treating lunatics. Only a few months ago, an imbecile might have been seen at Hakone confined in what was virtually a cage, where, from year's end to year's end, he received neither medical assistance nor loving tendance, but was simply fed like a wild benefin a left the Imposite Forence on Japan and the Japanese in Saint Louis. The lecture seems to have been a miserable affair. Professor J. M. Dixon, formerly but was simply fed like a wild benefin a left the Imposite Forence on Japan and the Japanese in Saint Louis. The but was simply fed like a wild beast in a of the Imperial Engineering College, menagerie. We have witnessed many Tokyo, and now of Washington Universmenagerie. We have witnessed many such sights with horror and profound pity, an excellent authority on everything Japanese, has denounced the lecture as until not only vulgar and at times obscene, to think of establishing asylums where but also inaccurate, and displaying a marthese unhappy sufferers can find refuge. vellous ignorance of even the simpest matters of pronunciation of Japanese it is controlled by the Municipality; its It is controlled by the Municipality; its accommodation is very limited, and its represented himself as having been war terms place it beyond the reach of the correspondent for the Japan Mail during poor. The fact is that the tide of virtue the China-Japan war. That is wholly undoes not flow as high or the wave of vice true. We never heard the man's name ebb as low in Japan as in the West. The range of action is narrower, and the sentiments that inspire it are less profound here than there. Why that should be the case, journal, he has imposed upon the public, we can not pause to consider now, but we believe that our readers will agree with us as to the fact. It is not safe, therefore, to draw any general inferences from a comparison of extremes. We must criticise him. try to strike an average, and that is where the difficulty presents itself. On the whole we are inclined to think that moral insouciance is the chief sin to be laid to the charge of the Japanese. They are not charge of the Japanese. They are not markets being found in all parts of the world, actively cruel: very far from it indeed. The value of habutae, silk handkerchiels and Their kindness to children is proverbial; their patience with one another's failings is almost inexhaustible; and their mutual belpfulness in seasons of distress represents a high standard of altruism. But gaws, Kirin, and Ashikaga secure altogether they will not interfere to save m horse other textiles are annually exported in increased from the brutality of its driver, and they will sit calmly in a jinrikisha while its drawer with throbbing heart and straining muscles toils up a steep hill. They do not recognise, in short, that every man has a mission of mercy, and that he is culpable if he fails to fulfil it to the best of his ability even at the risk of intruding upon his neighbour's sphere of independence. It may be urged that such a duty does not receive general recognition anywhere. Perhaps not, but in some Western countries it has received sufficient recognition to prompt the organization of societies means based on the requirements of the econofor the prevention of cruelty to animals or For advance payment of exchange bills, 2.9 children, and by the efforts of these so- sep; for temporary overdrafts, between 3 sen and memorial temporary and Commerce had found

cieties the effective sway of humane principles has been incalculably extended. We have endeavoured to induce prominent Japanese to form such a society in this sen to 3 sen. Alterations in these respects were country, and we have endeavoured to inthe succouring of the indigent are not duce members of the Diet to introduce a law to which appeal might be made against persons ill-treating animals. But our year, 6.5 per cent. efforts have been fruitless. A law alone would not suffice. It did not suffice in England. Private philanthrophy had to come actively to its aid. That will have to be the case in Japan also. But when? Neither the legislature nor society seems disposed to trouble itself about the matter.

#### AN IMPOSTER.

We observe that a Mr. Henry Lewis us less than the fact that Mr. Henry Lewis until now, and never employed him in any capacity whatever. So far, then, as concerns his statement that he acted in the capacity of war correspondent for this and we trust the St. Louis Star, which refers to the subject in its issue of January 18th, will assist in denouncing Mr. Lewis fraud lest he find credit with a community where there is no Professor Dixon to

#### JAPANESE FACTS AND COMMENTS.

The export of silk textiles from Japan increases year by year, alleges the Tokyo Shimbun, other goods annually exported is reported to amount to no less than twenty million year. Fukui prefecture alone receives over four million yen from its manufacture of habutas, while Kana-Kawamata realizes half that amount. over ten millions. Silk handkerchtefs and quantities and at high prices. These, it is expected, will become staple exports next in rank to raw silk in a year or two.

A telegram from London, received by the Mitsui Bussau Kwaisha on the afternoon of the 17th instant, and published in the Fifi, re-ported that Texas middling cotton to be shipped in March or April has risen in value to 20,00 yes per picul. Another telegram re-ceived on the following day placed the value of the same cotton at 25 pen.

The example set by the Bank of Japan in raising the rate of interest has been followed by the Yokohama Specie Bank, though the step taken by the latter is, it is said, by no

3.1 mm; the above to be carried into operation from the 15th instant. Discounts on the security of raw and waste silk are fixed at 2.9 sen. while those on commercial notes vary from 2.8 enforced from the 10th instant. The rates for deposits are: - Temporary deposits, 4.5 per cent per annum; fixed deposits for three months 5.5 per cent.; for 6 months, 6 per cent; for one

The post bellum trade has been adverse to us, remarks the Forosu. Yet the receipts of installments and the sale of Wat Bonds bave directly contributed to the inflow of specie despite a gross excess in imports. Towards the close of last year, however, both the Indemnity and War Bonds accounts were nearly settled, and the trade began to show a marked effect upon the metallic currency. Such effects were keenly felt in the beginning of this year. Although no trade return for January is yet published by the Finance Department, the aggregate total of exports and imports for Yokohama and Kobe for the month under review in known to be 9,149.980 ven and 16,591,392 ven respectively, showing an excess in imports of 7,441,512 ven. The export and import of bullion 7.370,601 yen and 567,028 yen in value respectively, the excess in exports being 6,802,972 yen. Thus trade indicates an excess in imports of over 7,440,000 yen, while bullion shows an excess in exports of over 6,800,000 yes. Our commercial annals, asserts the Foresu, can not furnish an instance in which such an enormous excess in imports and such a huge outflow of gold were noticeable during one month. This anomaly will probably not cesse for some time to come, and the excess of imports for this year must be expected to exceed seventy million pen.

Legal proceedings have been instituted against the Yorosu by the Minister of Agriculture and Commerce with reference to an alleged libel arising out of the Osaka Rice Exchange compilations. The Yorosu has evidently determined not to take things submissively, for in its leader a few days ago it remarked: "The Cabinet is eager for the enforcement of despotism under the guise of a constitutional system. No wonder therefore that it spares no effort to suppress the vor populi through the law. Whether dignitaries who are utterly wanting in sulf-respect and are constantly bringing disgrace upon themselves have a right to sue persons who regard them with contempt is a question which requires solution by moralists of the present an expression of opinion which, while the case is sub fudice, would in England infallibly have secured the writer imprisonment for contempt of Count.

The export of tea from Yokohama last month was as follows:—To San Fransico, 123,972 cattles; to New York, 252,934 cattles; to Canada, 277,416 catties; to Chicago, 201,150 catties; to Pacific ports, 23,196 catties. Arrivals and sales of tea from the beginning of the season up to the end of last month, compared with those for the 20th year, may be tabulated

	3oth year-	zgth year:	Increase or decrease.
	Catties.	Catties	Cattles.
Acrivals		22,328,100	526,200
Sales	21,659,900	24,241,800	581,900
	Yen.	Yen.	Yan.
Value realized		4,530,626	1,285,033
Average	28.23	21.63	6 6o

That Hokksido, with its cold climate, will be utterly unfit for sericulture is a supposition arrived at without sufficient consideration. A person who made a tour of inspection in the North last year reports that though the silk industry there is still in a state of immaturity, yet the cocoons produced are in no way inferior in quality to those raised in most of the north eastern districts and in the neighbourhood of Shinshin. The development of the industry, the Jifi thinks, may be confidently expected.

Rumour was recently affoat that the Depart-

is necessary to alter the site for the Government Iron Foundry. This, however, is attenuously denied by Mr. Wada, Director of the Foundry, who, says the Jiji, states that the neighbourhood of Wakamatsu has been definitely fixed upon for the institution, and no change will be made. The fact that the depth of water in Wakamatsu port is only ten feet, rendering it difficult of entry for large vessels, gave rise to the rumour. But that will not be for long. A company was lately organised under the name of the Wakamatsu Harbour Company, with a capital of 1,500,000 yea, to undertake the work of deepening the channel to twenty feet up to the side of the Foundry embankments. That will enable ships of over 2,000 tons to enter freely.

From the Tokyo Shimban we gather that 40 000 cases of Sumatra oil are shortly to arrive in Yokohama to the order of Messra. Raspe & Co., and that of this amount 10,000 cases have been already taken by Mr. Takenouchi at Minami Nakadori, at the rate of 1.90 yen per case. Mr. Takenouchi lately imported 10,000 bags of Formosau rice, which were readily sold at favourable prices in spite of the market's being glutted with foreign cereals of all descriptions. The amount of foreign rice imported into Yokohama during January exceeded 250,000 bags, valued at 1.500,000 yen. A telegram from Shanghai amounness a rise in the price of rice by twenty sen per hag owing to the increasing demand in Yokohama.

The lea brought into the Kobe market from the various parts of the empire last year amounted, according to the Fili, to 13,503,309 catties, of which 12,000 253 catties were exported. The following are the details:—To New York, 325,784 catties; to Chicago, 5,273,303 catties; to San Francisco, 700,682 catties; to Buffalo, 15,600 catties; to Fortland, 0,407 catties; to Tacoma, 404,865 catties; to Winnepeg, 8,759 catties; to Binghampton, 15,120 catties; to Minaukee, 14,239 catties; to Canada, 1,020,694 catties; to Hamilton, 354,954 catties; to Montreal, 118,852 catties; to Vancouver, 197,592 catties; to London, 302,208 catties; to Seattle, 20,292 catties; to Toronto, 43,876 catties; to Honolulu, 1,238 catties, &c.

Yokohama's trade in Kanten (agar-agar) has been extremely prosperous during the past few years, the quotations at one time rising to 87 yen. The business, however, has suddenly come to a standstill. Since the arrival of the new season's goods, about 2,000 cases have been exported, and the market is glutted. Prices have now fallen, says the Yifi, to 65 yen, and a further depreciation is expected.

At a meeting of the Osaka Municipal Council held on the 8th instant, the chief engineer engaged on the construction of the port is reported to have stated that the scheme will probably be completed within eight years. It will be possible to commence work on the embankment next January.

The amount of silver subsidiaries to be minted from April last to March this year was estimated, according to the diamichi, at ten million yen, of which 7.500,000 yen have already been struck. The manufacture of 50 zen piecea occupies attention at present, and it is said that 2,5000,000 yen will be issued by March.

The allk trade of Yokohama is now very prosperous, the 7#fi asserts. Sales on the 14th instant amounted to 1,200 bales of filatures and hanks, of which seven-tenths were taken by No. 168. Quotations stood at 830 yes except for Shinshia filatures, which were sold at 950 yes. The rise in prices on the whole was no less than five yes per bale, but the market is still eager for fresh purchases.

The rumour that Russia is disposed to press leafured from the latter half of the current loans upon China has recently been a source year, spirits are to be charged an import duty of excitement in England. Russia's scheme of 45 per cent advalorem. But this will not to furnish the Chinese with funds would certainly secure her financial ascendency in the Celestial empire, while England must expect her influence to wane in a corresponding degree.

Digitized by OOQ

The English government, says the Jiji, is now reported to have resolved to raise a Chinese loan in the London market an its own security. If that he so the bonds will not be subject to such serious fluctuations as have usually attended the financial arrangements of China. There should be no difficulty in taising a loan; it depends entirely upon the amount of remuneration to England.

Commenting upon the cotton-spinning industry of Japan during the latter half of last year, the Shogye, summarizing details given elsewhere in our columns, says that the number of spindles in motion totalled 781,619 per month, and the supply of cotton amounted to 14.952,168 kwamme (124,601,400 lbs.), the average price being 20.11 yen per picul. pared with the figures for 1896, there is an increase of 32 per cent, in the number of spindles, but the augmentation in the supply of cotton is limited to 27 per cent. From these facts it may be inferred that the industry during the second half of 1897 was far from prosperous. One of the reasons in that despite the apprecia tion of cotton by eight per cent, the value of fuel has extravagantly risen. Last year an increase of 75 per cent. was noticeable in the price of coal, and the wages of male labourers rose 16 per cent., and those of females 18 per cent. compared with the corresponding period of 1896. The value of yarns rose only one per cent., and the manufacturers reaped but a small amount of profit on a limited turnover. The consequence was a partial suspension of work and reduction of reserves and dividends.

The Juji expresses surprise at the steady setrogression shown in postal enterprise during the past ten years. The total mileage of railin the 20th year of Metil (1887) was a littl- over 530 miles, but it had increased to 2,500 miles by the end of 1806; the capitals of various companies, which in 1887 aggregated 176 million yen only, had increased by the 10th year to 637 millions; while foreign trade increased in volume from 96 millions to 289 millions. But despite this progress in other directions the postal system indicates a grievous decline. Although mail matter shows a vast increase as a natural result of ever growing civilization, the number of post offices and postal agencies have decreased from 4,795 to Each post office serves from 5.48 to 5.80 square miles, while the population in each postal district is about 9,900. An expansion of postal machinery ought to follow advance in other directions, but the Authorities appear to have taken an opposite course. The Depattment for Communications is reactionary. The Jiji fails, however, to notice the true reason namely, that the Department can not obtain the funds necessary for developing its business.

The sake tax, next to the land tax, is the principal source of revenue in Japan. mand for mixed liquors, however, has increased considerably of late, and the sales of clear sake are gradually diminishing. In view of these facts it became necessary for the Government to adopt suitable means for the control of spirituous liquors. Taxes on spirits have been hitherto levied according to regulations special ty established for the purpose, and those on mixed liquous are fixed at six yen per koku. This rate, however, has failed to prevent the almost universal use of spirits for the adulteration of clear saké. A koku of spirits, at present, costs 25 yen only, and can be used for manufacturing five koku of mixed liquor. The original value of the latter therefore does not exceed five yen, whereas clear sake is required to pay seven yen per koku in taxes only. The popularity of the mixed liquor may, from these circumstances, be easily imagined. How then is it possible to get rid of the present anomaly? According to the new Customs Tariff to be enforced from the latter half of the current year, spirits are to be charged an import duty of 45 per cent ad valorem. But this will not secure the sake brewers. The Government should, the Nichi Nichi urges, undertake the of the sake dealers.

#### REVIEW.

Perhaps a greater tribute to a writer's power could scarcely be given than the fact that having sat down in a somewhat critical mood m read the book before him the would-be critic completely lost sight of his self-imposed task during the first two chapters in the all-absorbing interest of the tale itself. This was our experience with "His Chiel's Wife," the first venture, we believe, in the field of fiction, of a popular lady resident of Tokyo. The story is a powerful one, told with vigour, and in the more intense scenes, much delicacy. It deals with men and women, whose prototypes we jog against daily; the action is never allowed to flag or be impeded by those disquisitions on every subject under the aun such as have well-nigh bored novel-readers to death during the past ten years. Indeed, the "New Woman" is altogether refreshingly is altogether refreshingly absent from these pages, and the style is lucid and restrained to a degree, -no slight achievement when we reflect that the acene is laid to Brezil, where the wild luxuriance of nature surely affords, if anywhere in the world, temp-tations for word painting. Yet the following is, perhaps, the longest description—that of Brazilian forest-in the book,

"Oh! that forest, with its high green banks of overgrown and tangled vegetation, with its trees of rich and brilliant bloom—purple, golden, crimson, white; from the boughts of which hung knotted creepers, trailing far yards upon the ground, and on the trunks of which grew a gorgeous garden of red and purple parasites. Hidda gazed with an artist's eye at all this world of colossal heanity—at those lofty palms, those rich, dark mangotrees, and noble ferms that grew so high that they seemed to mingle with the azure sky above her.

As the sun one in the heavens, a profound and almost over whelming stillness sank down upon the woods. The gaudy buttenflies ceased their flittings, and took their soft siestas within the blackness of the forest-depths. The birds no longer called to each other, but vanished from sight; buried alive in a tumb of vegetation, tangled and impenetrable. Only now and again a brilliant-bird flew across their path, poised itself for a second upon some sweet and hanging blossom, and then vanished like a flashing jewel across the stream, far from bunnar sight.

Here is a portrait of the hero, Hugh Neville, the younger son of a Cambridgeshire squire, and second Secretary of the British Legation in Brazil:—"A good-looking young Englishman of the Saxon type, with fair, carly hair, fresh complexion, and bright blue eyes shining with intelligence, he possessed that air of general benevolence which accompanies his type." And that is all, but how perfect the picture!

The story is woven out of the lives of the various social units which compose the corps diplomatique of Petrofiolis,-Ministers, retaries, their wives and families. No outsider intrudes within those hallowed precipcia. feel at ouce that it is a world which the author knows thoroughly,—the aocial atmosphere she has herself breathed. Politics, likewise, find no place in these pages. If we have a fault to find it is one which has made us rebel against all female novelists, save the very greatest, Does any woman believe in the absolutely uniegenerate wickedness of either man or woman? We think not. Can any reader recall in female fiction such a thorough-paced villain as Count Fosco? Satau bimself had redeeming points in Miss Marie Corelli's eyes. But that men and women, devoid of even the shadow of a moral sense, move about the world we live in is as certain as is the existence of their autipodal type, the perfectly pure and true. the story before us, we are led to believe that lave for her child in Countess Willenheft's only safeguard against the machinations of Count von Demlichoff, so that when poor little Stella dies, the moral collapse of the mother will follow, and Demlichoff, whose philosophy was that of the modern French decadents-" all women were coquettes and hypocrites, worthless and rotten at the core "-will triumph. That is what

\*' His Chief's Wife' by Baroness A. d'Anethan, London, Chapman and Hall, Limited : Yokohama, Kefty and Walth Limited. O'l ghall if O'm

would and does happen every day. What actually happened it would be unfair here to reveal But that such a man and such a woman could thereupon talk to each other of the = love of brother and sister," in seeming good faith, is too great a tax on the "gentle reader's" credulity.

Their end, too—unnecessary from a realistic point of view-savours somewhat of melodrama.

This, indeed, is the only point which seemed to us to strike a discordant note in an otherwise admirably told tale. Other readers may view the incident differently. Certainly, "His Chief's Wife " deserves success, as a fresh and healthy departure from the school now in vogue, and we look forward, with interest and pleasure, to further efforts from the same graceful pen.

#### FIRE IN KOBE.

Another fire occurred in Kobe on the morning of the 16th inst., at about 2.30 o'clock. It appears to have broken out in the large twoappears to nave proken out in the large two-storeyed brick building on the Native Bund occupied by Messrs. C. T. Nickel & Co., be-low, and Mr. J. C. Wilkinson above, though how it started is a mystery. Between 2 and 2.30 a.m. smoke was seen issuing from the windows and, an alarm being promptly given, the Fire Bigades were seen on the spot the Fire Brigades were soon on the spot. Superintendent Sim had both his engines on the scene by 2.30, by which time it was impossi-ble to tell accurately where the fire originated. There was a difficulty in obtaining water for some time, the new Custom House buildings blocking access to the sea. Eventually, however, water was obtained from a new drain connected with the Paper Mill drain. It was found impossible to save the building in which the fire originated and a neighbouring godown, filled with charcoal, was only saved by extraordinary exertions on the part of the fire-men. The Robe Herald understands that Messrs. Nickel & Co. were covered by a policy in the Norwich Union for year 1,000 and another in the Phoenix for yen 4,000 Mr. Wilkinson is insured for yen 5,000 in the Imperial Insurance Co. The building was owned by Oshimaya, but we are not in a posi-tion to say if it was insured.

#### SARATOGA SPIT.

Three groundings in less than a fortnight must surely be the record for Saratoga Spit, or Futtau Point, to give it the Japanese name. First the Japanese steamer Bankoku Maru ran ushorn there when coming up the Bay; then the Cam "footed" it; and thirdly the P. & O. steamer Borneo ran on it on Monday. The latter was found ashore by the Company's steamer Rosetta, which arrived during the afternoon of the same day. After the discharge of a portion of her cargo, the Borneo, with the assistance of a tow from the Rosetta, came off before midnight, and arrived in port, undamaged, on the following morning, Tuesday, The Japanese war-vessel Kongo Kan, which went to the Borneo's assistance from Yokosuka, is reported to have lost a steel hawser while attempting to tow the distressed vessel off the

#### HORKAIDO COAL-MINING AND RAILWAY CO.

The regular general meeting of the Hokkuido Coal-mining and Railway Company was held at the Company's office at Odawara-cho, Tsukiji, Tokyo on the 13th inst. The meeting was attended by 241 shareholders representing 160,556 shares. The report presented by the

#### CHINESE NOTES.

"Instructions," says the N.-C. Daily News, were sont by the Taungli Yamen, during the middle of last month (January) to the Chinese officers superintending the building of the six fast cruisers in England and Germany to hurry up the work and make ready for sailing to China m soon as possible."

From the report of the Soychee Cotton Spinning Company in Shanghai it appears that two of the principal difficulties to be overcome in connection with these enterprises are the unskilled character of the labour obtainable, as well as its scarcity, and the amount of pilfering indulged in by the Chinese employes.

The Rev. Griffi h John, in a report of mis-sionary progress in Hunan, speaks of a raid recently made on the depôt of his mission at Hêngahau, and describes the energetic action taken by the local officials, at the instance of the British Consul in Hangkow, to punish the offenders and furnish redress. Chinese official seem to be treating the missionary question in a much more liberal and helpful spirit than they formerly showed."

It is estimated that some 2,000 carriages containing Chinese of the "demi-monde, beas-monde, and no-monde," drive every afternoon along the Bubbling Well Road at Shanghai, which is just three miles long from the Bund. With the addition of jinrikisha and wheelbarrows the throng is pretty dense, and accidents are naturally frequent. The Chinese may be conservative, but the taste they have developed for "carriage exercise" in Shanghai is extra-

It is interesting to note that the Russo-Chinese Bank at Newchwang in under the management of Mr. H. A. Bush and Mr. F. C. McCollum, These names have not a particularly Russian twang. Evidently the enterprise is merely another chapter of the old story: Britishers "run the show," Both gentlemen, by the way, are well-known in the Treaty ports of Japan particularly the latter, who was conof Japan, particularly the latter, who was con-nected in Yokohama with the National Bank of China.

Advices received from Nauking," says the N.C. Daily News, "state that H.E. Viceroy Liu has received an intimation from the Tauogli Yamên to the effect that Prince Henry of Prussia had expressed a desire, through the German Minister, to visit Nanking, in which case the Prince would most likely be accompanied by the present German Governor of Kiao-chou, and escorted by the German fleet. Preparations are therefore now being made at Nanking, under instructions from Viceroy Liu, to give a fitting reception to the German Prince and his

Here is a telegram said to have been received from Tsitsiher, the capital of Heilungchiang province, which is better known to the general public as "the Chinese Amur region":—

"Advices from Mulio (a place on the Chinese side of the Amur River where gold mines are side of the Annur River where gold mines are being worked) report the crossing over from Russian territory of large hodies of Russian troops, composed of cavairy, infantry, and artillery, into various points of Heilungchiang province. The Russian seem to be divided into three main corps numbering some 12,000 to 15,000 ment each. Strict discipline is observed in the Russian ranks, although there seem to be some 3,000 Hing-hu (Red-beards) bandits amenguathem. The territory occupied by the Russians does not contain even 5,000 Chinese troops." does not contain even 5,000 Chinese troops."

had not been given any breakfast, M. Le Coispellier, Captain of the Yarra, replied in emphatic terms, declaring that both the first and second breakfast had been served on board the steamer at the usual hours, and that any body might have partaken, as, indeed, many did. Mr. Hamilton therefore retorted that dry bread had been furnished to the passengers, and that breakfast would have been served a little earlier than the usual hour on any other line than that of the M. M. Company, "whose neglect of passenger comfort in these things has become notorious." The discussion brought two other correspondents into the field. One said that, returning from Japan two years ago with his wife, he had experienced similar treatment to that described by Mr. Hamilton, but that in everal other voyages by French mail steamers, he had admired the considerate treatment of the passengers. The other, recalling two voyages made by him to Japan and back in the M.M. S.S. Melbourne, when she was under the command of Captain Vimont, explained that an appeal to the captain would at once have procured everything necessary. These letters ought to be useful to the M.M. Company.

The Edict issued by the Emperor of China in connection with the murder of the two German Missionaries in Shantung, is thus translated by the N.-C. Daily News:---

In obedience to our commands the Board of Civil Appointments has presented to us its report concertaing the penalties which ought to be laid upon the officials concerned in the recent Chuyê affair, The said reports states that Li Ping-heng, Gover-nor of Shantung, has placed himself in a most or of Stantung, has placed himself in a most reprehensible position, first, by not being prepared to prevent the murder of the two priests at Chitis and secondly, for having failed to report the outrage to the Throne until the Tsungli Vannèn was informed [from outside sources] of it and telegraphed instructions to the said Governor to investigate the affair. Such conduct deserves punishment. Li Ping-heng is, therefore, hereby degraded two steps in rank and ordered to a lower post, a penalty which shall not be permitted to be commuted or set off against good conduct marks in the said Governor's official record. As for the said Governor's subordinate offices concerned, namely, His Liang, recently transferred from his post of Taotai of the Yen-Yi-Tso-Chi Intendancy, Shanung, Wan Pen-hua, brigadier-General of the Tsaochon Military Circuit; and Chao Chèng-chao, perfect of Tsaochonín (where the murders happened) they are hereby cashiered of their several ranks but retained at their posts. Further, the privilege to disseminate the ed of their several ranks but retained at their posts. Further, the privilege to disseminate the religions of the various countries of the West is accorded by Treaty, and when we take into consideration that these missionaries have come from afar—from 10,000 Il distance—it is but simple justice that the officials and people of China should sympathise with their difficulties and grant what aid they can. Judge, then, the nite of it in the analysis of the post of the same grant what aid they can. Judge, then, the pity of it, when we are suddenly informed that robbers had murdered two Missionaries within the jurisdiction of the magistrate of Chuyêhsien. We, therefore, hereby command that, in addition to the punishment demanded by law to be awarded to the perpetrators of the said outrage, churches in three different places and dwelling houses in seven places he built by us as a token of the Government's desire to atone for the catastrophic which has befallen strangers from afar. In conclusion, we hereby call upon Chang Jumei, the present Governor of Shantung, to exhort his subordinates to give full protection to these missionaries, and to give warning that I in the future there should again occur further out-rages by desperadoes and bandits, the local authorities concerned shall be held responsible for the same. Obey!

The particulars of the murder of a German marine at Kiao-chou are thus given by the N.-C. Daily News :-

Disquieting news having been received from directors, and passed, shows that the net profit during the second half of last year (from 1st July to 31st December) amounted to ven 811,986, to which yen 13,008 brought forward from previous account, was added, thus making a total of yen 824,994. Of this amount yen 57,400 were written off to reserve, yen 69,000 voted as remuneration to officials. yen appropriated in payment of a dividend at the rate of 15 per cent. per annum and yen 84,334 carried forward to new account.

A telegram in the Shanghai Mercury two days later contradicted the atory.

A telegram in the Shanghai Mercury two days later contradicted the atory.

Chimo, a detachment of German sailors who had heen garrisoning Kino-chou city stated thence for Chimo, when they got near to Chimo, in the evening, they missed their way, and knocked up a house in a village in the neighbourhood, and persuaded the master of the house, an old man, to guide them to their destination. The old man's son, who lived at Chimo hour, with his wife, had been spending the New Year with his father, and was very angry at his father being taken off, followed the detachment, with his wife, had been spending the New Year with his father, and was very angry at his father being taken off, followed the detachment, of the evening, they missed their way, and knocked up a house in a village in the neighbourhood, and persuaded the master of the house, an old man, to guide them to their destination. The old man's son, who lived at Chimo hour, with his wife, had been spending the New Year with his father, being taken off, followed the detachment, with his wife, had been sept to Chimo, he found that his hours before the launch started, and that they shop, an optime resort close to the city gate, Original from Chimo, a detachment of Gorman sailors who had

had been robbed during his absence. creased his tage, and, seizing a big knife, like an executioner's sword, he cushed at the German sentry at the gate from behind, and with one blow nearly severed his head from his shoulders, cutting through the jugular vein. It is inexpli-cable how a small, feeble-looking man could have dealt such a blow. The sentry ran about ten paces, firing off his gun, and then fell down dead. The whot attracted some of his comrades, who came running up, only to find him dead, but who arrested the murderer, who was still a prisoner when the Darmstadt left Kiao-chou Bay. Thus the murder was an act of private vengeance, and had no political significance.

The circumstances relating to the murder of a German sentry at Chimo and the punishment of the assassin are thus related by Der Ostastaticher Lloyd:-

Already in January the town of Chimo was occupied by a detachment of the fleet to which belonged the sailor Schulze. On the night of the 23rd and 24th of January he was standing sentry at ie west gate of the city, a watch commanded by a petty officer being in the guard room over the gate, and another sentry near by on the wall. Schulze was assassinated shortly before 2 n.m. The sentry on assaurated states where a sum. The states were slarmed by a shot and, hastening down, found Schulze lying on the ground with his discharged gun near him but no sign of the murdener. He died without having disclosed anything concerning the attack to which he had fallen a victim.

The budy showed two deep caping gashes on the

The body showed two deep gaping gashes on the left side of the head and neck, which, from their position, could only have been inflicted from behind, the artery of the neck being severed, so that death must have could be a seried to a seried to a seried to the seried death must have quickly ensued from loss of blood.

The head man of the district was at once made responsible for the arrest and judgment of the murderer and succeeded in arresting him after two days.

He was a man owning a small shop for the sale of articles made of cow-horn in the vicinity of the gate, and confessed his crime before the Chinese gate, and confessed his crime before the Chinese magistrate, giving as his motive the fact that his shop had been broken into and tobbed in the night, a fact which he discovered upon examining his stock at night. Upon being led to the scene of the murder, he repeated his confession in the presence of German officers. The knife with which he compitted the murder was found in his passession still covered with blood, subsequently recognised as human. The Chinese magistrate at once sentenced the murderer to draft, but upon the head man of the district aroming that he was the head man of the district avowing that he was not in a position to confirm the sentence, the Governor at Chinanin, to whom the occurence had been telegraphed, referred the matter to Poking, where, however, the Government refused the authorisation, taking, in an utterly incompre-hensible manner, the criminal under its protection.

To see that justice should be done, the German murderer according to German law, and in compliance with a clause in the proclamation issued to the population at the time of the first occupa-

The conclusion of the Court-martial was unani-mously in favour of the death sentence, and the unurderer was sentenced to be shot as prescribed by the law, when the head man came and begged that the criminal should be handed over to him, to be beheaded according to Chinese custom, which was accordingly done publicly in Chimo on the morning of the 2nd of February. The head of the murderer was then hung on the gate of the

The Imperial Edict issued with regard to the raising of a domestic loan of 100 million taels in China is thus translated by the Iv.-C. Daily

We have received the report of the Board of We have received the report of the Board of Revenue, made in obedience to our commands, with reference to a memorial by Huang Szejung, a member of the Supervisorate of Instruction of the Heir-Apparent, in which is recommended the issuance of Government Bonds. recommended the issuance of Government Bonds for the puspose of raising funds for the Imperial Exchequer. The said Board having gone carefully and minutely over the memorial in question agree with the views contained therein recommending that "the said Board of Revenue shall print one million Bond certificates (of Tis. 100 each), to be styled "Sincerity Bonds," and distributed for sale at Peking and in the various provinces of the Emprie, the said Bonds to bear interest at the rate of 5 per cent per annum, the same to be all redeemed by the Imperial Government within the period of twenty years, in-Government within the period of twenty years, inlerest to be paid up to date of red imption. The said in
Digitized by

Bonds are to be also saleable and transferable at all times within the above period and their actual value shall be guaranteed by the Imperial Governnent. At the several periods set for the redemp-tion of the said Bonds the holders thereof shall have liberty to use the said Bonds in payment of land taxes and sail duties. The said Bonds shall be distributed and sold to all classes of the country, beginning from the Princes, Dukes, and Nobles downwards in Peking and from the Tartar-Generals, Viceroys, and Governors in the Provinces down to their civil and military subordinates of every rank, grade, and class, whiether substantive or expectant. These shall buy up and pay cash for the said Bonds so as to set an example to the business men of the country. Those of the business classes and others country. Those of the business classes and others amongst the people of the Empire having shown amongst the people of the Empire having shown a desire also to buy the said Bonds shall have perfect liberty to do so, in which case it shall be the duty of the Governor of the Imperial Precenter of Shuntien, at Peking, and the various Tartai Generals, Viceroys, and Governors, in the provinces to proclaim at once to the people at large the regulations settled upon by the said Board of Revenue governing the issuance and sale of said Bonds. The said High Authorities shall also appoint deoulies to explain to the people the also appoint deputies to explain to the people the time nature of the said Bonds and any attempts by the said deputies to take advantage of the oc-casion to extort and force the sale of the said Bonds upon the masses must be strictly prohibited. The deputies charged with the sale of the said Bonds to the people who shall succeed in obtain-Bonds to the people who shall succeed in obtain-ing large sums therefrom will be rewarded with extraordinary promotion in recognition of their energy and ability."

The said Board having agreed to the above-

quoted proposition we hereby command that the same be forthwith regarded as Law.

In a crisis like the present when the Imperial Exchequer is depleted, we feel sure that our Princes, Dakes, Nobles and Ministers in the Capital and the high authorities in the provinces who have been the recipients of our special Bounty will surely show their gratitude to the Throne by heartily resourced to the the Capital and the contract of the Capital and the c sponding to the needs of the Government. Nay to the common people must surely know their duty and loyalty to the Imperial dynasty and hasten to the succour of the Thione at this moment of emergency. Finalty, as it in decided by the said Board of Revenue that the present movement is entirely different from the former methods of calling upon the people of the Thione as young help to the limit the people of the Empire to render help to the Imthe people of the Empire to render her to the imperial Government, nor will any force be permitted to compel the masses to buy the said Bonds, the present acheme being on the basis of a commercial transaction where a regular interest shall be paid at stated intervals, we first that there will be a stated intervals. be no delay in encompassing the object of this loan and that our prople will not look on and remain indifferent [to the needs of the Empire]. Let the be promulgated to all the people of the Empire.

It is certainly an urgent, almost a plaintive, appeal, and an a test of the patriotism of the Chinese nation, if for no other reason, its results will be observed with much interest,

#### NEWS OF THE WEEK.

M. Harmand, French Minister in Japan, has been made . Commander of the Order of the Legion of Honour.

A Masonic Ball was given in Kobe on Friday evening and turned out a most enjoyable affair, some 150 persons being present.

Vice Admiral Sir Edward Hobart Seymour, K.C.B., who relieves Admiral Sir Alexander Buller as Commander-in-Chief of the China Station, arrived in Hongkong on February 4th.

The launch of the N.Y.K.'s new 6,000-ton teamer at Nagasaki has been postposed from March 10th to the 20th, in order, says a contemporary, to avoid any clashing with the General Election.

The Emperor William has conferred the Order of the Red Eagle of Prussia upon Baron von Bulow, = a token of gratitude for his services in connection with the occupation of Kiao chou by Germany.

They have been having a very mild winter in England, though a very foggy one. There world cyclist who has been ill treated in China had been no instance for a quarter of a century and nelted with mud is an American. If only

when neither snow nor sleet fell in London before the 12th of January, until this winter.

Golf as played in Hankow must be a thirstproducing pastime, judging from the accounts of the club there. The Shanghai Mercury finds in the report the following items : "Sale of golfing gear, \$481.30; Sale of Wines, \$4,283.

About half-past two on Friday afternoon, one of the school rooms of the Seisoku Jinjo Chu-gakko (Ordinary Middle School), near Shiba Fark, Tokyo, was found to be on fire. With prompt assistance from the Police Brigade the buildings were saved, only one room being damaged.

An imaginative individual telegraphed the An imaginative individual telegraphed the following "war-scare" to the Singapore Free Press from London on Jan. 23rd:—"A division of the British fleet, H.M.S. Hannibal and H.M.S. Illustrious, sailed yesterday [for the Far East.] War is very probable." The ships in question have joined the Meditterranean squadron.

The British Government basobtained the virtual control of the coal supplies east of Suez, having bought up in Japan, Hongkong and the China ports, Singapore, Colombo, &c., the whole available stock of Cardiff coal and of such coals as are likely to be of service in men-of-war, "The moneyed fist" is, after all, an important factor in international affairs, remarks the China Mail.

A string of a dozen sandwich girls created quite a pleasant sensation in the West End of London recently. Enthusiastic reporters speak of their "Gothic hats," "graceful robes of all colours," "chestnut, black, or golden locks," and "faces pretty enough for anything." The "Sandwich Girl' will probably be the title of the next musical burlesque.

Sir Nicholas Hannen was received in audience by H.M. the King of Siam on the 3rd February. A state banquet was given on the following evening at the Palace. The only persons present were the four Ministers :- Messrs. Bur Seldeneck, Inagaki, and Greville, and Mrs. Greville; Sir N. Hannen and Lady Hannen, Miss Hannen, and M. and Mme. Rolin-Jacquemyna.

On Tuesday morning early, a fire occurred in Sannomiya-cho, Kobe, in a crowded quarter, and despite the efforts of both the Foreign and. Japanese fire brigades, from fifteen to twenty were destroyed before the flames houses were subdued. There appears to have been some difficulty in obtaining a supply of water. The buildings destroyed included an oil shop and several houses occupied by geisha. origin of the fire had not been discovered.

A two horse coach, belonging to the Santan Basha Kaisha, and running between Kyoto and Miyatan, was upset and fell down an embankment near the village of Oye on the 8th instant, Of the eight passengers in the vehicle two were seriously II not mortally injured, and one of the horses was killed. The driver and conductor of the couch ran away immediately after the accident without giving any assistance to the injured passengers, but were afterwards arrested by the police.

We observe that 12 fine pedigree Hereford bulls were recently shipped from England to Fray Bentos on the River Plate, by the steamer Bellagie. They are the property of Liebig's Extract of Meat Company, Limited, and have been sent out to South America in order to maintain the breed of the cattle reared on the Company's vast cattle farms. The cattle in-dustry is carried out on such a gigantic scale in that part of the world, that the Liebig Com-pany's cattle farms alone cover an area of 1 250,000 acres—that is, about the size of two whole English counties.

It must be m great disappointment to the Kaiser, says the Globe, to read that the round-the-

he had been a German two more provinces, six ports, a pro-cathedral, and an indemnity might have been claimed. And what big fish might not have been landed out of Mr. Landor's troubles in Thibet! These golden apportunities are wasted on the Angle-Saxon-

Whilst leaving Nagasaki harbour on Tuesday, February 8th, the Yikiang collided with the Russian gunboat Zabiata, lying at her moorings. It would seem, says the Press, that the former vessel in turning made rather a large circuit, passing close over to the Lienshing, belonging to the same company. She then proceeded up the harbour, heading in the direction of the Russian gunboat. When within a short distance of the latter, the Viksang suddenly stopped, owing, it is thought, to an accident to her steer-ing gear, and drifted into the gun-vessel, carrying away a boat from the davits and injuring the vessel's side. The Fiksang sustained no damage and after a short time continued her journey. A claim for damage to the extent of \$1,500 has been lodged by the Russian Consul with Mesars. Browne & Co., the local agents for Messrs. Jardine, Matheson & Co., the owners of the steamer.

The Russian peasants settled along the Volga in the province of Astrakhan are in a state of intense excitement over the appearance of "Antichrist" in their midst. In a village near the mouth of the Volga a girl gave birth to an illegitimate son. The child was one of exceeding beauty, and at the time of his birth there raged a terrible thunder-storm the like of which the oldest inhabitant had never before experienced. In some unaccountable way the report got abroad that the child was "Antichrist." His entrance into the world was accommanied with all the manifestations which the Russian peasants have been taught to look for at his coming. The girl had to fly with her child from the village, and has sought reluge somewhere on the pathless steppe.

The Rush Medical College has affiliated with the University of Chicago, and Mr. John D. Rockefeller has made an additional gift of \$200,000 towards the current expenses of the University. The twenty-fourth Quarterly Convocation was held on January 3rd. President Harper, in the Convocation Address, proposed the establishment in Chicago of a Teachers' College, to be located and conducted so that teachers in the city schools might attend, and work for a degree without interfering with their daily occupations. This suggestion is an outgrowth of the University Extension work, which has been carried on by the University with so much success. During the past quarter, eightyeight University Extension clauses, meeting at the University itself, at the Newberry Library, the Western Union Building, and other centres. have been conducted. About two-birds of the number attending these classes were teachers.

The annual compilation of church statistics made by the New York Indesendent shows that about one-third of the 25,919,017 communi-cants in the United States are Roman Carbolics. The most numerous Protestant denomination is the Methodist, and 5.735 898, while the Baptists are second (including their multifarious tists are second (including their manuscrous aubdivisions), with 4,175,300. The next in order are the Lutherans, with 1,507,466, and then follow the Presbyterians, who number 1,490,162; the Disciples of Christ, with a total of 1.051.079; the Episcopalians, with 658,640, and the Congregationalists, with 630 000. The numerical equality of the last two churches has been continued for a number of years, though the Episcopalians appear to be gaining a little on their Puritan brethren. The Unitarians, despite their recent efforts to increase the numher of their adherents, are practically at a

#### A TOKYO SANITARIUM.

TO THE EDITOR OF THE "JAPAN MAIL." SIR,—It visited, a short time ago, the Tsuno Hazu Sanitarium, situated in a suburb of Tokyo, about twenty munites' cide by tail from Shimbashi, and ten minutes by railroad from Yotsuya Gate, through the Moat to Shinjiku Station. I was deeply impressed with the fitness of the Sanitarium for Japanese ladies who are seeking rest from the busy cares of life, as well as for those who need within medical recomment and nutsing. skilful medical treatment and nursing. Leaving the cars at the Shinjiku Station, the visitor is pleasthe cass at the Shinjiku Station, the visitor is pleased with the country-like surcoundings of the place. Within five minutes' walk the braniful grounds surrounding the buildings are entered, and the visitor is not only lavourably impressed with the good taste displayed in the grounds, but also with the admirable adaptation of the buildings for a sanitarium. The house is so spacious and so suitably and completely furnished in the halls, sitting rooms, dining room, sun-parlous, bedrambers in both Japanese and foreign style, that the visitor is at once charmed with the place. The Sanitarium is under the direction of Dr. Okami, a graduate of the Woman's Medical College in Philadelphia, and the Training School for Nueses is under the instruction of Dr. Hishikama, a graduate of the Woman's Medical College in Chicago. They have also a class of trained nurses and an experienced house keeper. The massage treatment, that has proved so helpful to those who are suffering from physical weakness, will be carefully given by trained ourses to those who may desire it. Any patients who may desire to have their own physicians will be at liberty to have their own physicians will be at liberty to have their ed with the country-like surroundings of the place have them. A branch of this sanitarium is about to be open

ed at Közu, by the sea-shore. It is beautifully simuted, elevated, and within view of the sea-beach. situated, elevated, and within view of the sea-neach.
Around it are of ange and plum frees and in
the distance charming scenery. The Sanitarium
was established by Japanese and American
Christian ladies, with the hope that many who may be suffering, will find it a resort where will find rest and where patients will have such will that the and where partial the treatment as will be best to their speedy recovery of health and strength. Circulars can be obtained from D. Kei Okami, 105, Tsuno Hazu, Tokyo.

Teuly yours,

S. J. MILLIKEN, Joshi Gaknin, Tokyo.

#### COOLIE INSOLENCE IN JAPAN.

TO THE EDITOR OF THE " JAPAN MAIL."

Sir. I observe that you have been good enough to devote a leader to the subject of coolie insolence to foreigners, about which I have lately been addressing the Kobe Chronicle. However much we may differ an certain other topics, in that

much we may differ on censor other topics, in that special one you and your humble servant would seem to be thoroughly at one, and I beg to thank you for the article in question and also for the very practical suggestion you therein make.

As you say, a discussion of the causes of the untoward phenomenon, while interesting, would be to a certain extent academical, and would not in itself do very much to mend matters. Such a discussion of layer no intention of entering moon here—that I

fortunate for Japan if she acquires a "reputation for gross impoliteness." Now, the very unfortunate thing is that she has got that sheady to a very great extent. The soher fact would seem to be that in Western countries the hearty goodwill and in some instances the enthusiasm that was and in some instances the enthusiasm that was formerly cherished and evinced for the Japanese is rapidly being displaced by a cold, sullen dislike, not in some cases unmixed with a dash of impatient contempt. And for this, Japan has to thank two factors mainly,—Koku-sui hososto (when same a very excellent thing) run mad, and that very high-smelling edition of Caliban, the Japanese coole, released from all those restraints that Tyeyasu found good for the benefit of his immortal sont, found good for the benefit of his immortal sont, and for the general welfare of society. The cheap, noisy patriotism of the wind-bag order has been disastrous in its effects. The true article—that which seeks to make Japan stronger and better (1) materially, (2) intellectually, (3) morally—by much at a discount in certain quarters,—in none more so perhaps than in the schools, where of all legitimate means, has of late years been very much at a discount in certain quarters,—in none more so perhaps than in the schools, where of all legitimate in the schools, where of all legitimates are supplied to the schools of the school of the s places it night to be ever in evidence. In certain of these I know of, the general trend of the work (or rather of what by a big stretch of courtesy is called work) has been to demoralize the students and to a great extent to unfit them for tackling the serious business of life with that high conception of duty which is such an all-important factor in national greatness. Witness Formora—where, if reports be true, the administration is a pig-stye, while with all the faults of her Public Schools, Great Britain contrives to run a fairly honest and efficient administration over 290,000,000 people in India with 1,300 (thirteen hundred) civil servants! Every schoolmaster that knows the alphabet of his profession is supposed to inderstand that it is his duty to turn boys into men, to develop in his students the qualities of

1. Intelligence.

2. Courage (especially moral courage).
3. Energy (sustained activity with a definite purpose).
4. Patience or Staying Power.
5. Honesty and truthfulness.

In some schools that I know of, this truism has struck a good many of the teachers as being a great revelation! It would seem from this that is Japan however much the schoolmaster may be abroad in Lord Brougham's sense of the word, he abroad in Lord prougnams seemed in the schoolmaster brought up for the last len years on little more than inflated ideas of the self-sufficiency (abragassa) of Japan, has all unchecked been debasing the moral and intellectual surrency of the nation as much by his slus of omission as of commission, and the Consequence now is that the fair reputa-tion of Japan has to pay the score. The coolie is at present the beggan on horseback,—we know what his destination is, and the sconer he gets to it the better for all concerned. But Heaven

to the better for all concerned. But Henvel help Caliban's hapless steed, which unfortunately chances to be the reputation of the country.

But all this is parentherical. What is to the purpose is, that if this sort of thing goes on, tourists will be warned to keep severely away from fourists will be warned to keep severely away from Japan; that Japanese in foreign countries will be looked on with colder eyes than they are regarded with at present; and that if the Japanese insist upon magnifying, instead of minimising that most calamitous of all distinctions, the racial one, they will find themselves confronted with the hearty dislike of some 450,000,000 Europeans and Americans. This is a hard thing to say, but there is no use blinking facts.

l am very truly, Yours,

SCOTUS.

Tokyo, February 9th, 1898.

IN H.B.M.'S COURT FOR YAPAN.

Before James Troup, Esq., Assistant Judge. MONDAY, February 14th.

INTERESTING CHARGE OF ASSAULT,

lames Maclean, accountant, was charged with aulting Adrien Deveze, a citizen of the French Republic.

Mr. J. F. Lowder appeared for the complainant, and Mr. McNeil for the defence.

Mr. Lowder recited the facts of the case at great length, stating that complainant was the agent of a Mr. Gerard, a French gentleman owning Lots 78 and 77-a, Bluff. A portion of this was occupied by Tile. Works, while a house and outhouses were leased to a Mr. Flucke. The latter gentleman, who was about to leave Japan, came to complainant about the end of January, and asked complainant to consent to the lease being transferred to Mr. Maclean. This complainant accept to do on the same terms and conditions as Mr. Lowder recited the facts of the case at great ber of their adherents, are practically at a standardl, with only 700,000 members, while there are but 51,025 Universalists all old. The total number of communicants in all the churches is enormous—more than twenty-five militon; but that is scarcely more than one-third of the population of the country. What is the religious status of the other fifty millions?

Digitized by

do very much to mend matters. Such a decussion of the communication of the mend matters. Such a decussion of the communication of the new population of the same twenty five while a house and outhouses the characteristic of the control of elsewhere, where I can command a were leased to a Mr. Funcke. The latter advert to at present is a will not be entirely without some ultimate effect. What I would talter advert to at present is a phase of the question you have adombtated in your article of this morning's issue.

You there very truly say that it will be very unit the existing leased to do on the same terms and conditions as in the existing leased. This complainant and conditions as in the existing lease of the outer fifty millions?

You there very truly say that it will be very unit to exist the existing leased to do on the same terms and conditions as in the existing leased to do on the same terms and conditions as in the existing leased to do on the same terms and conditions as in the existing leased.

during the whole of the proceedings, but a gentle-man who said he was an agent of defendant's afterwards approached complainant with reference to some alterations which Mr. Maclean wished effect in the property. Complainant declined, both verbally and by letter, to allow these alterations to be made. Defendant's wife, however, afterwards be made. Defendant's wife, however, afterwards called on him, and he agreed to send his contractor to see what could be done, letting it be understood that he would have no alterations effected until the report of this official had been presented. The contractor reported that the alterations could him made properly and without spoiling the building; but that the wife of the defendant wanted them done very cheaply, and he could not guarantee them at that price. Complainant thereupon told the contractor to go back and say he could not allow the alterations to be and say he could not allow the alterations to be made. The contractor went twice or thrice to de-fendant's former residence, but could not find him, and he found out afterwards that they had already moved to No. 78. On February 7th complain-ant learned this, and also learned that defendant had engaged a Chinese contractor to make some alterations. He wrote to the defendant, and next day, hearing that some Japanese workmen had arrived, he went to No. 78, and found many rows of bricks in the walls of the outhouses removed, Whire he was looking at this defendant (whom he had never agent them have the consequence). had never seen throughout the transactions) came un. Words ensued between them, and eventually had never seen throughout the transactions, camp. Words ensued between them, and eventually defendant committed the assault complained of. He had since written a letter in which, while stating that complainant had fallen accidentally and discinining liability, he offered to pay any medical expenses to which he might have been put.

Complainant (whose evidence was partly given through Mr. Leopold Martinolich) gave evidence in corraboration of his advocate's statement as to

through Mr. Leopoid martination gave evidence in corroboration of his advocate's statement as to the circumstances preceding the assault.

Mr. McNeil questioned the selevancy of all this evidence, but His Honour thought it desirable that the based. The about noint raised here by evidence, but His Honour thought it desirable that it should be heard. The only point raised here by the defence was as to the word "modification" in one of complainant's letters, which were written in French. The complainant wote that he could consent to no "modification," and Mr. Lowder that the said that the said modification are not that the said that the said modification that the said modification is said to the said modification that the said modification is said that the said modification is said to the said modification that the said modification is said to the said modification that the said modification is said to the said modification that the said modification is said to the said contended that this word meant that he would consent to no alteration of the buildings. Mr. McNeil, on the other hand, argued that "ancom modification" meant "no modification in the terms of the lease."

Complainant, in answer to His Hunour's ques-tion, stated that what he intended to convey was that he would allow no alteration of the buildings.

As a matter of convenience the evidence of Dr. As a matter of convenience the evidence of Dr. Stewart Eldridge, medical practitioner, was then taken. He stated that he saw complainant on the 11th test. He found on the front of the left shoulder joint a bruise some 3½ inches by 3 inches, of such severity as as to indicate considerable violence in the inflicting cause. It might have been caused by a blow of the first, and had been inflicted at least 48 hours before. There was much discolouration, and some slight effusion of blood under the skin. The wrist had all the appearances of a sprain, and its condition would incanacitate complainant from manual labour. incapacitate complainant from manual labour. It would most likely be caused by the forced bending of the hand backwards.

ing of the nand backwards.

Cross-examined:—The appearance of the wrist
might have been brought about by complainant
putting his hand out to protect himself from a fall.

The injuries were of a kind to be treated by time rather than medically. The injury to the shoulder might have been caused by a fall on the ground, but it must have been under exceptional circum-stances; it would require a forward fall on some body like a stone or a short post of a size corresponding to the size of the bruise.

The Court at this point adjourned for tiffin. On resuming, the complainant continued his evidence, He said when he saw Mr. Maclean on February toth he asked him why he was demolishing the walls of the outhouses. Defendant said, " Get out, walls of the outhouses. Defendant said, "Get out, get out," in a very angry and threatening manner. Witness replied:—"This is my compound; I don't know why you denodish these outhouses." Defendant again said, "Get mut; get out. This is my compound. I do what I like." Witness said: "Then I must go to the Consul," and defendant replied, "I don't care; go to the d-1; get out." At the same time he struck witness with his fist. The blow alighted on his left arm near the shoulder, and witness immediately fell down, and in falling strained the wrist of his right hand. Defendant was standing on higher ground than witness when the blow was struck, and witness fell backwards. He was 63 years of age. Witness received a letter from defendant after the summous was served, stating that the affair was purely accidental, and offering to discharge any medical expenses that might be incurred. The letter at the same time disclaimed any repon-

sibility in the matter. Witness was positive that his fall was not accidental, and he was sure he did not strike his shoulder in falling against any stone or stump or other projecting surface.

stone or stunip or other projecting surface,
Mr. McNeil proceeded to cross-examine at great
length with a view to showing that complainant
was trespassing at the time of the alleged assault.
The Judge raised a point as m whether he had
judisdiction to judge as to title to land in a
case coming before him in his magisterial capacity, and after a lengthy conversation he decided
to adjourn the case for further argument on the point this morning.

#### TUESDAY, February 15th.

The case in which Adrien Deveze, a French citizen, charged Mr. Macleau, accountant of the Bloff, Yokohama, with assault, was resumed. His Honour adjourned the case on the previous

day for argument on the question whether he had jurisdiction to decide in a case of this kind as to a julisarction to accide in a case of this gind as to a title to land, the defence having suggested that complainant was trespassing at the time the assault was alleged to have been committed.

Mr. Lowder now admitted that the portion of

land on which the affair was stated to have occurred was under lease to the defendant, this being the point to which the cross examination of the previous day was directed.

His Honour intimated that Mr. Lowder's ad-

mission avoided the necessity for any further argument on the point, but he did not think that in any case the question of interest in the land need come before him.

The cross-examination of the complainant was then proceeded with. He stated that after his fall in consequence of the blow given him by defendant he rose again, and west towards Mr. Maclean. The Japanese workmen however, intervened and separated them—"to prevent fight." Mr. McNeit: Were you desirous of fighting? Witness: No, I am too old for that.

Witness afterwards went home, and consulted Mr. Jowder the same day. The cross-examination of the complainant was

Ir. Lowder the same day.
Mr. McNeil: What instructions did you give r. Lowder? Witness: I told him that if he could settle the

atter I would not bring the case into Court.
Mr. McNeil: What were the terms of settle-

ment you suggested?

Mr. Lowder objected that m question of this

NIC. Lowder objected that w question of this kind regarding a consultation between solicitor and client was inadmissible.

Mr. McNeil contended that there was no privilege on the part of a client enabling him to

decline to answer a question as to what passed between him and his attorney. His Honour ruled that the question might be

put, and complainant admitted giving instruc-tions to Mr. Lowder to write a letter (which was put in by consent). This letter stated that if the defendant would at once vacate the house there would be no question in Court, otherwise proceedings would be necessary. It also stated that the alterations to the house must be stopped

at once or an injunction would be asked for.

Mr. McNeil—You practically told him he must

Nr. McNeil—You practically told him he must turn out at once, or that an action of this sort would be brought?

Mr. Lowder objected on the ground that counsel for the defence was endeavouring to put a construction on the letter which it did not bear. It might be a matter which he was at liberty to argue, but it was improper to endeavour to elicit and the state of the sta such an answer from the witness.

After some argument the Court allowed the

question in be put.
The witness merely answered that his instructions were expressed in the wording of the letter—that there would be no question Court if the premises were vacated.

Mr. McNeil—As to this blow—were you wear-

ing a hat at the time ?- Yes.

ing a hat at the time?—Yes,

And will you show us how the defendant dealt
this peculiar blow—which "grazed your skull"
(while you were wearing your hat) and then
strick your shoulder?—I did not see the blow;

I felt it-(laughter).
In re-examination Mr. Lowder put in the defendant's answer to the letter written on complainant's

instructions. It simply stated that defendant had no intention of vacating the premises.

A Japanese coolie named Tojno Sojico was then called. He said on the day of the alleged assault he heard defendant speaking in a very loud voice, and saw him strike complainant, who fell backwards down some steps and struck his head. Witness assisted the complainant to rise, and defendant then seized Mr. Deveze by the arm, whereupon witness intervened and separated then with the assistance of another coolie.

Milke Sekichi, the second coolie referred to, gave coroborative evidence, and the Court then

After the interval Mr. McNeil addressed the Bench for the defence. He said he need not refer at length to the evidence tendered as to the cir-cumstances preceding the alleged assault, as he submitted that they were irrelevant to the charge. He contended that at the time of the occurrence complainant was a trespasser on ground which it had been admitted was leased to Mr. Maclean. He had no permission to be there and Mr. Maclean was justified in asking him to quit the premises, and, on his refusal, in ming sufficient force to eject him. Mr. McNeil then proceeded to review the evidence and the facts elicited in cross-examiestablished that the injury received by complainant was not due in fact to his having fallen down the steps first on his haud and then on his shoulder. Had Mr. Deveze been a British subject it was possible that there might have been a cross-summer. cross-summous, and defendant would then have been able to give his account of the affair on oath. As it was he would only be able to make a statement, and that statement he lioped His Honour would take into consideration. As for the letter which was written on Mr. Deveze's instructions offering not to take steps if defendant removed from the hance in the steps. from the house immediately, he submitted that that amounted to a highly improper threat, and that the action was brought in order to punish Mr. Maclean for his contumacy in declining to turn

out.

Mr. Macleau then road his statement, which was to the effect that he found Mr. Deveze interfering with his workmen, and as he would not leave the compound he (defendant) took him by his sleeve to eject him. Unfortunately Mr. Deveze slipped and fell backwards down the steps, and after he had falten rolled over and struck his shoulder against the stones at the history of the shoulder against the stones at the bottom of the steps. He then got very angry, and took a long stick with which he threatened defendant. Defen dant expressed regret that he had been hart. He solemnly denied that he gave complainant a blow. He had certainly thought that complainant had given his permission for the alterations to be done

until he got complainant's second felter,
Replying for the complainant Mr. Lowder commented on the fact that the serious assertions nontained in defendant's statement had not brought out in cross-examination. Even admitt-ing the plea of the defence that complainant was trespassing—which he disputed—it must be shown that defendant first gave sufficient warning, and that he afterwards used only such force as was actually necessary. Could the violent and heated that he afterwards used only such lorce as was acunally necessary. Could the violent and heated
expressions of the defendant be regarded as a
request to a trespasser to leave his premises?
These expressions were immediately followed by a
blow, and he (Mr. Lowder) submitted that abundant evidence had been adduced to show that that
blow was altogether more than a justifiable exertion of force for the purpose of ejecting a trespasser. The suggestion that the letter in which
Mr. Devers stated that he would not bring the Mr. Deveze stated that he would not bring the case into Count if defendant would quit the house was in any way a threat was, he submitted, unten-able; it was perfectly natural that Mr. Deveze should not care to come into Court in such a matter and should me willing to let bygones be by-

gones if he could get rid of so unruly a tenant.

His Honour held that the evidence of the prose-cution was in the main unshaken, and fined defendant eight yen and 40 yen costs.

#### CHRIST CHURCH, YORUHAMA.

MESTING OF SUBSCRIBERS

MERTING OF SUBSCRIBERS.

The annual meeting of the seal-holders and subscribers of Christ Church, Yokahama, was held yesterday afternoon, when Mr. J. Walter presided, and there were also present Messrs, E. Whittall, E. J. Moss, V. R. Bowden, and H. J. Sharp. \*

THE ANNUAL REPORT.

The report was as follows:—The Committee of Christ Church, in placing their annual report and accounts before the subscribers and seat-holders, have to state that for the year 1807 the total results.

have to state that for the year 1897 the total results are slightly more satisfactory than for the previous year, there being a credit balance of \$112.46 to carry forward, as against \$67.09 brought forward

Pewstents are in advance of last year by about \$300, this increase being mainly due to the rates having been raised by order of the Trustees on and from the 1st January last, to those originally changed, and partly owing to an increased number of the partly owing to an increase of the partly owing to the partly owing to an increase of the partly owing the partly owing to an increase of the partly owing to ly charged, and partly owing to an increased number of sittings having been let. The total offertories, inclusive of special ones, show an increase of \$40 as compared with the previous year, though the actual recentle derived by the Church from this source is, as indicated below, \$24.29 less. Notwithatanding the larger revenue derived from pew-rents, the income is still inadequate in cover

Digitized by Google

S. P. G. Missions during the year, amongst poor people in shape of food, clothing, medicines, Offertories at the children's afternoon services remitted to Dr. Barnardo for the benefit of his Homes 149.41 76.99

\$471.99 Deducting this amount of special offerturies from the total sum received, there remains a balfrom the total sum received, there remains a hal-ance of \$908 50, which is the amount of revenue derived by the Church from this source, being less by \$24.20 than that obtained last year. The Officiories on the first Sunday in each month is employed by the chaplain to meet the pressing needs of pour people, and much want and suffer-ing has been relieved by the judicious distribu-tion of this money. tion of this money.

Repairs to the Church and Parsonage, consider-

Repairs to the Chirch and Parsonage, considering the age of the buildings and the severity of the typhton experienced on the 9th September last, which caused some damage, have not been very heavy, amounting to \$350.24.

A special Committee of British residents has been appointed to make a general appeal to the friends and supporters of Christ Church for funds, for the appears of the chirch for funds, friends and supporters of Christ Charch for funds, for the purpose of rebuilding the Charch, the present structure, being built of tiles and plaster and over thirty-seven years old, is in a most tussifisatory condition. A generous response has been made to this appeal, and over \$11,000 have so far been autocided.

During the year 253 services have been conducted in Christ Church, and in addition eleven marriages, 18 baptisms and 12 funerals have been solemnized in the Church.

The number of communicants present at the celebrations of Holy Communion were 648.

The sincere thanks of the Trustees and Com-

The slicere thanks of the Trustees and Committee are due to the bon, organist, Miss Leach, and to those ladies and gentlemen who have so kindly assisted in the Choir. Mr. James Dodds having resigned his position on the Committee, awing to his departmention Japan, Mr. Cecil Gunness was invited to fill the vacancy, which he kindly consequent to do.

being to its repairs that justing all the vacancy, which lie kindly convenied to fill the vacancy, which lie kindly convenied to do.

Mr. J. A. Fraskr having also left Japan has resigned from the Committee, but owing to the near approach of the Annual General Meeting, it was not deemed necessary to temporarily fill the

vacancy.
The Committee beg to acknowledge the receipt The Committee beg to acknowledge the receipt from an anonymous donor, of a pulpt cover, kindly presented through them to this Church, James Walter, Chairman, J.A. Fraser, E. J. Moss. Crell Guinness, K. Wilson, Hon. Treasurer, Cr.

KENNETH WILSON.

Hon. Treasurer, examined the Accounts with the Vouchers and find them correct B. GILLETT.

(Signed) Yokohama, 31st December, 1893.

The CHAIRMAN, in opening the meeting, stated that he was sony to see so few seat-holders present. He was afraid the day being a public holi day, was inconvenient to many, but the Committee found it impossible to scenre the room on any other day which would be convenient to seat-holders and also to the Committee. Turning to the account. day which would be convenient to seat-holders and also to the Committee. Turning to the accounts, they would notice that there was a balance in their favour of 112 dollars odd, and that was so far actisfactory, as they frequently had to face a deficit. He was, however, alraid that they would have to appeal for extraineous aid to cover the current expenses during the ensuing year.

Mr. WHITTALL proposed, and Mr. Moss seconded, the adoption of the report, and the groposition was carried.

tion was carried.

#### ELECTION OF COMMITTER.

On the proposition of Mr. V. R. Bowden, seconded by Mr. H. J. Sharp, the Commuttee disavow Senor Delome's letter.

was treelected, with the substitution of Mr. Dadds for Mr. Cecil Guinness, who is retiring, and with Mr. William K. Wilson in the place of Mr. J. A. Fraser, who has gone home.

The Chairman proposed a vote of thanks to Mr. K. Wilson, the Hou. Treasmer, and with this the formal proceedings terminated.

America has sent a demand to Spain to disavow Senor Delome's letter.

RUSSIAN TROOPS SAIL FOR

VLADIVOSTOCK.

The Russian auxiliary cruiser Tamboff has left Odessa for Vladivostock with a thousand troops on board.

the formal proceeding's terminated.

THE REDILDING PUND.

Mr. E. J. Moss mentioned as a matter of interest to seat-holders, that with regard to the fund for the rebuilding of Christ Church 11,871 year had been promised, and of this 7 653 year were already in the Hongkoog and Shanghar Bank, where so-

terest to the extent of tot pen had accused.

M. Sharp-It is over 12,000 yen now.

The Chairman-And I believe there is likely be a considerable increase in subscriptions alior thy.

a) Kt to R 4 is much superior.

(h) An attacking move, but Kt Q 2 is safer.

(c) We do not recommend this against such at

(d) Best. Black has no satisfactory line of play.

Weak.

(g) ...... (h) ......

(!) \*\*\*\*\*\*\*\*\* (ni) White here announced mate in six-moves, (The reader may imagine any amount of = Dry-asdust? analysis following each of the above

addist analysis following each of the above notes),
(a) The chivalions Knight turns from his lowly fee and challenges one of his own size, is immediately slain and as quickly avenged. He might have retired discreetly and with propriety to R 4, and so have lived to fight another day.
(b) The White Commander now sends out skirmishers, and in doing so sacrifices a battahon. Had he been less of a strategist he would have Had he been less of a strategist he would have

rad he been less of a strategist he would have advanced his temaining Knight to Q z.

(c) Black has yet to learn that a speat is not a fair exchange for a mackerel, that "Giveum's" dead and "Lend-um" is very bad.

(d) He feels now particularly at case and pro-ceeds to awaken the enemy from a deep dream of

peace,

(e) "There's small choice in rotten apples,"

peace,

(e) "There's small choice in rotten apples," which, being interpreted, signifies that Black must lie down on the hed he has made for himself.

(f) This amiable and considerate procedure—yelept, playing your opponent's game—is good when you haven't one of your own to play.

(g) This appears to threaten a good deal; and White gives it his immediate attention on the ground that it is as well to be civil, as the old woman said.

(b) He is evidently not much frightened, though e makes baste to get out of his way.

(i) And now the commander-in-chief has to shut

his umbrella and take the field on his own

(j) He is not the first to find out that though (1) The is not the max to more our that rounge, war is the sport of kings, only one of them langhy.

(k) He springs forth in time to avert a certain defeat in four or the loss of his Royal Mistress.

(l) The King retires into his corner to laugh, offering thereby to his opponent the cup of Tan-

offering thereby to his opponent the cup of Tautahus filled with the legacy of Philidor.

(m) The cup is smashed in sheer disgust and desperation and White then proceeds to bring the encounter to a conclusion in a very artistic way, announcing mate in six, as follows:—23—R takes K ch; 24—B to B 4 ch; 25—Q to B 7 ch; 26—Q takes Q ch; 27—Kt takes P ch; 28—Q to Kt 5 mate.

THE ZIG-ZAG PUZZLE. The following puzzle is taken from the Philadelphia Times :

The Pawns are immovable. Move the five pieces so that the King can reach the square that is now vacant. The King must not, however, at any time move to the centre square, and the pieces must be moved according to the laws of Characteristics. Chess governing their movement.

There is very little style about chess. It gives There is very little style about class. It gives a man no opportunity to balance himself on one leg, lean half over a green table, and jab a real ivory ball with a cue held across the small of his back. There is no running the first base, or going over three fences to find a ball in Chess; and there is no ball's eye to hit—which are disadvantages, in a way. Then, a mean, little six by-nine man, with a bulging forehead and a watery eye, and spectacles, can whip a man twice his size, which is an anomaly calculated to disturb the equilibrium of nature.—Hartford Times.

Pillsbury and Showalter have arranged to play a match for the championship of the United States. Stakes will be \$1,000 a side. Play was to commence in the first week of February

We learn from the Singapore Free Press that the members of the local Chess Club were recently divided into four classes for Touranient and other purposes. At the same time a challenge system—similar to our "Cleland Ladder"—was tatioduced which is producing good results. As at present acranged class A comprises eight and class B seven players, which tends to show that the Singapore Chess Club is now quite strong and going well, although still in its first year.

At the Yokohama Chess Club no games of any importance were played during the week. On Thursday next the Secretary will arrange a Consultation team game, when we hope a large number of members will turn up.

#### THE TORYO CHESS CLUB.

The appointment of the Rev. W. F. Madeley to the Mission at Himself makes another gap in the fighting strength of the Tokyo Chess Club. Mr. Madeley was entertained at tiffin on Friday last in the Imperial Hotel by the members of the Club, when the Ven. Archdeacon Shaw, President, accopied the chair. Mr. Madeley played in the first two matches with the Y.C.C., coming off with sound homeurs on both accasions. equal honours on both accasions.

#### LATEST COMMERCIAL.

#### IMPORTS

There has been a fairly good business transacted in grey shirtings and something in yarns, but fancy cottons and wooliens remain very dead. In new cotton a considerable business has been done and prices, both for American and Indian, are recovering from their recent depression.

#### THE GREATEST WONDERS OF MODERN TIME

#### HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be main ained by the use of these Pills,

penny can be maintained by the use of these Pills,
Sis Samuer Bares, i. his work entitled "The Nile Tribest
aries in Abysinia," asys—"I ordered the dragoman Mahome
to inform the Falir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice grains. In I
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistabable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

#### HOLLOWAY'S OINTMENT

is a certain enody for bad legs, bad breasts, and miterations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Ma. j. T. Cooven, in his account of his extraordinary travels in China, published in 1871, 1878—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk\_lowin, butter, and horse feed poured in upon us, until at last a teaspoontial of Oittment was worth a fowl and any quantity of pees, and the demand became so great that I was obliged to lesh up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World

May 1st, 1890.

I HE Tai Won-kun, the father of the Emperor of Korea, is dead. On the 22nd an attempt was made to assassinate Kim Hungyuk, a leading Russophile politician of Korea.

A SEVERS northerly gale was experienced in Yokohams on the 22nd instant. One of the yachts in the harbour broke adrift and another sank at her moorings ; but neither were seriously damaged.

An accident happened at Shimbashi on Wednesday to the Abt railway engine imported from the United States, which came into collision with a luggage van, with the result that the latter was derailed and capsized.

THE trial of Nagai Yoshito, the man charged with the marder of the British seaman Kennedy in the native town, Yokohama, on the 17th Sept. last, opened in the Local Court on the 24th inst. and was further adjourned.

A REUTER telegram from Akkasa, West Coast of Africa, on the 22nd inst., stated that two French expeditions were advancing on Sokoto, within British territory. A semi-official note published in Paris denied the truth of the statement.

A RIOT has taken place at Simar in the district of Nasaik, Bombay, in connection with the measures taken to combat the plague. A hospital attendant was killed and the isolation camp burnt. The troops fired on the rioters and many were killed.

A NEW treaty between Gre # Britain and China is reported from Peking to have been signed, by which Yo-chow, in Honen, is to be opened to commerce two years hence, the rivers and lakes in the interior to be opened to steams navigation within four months; and the districts bordering the Yang taxe to be inviolate from cession to any other Power.

The Import market during the past week can scarcely be characterised as brisk, although a fair business has been transacted in certain Yarns show an upward tendency and there has been a moderate demand for most descriptions. The sales of grey shirtings, which were very considerable last week and the week before, have fallen off, the immediate demand having been supplied, while no business whatever is reported in fancy cottons and woollens. Metals generally are looking up a little and a fair amount of business has been done at reduced prices. The slump in kerosone still continues; prices have continued to fall until the last two or three days, when a rather firmer tone prevailed in the market. Transactions however have been very small and stocks are accumulating. The total import from January 1st. to date amounts to 449 286 cases American, 205.539 cases Russian and 40,450 cases Laughat. In sugar, considerable sales have taken place in Manila brown, and the stock is cleared out. Some business has also been done in China sorts, but nothing in Formosa or in white refined. Imports of Rangoon and Saigon rice have been heavy. During last month no less than 799,159 piculs of foreign rice were imported, against exports of home grown grain of 37,838 piculs. In Exports there has been a very moderate husiness trans-acted in raw silk, the high prices asked and the small stock of silk of a desirable quality remaining militating against any further large transactions. The dealers and producers however may congratulate themselves on a very successful season so far. The tea market is practically closed. No sales have been reported during

SPIRIT OF THE VERNACULAR PRESS.

There are some romantic but not very profound publicists in Japan who urge that neighbourly kindness should induce this country to accede to China's request for an extension of the time for paying the remainder of the Indemnity. Such persons show little knowledge of the situation. An act can not be called "kind" unless it confers some advantage on its subject. If it be neither beneficial nor profitable to the other side, is ceases to be a kindness and becomes an injury. That is the case with regard to postponing the payment of the Indemnity. If China were actually unable to find the money, or if she could not find it without making hurtful sucrifices, the question would assume a different complexion. But she can easily procure the necessary funds. European States are only too willing to minister to her wants, and if she does not take advantage of their offers, it is because she can not shake off her narrow conservatism. On the other hand, to defer the discharge of her liabilities is a heavy loss to her. In the first place, pending the payment of the whole Indemnity, she has to suffer the national humiliation of Japan's occupation of Wei-hai-wei. In the second place, she has to contribute a sum of five hundred thousand taels yearly towards the expenses of the occupation. In the third place, she has to pay interest at the rate of 5 per cent.
on the undischarged partions of the Indemnity. Five per cent, is a reasonable rate in the East, but a very high rate in Europe. China can obtain the means of discharging her debt on much easier terms. Moreover, by paying off the remainder of the Indemnity MI once, she can effect a saving of many millions of yest. It is not at all to her advantage that Japan should assist her to procrastinate. Such in the gist of an article in the Nichi Nichi Shimbun.

\*\* \*
The Yomiuri Shimbun publishes an extremely nebulous article with regard to this ques-tion of the Indemnity. It sets out by stating that the vital problem is to determine what course Japan shall pursue in the event of China's declaring her inability to pay the next instal-ment at the appointed date, but, instead of attempting to solve that problem, it drifts off into a vague accusation that the great difficulty is the want of any definitive Ministerial policy towards China. Considering that the present Cabinet has been only six weeks in office, and that no questions have occurred to test the quality of its policy towards the neighbouring empire, one in led to expect that the Yomiuri will advance some proofs in support of its indictment of the Government's attitude. But no obligation of that kind is acknowledged. We are merely told that the positive policy of the last Cabinet has been changed into a negative, and that the In-demnity question descends to a secondary rank of importance compared with the fundamental consideration of the Cabinet's general intentions.

The Nippon discusses the same subject but arrives III the conclusion that the question is one of foreign policy rather than of finance, and that Japan should grant China's request for the sake of the improved relations that such a course would bring about. The Nippon has always been a strong advocate of reducing the programme of military expansion, and it finds in this matter a fresh argument to support its case. for it contends that if Japan had not pledged herself to unproductive expenditures on such a large scale, she would now be in a position not only to discharge her duty towards her neighbour duty imperative in the Nippon's eyes as to call for recognition even at the cost of cutting off one's own flesh to succour the suppliantbut also to head the breach in an international friendship which ought to be of the closest character. It is admitted by the organ of "Young Japan" that the Indemnity forms the basis of the Government's post-bellum programme, and that to postpone the payment of the remaining portion—over 100 million yen—would dislocate the programme. Naturally the Ito Cabinet, which is responsible for the programme, cannot of loanse, be resorted to with greater ease in fully design and which are universe, be resorted to with greater ease in fully design and which is programme, cannot of loanse, be resorted to with greater ease in fully design and which is programme.

UNIVERSITY OF ILLINOIS AT

easily reconcile itself to any radical change. But it must be remembered that the same Ito Cabinet, when submitting the programme to the Diet, declared that the national strength could easily support such burdens, and that the revenue of the State possessed a large residudm of elasticity. If that be so, there should be no difficulty in making such arrangements as would enable the Cabinet to accede to China's request at the present juncture. But unformnately the finances have been embarrassed ever since the post-bellum programme came into operation, a fact plainly proving that the esti-mate of its drafters was laulty. The situation now is that owing to the Government's persistence in over-burdening the nation's financial strength for the sake of organizing excessive armaments, Japan is precluded from performing an act of neighbourly courtesy, from cementing a close friendship with China, and from guaranteeing the Middle Kingdom against the dangerous contingencies connected with incurring further pecuniary obligations towards European Powers.

\* \*

The Hochi Shimbun is entirely opposed to the idea of granting China's request. It takes the general ground that legitimate obligations should be punctually discharged, and the particular ground that no real impression could be made upon China by such a concession. The Chinese have doubtless come to fear the Japanese, but their dread has not replaced, it has rather supplemented, their old sentiments of distrust and contempt. They would not interdistrust and contempt. They would not inter-pret a postponement of the Indemnity payments is an act of friendship; they would regard it rather as a sign of weakness. At any rate their gratitude would not go far towards securing their friendship. Another point is that one of the most essential means of winning China's good-will is to make her understand Japan's mond. The imposition of an indemnity of 200 million taels and the acquisition of territory in Manchuria — subsequently exchanged for a money payment at the instigation of the three Powers-were conditions suggested, in part, by the hope of rousing the huge empire from its sleep and making it enter the path of progress. It is important that the Chinese should clearly appreciate that sentiment. To remit the Indemnity now, so soon as its payment becomes irksome, would be an indication that Japan had departed from her original purpose in imposing it. But the main point is that the concassion would not have the practical effects claimed for it by its romantic advocates—it would not win Cuina's good-will.

It is alleged that the Government contemplates certain changes in the Law of Election, the principal points of the new programme being to extend the franchise, to widen the limits of electoral districts, and to increase the number of members. At present a man must have reached his 25th year, and must be paying direct national taxes aggregating 15 yes in order to possess a vote. Out of a total population of 42,270,000 the number of males from 25 years upwards is 16 millions, in round figures, and the number of these that pay the required amount of tax is only 510,000; which total is reduced, from various causes, to only 460,000 of actual franchise holders. Hence it must be said that the Japanese Lower House represents the minority, not the majority of the nation. Very different is the state of affairs in Western constitutional countries. In England for example, out of a total population of 38 millions, no less than 6,400,000 have the franchise; in Italy, 2,220,000 possess it out of 28 millions; and in America and France every male of over 21 is a potential voter. The Goverument's idea is to lower the age to 20, and to reduce the property qualification so that have the franchise. Extension of electoral dis-tricts is also considered necessary, not merely for the sake of securing the return of candidates possessing more than a mere local reputation,

proportion to the smallness of the constituency. In some respects the ideal system would be to have the whole body of electors throughout the empire vote for the candidates en masse, but that plan would be attended by one disad-vantage, namely, that the men returned would in most cases have no knowledge of the condicions existing in special localities. bable, therefore, that the limits of the Prefectures and cities will be the bounds of the electoral districts in the reformed system. The number of members, 100, will be increased, it is said, to about 500. The Jiji Shimps gives this information, and expatiates on it at some length, predicting that it will afford naiversal satisfac-

The Kokumin Shimbun also writes about the Law of Election and arrives at the conclusion that although the present House of Representatives includes some men worthy to be called leading publicists, it can not be regarded as an assembly of the nation's best intellects. On the contrary, one may say without violating the trath, that the members are, on the whole, mediocrities. Many of them, indeed, do not reach that level. The agricultural class is largely represented, but scarcely any members are returned in the manufacturing and inercantile interests? The fault lies primarily with the The fault lies primarily with the Law of Election which, by prescribing that a candidate must have certain qualifications in the district for which he is elected, limits the shoice of the electors to men of local reputation. Further, the smallness of the constitueucies creates easy opportunities for corruption, and there can be no doubt that not a few persons are returned simply by means of money. It is, of course, too late to effect any reform of the Law in time for the purposes of the general election now pending, but the subject demands early attention if representative institutious in Japan are to be useful and honoured, while, the Kokumin arges the constituencies to return men who will be a credit to the country.

If the spirit of international amity alone could be consulted, says the Miyako Shimbun, Chion's request for the postponement of her obligations in the matter of the indemnity ought to be grant-ed. But Japan's interests forbid such a course. The question demanding consideration, therefore, is the procedure to be adopted in the event of China's declaring her inability to pay the installment due in May. There is the precedent that Japan remitted a part of the debt due to her by Korea, and there is the precedent of the method pursued by European States in the case of the Turkish bonds. But those incidents relate to fcountries possessing greatly different ranks. No instance of such procedure is to be found among States of equal status. It will be a profound disgrace to China if she can not discharge her obligations. On the other hand, how is Japan to compel her to do so? Weihai-wei is held as security. In the event of China's failure to pay her debt, that fortress will become Japan's permanent property. But there are many reasons is doubt whether such a consummation would issue to Japan's benefit. To say nothing of sacrifices of men and money required for maintaining the place, there is the important consideration that by the taking of a position upon the Asiatic Contiment, Japan becomes unavoidably a party to all the incidents of which the Far East is evidently about to be the theatre. If the Government has made up its mind that her destiny points in the direction, well and good. But it is a question of immense moment,

Two American marines were drowned at Colombo while attempting to swim ashore from the U.S. cruiser Raleigh. It is supposed that the U.S. cruiser Raleigh. It is supposed that they attempted unsuccessfully to land on the breakwater, and became exhausted in awimming back to the ship. The bodies were recovered some days later, one in a mutilated state, and were buried with military honours. Two men jumped over-board and made an unsuccessful

#### FINANCIAL POLICY.

Conjectures and theories are formulated in plenty by the vernacular press with regard to the Cabinet's financial policy, one writer attributing to the Government an intention to augment the taxes, another alleging that it intends to resort to a foreign loan, and a third suggesting that signal reductions of the military expansion scheme are on the tapis. We do not think that credence can be attached to any of these forecasts. From what we have been able to learn, we judge that the Cabinet's programme has no heroic features. Its foundation is a simple, straightforward endeavour to make ends meet, pending the time when the co-operation of the Diet can be sought. It might be supposed that as the Diet assembles in May for an extraordinary session, a financial scheme could then be submitted for parliamentary approval. But even assuming that suffi-cient time were available to complete the necessary investigations—and there is not sufficient time—, the difficulty would remain that a new Budget for 1898-9 is The fiscal now out of the question. year begins on April 1st, and the Budget having failed to "come into existence," nothing could be done except to follow the Constitutional routine and adopt last year's Budget. Strict economy is, therefore, the order of the day, and the principal object to which the Minister of Finance is devoting his energies is retrenchment in all possible directions. Any measures in the nature of increased taxation, or a foreign loan, or a large change in the military expansion scheme, can not be regarded as having entered the field of immediately practical politics. The Government can scarcely hope to adhere strictly to the lines of last year's Budget. There will inevitably be some "supplementary budgets " for presentation to the Diet next December. But the aim of present efforts is to obviate any such necessity as far as possible. We look for a very quiet, uneventful time in the realm of finance during the remaining ten months of the year.

#### FOREIGN JOURNALS IN JAPAN.

The Hiogo News writes :-

The Mail seems to pretend that the absence of express stipulations in the Trauties against foreign journalists, although the stipulation in the Jap-anese Pless Law is explicit enough, ought to satisfy every one of the Government's benevolent intentions, and of the absolute reliance to be placed thereon.

Of course we have never "pretended" anything of the kind, or anything even remotely resembling it. But in truth we are weary of the whole subject and our readers must be still wearier. It has served merely to afford another illustration of the besetting incapacity of some of our local contemporaries to attribute sincere motives to any person disagreeing with them. "The Japan Mail and the Japan Times," says the Hiogo News, "have engaged in eager rivalry for the better bliading of foreign residents upon the points of the controversy; that they had any hope of blinding the foreign editors them-selves we can scarcely believe." Inevitable as is the inference suggested by such perennial attribution of dishonest motives, the Hivgo News and other local journals habitually expose themselves to it. They are to be pitied.

#### JAPAN AND THE INDEMNITY.

There is a considerable leaven of romance in the mass of Japanese journalistic opinions on the subject of the Indemnity. The old spirit which impelled the Samurai to be magnanimous almost to the extent of complete indifference in money matters, still animates the nation, and there can be no doubt that it would afford the Japanese keen satisfaction to remit the remainder of China's debt and give her a final quittance. Happily such ideas are modified by practical considerations. Were a policy of leniency in this matter likely to secure China's friendship, there might be a tolerably solid basis for discussion. But if anything be certain it is that a concession of the kind would produce no appreciable moral effect upon the Chinese. Seeing that such shocks as a signal defeat in war at the hands of a hitherto despised little neighbour, the loss of an important and valuable island, and the necessity of paying a large indemnity failed to make China's national pulse beat perceptibly faster, is there any reasonable prospect that to be relieved from a portion of her indebtedness would materially alter her mood towards Japan? All information goes to show that the bulk of the nation and even the Peking statesmen themselves remain practically insensible of the catastrophes that overtook the empire in 1894-5. It is true that in Amoy the average Chinaman has lost morale since the war: he is said to be less enterprising and less self-respecting than he was previously. But Amoy has constantly the object-lesson of Formosa. The provincial Chinese may be entirely ignorant of their country's mishaps, or may be splendidly confident that, whatever idle rumour affirms, mishaps can never have overtaken the great Middle Kingdom.
To the people of Amoy, however,
the hard, unmistakable fact presents
tiself, that China has been despoiled
of Formora and that said attention of Formosa, and that each attempt to drive the Japanese out of the island ends in seating them there more firmly. Amoy is a case apart, and it may fairly be said of the Chinese people at large that the results of the war left them quite unperturbed, and that the remission of a national debt of 83 million taels would produce about as much permanent effect upon their mood as two for three days' dought at a season when rain was desired. In so far, then, as international effects are concerned, Japan need not take the remission of the Indemnity into serious consideration. Ontside Peking there would be no knowledge that an act of magnanimity had been performed, and in Peking it would be taken for granted that had Japan felt herself in a position to assert her rights she would not have waived them.

#### THE VERNACULAR PRESS AND THE CABINET.

Vernacular newspapers have hitherto maintained a studiously reserved attitude towards the new Cabinet. There has, indeed, been no material for criticism. At first some journals showed a disposition to cry out because the Ministry made no announcement of policy. But the unreasonableness of such a complaint was confined pending trial, were of a nature soon recognised. Declarations of policy are not made by Cabinets when assumporary. We suspect that such abuses are

index of its policy; no one thinks of asking for anything more. A question is now coming upon the tapis, however, which promises to set pens in motion. It is the attitude of the Government towards polical parties after the general elections. Will the Cabinet ally itself with the Liberals or with the Progressists? ought not to be much doubt upon the subject, one imagines, but not until now do the Progressist organs seem to have made up their minds that the union will be with the Liberals. On that hypothesis predictions calculated to shake public confidence in the Ministry are beginning to be founded. It is suggested, for example, that Count Inouye does not intend to retain the portfolio of Finance longer than until May, when he will resign, in order to make a place for Mr. Hoshi Toru, the latter's inclusion in the Cabinet being necessary to secure the support of the Liberals en bloc. According to this theory, Mr. Komura, the present Vice-Minister of Foreign Affairs, would succeed Mr. Hoshi in Washington, being himself succeeded at the Foreign Office by some "diplomatic official of the American Party," whatever that may mean. Little credit can be attached to such forecasts, we think. Their purpose is to suggest ministerial instability.

#### PRISONS IN JAPAN.

There has been much talk for the past twelve-months about the necessity of effecting special improvements in Japanese prisons with a view to the incarceration of foreigners who may be arrested by the police after the Revised Treaties go into operation, and it is understood that measures have been taken in the desired sense. Japanese public opinion seems to have been almost unanimous in approving of discrimination. A few voices were raised, indeed, on behalf of equality of treatment. But, as was pointed out in these columns at the time such "equality of treatment" meant, in fact, flagrant inequality, for conditions as to food, clothes and accommodation perfectly tolerable to a Japanese, might be almost unendurable by a European or an American, and it would thus result that the punishment of being imprisoned in a Japanese jail, more Japonico, would be many times more severe for a foreigner than for a native. That view of the question was entertained by Japanese official-dom, and has been, or is being, translated into action. The difficulty in dealing radically with the matter is that the expenses of the provincial jails are de-frayed from local taxes, and the nature of the accommodation provided for prisoners depends, consequently, upon the appropriations made by the local assemblies. The central prisons (shuji-kan) are under the control of the Government. There are five of these establishments, namely, in Sapporo, Sendai, Tokyo, Kobe and Miye. They are spacious buildings, offering every facility for steps such as may seem necessary for the proper accommodation of foreigners. But the provincial jails stand, for the most part, on a different plane. The Kobe Chronicle, in a recent issue, published an interview with a Japanese whose experiences, while Ministry's legislative measures are the Original flighted, as a rule, to tax them-

selves for the purpose of providing com- anti-foreign literature. Evidently the out the empire ought to be undertaken by the Central Government. Such used to be the case, indeed, until comparatively recent times, when financial stress suggested the expediency of transferring to each locality the charges incurred in connexion with its law-breakers. But the desirability of reverting to the old method has long been recognised, and a law in that sense will, it is understood, be submitted to the Diet at the close of the year. We have heard that some discussion took place in official circles as to whether accommodation for foreigners in the central prisons alone would suffice, or whether provincial jails also should be equipped for that purpose, and that the decision was in the latter sense. It will be seen from what we have written that the problem has long been under consideration. Elaborate reports upon the condition of Japanese prisons and the manner of treating prisoners were compiled by officials of Her Britannic Majesty's Legation and forwarded to the Foreign Office in London before the negotiations for Treaty Revission had entered their final stage. In fact, like all matters that have any important bearing upon the interest or welfare of British subjects, the question of foreign prisoners in Japanese jails after the abolition of Consular Jurisdiction, attracted the attention, and received careful investigation at the hands of English officials long before either journalists or the public at large paid any heed to it.

#### GREAT BRITAIN AND CHINA.

· The telegraph brings circumstantial intelligence from Peking that a convention was concluded between Great Britain and China on the 20th instant, and that the principal conditions are the opening of Yo-chow to foreign trade within two years, the granting of facilities, within four months' time, for the navigation of inland waters-lakes and rivers-by steamers, and the giving of a guarantee that no part of the Yangtsze Valley should be ceded to a foreign Power. In the advantages accruing from the first two conditions, all the world will be entitled to share equally with England, and the third is in accord with Great Britain's undeviating policy to the explosion was accidental and that the secure the neutrality of the districts ship is a total loss. It appears probable, watered by the Yangtsze, and to prevent their acquisition by any State which would be likely to bring them within the purview of a protective policy. Yo-chow is a town of some importance in Honan province. It stands on the right bank of the Yangtsze, where the great river bends southward to the head of the Tungting lake. It possesses historical interest as the place where the Taeping rebels first reached the Tangtsze in 1852, after their failure to capture Changsha, the capital of the province. We are not aware that Yo-chow offers any special commercial advantages. The importance attached to its opening is doubt-less due to its being situated in Honan, a moshinations are not responsible, as was Taeping rebels first reached the Yangtsze province supposed to be the cradle of Chinese conservatism, and well known to students of contemporary annals for the sake of its chief city, Changsha, where the fact that the U. S. Consul, Mr. Lee, had to construct the line, but that England is notorious Chow Han used to preside over made application for an increase of force to build it, just as Russia is to build the the manufacture of anti-Christian and to protect American interests.

forts for criminals or suspected criminals. Chinese Government regards the opening That kind of obligation is one of the last of Yo-chow as a feat attended by considerto receive ready recognition. It cannot able difficulty, and it would seem that be questioned that the control, manage- Her Majesty's Ministry share that view ment and equipment of prisons through- since a term so lengthy as two years has been demanded and conceded for purposes of preparation. The steam navigation of inland waters means of course, waters communicating with places open to trade. It is an important concession and has long

> Our readers may suppose that the conclusion of this convention is to be taken as an evidence of an arrangement for placing a Chinese loan upon the London market. But there do not appear to be any grounds for such an inference. At all event no official intelligence, so far as of Yunnan, the British sphere-the term we can learn, has been received of any further negotiations relating to a loan. On the contrary, China seems to have definitively fallen back on her domestic resources to obtain the balance of the Indemnity due to Japan.

#### THE LATE PRINCE AKIRA.

His Imperial Highness Prince Akira, better known as Prince Yamashina, who died in Kyoto at 4.40 a.m. on the 17th instant, was the eighth son of H.I.H. Prince Fushimi, and was born on May and, 1816, being thus in his eighty-second year at the time of his decease. He was adopted by the Emperor Komei, and in 1864 he changed his name to Yamashina. When the Administration was organized in 1867, he became a Councillor of State, to which office was afterwards added that of con-trolling the conduct of foreign affairs. He did not take an active part in the Administration, however, but retired to Kyoto, where he spent the last twenty years. His malady appears to have been of a complicated character, but liver trouble was the proximate cause of death. His Imperial Highness' heir is Prince Kikumare (Nashimote no Miya) who is now serving as a Second Lieutenant in the infantry of the Fifth Division. Court mourning for five days from the 17th instant, and public mourning for three days, have been proclaimed.

## THE "MAINE,"

The first intelligence telegraphed to Japan about the U.S.S. Maine has been supplemented by news to the effect that therefore, that the men were engaged shifting ammunition, and that the bursting of a shell had the effect of blowing up the magazine. The Maine has hitherto been spoken of as a cruiser, but she was a battleship, as her name indicates, all vessels called after States being battle-ships in the American Navy. Her complement seems to have been 374 of all ranks, and, as the telegram speaks of 255 being lost, it may be presumed that the remainder were either ENGLAND IN SOUTHERN CHINA.

We often hear it said by Englishmen in the Far East that Great Britain does not know her own mind and that no continuity can be detected in her policy towards China. But it seems to us that for the past fifty years she has pursued the same course undeviatingly, and that recent events indicate very clearly the goal towards which she directs her steps. been desired by enterprising men in the Before the absorption of Burmah into her Far East. said to have been the provinces on the south-eastern coast of China from the mouth of the Yangtsze to Canton, but after the acquisition of Burmah and the resulting project of railway extension from the Burmese capital to the chief town is most objectionable but we use it, faute de mieux, in its most restricted sensereceived a natural extension so as to include the whole section of China lying south of the Yangtsze. It is true that the continuation of the Burmah railway into Chinese territory has been long delayed, but marked emphasis was given to Great Britain's view of the situation when, during the China-Japan war, she sent a squadron to guard the Yangtsze and to guarantee the neutrality of that great water-way, as well as of the rich pro-vinces traversed by it. Further, although railway extension from Burmah has been deferred, the British Government has utilized the delay to secure the navigability of the Yangtsze and the opening of the West River. These statements may not convey much significance to a reader unacquainted with the geography of China, but the situation will be readily understood when we say that, valuable as would be the tradal result of railway access to Yunnan, the ultimate purpose of connecting that province with British India vid Burmah is to establish overland communication with Shanghai and Canton, for which purpose the two great rivers, the Yangtsze and the West, are essential. The Yangtsze actually flows through Yunnan, but its upper reaches are not fitted for steam navigation. Ichang is the farthest point easily accessible by large vessels, for though the river above Ichang as far as Yungching is not actually useless for steamer service, its rapids constitute serious obstacles. If the Bhamo-Yunnan-fu line were pushed on to Ichang, Great Britain would have an overland route by rail and river from India to the China Sea. The West River also flows from Yunnan to Canton, but the same remark applies to it as to the Yangtsze; it is not easily navigable above Pih-se-fu in Kwangsi, to which point the Burmah-Yunnan railway would have to be carried. It thus becomes apparent that the extension of the Burmah railway into Yunnan practically means the overland connexion of Shanghai and Canton with India, so that while Russia is building a route through Siberia and the North of Asia to the Far East, England is on the eve of constructing a route in the same direction through Southern Asia. We say "is on the eve of constructing," because a telegram sent from Peking on the 14th instant conveyed information that Great Britain had actu-Siberian Railway through Manchuria.

There is an immense difference between confronted by the conditions which existed the prospects of two lines one of which prior to the autumn of 1896; in other has its terminus at Vladivostock, within words, the special encouragement which the ice-circle, and passes through regions their enterprise derived from the altered of which the resources are still undeveloped, while the other has its termini at Nangking, Shanghai and Canton, and passes through the wealthiest and most thickly populated provinces of China. The telegraph further tells us that Great from the old-established agencies. Pre-Britain is negotiating for the opening of sumably there will be no advantage in the Yuan-chou in Hunan province and for the terms offered by the former, except that navigating of inland waters, all which the projected system includes a cooperaprocedure fits exactly into the programme tive element, bonuses out of surplus propursued ever since the acquisition of fits being promised to insurers. Under Hongkong, Much has to be done, of those circumstances we can form no concourse, before these immense projects jecture as to the amount of custom that are realized, but they have certainly ceas- the local company is likely to attract, but ed to be mere schemes on paper. We of course it will have to face very formid-know what may be expected of British able opposition, no less than thirty-five enterprise if once the path be cleared for leading firms in Yokohama being directly it, and her Majesty's Government has interested in supporting the old comvery nearly succeeded in clearing the panies. Its great advantage, we think, path right through.

#### NEW INSURANCE COMPANY.

Briefly stated, the raison d'être of the new local insurance company, whose organization, mooted some time ago, is now almost an accomplished fact, was that the community saw itself confronted by a combination on the part of the companies—a combination which, in the absence of competition, could exact its own terms in a branch of affairs scarcely less important to private persons than to men of business. Everybody wants to insure his house, and nobody likes to think that in adopting a precaution so essential he is at the mercy of agents associated for the purpose of imposing their own charges on him. Had the old-established companies continued to compete with one another, their rivalry, to say nothing of their long experience, would have secured to the public a sufficient guarantee against excessive rates. But in the early autumn of 1896, they joined to put up the rates all round, and, finding the operation pro-fitable, they made their terms still more onerous in the fall of 1897. That second addition suggested an opportunity for successful competition: hence the orprospectus is advertised in these columns. In estimating the future of the enterprise, the first question to be asked and answered is-were the old companies compelled by genuine business conditions to put up their rates, or were they merely taking advantage of their union to exploit insurers? If the former, then there is obviously no room for a new competing company; if the latter, then the new company will not only lay the public under an obligation, but also step into a lucrative business. The old companies appear to have furnished an answer to the question. It is said that, confronted by the immediate danger of competition, they have already reduced their rates to figures below those at which they stood prior to the first of the two appreciations mentioned above If that be the case, it is difficult to avoid the conclusion that, in raising their charges, they were not adopting the lowest scale of rates compatible with a safe and lucrative business, but were deliberately turning the absence of competition to their own profit. Satisfactory, however, as that inference must be to the projectors of the new Company, we have to note that the grove find here every and Wait Whitman.

panies. Its great advantage, we think, will be the permanence of its rates. People now see that, in the absence of competition, the old companies can not be relied on to keep their charges down to the minimum figure consistent with sound business, whereas that is precisely what the new Company promises to do. We may add that the prospectus issued by the projectors shows the difficulty experienced in collecting statistics. It has been necessary to confine the statement to the figures for one or two years. The available statistics, however, are sufficiently striking; especially in Kobe's case, where the premia collected during 1896 and 1897 aggregated 250,000 yen and 280,000 yen, respectively, whereas the losses paid were only 113,000 yen and a sum lying, probably, between 30,000 yen and 50,000 yen. It is an interesting fact that among the Provisional Directors of the Company are two gentlemen representing firms which hold the agencies of several important European insurance offices,

#### NOGUCHI THE POET.

We have from time to time quoted some of the weird, wild, disorderly, fantastic verses of Mr. Y. Noguchi, a Japanese youth who resides in America and writes poetry. His productions may be com-pared to a head of hair so tossed, towsled, and dishevelled that though it occasionally emits flashes of colour and fineness, one remains in perpetual doubt about its texture and quality. The Criterion has this to say about Mr. Noguchi:-

If that remarkable Japanese-American boy, Yone Noguchi, does not emerge from the competent obscurity of the chorns, it will not be because he is like his neighbours. The place where his strange Muse gesticulates and invokes the vast

is not by any chance to be overlooked.

The nobridled eccentricities in which Mr. Noguchi clothes his inspiration make it hard to see, at first, whether he is a poet or a harlequin. The point has been still further observed by the sucritical rhapsodizings of astonished admirers. On dis passionate scuttiny, however, one is forced to the conclusion that it is the real material of poetry that Mr. Noguchi handles. He has imagination; be has a rapt passion of uttermore; he apprehends the sublime. He is sincere. Here and there though only, as it seems to me, in brief passages —his art shapes these materials into the finished

product of speety.

Having due regard to Mr. Noguchi's youth, I cannot but feel that his promise is remarkable. He is in danger of being misled by friends into mistaking the defects of his gift for its distinguish.

#### YAPAN AS AN ALLY.

It is pleasant to find an English journal speaking out perfectly frankly and justly on an Oriental subject. The Saturday Review of January 8th writes :-

On an Oriental subject. The Saturday Review of January 8th writes:

Mr. Frederick Greenwood, who seldom writes unless be has something to say, contributes in the Pall Mall Gazetie an article of much good sense, in which he insists especially on the strong evidence of a previous understanding between Germany and Russia as to their respective aggressions in China. At the same time he suggests that the Kaiser's silly outbreak about the "mailed fax has upset some of Russia's calculations. Mr. Greenwood, howaver, spoils the effect of his article by making a deplorably Philistine attack on Japan. It will be remembered that during the late war, excited by the sight of the mutilated bodies of some of their wounded comrades the Japanese soldiers broke loose after the capture of Port Arhur, and that for some three days the town was given over to pillage and massacre. Therefore, declare, Mr. Greenwood, "the gentle Japanese" is a bloodthirsty savage with only a veneer of civilisation, and no Christian Power could possibly enter into alliance with the Mikado-Surely this is a bit of British hypocrisy quite unworthy of an experienced publiciat like Mr. Greenwood, who knows that such outbreaks are by no means uncommon, and that parallel cases could be cited in the history of every army, Read for instance, in Ampier's history of the Penisuular wars the account of the capture of San vebastian: "This storm seemed to be the signal of hell for the perpetration and plunder had been the principal object; at Badajor lust and murder were joined to rapine and drunkenness; but at San vebastian the direct, the most revolting, cruelty was added to the catalogue of crimes. One atractive of which a girl of seventeen was the victim staggers the mind by its enormous, incredible, indescribable barbarians of a friendly nation by English soldiers during several days. What would Mr. Greenwood say, we wonder, if a German or Russian paper were to argue from such shocking incidents that the English were a nation of barbarians with whom no faith shoul

We remember that jibes and execrations were heaped upon our heads at the time of the Port Arthur affair because we ventured to point out that, unpardonable as such doings must always seem from the point of view of strict morality, to draw any in-ference from them as to the savagery of the Japanese nation and so forth was supremely ridiculous, seeing that worse excesses were habitually perpetrated by our own troops in the wars at the beginning of the present century, and that the Duke of Wellington himself declared his conviction that to permit the sack of towns taken by assault was necessary for the purpose of encouraging the assailants and affording an incentive to the troops in general. Men. have now learned to laugh at the Iron Duke's dictum: civilization has exploded it. But it was uttered and acted upon not so long ago. The Japanese at Port Arthur had been driven to a state of phrensy by the shocking brutalities that their comrades had suffered at the hands of the Chinese, and under the influence of that fury they proceeded to kill right and left, not raising their hands in any way against women, however. It is now known that the grim Commander of the First Division, the late Lieut-General Yamaji, passed the word "no quarter" before the storming of the Liao-tung stronghold, and that for doing so he was debarred from any share in the Shantung campaign. Nobody would think of attempting to justify proceedings of this nature, but a critic must be richly endowed with hypocrisy and ignorance if he regards them as factors differentiating the Japanese from Western nations. Human nature is much the same every-where. One of its most remarkable developments in the fin-de-siécle Occident is a magnificent self-assurance which betrays men into complete forgetfulness of their own record when scrutinizing the doings of Orientals.

Origin<del>al from -</del> 'ERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

#### ENGLAND FROM A JAPANESE POINT OF VIEW.

[Had England been wise, she would not have Had England been wise, she would not have imposed on China, conditions which the latter could never be expected to be in a position to openly subscribe herself to, under the menacing frows of the Northern Power. Without demanding the formulation of those conditions, England would be able, if she were only so minded, to make good her claims in China. That, instead of following such a simple course, she has tried, and a few latter have come to still training to place and —for all we know, may be still trying, to place on paper conditions of the kind just indicated, may probably be taken as a sign that she is far from having made up her mind to pursue a resolute course of policy. We should think that a bolder and more thoroughgoing attitude is required of her, if she really means to regain her former ascendancy in Eastern Asia.]

We quote the above from the Japan Times. It has reference to England's offer of a loan to China. Our contemporary's view of the question seems to be based on the idea that England's prime purpose is to become China's creditor. We regard that as a misconception. The fundamental motive of British policy in China is to contrive that the markets of the Middle Kingdom shall be kept open to all the world. Provided that end be attained, her Majesty's Government does not care where China borrows money. Were she to appeal to American capitalists, not the faintest objection would be raised on England's side, because it would be felt that a debt to the United States does not involve any riskof transfers of Chinese territory to a commercially exclusive State. Experience has shown the consequences of incurring a pecuniary obligation to Russia. A further loan from that Power could not fail to create a situation inimi-cal to British interests. The object of Her Majesty's Government was to avert any such contingency, and that object is attained, since China has been induced to fall back on her own resources. An additional object is attained, also. China has been spurred into making something like a national effort-an effort which may possibly have the effect of welding into tangible entity any fragments of patriotism scattered among her people. We can not speak very hopefully on that topic, indeed, but that England is quite satisfied with the present result, so far as concerns the loan, we have no manner of doubt. As to the conditions understood to have been formulated by her Representative in Peking, their first motive is to furnish a practical demonstration of the policy she is determined to pursue. She has imposed her policy upon the Powers whose recent activities threatened to impair her interests. Concerning that point there can be no second opinion, Kiao-chou is to be nothing more or less than a new foreign settlement, and Russia has pledged herself to open to trade any port she may acquire from China. Our Tokyo contemporary speaks of England "regaining her former ascendancy in Eastern Asia." She had never lost it. Whether she habitually asserted it or not, is another question, but that she has re-asserted it now is undeniable. There is no necessity for her to lend money to the Chinese Government in order to "make good her claims in China." She is making them good without lending money. It may seem, indeed, to superficial observers In this very interesting resumé there are that her Majesty's Government is unduly two points calling for comment. One is pressing China in the latter's season of Mrs. Bishop's account of the Tai Wönwar and stress." But China's only kun. She calls him a man with "bowels arrangement made by Count Inouye; the hope of preserving her integrity is to be come and a heart of stone," and we opportunity lapsed, and Russia stepped in adopt the course integrity is to be come and a heart of stone, and we opportunity lapsed, and Russia stepped in adopt the course integrated by Lugano that the description is at the latter of the course integrated by Lugano that the description is at the latter of the course integrated by Lugano that the description is at the latter of the course integrated by Lugano the course in the course integrated by Lugano the course integrated by Lugano the course

Every port, every district, that the Middle Kingdom opens to the world's trade is a port or a district secured against the territorial ambitions of foreign Powers. There is no other chance of safety for the big, invertebrate empire. England is not selfishly seeking concessions which shall inure to her own exclusive advantage. She is seeking to avert China's danger by forcing her out of the conservatism which is its chief source. Of course Great Britain is working in her own interests primarily, but they are also China's interests as well as the common interests of all countries.

#### MRS. BISHOP ON KOREA.

Reviewing Mrs. Bishop's (Miss Bird) latest work, "Korea and her Neighbours," The Times says :-

The record of Mrs. Bishop's second visit to the Korean capital will, for many readers, be the most interesting part of her volumes, for it was then that she saw much of that extraordinary and ill-fated woman, the late Queen, and of her forlorn and weak husband. The Queen is described as past forty, and a very nice-looking, slender woman, with glossy, raven-black hair, and a very pale skin. The eyes were cold and keen, and the general expression one of brilliant intelligence. When she began to speak, especially when she became interested in conversation, her facelighted became interested in conversation, her face lighted up into something very like beauty. She idulized her only son, the Crown Prince, and was ceaselessly anxious about his health, and in fear that the son of a concubine might be declared heir in the throne. Some months after, when in her death agony she was surrounded by Japanese assassins, her thought was for this youth, and during Mrs. Bishop's first audience the mother sat with the son's hand clasped in hers and prompted the King in conversation. At each succeeding interthe son's hand clasped in here and prompted the King in conversation. At each succeeding interview the Queen's singular intelligence and force became more and more apparent, so that her extraordinary political influence ceased to be a matter for supprise. All her married life had been one of battle against the Tai Woo-kun, the King's father, who has "bowels of iron and a heart of stone," who had slain some of the Queen's nearest relatives by means of an infernal machine sent to a beamful box and looking like a present. The conversations ranged over a great variety of subjects on which the Royal pair desired informasubjects on which the Royal pair desired informa-tion. The King seems to be burt that Great Britain does not accredit an independent Minister to bim, in place of a Consular official under the orders of the British Minister in Peking, while the orders of the British Minister in Peking, while the Queen spoke much of one own Queen, and said to Ste has everything that she can wish-greatness, wealth, and power. Her sons and grandsons are Kings and Emperous, and her daughters Empresses. Dues she ever in her glory think of poor Karea? She does so much good in the world, her life is good. We wish her long life and prosperity." Nine months later, when Mrs. Bisher retuined to Kurea, the Queen had been but baronsely unrefered and the King was prisoner in his own palace. Count Inonye, the greatest man Japan has sent to Korea, described the Queen in a published despatch as having "few equals among her countrymen for shrewdness and sagacity. In the countrymen for shrewdness and sugacity. In the art of conciliating her enemies and winning the

Confidence of her servants she has no equal."

Mrs. Bishop tells the story of the borrible muster of the Queen by the procurement (as the Japanese Courts of law found) of the Japanese Minister, Count Minra, and his secretary, and of the events leading up to the flight to the Russian Legation. She has, naturally, much to early of the policy of Russia in the peninsula, and is satisfied that the Russian agents took no advantage of the presence of the King amongst them; on the contrary, they abstained by express purpose from interfering with his course in any way, even where they might reasonably have influenced him. Nor does she regard Russia as auxious to increase bastily her influence in the peninsula, or to irritate the Japanese, who became inactive for a time after the murder of the Queen and the overthrow of the Ministry appointed by them,

enough. But it must be confessed that the Tai Wön-kun has no monoply of these qualities in Korea. On the contrary, he has many rivals in their possession. For example, Mrs. Bishop speaks of him as having slain some of the Queen's nearest relatives by means of an infernal machine sent in a bon-bon box. But she forgets to mention that the act was only one of those interchanges of domestic courtesies for which Korean officials are famous, or infamous. An attempt had been made by her Majesty's relatives to poison the Tai Won-kun, the deadly drug having been sent to him as some attractive sweet-meats. The old Prince returned the compliment by forwarding an infernal machine in an environment of bon-bons. Such, at least, is the generally received story. The second point that does not appeal to our sense of historic accuracy, s the assertion that the Russian agents took no advantage of the presence of the King in their Legation, and that they "abstained by express purpose from in-terfering with his course in any way, even when they might reasonably have in-fluenced him." It is doubtful whether this part of Mrs. Bishop's narrative will command much credence in the Far East, Russian agents have never shown themselves dilatory in grasping a national advantage. Why should they indeed? Their duty is to promote the interests of their country in every legitimate manner, and if they neglected such a unique opportunity as the presence of the refugee King in the Russian Legation, their magnanimity would deserve to be called by a different name. It was during the King's presence in the Russian Legation that Korea applied to St. Petersburg for military instructors and for a financial adviser, and it was from the time of his Majesty's residence in the Legation that Russia's influence became paramount in the peninsular kingdom. Even apart from these facts, does it not seem like straining at a gnat and swallowing a camel to discuss the details of what the Russian agents did after they got the King into the Legation and to ignore their great comp in getting him there? The plain fact is that they acted throughout as any clever, strong politicians would have acted, and it is useless to credit them with a display of scrupulousness which was not called for and would scarcely have been patriotic.

Mrs. Bishop's allusion to Count Inouve as "the greatest man Japan has sent to Korea" recalls the curious paralysis that affected the Government in Tokyo at the time of Count Inouye's last visit to Soul, It is now a matter of history that after the villainous coup d'état which cost the Queen her life, Count Inouye, partly by tactful and clever management, and partly, perhaps chiefly, by the confidence that his own personality inspired, succeeded in obtaining from all the Treaty Powers, Russia included, a mandate to place Japanese guards in the palace, and to employ Japanese troops and police for the protection of the King. Thus the very situation for which Japan might have been supposed to be longing was created; she was offered the place of predominance in Soul with the declared consent of Western States. But the Cabinet in Tokyo fell into a doubting mood. There was a dis-

to tread as the delegate of the Powers. It may have been to Japan's ultimate advantage that she failed to grasp the oc-We are inclined to think that it was. The attitude of the world towards her is still so censorious that she cannot Acts and methods which might pass muster were Russia or some other great Power responsible for them, would be roundly condemned did they stand to Japan's account. It is as well for the Japanese, on the whole, that they were spared the duty of appearing on the Korean stage as the representatives of Western civilization, but we do not believe that they derive much consolation from reflections of that

#### FRANCE AND HAINAN.

The telegram from Shanghai with reference to the pending occupation of Hainan by the French looks less apocryphal than previous intelligence of a similar character. Still, as the enterprise has not vet deen actually undertaken, its discussion would be premature. If "spheres of influence," are to be recognised in China, Hainan certainly lies within France's sphere. But there is neither occasion nor warrant for employing such euphemisms. The seizure of Hainan by an armed force of French marines, in time of peace and without even the poor pretext of a murdered missionary, would be neither more nor less than an international robbery, and so long as it remains an unaccomplished fact, we may be permit-ted to believe, for France's sake, that such an intention is not entertained. Besides, the capital of the island, Kiangchow, which found a place among the ports enumerated in the Treaty of Tientsin, was duly opened to trade in 1876, and if France annexed the island, she might find that fact embarrassing.

#### SARATOGA SPIT.

Having had occasion to notice the grounding of no fewer than three steamers within a fortnight on the Saratoga Spit, it occurs to us that the attention of shipmasters may be advantageously drawn to Questions 56, 48, 49, &c., in Captain T. H. Mahlmann's "Inland Sea and Coast Pilot," where very clear instructions are t on the Spit, in its description of Futsusaki at page 310, but, strange to say, at page 304, where general directions are given for the passage from Uraga channel to Yokohama, nothing is said about the Fort. Of course a really prudent shipmaster would read everything relating to waters which he was about to navigate, but the general directions would alone be consulted under ordinary circumstances, and it is very possible that, owing to their silence as well as to the silence of recent accidents have recurred. goes to confirm the necessity of careful rally, he would be acting precisely as the reference to Cantain Mahlon and second rally, he would be acting precisely as the reference to Cantain Mahlon and second rally, he would be acting precisely as the contain man then work.

They set out by alleging that the contribution of the set of the contribution of the contribut

#### THE SAPPORO PIG.

The Yezo Porker is becoming quite a lebrity. The poor brute would have celebrity. The poor brute would have perished "unwept, unhonoured and unsung" had not a Japanese newspaper safely undertake to discharge administra-tive functions in an international arena, the "Sapporo Sport," thus inadvertently supplying material for the "chorus of lishmen's inextinct barbarism, one of the irresponsible reviewers" who stand always critics retorted that two wrongs do not on the watch to rail at the mote in Japan's eye. Generally these reviewers enjoy almost a monopoly of their métier. They have succeeded in establishing such a reign of moral terror that no one dares to question the soundness of their judgments. It is the fashion to abuse the Japanese. If a man venture to stand up for them, to plead that they should be judged in accordance with the ordinary laws of fairness, he is looked at askance, branded as "unpatriotic," or suspected of some mercenary motive. Rather than brave that ordeal, quiet, peace-loving folks shrink from any public protest. They watch the sorry performance wearily, perhaps with an occasional thrill of indignation, but they don't interfere. "Let those newspaper fellows peg away," they say. "It is none of our business." Possibly we should speak of these things in the past. Certainly the spirit of intolerance used to he more potent than it is now. This pig logic to which the ingenuous critics have incident, for example, has induced some Englishmen to address to the Japan Times letters so outspoken that their publication a few years ago is scarcely con-ceivable. They are anonymous letters, it is true, and their anonymity is covered more effectually by the columns in which they appear than it would be in a local foreign newspaper. Still the opinions they embody and the language in which they are couched show courage rarely displayed in past times. Seldom indeed have members of the foreign communities in Japan extended practical recognition to the fine precept,

> "They are slaves who would not be In the right with two or three.

It is so much easier, so much less troublesome, to be a slave in that sense. The first correspondent that addressed the Japan Times was called "a mischievous meddler." That is typical. To express an independent opinion is to be publicly reviled. Better be dumb: it will be all the same a hundred years hence. So conscience is narcotized, and silence, easily construed as consent, reigns everywhere. The Sapporo Pig would have profited more by this mood half-a-dozen years ago given about the necessity of keeping in the channel between Forts No. 2 and No. 3. The "China Sea Directory," Vol. IV., animal is not without grounds of gratitude. 1894, mentions the existence of Fort No. Pity, partly genuine, has raised a monument to its memory and the mote-seeking chorus have carved thereon an indictment of Japanese savagery. But the truth of the inscription has been challenged, and the resulting controversy furnishes some quaint and instructive lessons. As usual, Japan's accusers have completely shifted their ground. The courage they display in performing pirouettes of that kind is splendid. If a man, having declared that the circumstances of a particular murder argued insanity on the part of other authorities on the same subject, the the murderer, and having been answered Vessels that murders perpetrated elsewhere under ling in the fire of martyrdom or bones have tried to pass between Forts No. 1 similar circumstances are not regarded as and No. 2, instead of between No. 2 and evidences of insanity, were to construe No. 3. If our conjecture be correct, it that answer as a defence of murders generated by the content of the construction of th

of the Sapporo officers in hunting a pig on the ice and beating it to death was an "unmistakable evidence of inextinct barbarism," and when it was pointed out that fox-hunting, coursing, fly-fishing, cock-fighting, badger-bailing, rat-worrying and such things, though practised largely in England, are not counted proofs of Engmake a right, and another complained that he was accused of cruelty because, although there is fox-hunting in England, he denounced the beating of a pig to death in Japan. Now there never was the least question about the inhumanity of the Sapporo pig's treatment. No one dreamed of excusing the act from an ethical point of view. The sole question was, what inference as to Japanese national character should be drawn from the affair. Did it really indicate "inextinct bar-barism?" The correspondents of the Japan Times, like ourselves, denied the justice of such an inference unless it were equally drawn from the British sports of fox-hunting, cock-fighting and so forth, whereupon they and we were accused of defending the Sapporo "sport." It is precisely as though one should say that not to attribute insanity to murderers is to condone murder. That is the kind of accustomed us. They really seem to be-lieve in its validity themselves, which is the strangest part of it all. One of them, further, contends gravely that cock-fighting is not a cruel pastime because " birds obtain pleasure from it in following out their natural instincts," and that pugilism is equally excluded from the category of semi-savage performances because the pugilists are volunteers. That is most instructive. It gives a new ethical status to the exercise of rudimentary passions. But it does not touch the real question at all. It has nothing whatever to do with the mood of the persons that set the cocks fighting or pay to see the pugilists boxing, and it is with that mood alone that we are concerned. Finally there is an assumption. There always is an assumption. It is the invariable habit of these critics to assume the worst possible motives on the part of any one that they desire to abuse, and then to abuse him for being influenced by such motives. In civilized Europe, they say, no one takes a pleasure in the sufferings inflicted on a hunted fox or deer, a baited badger or a worried rat. Men's affection for such pastimes is due to some other feature of the "sport." But in China and Japan what delights people is the sight of pain. "A Chinaman will practise terrible tortures on his enemies for the sake of the delight he derives from watching the quivering muscles and the shrinking flesh. An identical feeling must have animated the Japanese who watched a pig being beaten to death. The sufferings of the animal appear to have been the sole motive of the edifying spectacle." Could anything be simpler than that method of argument? There is not the smallest title of evidence that "quivering muscles and shrinking flesh" are delightful spectacles to a Chinaman. One might allege with equal justice that limbs shrivelshattered in the hoot of the Inquisition were pleasing objects to our own forefathers. But nothing is too bad for the

anything to show that "the sufferings of the pig were the sole motive of the Sapporo "sportsmen." On the contrary, the main element of fun was that they chased the animal over the ice, slipping and falling in their attempts to strike it. But civilization and refinement require that natural depravity should be attributed to the Japanese. So they are supposed to be guided by savage instincts and then it becomes quite easy to demonstrate that they are savages. That is the method of the critics. It is the acme of simplicity, and it seems to please them. Like the fighting cocks they derive pleasure from following their natural instinct, which is to slander an Oriental race, and therefore there can be no barm in slandering it.

#### THE WELCOME SOCIETY'S MAP.

The Welcome Society's map, to which we have already alluded in these columns, has evidently supplied a want, if we may judge from the demand that its publication has produced. Some of the copiesfor presentation purposes, we imagine-are enclosed in neat little cases after the true Japanese fashion, their portability and durability being greatly increased thereby. It has been suggested, we observe, by a Kobe journal that a better method of compilation in the case of this map would have been to prepare a series of sheets, devoting one to each district and employing a scale of such magnitude as to render the distances easily estimable. That plan certainly possesses advantages. But it has disadvantages also, and they are by no means insignificant. In the first place, the cost of compiling and printing a series of sheets would be comparatively heavy. It would be impossible to offer them at the very low price for which the single sheet can be procured. In the second place, it may be reasonably doubted whether the trouble and confusion of using a number of maps do not more than counterbalance the convenience of their greater clearness and minuteness. Besides, we do not understand that the Society's map is intended to serve all the purposes of a tourist or to enable him to dispense with other sources of information. It is rather designed to supplement the assistance procurable from the Society's guides.

#### RUSSIAN SHIPS IN PORT ARTHUR.

The telegram which we publish from Peking on the subject of the Russian ships in Port Arthur seems somewhat apocryphal. It is understood that the Chinese Government granted permission for the Russian Squadron to use Port Arthur as a winter station, and the 18th of February would surely be a rather early date to fix as the end of winter. The answer attributed to Russia sounds very strange, also. It amounts to saying that the presence of Russian men-of-war in Port Arthur guarantees the place against seizure by a foreign aggressor, and is consequently a matter for congratulation not only to the Middle Kingdom but also to Japan, for we presume that the latter is indicated when reference is made to another Power whose safety is secured by the procedure. From every point of view the message is incredible. It does not show any trace of the accuracy which usually distinguishes the Jiji Stim.

#### MR. J. F. FRASER AND THE TORYO LITERARY & MUSICAL SOCIETY.

The usual bi-monthly meeting of the Tokyo Literary and Musical Society takes place next Monday evening at 8 o'clock. The Committee of the Society have taken advantage of the Round-the-World Cyclists' presence in Tokyo to invite them to speak of their experiences by the way. But as Mr. Fraser has already pledged himself to deliver a lecture on that subject in Yokohama on Tuesday evening, he is, of course, precluded from ac-ceding to the Tokyo Society's request. ceding to the Tokyo He has expressed his willingness, however, to speak about his three years' experience as a Journalist in the House of Commons. It will not, we understand, be a serious talk, but only an impressionist, chatty account of how an evening passes at St. Stephens. The members of the Society will doubtless find much interest in such an address, and we may suggest that as the topic concerns the Japanese also, the occasion will be specially suitable for inviting some of the latter to attend,

Mr. Frazer, the journalist and cyclist, spoke for forty minutes on Monday evening at the bi-monthly meeting of the Tokyo Literary and Musical Society. He chose for his subject the British Houses of Parliament, with which three years experience as a reporter has thoroughly smiliarized bim. It was an interesting and entertaining lecture-discourse would, perhaps be a more correct term—, delivered in an easy, unaffected manner and couched in simple, straightforward language. Mr. Fraser has a fund of dry humour, which he dispenses in a casual, incidental way and with a perfectly grave face. His audience does not always discover the joke until the time to laugh at it has passed, and the sense of belated amusement adds to the fun. He paid no compliments whatever to the parliamentary institutions of Great Britain. Indeed, the sum of the impressions conveyed by his swift, clever sketches was that the procedure of the Houses particles largely of the farcical and that the whole business borders Yet there was much solid inon burlesque. formation sandwiched between witty caricatures. As to the method of stenographic reporting, for example, Mr. Frazer undertook to dispel the popular delusion that the langer the debate the more onerous must be the labour of the reporter, In point of fact, a long important debate costs the stenographer little effort. The great debates are undertaken by a band of eight stenographere, each of whom reports for two minutes and then devotes ten to transcribing his shorthand notes into long hand. Thus if he works without the smallest hitch or intermission, he may get about three minutes rest out of every sixteen, which means that in a debate lasting two homes and forty minures, he has a total breathing time of thirty minutes divided into ten spaces of three minutes each. As each section of the debate is transferred to paper, it is telegraphed to the syndicate of journals for which the atenographers work, and so perfect is the organization, so rapid the process of transmission, that a debate commencing # 4 p.m. and ending at 6 45, is published in full in Belfast at 7 15. That kind of thing was characterized by Mr. Fraser as easy work. The tough, harrassing task, he said, was when a reporter had to work alone on less important occasions. with, it might be, an hour of unrelieved responsibiliy in view, he takes his seat in the little box allotted for his use, gets his paper ready, sharpens his pencil, and setting busily to work writes down, "the debate was continued by the Irish members," after which he falls as eep, or goes out for a drink or a smoke. Speaking of the celebrated fight in the House, which he

believing himself assaulted, struck out, with the inevitable result that the fraces speedily de-But if this veloped considerable proportions. explanation somewhat extenuates a disgraceful scene, Mr. Fraser's description of the methods employed to cut short a prosy speech, and of the obstacles encountered by private bills, did not enhance the reputation of the Lower House, When the Commons do not want to be bored by a speaker, they fire off at him an incessant volley of "'vide" "'vide" "'vide," or "agreed," "agreed," under which he at length sinks discountied into his seat. As for private measures, the rule is that after mid-night "unopposed bills" may be brought forward. A member accordingly gets up to introduce some small harmless project and the way seems clear before him, when another member, who has been enjoying a sound sleep, auddenly wakes up, and for the sake of legislative activity calls out "I object," The measure then be-comes an "opposed bill" and its chance of passing disappears. But though its introducer has been deprived of his hope, revenge remains. He "lies low" nutil, one night, the "I object" member introduces a bill of his own; explains its provisions in a casual, de-precatory (ashion; points out that they concern only a small section of a particular constituency and declares that they will be as beneficent as they are necessary. But just when he appears to be on the point of success, the member whose little scheme he baulked a week, perhaps a month, previously, jumps up and cries "I object." "Surely the honorable member can not have observed that the scope of the measure is limited to one locality where such a reform is locally essential," pleads the introducer of the bill. In vain. The "I object" is iterated more strenuously than before, and the bill periob-es. "That is how," said Mr. Fraser, "you never hear of any private bills passing," The process of going into Committee he described somewhat as follows:-" There is a most interesting and important ceremony called going into com-mittee. It is managed in this way. The Speaker says:—'I move that the Speaker do now leave the chair all that support the motion will say aye all that are of the contrary opinion no the ayes have it. It is all delivered in a breath. Then he leaves the chair, Sergeant-at-Arma rushes in and moves the the Mace, and the ceremony is over. No one has said 'aye'; no one 'no'; no one has laken any notice whatever." With many such descriptions and many accounts of the mannerisms and methods of parliamentary celebrities did Mr. Fraser entertain the Society. He spake from very brief notes, to which he made tare reletence, and there could be no question about the pleasure he gave to his

We learn that the Asiatic Society of Japan has invited Mr. Fraser to lecture on March and, and that he has promised in do so, taking for his subject "Burmah and south-western China," a topic specially interesting at this inneutre.

#### P. & O. "BORNEO" IN COLLISION.

the steuographers work, and so perfect is the organization, so rapid the process of transmission, that a debate commencing # 4 p.m. and ending at 6 45, is published in full in Belfast at 7 15. That kind of thing was characterized by Mr. Fraser as easy work. The tough, harrassing task, he said, was when a reporter had to work alone on less important occasions. Then, with, it might be, an hour of unrelieved responsibility in view, he takes his seat in the little box allotted for his use, gets his paper ready, sharpens his pencil, and setting busily to work writes down, "the debate was continued by the frish members," after which he falls asleep, or goes out for a drink or a smoke. Speaking of the celebrated fight in the House, which he witnessed, Mr. Fraser says that its fisti uff phases were the outcome of an accident. In the cough har thad her stem rather badly hent. The passenger at the part was and her two sone, and the little with the large was and the little with the large was considered. In the large was a second to be dogged by ill-luck lately. About a week ago she ran aground on the Spir, and on Sunday morning, as she was clearing out of Yokohama Hatbour, as he substained aut on Yokohama Hatbour, she substained aut on Yokohama Hatbour, she substained aut of Yokohama Hatbour, she substained aut on Yokohama Hatbour, she substained aut of Yokohama Hatbour, she substained aut of Yokohama Hatbour, she substained aut of Yokohama Hatbour, she substained aut of Yokohama Hatbour, she substained aut of Yokohama Hatbour, she substained aut of Yokohama Hatbour, she says she it is entired to the little entrance of the beakwater as the Japan-the entrance of the beakwater as the Ja

## "SCOTUS" AND CALIBAN.

The letter addressed recently "Scotus" to this journal, in which he dubbed the Japanese coolie "a very high-smelling edition of Caliban," has naturally been quoted with admiration in Kobe. Yet it would scarcely have been possible to pen a grosser libel than that of which "Scotus" was guilty. For, in the first was guilty. For, in the first place, the Japanese coolie is probably the cleanest representative of the labouring class in the world. He takes a bath every day, and, if his clothes are sometimes ancient, they are very rarely so mal-odorous as to be offensive. In the second place, he is unquestionably the very politest representative of the labouring class in the world. There is no "pro-bably" about that. He has been showing himself truculent of late to foreigners, but in every-day life he generally understands and practises courtesy to a degree without parallel elsewhere. "Scotus" simply parallel elsewhere. indulged in a riot of epithets when he called the Japanese coolie "a high-smelling edition of Caliban." But the tone of his whole letter was a good deal above concert pitch.

#### BANK OF JAPAN.

The last half-yearly statement of the Bank of Japan is an exceptionally interest-ing document. The gross profits and losses at the head office, branches, and agencies stand thus :-

•	Profits. Yen	Losses. Yen.
Head Office		2,736,766
Osaka Branch	1,590 675	76.775
Bakan Branch	350,420	18,620
Hakkaido Branch.,	136,037	60.371
Nagoya Branch	145,131	28,083
Sapporo Agency	1,154	14,090
Kyoto Agency	142,747	16,384
Taipeli Agency	- 2,803	348.731
Otaru	16,492	2,146
-		

Total ......16,880,279 3,301,966 These sums are singularly large. Profits aggregating nearly 17 million yen and losses totalling 31 millions are remarkable figures in the case of a bank with a paid up capital of only 22½ millions. Both the profits and the losses, however, include special items. As to the former, it appears that for several years the Bank has had in its vaults a large reserve of gold coin and gold bullion, the silver price of which has been steadily appreciating. In other words, the gold reserve, when expressed in the silver mint of Japanese currency, represented a greater sum year by year. But this process of growth appeared on paper only. The Bank did not actually exchange the gold for silver, nor did the Directors venture to regard as actual profit a difference which might at any time be wiped out were silver rehabilitated at the ratio that connected the precious metals fifteen or twenty years ago. When, however, Japan adopted gold monometallism, the ratio of 1 to 32 (omitting fractions) was definitely fixed for this country, and the Directors could then say with certainty that the gold reserve represented exactly twice as many units in the new system of currency as it had represented in the old at the time of the Bank's establishment. Here, then, was a clear gain, amounting, so far as we can see, to 71 million yen. In short, by the adoption of the gold standard at a ratio of 1 to 32, extent of 71 million yen.

Digitized by

splendid transaction for the Bank. It has shown the profit now in its semi-annual accounts, and carried the whole sum to its capital fund, which thus becomes 30 million yen. There are 150,000 shares of 200 yen each, 150 yen of which had been paid up, and, 50 yen being added by means of this gold profit, the shares are not liable to any further calls. Even when from the total gross profits we deduct the above sum of 71 millions, there remains 91 millions, a striking figure, being, in fact, over 41 per cent of the capital with which the Bank was working. The special item included in the very large losses-34 million yenis depreciation of securities. Owing to the keen demand for money during last year, the rate of interest toos the paying a the market price of all securities paying a Thus fixed interest fell in proportion. Thus there has been a serious shrinkage in the value of the Bank's reserve of securities, and the depreciation is wisely written off as loss, though there can be little doubt that it will be ultimately recovered.

The working expenses of the Bank and its various branches and agencies totalled 2,374,783 yen, so that the net profit was 10,804,590, and this was distributed as follows :--

Ordinary Dividend (6 per cent. per	Yes.
annam)	. 675 006
Special Dividend (7 per cent, pe	r
##BBBB)	. 787.500
Fifty yen added to each share	7,500,000

#### NIPPON BICYCLE CLUB.

Sunday could scarcely be considered satisfactory for wheelmen, the sky being overa bleak and stiffish northerly wind prevailed until late in the afternoon. In spite of the weather, however, the members of the Nippon Bicycle Club and their guests of the Sorin Club, Tokyo, managed to have a most enjoyable field day at Honmoku and Sugits. About fifty members of the Nippon Club assembled at No. 42 at about 9.30, and rode to Yokohama Railway Station, where they were joined by some thirty brother wheelmen of the Sorin Club, who trained it from Tokyo. The joint party then rode through the Settlement and via the main Bluff road and Kitagata to Honmoku, where they rested and were most hospitably entertained by the President of the Club, Mr. J. L. O. Eyton, at his commodious villa by the aca-side. A choice repast was provided and the Lown Band was also in attendance and played a selection. A little before 12 o'clock the procession reformed and a start was made for Sugita, which was reached without mishap at I o'clock. The Bay View Hotel had been chartered for the occasion, and gaily de-corated with flags lent by Mr. Wright, Captains Pope, Wallace, and Pritchard, while the garden had been surrounded with mats to keep out the cold wind and three long tables arranged for tiffin, the President, Mr. Eyton, Sr., presiding, with the Captain of the Club, Mr. Laffin, and Hon. Sec., Mr. K. Kingdon, as Vice-Chairmen. A capital cold tiffin with delicacies of all sorts, and choice wines, received full justice from those assembled, while the Band, which was accommodated in a kiosk in the garden, played a selection of music. Several short speeches a selection of music. Several short speeches were made—one by the President, welcoming the Sorin members, a reply by Mr. Kato, another by Mr. Inouye, of the Nippon Club, while Mr. Uchiyama Rossetsu made a most able and the currency value of the gold reserve of fluent interpreter. The wish expressed by all the Bank of Japan was enhanced to the the speakers was to draw closer the bonds of

sportsmen. After a most enjoyable couple of hours or so at Sugita, during which a number of photographs were taken of various groups, start was made for Yokohama, the members of the Nippon Club accompanying their guests to the railway station. Although there were crowds of Japanese, all along the road, including all the school boys from Yokohama, no trouble or accident occurred, the police authorities having, at the suggestion of the President of the Nippon Club, posted police all along the route followed by the cyclists. Had it not been for this precaution it is probable that some unpleasantness or accident would have occurred, for a certain class of Japanese pedestrians appear to think that the prestige of the country is injured if they move out of the way of a foreigner on a wheel

#### YOKOHAMA SEAMEN'S MISSION.

The popularity of the cirtertainments given under the auspices of the Scauner's Mission was evidenced on Thursday, when there was a very large audience to listen to the excellent musical programme arranged. The Rev. W. T. Austen presided, and a number of well-known local amateurs took part in the performance, "Miss amateurs took part in the performance. Miss Leighton contributed three items, including "The song that reached my heart" and a clever negro whistling song; Madame Henckler sang thrice, "Way Down upon the Swanee River," and "Sweet Marie" being perhaps the favourites; Mr. Scharr was heard to advantage in "The Lost Chord" and "Ye Gentlemen of England;" and Mrs. Robinson also favoured with two enjoyable vocal contributions in addition to a pincefect descriptions in addition to a pincefect descriptions. contributions in addition to a planoforte duct with Miss Booth. Miss Scott, whose name is already familiar to the Yokohama musical world in connection with the Philharmonic Society, gave a violin solo in a manner that showed that she has improved considerably in technique since she last appeared on a public platform. Mr. Borden played a cornet selection. At the close of the programme the sallors gave three cheers for the promoters of the concert and the performers.

#### THE ELSIE ADAIR COMPANY.

There was a very fair though not full atten-dance at the Public Hall on Thursday evening, on the occasion of the farewell performance of the Esca Adair Company. The various items on the programme went with plenty of "go" from beginning to end and were almost all greeted with warm applause. After a pisno overture by Mr. Lionel Jupp, who also rendered efficient service as accompanist through the evening, the amusing little one act comedy "The Decision of the Court," by Brander Mathews, was capitally played by the sprightly Elsie and Mr. Eddison, a local comedian of no small ability, as Mrs. and Mr. Algernos Stanyhurst respectively. There is but one scene in the sketch—a visit paid by Mr. Stanyhurst, an English aristocrat who has married an American girl, on his wife, who has applied to the Court for a divorce on the ground of desertion, and "international incompatibility." During the course of the interview the decision of the Court, granting the divorce, arrives, but in the meanwhile a reconciliation is effected between the husband and wife, the Court's decision set aside, and conjugal happiness once more reigns supreme. A score or so of capital scenes on the vitascope were exhibited by Prof. Hoffmann; Mr. Walter Vanderlip delivered an amusing "single handed debate" and sang a amusing "single handed debate" and sang a comic sing, "Girl wanted": while Miss Elsie Adair also in the first part sang several most amusing comic and serio comic aongs in her most piquante style. The second part of the programme comprised a comic sketch "A fancy dress ball in a Lunatic Asylum, which introduced a number of songs and dances by Miss Elsie Adair and Mr. Walter Vanderlip, and elicited much hearty laughter and applause from the audience.

That was a social intercourse between foreign and Japanese Original from UNIVERSITY OF ILLI UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

#### KOBE COOLIES.

HE behaviour of coolies in Kobe has evidently aroused much indignation among the residents of that place, for they have addressed memorials on the subject to the Foreign Representatives. Such a course is to be welcomed, we think, because the sooner a remedy is applied, the better for all parties. Direct communication in the first instance with the Japanese Local Authorities would doubtless have been a more tactful and probably a more efficacious method of procedure, for, after all, it is to the Governor of the Prefecture alone that the community as a whole can properly address itself. But so long as Consular Jurisdiction exists, there will always be a feeling of hesitation on the part of the foreign resident to place himself in communication with Japanese officialdom. We do not mean to suggest that recourse to diplomatic or Consular aid is in any sense to be deprecated. The point is that as each nationality must observe the etiquette of communicating with its own Representative only, a combination of nationalities for the purposes of a memorial becomes irregular. Such a document can not be received or acted on with propriety by any Foreign Minister, as the Kobe memorialists have probably discovered by this time. On the other hand, where a grievance is common to all nationalities, it seems a pity that the force attaching to a joint protest can not be exercised, as it would be by recourse to the phase of the matter, the question to be considered is that of a remedy. There can be no doubt about the reality of the facts com-Japanese a none-the-less disagreeable, disposition on the part of foreigners to attach full credit to every statement of the treatment formerly extended to the be made on those accounts, however, there remains a solid mass of testimony Japanese Authorities will be consulting their own nationals and uniformly devotdischarging their duty to the foreign re- them, denounce as a hypocrite or a hiresidents, by adopting some corrective measure. Probably the simplest would be the for the Japanese-some of these most issue of a notification by the Governors equitable critics will, of course, assail us. of Hyogo and Kanagawa Prefectures, But every impartial foreign resident who embodying a warning to the coolies and devotes a moment's calm thought to the instructions to the police. accusations preferred against the coolie, and we are very far from doing anything of the kind. Some critics-many, indeedallege that the war has exercised a demoralizing effect upon the lower orders; that they are burdened with "swollen heads "-to use a slang expression-; that, in short, they have lost their moral balance and become subservient to blind impulses of delirious patriotism. It is possible that the diagnosis many be partially correct. We hesitate to contradict it, but we desire to point out that if such conditions exist, they ought not to be limited to particular districts but should be equally observable everywhere. In the three capital cities, however, and in the provinces generally, we can not discover that the demeanour of the labouring classes towards foreigners has undergone any alteration for the worse during the past three years. In the midst of general courtesy and kindliness there was always an off-chance of encountering a rude, truculent or inebriated plebeian, and there is just about the same chance now that there was before the war. But in the foreign settlements and their vicinity an unwelcome change has certainly taken place. What is the reason? Some may reply. perhaps, that opportunities for displays of roughness being incomparably more numerous at the open ports than elsewhere, the record is worse there, but that the fact does not warrant any inference as to the radical superiority of other places. That is a point worth considera-Japanese Authorities. Apart from that tion, but to us another and a very different reason presents itself; a reason which we fear will be found unwelcome but which must in justice be stated. It is that the plained of. They have frequently been present generation of foreign residents exaggerated in newspaper columns, and are suffering for the sins of their predethere has always been a natural, but to the cessors. We speak from the experience of a great many years when we assert that, whatever be the case now-a-days, their own nationals and to show equally Japanese labourer was essentially the wholesale distrust of everything advanced treatment of an Oriental by an Occidental. on the Japanese side. Whatever allowance We shall be abused for saying so, no doubt. Some of the ingenuous critics, who, while indignantly repudiating the against the treaty-port coolie, and the faintest suggestion of fault on the side of the advantage of the country, no less than ling their pens to flattering and exalting ling every one that ventures to say a word that view. Truly we may go a step far-

pleans they are still so treated. Not

by the better classes, of course. If we except the scarcely avoidable petulance due to ignorance of the language of the country, the demeanour of respectable foreigners towards the Japanese at present leaves little to be desired. But it is not always so with liberty-men, with the denizens of "Blood Town" and with the lower orders of foreigners generally. Their manner towards the Japanese is too often rude and offensive, the manner of superior beings to inferior. The Japanese do not count themselves inferior beings. They have none of the Oriental's wonted servility, and if for a long time their respect for the Occidental's knowledge and attainments checked the resentment his attitude towards them would otherwise have provoked, that restraint, gradually ceasing to be efficient, has been replaced by a feeling of umbrage which, though its causes are chiefly retrospective, is now making itself unpleasantly active. The educated classes assert themselves by dispensing with foreign assistance-dispensing with it prematurely, to their own great loss and detriment-, and by struggling for commercial independence which they are not yet prepared to exercise without disaster. The students vindicate their patriotic instincts by swagger, sometimes developing into boisterous defiance. The coolie resorts to muscular methods-his only methods-in order to show that he is as good a man as the best of the Tojin. Had we not foreseen all this years ago, and foretold it over and over again in these columns, we should not speak so confidently now. To folks garnering an evil harvest it is small consolation to be told that the seed was bad. That is the truth, however, in the present case, and it had better be recognised. The foreign settlements are the chief scenes of the trouble because it is in the foreign settlements that the sentiment of umbrage and the morbid impulse of self-assertion have been educated, and because it is there also that practical evidences of Western superiority are still occasionally thrust upon native attention. It is not our object to justify the Japanese. wrongs do not make a right. We seek to explain rather than to excuse, and we have written very clumsity if there be any doubt about our conviction that the conduct now laid to the charge of the Japanese student and the Japanese coolie is, on the whole, without presently visible provocation, and that it will inflict incomparably more injury upon the Japanese themselves than upon foreign residents who are the immediate sufferers. the rest, nothing is less desirable than that any causes of mutual ill-feeling should be suffered to rankle or gain potency by way of preface to the passing of foreigners under Japanese Jurisdiction, and we should imagine that the expediency of applying To dismiss the subject at this point ther, and say that by many Europeans or some remedy must be clearly recognised by a Capited like that now in office.
VERSITY OF ILLINOIS AT

#### BARON IWASAKI AND THE BANK OF JAPAN.

On the 19th instant the Bank of Japan held its regular annual general meeting, and the President, Baron Iwasaki, delivered the following speech, which we translate from the Shogyo Shimpo :-

Gentlemen,—In making my report of the working of the Bank for the 30th year of Meiji, I propose to submit for your consideration and approval some remarks about the state of economical circles and the cardinal points of the Bank's business during the year,

At the commencement of last year, as a consequence of the excessive pressure of monetary affairs at the close of the preceding year, a feeling of measiness prevailed in the market, which was not allayed until the month of February or March. Trade in the United States having then at length recovered its tone, the stack of silk that had accumulated in Yokohama since the preceding year began gradually to be sold off, and public confidence seemed to be somewhat restored. Thereafter the market price of Public Bonds rose by degrees, and the deposits of the various banks showed a tendency to increase. But though the market outwardly evinced a disposition to grow easier, its real condition was very far from inspiring confidence. Im proportion to the daily progress of the works forming part of the Government's recovery was scattered singuisment's programme, money was scattered among the people in steadily increasing quantities, and the sums that had in be paid up an account of newly established banks and companies did not fall short of several millions monthly. Prices lose higher and higher; the balance of the foreign trade suffered more and more violent disturbance, and surrers more and more violent disturbance, and the demand for capital promised to be very large as the silk and ten seasons approached. The Bank, then, feeling that it would be wrong to remain quiescent in the face of such discumstances and not to adopt any presentations altered in the face. quiescent in the face of such circumstances and not to adopt any precautions, altered its table of interest on the 14th of June, raising the rate on loans and advances by 2 rin daily. Entering the second half of the year, the demand for capital became great, and in consequence of the cautious attitude adopted by the various banks, the shares of the companies began to fall, on the one hand, and the circulation of money became so unsatisfactory that the Bank was obliged to adopt some remedial measure. But since the spring, the Bank had been gradually paying back the sums deposited with it by the Government, and it consequently had no resource except to obtain permission for an issue of notes above the legal limit in order to satisfy the needs of the moment. At the same time, persuaded, on the other hand, the same time, persuaded, on the other hand, that it was imporatively necessary to adopt pre-cautions so as to prevent disorderly outgoings of capital, suitable occasions were sought, and twice, namely, in August and October, the rate of interest was again raised by one rin daily. About that time, owing to the influence of a rumour that the United States Government was about to throw upon the market the accumulations of silver lying in its vaults, the gold price of the white metal and dealy declined, and fears began to be entertained about the working of the new monetary system.

Again, official reports having been received in

August and September of violent storms in pro-August and September of violent storms in pro-vincial localities, apprehensions were felt about a failure of the rice crop, and, owing to the combined influence of these various disturbing causes, the market fell into a state of still greater depression. Further, owing to fluctuations in the rate of exchange upon China, the export of cotton yains received a temporary check, and the Osaka market, which had already been suffering severely from flucancial difficulties, became yet more defrom financial difficulties, became yet more de from financial difficulties, became yet more de-pressed. Bonds and shares also began to depre-ciate, and such a universal sense of uneasiness was engendered that a panic seemed almost im-minent. The Bank, therefore, endeavoured, so far as the circumstances would permit, to provide monetary facilities, and happily the year closed without any serious trouble. It thus resulted that, at the close of the year, the Bank's loans, independ-ently of its advances to the Gavernment, aggregate ently of its advances to the Government, aggregate ed 104,790,000 jen, an amount imprecedented since the opening of the institution.

As a necessary consequence of this large ac-As a necessary consequence of this large accommodation given to the public by the Bank, the issue of convertible notes aggregated 226,223,000 yen, being 47,310,000 yen above the legal limit. Now, as any issue in excess of the legal limit is an exceptional circumstance, it naturally becomes a matter of keen attention on the part of the public, but when the circumstances are carefully considered it in found that the excessive carefully considered it in found that the excessive

since the war. In May, 1896, as a result of the arrangement for mutual deposits in the matter of deposits in the matter the Indemnity, a sum of 50 million year was in-childed in the Bank's reserves from that source, and deposits of hard money subsequently imported by the Government, caused a temporary increase in the coin reserves. But as these deposits were for the tase of the Government, they had to be gradually returned, and by September, 1897, the amount thus returned was 42,500,000 yen, and to make up for this it was inevitable that recourse should be had to the innue of notes against ollers. should be had to the issue of notes against office securities. Thus it comes about that the legal limit was passed.

general state of the money market being unsarisfactory, as I have already stated, and the banks, as a rule, being extremely cautious in their operations, the rate of interest rose; the market price of shares fell; and ominous unnours became and ble from time to time. Nevertheless, the general development of economic affairs not only suffered no check, but seems to have advanced steadily. Thus the volume of the foreign trade in steadily. Thus the volume of the foreign trade in imports and exports rose to over 382,430,000 year, an increase of 92,910,000 year as compared with the figure for the preceding year; the clearances effected at the clearing houses of Tokyo and Osaka aggregated 713.850,000 yen, showing an increase of 158,020,000 yen over the previous year's returns; the capital of the various banks and companies which were newly started or which made additions to their capital amounted to over 193,840,000 yen, and the sums of capital paid up on call to the banks and companies already in existence totalled 60,500,000 yen approximately. All these results are evidences of economical progress. But of course the growth in the volume gress. But of course the growth in the volume of business caused an increased demand for capital, and, the balance of foreign trade being unfavour-able, there was a tendency for further sums to be drawn away, so that an unsatisfactory state of the money market became an unavoidable consequence. Still, the rise in the price of rice and in rates of Still, the rise in the price of rice and in rates of wages had a compensatory influence in maintaining an appearance of prosperity; in illustration of which it may be noted that the subscriptions for the shares of the Industrial Bank aggregated fonteen times the amount to be issued; that extraordinary success attended the placing of the shares of the Banks of Agriculture and Industry opened in the various localities, and that the demand for all articles of merchandise remained as brish as ever. All these things can not be regarded otherwise than as signs of prosperity. brisk as ever. All these things can not be ed otherwise than as signs of prosperity.

Thus while, on the one hand, a state of pro-sperity existed, on the other there was a marked deficiency of capital. How to correct such an anomalous economic condition is a question of the

greatest difficulty.

A general appreciation of the price of commodi-A general appreciation of the price of commodities being one of the concomitants of public prosperity, that phenomenon grew more and more marked during last year. If we compare the average market quotations for daily necessaries in December with the corresponding figures prior to the War, we find that the former show an increase of actually forty per cent. It is fatther a natural result that the appreciation of commodities should lead to an increase of imports. Thus the total value of the imports last year was 219,300,000 year, the excess over the value of the exports reaching the large figure of 56,160,000 year. exports reaching the large figure of 56,160,000 yen. The items that contributed principally towards the tens that contributed principally towards this large import trade were machinery, raw materials, and rice to meet the deficiency caused by last year's bad crop. Nevertheless, a relation certainly exists between the volume of imports and the prices of commodities in the domestic markets, so that, as a future of national economy, this state of affairs is not without elements of uneasiness.

The reform of the system of currency effected last year was an economic event of the highest importance. It may be said to have imparted a completely new aspect to the country's finance. But as a measure of such magnitude must exercise a permanent effect upon the affairs of the nation, its advantages or disadvantages could not be lightly estimated. Consequently, no sooner did the problem come up for public discussion, than the problem come up for public discussion, than arguments pro and contro were heard, and no prospect of the controversy heing settled presented itself. Still, public opinion was on the whole favourable, and, the Imperial Diet having passed the Bill by a large majority, the gold-standard system was finally put into operation from the 1st of October. Prior to the enforcement of the new Law, much discussion took place about its prohable effects, but inasmuch as rates of exchange on foreign countries, the prices of commodities. on foreign countries, the prices of commodities, and other matters likely to feel the effects of the

ration of the system. The gold price of silver fell in a few mouths from 29 pence per ounce to 23 pence, and rose again to 27 pence, but, despite these extraordinary fluctuations, the rate of exchange upon gold-using countries remained always near the normal point, and no special effect was noticeable in that direction. Exchange upon China only underwent sharp fluctuations and much embarrassment was experienced by merchants trading with that country. That, of course, was unavoidable. Further, the results of the new system, so far as payments in connexion with the exchange of silver coins are concerned, have not been large. During the period of three months, exchanges of siver come are concerned, never the been large. During the period of three months, from October 1st to December 31st, the total of such exchanges effected at the Bank of Japan, its branches and agencies, did not exceed some 13,039,000 yen. The publicat

13,030,000 yen.

The publication of a weekly statement of the Bank's business was commenced from January 1st of last year. It is the custom in all foreign countries that the central banking institution should publish such reports of the state of its business and convey information as to the condition of the money market. When the Bank was established, however, its husiness was very small, and as there did not appear to be any necessity for publishing a report, the matter was left in abeyance. Of late, however, the Bank's transactions have developed so largely that they suffice to furnish a general index of the state of the money market, and, that fact being supplemented by the special consideration that economic to affairs having assumed a very complex character since the war, all information about monetary conditions is valuable to the public, it appeared essential that a report should be published, and measures in that sense were accordingly adopted.

It having been decided to nudertake transconvey information as to the condition of the money

It having been decided to undertake trans-actions with individuals and to amend the system of securities, these changes were put into operation from the 14th of Juir, simultaneously with the revision of the table of interest. As to trans-actions with individuals, the object of under-taking these was to facilitate the circulation of money and equalize the rates of interest. As to the amendment of the system of securities, its aim was to abolish the special term " security notes" (sampohim suki-legata), and to bring greater caution to bear on the choice of stares taken as security. As to the revision of the table of interest, a marked differentiation was made between the discount on commercial paper and that on other notes, simply

for the purpose of encouraging operations with the former and contributing to the development of credit transactions.

The accountant functions of the Bank were originally discharged by the Second Section of the Secretariat, but since these functions must evidently become more onerous in proportion to the increase of the Bank's business, an Accountant Bureau was newly organized on the 1st of May, and the duty was entrusted to it of dealing with matters of accounts for all the bureaus and sections, exercising general supervision, and ensuring theorough accuracy and homogeniety. Further, as a consequence of the change of the currency system, the name "Silver Convertible Notes Bureau" was changed to "Issue Bureau" from the 1st of October. The accountant functions of the Bank were October.

It is one of the Bank's paramount objects that its branches should be opened in all the chief marts of the empire so as to facilitate the circulation of money and equalize rates of interest. Hence, during the course of last year, a branch was established in Nagoya, and business began there on the 1st of March. Moreover, the Oteru branch agency was changed to a regular agency, and commenced operations from the 1st of Navenber. ember.

It is necessary that special reference should be made to the subject of the division of profits. The great divergence that has taken place of late years great divergence that has taken place of late years between the prices of gold and silver in terms of each other, has had the effect of producing a correspondingly large appreciation of the silver value of the Bank's reserves of gold coin and gold builtion. It can not be desied that the gain accouning to the Bank on that account is actual profit. But as the mutual fluctuations of the two metals were always beyond the range of forecast; these gains were not included in the regular prothese gains were not included in the regular profits, but their amount was shown in a special "Gold and Silver Exchange Account," the actual state of the Bank's liabilities being thus clearly indicated. As a result, however, of the change effected in the currency system, the gain under this heading assumes the character of a permanent profit, and it has accordingly been decided to devote it to the payment of a special dividend. We propose that this special dividend shall be applied to meet the calls upon shares not carefully considered it is found that the excessive altered system had gradually undergone the constant is sue was not only unavoidably necessary, but also believed changes before the actual operation of the yellowing measure in that sense is subthat, in point of the point of the point of the color of the called changes before the actual operation of the yellowing measure in that sense is subthat, in point of the point of the color of the called that is necessary.

be fully paid up, but as the operation has not the effect of increasing the institution's working capital in any way, it becomes necessary to direct your attention to the fact that this step may make it impossible to pay dividends at the cates hitherto declared, and may even eventuate in much smaller

I venture to add a word in conclusion. Since I was appointed to my present office in November of the year before last, more than a year has elapsed. During that time, unworted phenomena have presented themselves in economic affairs, and liave presented themselves in economic affeits, and many exceptional measures have been necessary in dealing with them. I have been much concerned lest the practical results should prove defective. But so far as concerns the spirit of those measures. I have been invariably inspired by a unique desire to promote the country's economic interests, and while the responsibilities devolving on the Bank must grow heavier hereafter in proportion to the viciositudes that will occur in the realm of economy. I promise that I shall be undeviatingly guided by the same apirit in every measure that I adopt, and I tenst, gentlemen, that you will accept my assurance.

#### TUESDAY'S GALE.

The strong northerly gale of yesterday did not pass over Yokohama without doing some damage afloat. Mr. Scidmore's new schooner Vamato Damashi broke away from her moorings opposite the Grand Hotel, owing to the fracture of a link in her chain cable, and with one sendo on board drifted out through the creek entrance to the harbour towards the P. M. Wharf. A steam launch, however, came to her assistance and towed her to a point inshore, midway between the British Naval Depot and the P. M. Wharf. This morning she was towed to a safer anchorage near the Pier. The only damage the yacht received was the scraplug of her paint and some of her copper torn off: not a seam was started. Several of the smaller yachts at the anchorage were in difficulties, and one, the 17-rater Deponia, filled and went to the bottom bows first. She can, however, easily be raised. Necessarily all working of cargo was suspended in the harbour, and me a consequence the departure of the P. & O. steamer Rosetta and the Shanghai mail boat Saikio Maru had to be postponed, the two vessels leaving the harbour this mora-ing before 9 o'clock. Probably we shall hear later on of some casualties to cargo boats. etc., between here and Tokyo, but the local lighters appear to have escaped accident. Ashore some damage is reported to fences and outbuildings, and two jinrikishas were over-turned during one of the fierce squalls in the forenoon in the streets of Yokohama, but the occupants formnately escaped unhurt.

#### TRADE OF KOREA.

The foreign trade of Chemuipo, Korea last rear amounted to about 10,000,000 yen. Following are details :--

#### TAPANESE TEA TRADE.

The tea trade of Japan, remarks the Osake Asahi, had its genesis before the Restoration, and when that event took place the amount exported had already reached ten million catties, valued at 3.500,000 ven. The trade has since undergone changes, but with the exception of a decline which made itself apparent immediately before and after the civil war in the 10th year of Meiji, every year saw progress. Statistics show that by the 20th year of Mein the tea exported amounted to thirty-five million cattles, valued at 7,600,000 or 7,700,000 yen. The growing prosperity, however, gave rise to spurious manufacture, and, Japanese tea having lost much of its reputation in foreign markets, the amount of export has considerably decreased. Alarmed by these circumstances, the tea-dealers endeavoured to restore their cradit at all costs, and they succeeded in accomplishing the object after three or four years exertion. The less trade 20 or 30 years ago was limited to transactions with toreign firms in the Settlements, no attention being directed to consumers in Europe and America. The trade, in fact, was largely dependent on the foreigners in Japan. reverse is the case at present. Agent Agents are despatched abroad to ascertain the condition of the market and the changes in the tastes of consumers, and steps are taken in various ways to extend the market. It is said that in the western parts of Canada and of the United States one fourth of the tea consumed is Japanese In Russia, too, the market has been expanded. In view of these facts it is advisable that texdealers should devote their energies to further improvements in the quality of the article and to increased enterprise in the matter of pushing asles. It may interest readers to subjoin a table showing the vicissitudes of the tes trade from the 1st to the 20th year of Meiji (1868-1896) :-Exports Calties. Original value,

#### MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

A speech of Mr. Fukuzawa's entitled Ukiyedan (Remarks on the Fleeting World), of great length, dealing with a number of current topics, was reported in the Jifi Shimpo last month. From the opinions expressed on various subjects we extract the following :- There is a good deal of talk about female education noways. It is quite true that women's general intelligence needs raising, but mere intellectual culture is not all that is required by any means. The real cause of the low social status that woman holds is the practice of polygamy, or that which amounts to polygamy, the use of a number of women by one man. Concubinage, prestitution, public and private, must be checked before the mass of Japanese women can be raised. The geisha of Tokyo are no longer like the gelsha of old days, but women of loose morals. And as for prostitution, there is no attempt like that made in foreign countries to conceal it. It goes on in broad daylight in the very centre of the metropolis. The first step to be taken is in the direction of greater concealment. In Western lands there is a large amount of prostitution, but it is not recognised by society as a whole. Europeans seem to realise that it is something to be ashamed of. This feeling is practically absent in Japan. Another suggestion is that there should be less drinking at our parties. For there is no doubt that the heavy drinking of many of the better class leads to other things. Japanese cannot afford to lose time in the performance of useless ceremonies such as are in vogue at some of our parties. The near approach of mixed residence brings such quesought to take some steps to raise this country to the Western standard as regards the attitude of the public to prostitution, concubinage, and the like. If the members of the Cabinet do not see the necessity of this, then it is clear that they are lacking in enlightenment.

There has been a good deal of controversy for some time past on the question of higher female education. Not a few magazine writers have expressed their disapproval of the Women's Universitys cheme, on the ground that, if carried out, the new institution would turn out an undesirable class of women. Mr. Takamine, the Director of the Female Normal School in Tokyo, writing on this subject in the Nippon Shugi, says that the tendency of higher female educa-tion in America is on the whole amagonistic in marriage. Women aim at rendering themselves quite independent of men by acquiring knowledge that shall enable tham to earn their own living and as a class become indifferent to mattimony, which is to be regretted. The Nippon Shugi endorses these sentiments and they are reiterated by a number of professors of the University and High Class Schools. Christian leaders of thought, however, support the higher female education movement in an outspoken manner.

In last month's Telkoku Bungaku appears in In isst monus Lessay from the pen of Professor Lafcadio Hearn on "Azure Psychology," or "The Value of Blue in Literature and Art from the Evolutional Standpoint," which, as it would be somewhat spoilt by the process of entitionising we give in full . epitomising, we give in full :-

epitomising, we give in full:

Pure bright blue is the least common among the many time given by nature to insect, bird, and blossom. Blue flowers are thought to proclaim for the plant that bears them a longer history of unclecked development than is indicated by flowers of any other primary colon; and the high cost of the finit is perhaps suggested by the inability of the horticulturist to produce blue roses. Vivid blue is found in the plantage of some wonderful birds, and on the wings of certain beautiful butterflex—especially tropical butterflex—but usually under conditions that amounce a prodigious period of evolutional specialization. Altogether it would seen that blue was the latest pure colour developed in the evolutional specialization of scale and flower with flexible and scale and flower with flexible and scale and flower with flexible and scale and flower with flexible and scale and flower with flexible and scale and flower with flexible and scale and flower with flexible and scale and flower with flower and scale and flower and 

higher forms of life until after the power of discerning red and green and yellow had already been

gained. Whether this be true or not, it is certainly noteworthy that, of the primary colours, blue alone has remained up to the present time a colour plea surable in its pure intensity to the vision of civilizad races. Bright red, bright orange, bright yellow or green or violet, can be used only very sparingly and delicately in nineteenth century attire and described. They have become offensive to us in and delicately in uncleanth century attire and de-coration. They have become offensive to us in their spectral purity by reason of the violence of the sensations that they cause: they appeal only to the rudimentary seathetic feeling of the uncul-tivated, or to the still coarser feelings of the savage. No contemporary beauty would robe berself like a fairy in warm green, or deck herself with zaffrou or scarlet. We cannot paint our walls violet, orange, or ventillion—the mere idea is monstrous! But the colour of heaven has not ceased to chaim us, Sky-blue may be worn under certain circumstantees and a reiling or interior wall surface of the ces; and a ceiling or interior wall surface of the same celestial tone may yield a most pleasing

effect.

It might be observed that we do not paint the outside of a building aky-blue;—the effect of a sky-blue façade would be even more disagreeable than that of one painted grange or crimson. This is true, but not because the aspect of blue on large true, but not because the aspect of bits life in surfaces is necessarily displeasing in itself. It is true only because, unlike other bright colours, vivid blue is never in nature associated with large solidiblue is never in nature associated with large solidities of any sort. Upon a house front the colour would appear absurd, because giving the notion of blue dead solidity against the glow of day. But a blue cailing, a blue vasit, blue waits of corridors, may give a laint pleasant idea of space and light the natural relation of the colour to depth and transparency is not falsified, but suggested to the imagination by such interior application. Yellow upon exterior wall-surfaces seems, on the other hand, quite natural—unless too strong in tone—because associated in memory with the beautiful effect of sunlight on broad surfaces.

But sithough yellow remains, next to blue, the

because associated in memory with the beautism effect of sunlight on broad suitaces.

But although yellow remains, next to blue, the most endurable that in massive displays, it never can be used, like blue, in its primary strength. Pale tones of yellow—especially this creamy tones,—may be delightful, either in feminine attire or in the tinting of façades, but not the pure burning colour. Only blue is always agreeable in its most vivid purity—providing it is not used so as to suggest blue hardness and blue opacity.\*

In Japan, which may still be called the land of perfect taste in chromatics—notwithstanding the Isuporary apparition of some harbanian innovations from the Occident,—almost any commonstreet-vista tells the story of the race-experience with colour. The general tone of the vista is given by blueish greys and dark blues, sharply relieved by details of white and pale cool yellow. In this perspective effect the blueish greys represent the tiling of roofs and swainings; the darker blues, shap draperies; the whites, small plastered surfaces; the tiling of roofs and swinings; the darker blues, shop draperies; the whites, small plastered surfaces; the light yellows, smooth naked wood and glimpses of rush-mattings. And the charm of these larger contrasts is still further relieved by the fautastic beauty of countless ideographs sprinkled along the fronts on disperies or signboards,—black, and sometimes red, against white; gold or white against black or blue. Strong yellows, oranges, violets, greens, am invisible. In costume also the ruling tones are greys and blues: when you do happen to see a diess, worn by some child or dancing-girl, all of one bright colour, it is generally a sky-blue,—very rarely an inis-violet, sometimes a wine-red. Yellow or green is never worn.

But neither the geschetic value of blue in its rela-

Vellow or green is never worn.

But neither the seathetic value of blue in its relation to the arts, nor the scientific significance of blue as the product of six hundred and fifty billion oscillations of the luminous other per second, can be compared for interest with the psychology of the colour,—with its subjective evolutional history an related to emotion. Doubtless in different minds the same apparition of blue will excite varying degrees of sensation, and set in motion, through revival of empirical association, very different spains of thought. Yet allowing for this osycholoing degrees or sensation, and set in income, in our revival of empirical association, very different trains of thought. Yet allowing for this psychological variety, there can be no question that the sight of the colour evokes in the general mind one common quality of pleasurable feeling,—a vivacions thrill,—a tone of emotional activity tunnical and the higher zones of sentience. takably related in the higher zones of sentiency and imagination.

In my own case the spectacle of pure lucent blue has always been accompanied by a feeling of yague delight, more or less strong according to the luminous intensity of the colour. And in one experience of travel-sailing to the American to And in one expe-

• Nine levels, blue eyes, blue flowers delight; but in these the colour accompanies transparency or offness. It is disable-less because of the incongruity before zen opartily and bore the less the eight of a double-bone to shytchie is sheen disable; in the least of a double-bone to shytchie is sheen disable; in the state of the double-bone the state of bat taste.

-this feeling became an ecstasy. That was when I beled for the first time the grandest vision of blue in this world, the glory of the Gulf Stream; a magical splendour that made me doubt the evidence of my own senses,—a flaming azure that looked as if the skies of ten thousand million summers had been melted into pure fluid colour for the making of it. And the captain of the ship that was bearing me into eternal summer leaned over the rail with me; and we both watched the marvellous sea for a long time in silence. Then he said:-

" Fifteen years age I took my wife with me on this "Fifteen years ago I took my wife with me on this trip—just, after we were martied it was—and she wondered II the water. She asked me to get her a silk dress of the very same colour. I tried in ever so many places; but I never could get just what she wanted till chance took me to Canton. I went round the Chinese silk-shops day after day, looking for that silk: it wasn't easy to find; but I didget it at last. Wasn't she glad, though, when I brought it home to her I She's got it yet."

Still betimes in sleen I find myself sailing south

brought it nome to her I She's got it yet,"

Still betimes in sleep I find myself sailing south again over the wonder of that dazzling surging azure; and the dream shifts suddenly across the world; and I wander with some grey, smiling man through grotesque narrow Chinese streets,—vainly seeking a silk of the blue of the Gulf Stream. And it was this haunting memory of tropic days that first impelled me to think about the reason of the delight inspired by the colour.

Possibly the wave of emotional feeling following

Possibly the wave of emotional faciling following upon a glorious vision of blue is more complex than the feeling aroused by any display of any other pure colour: at all events it is higher as to the quality of its complexity. For the ideational ele-nients blended in it comprise not a few of the noblest,—not a few of those which enter also into the making of Cosmic Emotion.

Being the seeming colour of the ghost of our anet,-the breath of the life of the world,-blue planet,—the breath of the life of the world,—blue is the colour-apparent of the enormity of day and the tremendous eternity of night. So the sensation of blue probably makes appeal to the ideas of Altitude, Profundity, Vastness. Also to the idea of Space-in-Time I for blue is the tint of distance, of dimness, of vagueness. Also to the idea of Motion; for blue is the colour of Vanishing and of Apparition. Vale and peak and coast and promontery turn blue as we depart from them; and again out of blue grow and define for us as we return to them. And the mass of inherited emotion turn to them. And the mass of inherited emotion bestired by the sensation of the colour must include bestired by the sensation of the condition of the feelings relating to countless ancestral experiences of classes,—to immumerable separations not less than to immumerable remines.

But whatever elements of sadiless shrive there,

But whatever elements of saddless strive they are dominated by others related to ideas of Warmth and Joy and Summer,—to all the happiness of dead humanity in the light of cloudless days. The feeling of blue is always a feeling of gladness. Blue speaks to us of the dead and of the gods, but never of their awfulness. Gloom, not the splendour of light, is associated for us with the idea of wrath, whether of ghosts or gods.

the idea of wrath, whether of ghosts or gods.

Now remembering that blue is the colour of the thought of the divine,—the colour patchestic—the modern idea of God,—the colour patchestic—the colour ethical, thrilling deepest into those structures of mind to which belong our feelings of justice and reverence and duty and unselfishness,—one may well ask why the tone of the emotion which let calls into play should be gladsome rather than serious. Could this mean that the merely sensuous experience of past humanity in the pleasure of luminous days,—experience transmit ted to each of us as composite memory,—is powerful enough to dominate all ethical feeling related to the sensation of the colour, for the simple reason that the former inherited feeling is vastly older, and therefore more voluminous than the latter F. O. does the fact lend support to the aucient metaphy sical theory of some elernal relation between ethic and applied a sentiment between the perception of beauty objective, and the recognition of beauty subjective—between the divine meaning of lovely

subjective—netween the divine meaning of loveliness as inward motal charm?

Probably the true solution is not suggested by either inquity. I venture the following very plain explanation:—"All moral pulsations in the wave of inherited feeling which respond to the impression of the belong only to the tender and brantision of blue belong only to the tender and beautiful aspects of faith."

I venture even to suggest that in this billow of pleasurable feeling evoked by the vision of blue, the most voluminous element, and most subtle, is in the fullest ethical meaning of the wood, the Splittual. Under the surface plexus of personal sensations and memories conjurically associated with the above it the featurable of the force of the contraction of the featurable of the fea sensations and memories empirically associated agazurau, is making lapid progress. The fol-with the colour, is the transmitted emotionalism of Comments of Strand been issued or unnumbered generations: a feeling was asympted are about to appear: Vol. I. "Questions of supersensual by its glostliness—deeper and were Philosophy and distributions are used.

er than any emotion belonging to the individual life. Under the sensuous recognition of blue as beauty, quickons the inherited ancestral recognition of blue as the hut of heaven and of hope—as the colour of that mystical splendour of beautitude the colour of that mystical splendour of beautitude into which, by the teaching of a thousand faiths, have passed for ever the spirits of the loving and the loved. Perhaps all human longings for all the Paradises ever imagined—all buried trust in the eternal promise of remoion after death—all dead to eaths of immortal youth and never-ending bliss—may somehow revive for us, more or less faintly, in this thill of the delight of azure. Perhaps, even as through the wondrous jewel radiance of the Tropic Stream pass undulations from the vaster deep, with their fugitive drift and foam, their sobbings and whisperings—through the emotion evoked by the vision of luminous blue there may quiver semelow back luminous blue there may quiver somehow be to us out of the Infinite-multitudinous like semeliow back billions of other-shiverings that make the blue billions of ellier-silverings that make the bile sensation of a moment—something of all the aspirations of the aucient faiths, and the glory of the myriads of the vanished gods, and the passion and the beauty of all the prayers ever uttered by lips of man.

The Melji-hydron man undergone a transformation and assumed a new name. It has been amalgamated with a little-known magazine called the Taiheiyō-hyōron and has come out under the title of the 中外時篇 Chagwai-jiron. The first number, issued on January 1st, contains among other articles an interesting account of the progress of thought in China. The title of the article is 文學 革新の陽光 Bungaku Kakushin no Shoke. (The dawn of Literary Reform). The writer furnishes a number of quotations from Chinese publications in support of his assertions. The following are the facts he gives, briefly stated. Since the war the number of newspapers published has largely increased in every part of China, and the opinions advocated in the various organs are almost without exception in favour of China's following in the footsteps of Japan in her adop-tion of Western Civiliantion. The course re-commended in some quarters is that the Chinese should study Japanese, in order to be able to make use of the numerous translations of foreign works circulating in this country, a task which with their knowledge of the meaning of the ideographs would be comparatively easy to The schools which have been opened ihem. for teaching Japanese are crowded with pupils, in Shanghai especially. China has hitherto re-garded Japan as a child and a pupil; it is now treating her as a grown up man and a teacher, and all this is the result of the late war.

A new educational magazine has come into existence called the Ryotku Jikken kai (The World of Practical Education). The object World of Practical Education). The object of the new organ is to collect and publish the experience of mon actually engaged in teaching rather than to discuss educational theories.

The Hakubunkan announces the publication of an encyclopædic work of reference on Japanese subjects entitled Zeihoku hyakkwa-sensho, which is to consist of 100 volumes, each volume to cover about 330 pages. The price will be 35 sen or 50 sen per volume according to binding.
Though the title of the work would indicate that an actual encylopædia is in contemplation, the aunouncement of the publishing firm indicates that the idea of the projectors is only to collect and publish treatises on every branch of knowledge, and the whole work will have no of knowledge, and the whole with with avenual unity whatever. The first volume has been prepared by Mr. Takayama Rinjiro, the editor of the Tairo, and is entitled Schai bunmeishi (A History of the World's Civilisation). The book in divided into 15 chapters, and treate of the literature, politics, religion, and philosophy of the West from early ages down to the time of the French Revolution.

A similiar work to the above, previously mentioned in these columns, the 新提首種 Shinsen Arakuthu, in making tapid progress.

Vol. II " Japanese on the Sea," price 30 sen. Vol. III. "Occupations for Women," price 30 sen. Vol. IV. "The Ten Great Religions of the World," price 20 sen. Vol. V. "Genius." Vol. VI. "The General Assimilative power of the Inpanese." Vol. VII. "Vapours in Japan." Vol. VIII. "Poetry and Prose." The last three Volumes will appear in Februssy, March and April respectively. The works are for sale at the Fukyūsha, Gofuku-chō, Nihonbashi, Tökyö.

The January number of the Telkoku Bungaku contains some excellent articles which we have no space to notice fully-one by Dr. Takakusu Junjiro, the distinguished pupil of Professor Max Müller, on " the Position of Woman in Ancient Literature"; one on "the Roman Catholics and the Revival of Literature and Art" by Mr. Takavama Rinjiro; and another by Mr. Ueda Mannen on the pronunciation of words and methods of spelling. But what concerns us most is a review of the year 1897, given among miscellaneous items, which has evidently been prepared with great care, and which not only treats of literature but of art, the stage, and music. We give the gist of the article in as short a form as possible.

(I) PREVAILING IDEAS .- Among these the notions that have clustered around or derived significance from the "Nippon Shugi" movement are certainly the most prominent. We cannot but regard that movement as retrograde, and hence we take rank among those who oppose it tooth and nail. Reduced to its final elements. it is nothing but an attempt to check the progress which civilisation has been making for the

last thirty vents.

Fiction.-The most productive and (2) successful year as regards this class of literature was 1896. Last year there was a distinct falling off. In 1896 there was immense competition, resulting in the expulsion from the field of a host of inferior writers. Consequently the men who were left rested on their oats and produced little that was original. Then last year the blending of the realistic and the fanciful or ideal styles which was brought about by the influence of the Waseda Eclectic School had the effect of removing all the flavour from works of fiction, of rendering them colourless and characterless. There has been a cry for novels of the witty kind and for works designed to illustrate and enforce fixed ideas, but in each case the response has been poor.

(3) NEW STYLE VERSES —In no year has

so much been written on this subject in all the Magazines. Though the verses that have appeared are a marked improvement on the compositions of two or three years ago, this class of literature is still in its infancy. It is not imperfection in form that strikes as as much as an absence of poetic passion and poetic ideas. Without the latter nothing very striking can ever be accomplished in this

(4) TRANSLATION.—The number of translations that appeared during the year under review was large. Mr. Tsubouchi Shôyō still continues was large. to concentrate his attention on English literature. Among other works he has given us translations of "Hamlet" and "Macbeth," Ogai's (Mori's) translations are extremely well done, but the amount of work of this kind that he gets through is very limited. During the year the Hage-atama and one other book are all that he has published. Mr. Fukuchi Ochi attempted the reproduction of Hugo's Les Misérables; but the latter part of his work was by no means successful. Mr. Hasegawa's translatious of Russian novels which have appeared in the 2 alyō, and Miss Osada Keiko's rendering of Lamartine's Graviella are specially worthy of mention. Miss Koganei Mikiko's Kokorosukushi shows signs of great labour and is most creditable to the authoress. Mr. Uchida's translations of comedy in the Zaipo and the reproductions of Zola that have appeared in the Bungel Kurabu, the translations of Mr. Imano Gako in the Shinshosetsu, and the renderings of the late Mrs. Iwamoto are worthy of mention. gratifying about the work that has been days. These works have been noticed in former in the translation line. It is indicated in extern summeries.

and lacking in thoroughness in not a few cases. (5) THE STAGE,-Regarded from a literary

standpoint the dramas that have been published during the year are very poor, wanting in the refinement and style which would entitle them to a place among permanent literature.

(6) YAMATO-BUN.-Books written in purely native style are few and far between now-a-days: The taste for this class of literature seems to be rapidly disappearing under prevailing influences of various kinds, so that it 🖺 not surprising that little is undertaken in this line.

(7) SHORT VERSES,-The class of composition known as tanka expresses the thoughts of conservative minds and is essentially retrospective rather than progressive. In these verses no new ideas are expressed. Any attempt to mamodel them would result in their abolition.

(8) BOOKS WRITTEN IN CHINESE STYLE. At the present time the men who are best versed in Chinese literature are old and lacking in the ability to make the best of their know ledge by classifying it in modern fashion. younger men who have studied Chinese literature to a certain extent are not in possession of the necessary grasp of the subject to allow of their systematising to any purpose. Two works of considerable size appeared last year, whose object it was to facilitate the sindof Chinese literature, the Senshin (先秦) Bungaku and the Shina bungaku-shi, first of these is dictatorial in style. There is too much of the opinion of the author and too little quotation of authorities for that opinion. second work shows an absence of some of the essential characteristics of a book aspiring to be called a history of literature. Then there are the Shina bungaku-taiko (大棚) and the 東大陸人豪傳, Todairiku-jingoden which appeared during the year, but neither of these merits praise.\* The society whose chief object is the investigation of Chinese literature, the Tosgakkai, though founded with a great flourish of trumpets, has shown little sign of life for many months past.

(9) CHINESE VERSES.—This class of writing is rapidly declining, as is abundantly shown by the number of trashy lines penned by obscure individuals that appear in the

magazines month after month.

(10) Comic Verses .- What are known an haikai or hokku have been revived during the year and seem destined to become popular again. Several collections of considerable merit were given to the public last year.

(11) HISTORY AND BIOGRAPHY .-- The number of books that have appeared during the year on these subjects is very large. The histories have been mostly confined to the Takugawa and Ashikagawa eras. The materials for dealing with the history of the middle ages and of earlier periods are very scanty, and this doubt-less accounts for the fewness of the writers on the events of those times. Our best biographers are beginning to realise that in order to give a vivid account of the life of an individual it is necessary to be well versed in the history of the age in which he lived.

(11) FINE ART .- The contest between the old and new schools ofart has never been more keen than during the year that is past. What will be the final result of the experimenting now going on it is difficult to foresee. There has been much that is unseemly and unphilosophical in the conflict. Both schools are lacking

in moderation.

(13) Music .- The almost universal indifference to foreign music has for a long time been most evident. Last year was no exception to preceding years. The efforts put forth some music have left little trace anywhere. It quite plain that we are not a musical people. Our native music makes no progress and is altogether out of touch with the thoughts and feelings of modern Japanese. The schools of music founded some years ago directly they were left to the management of Japanese began to decline and all that is visible now is a handful

of enthusiante trying to make an impression upon a stolidly indifferent nation.

The review which we have briefly summaris-ed covers 38 pages in the Teikoku-bungaku and constitutes a valuable record of the literary history of the year 1897.

The Kyōiku-jiron reports a speech made by Mr. Kinoshita, the President of the Kyōto University, at the Kyōto Education Society's meeting held a short time ago, on the work of the University. The Colleges which have commanced work are the Science and Engineering Colleges only, and even in these only a few of the subjects have been begun. Among them Civil Engineering and Mechanical Engineering occupy a prominent place. The demand for civil and mechanical engineers has increased so rapidly in the last two years that the Tokyo University has been unable to supply it. In order to provide teachers for the three Departments yet to be started—the Law, Literature, and Medical Departments—promising men have been sent abroad to study. Up to the end of last year the number of students despatched for this purpose amounted to 30, and it is contemplated is send 20 more during the present Vear.

The Kyōiku-Firon has collected and published the views of several leading statesmen and others on the educational policy which should be adopted at the present juncture; of which we furnish the following epitome. Marquis Itô's views, which head the list, were given in the last Religious Summary, and have been already discussed in the leading columns of this journal. Count Soyejima expresses great disagtisfaction with the educational policy hitherto pursued, whose chief fault has been excessive laxity or excessive strictness. The fuss that is being made over mixed residence and the danger arising from closer contact with foreigners does great harm, and may, if not watched, result in producing fanatics of the assassin type. Count Okuma disapproves of any relaxation

of the law in reference to education. Every child in the land should be forced to go to school. The danger to a nation arising from the existence of a number of ignorant persons is constantly illustrated in China. Our educational policy should be based on cosmopolitanism and should in no way encourage the spirit of aggres-sion which is so rife in some quarters to-day, Viscount Watsnabe dwells on the lowness of the salaries of teachers in elementary achools, which are no better than the wages of finrikisha men and bette. Mr. Otori Keisuke discusses moral education, and in doing this says that the national characteristics of the Japanese lie takes to be candour and straightforwardness, gallantry or chivalry, patriotism, sharpness of wits, frugality and love of simplicity, a nervous organization qualifying for delicate operations and workmanship, impatuosity, precipitancy, lack of perseverance, love of cleanliness, fickleness, great emotionalism, love of merrimont. light heartedness, noisiness of speech, an absence of affability and cordiality and an absence of magnanimity, a deficiency in address-the art of salutation, &c.—unakilfulness of speechand high development of the rational powers in the matter of politics. There is no country in the world, says Mr. Otori, where young boys talk politics as they do in Japan.

In addition to the above the views of Mr. Kurokawa Shinrai on the education of the past and those of several other well-known men are

An historical work of reference entitled the 國史便覽 Kohushi benran, has been compiled by three post graduates of the University, Messra. Shigeta Sadakazu, Nakamura Toku-gorô, and Nakagawa Masanobu. It covers 600 pages and sells at 1 yen 50 sen per copy at the Fukyû sha. The arrangement of the work is said to be very good and foreign chronological ables as well as maps are appended.

Original from .

The resistance in this bear an epitome of the Fu-

ture" given by Dr. Nakajima Rikizo at the Confucius Memorial Ceremony held some weeks ago, the gist of which can be stated in a few words. According to Dr. Nakajima, the central principle of Greek ethics, which was the basis of European ethics in ancient times. was the welfare of society, and that of Chris-lianity was humanity. These two systems are capable of being smalgamated. The reconciliation of Egoism and Altraism, of Stoicism and Epicureaniam is also possible, says Dr. Nakajima. The course recommended to his fellow-countrymen by Professor Nakajima is to choose the best out of the ethical systems of the ancients and erect a new atructure-a course which is not likely to be adopted under existing circumstances. The Nihon Shugi, after its fashion, describes the address as AS & A. A. 陳 獻, Heihei bonbon Chimpu Ktwamaru, reaching the *ne plus wiira* of the common place and the fuely."

Mr. Takahashi Goro has launched out in a new enterprise. He has become the editor of a Magazine called the 天地人 Tenchijin, the first number of which has recently appeared, the Sansaisha, Ginza, being the publishers, Judging from the remarks made in the opening number the new publication sime II becoming a first-class organ; and at representing in a way that has never hitherto been done all shades of public opinion. In size and general get-up it ranks with the Taiyo, the Schai-no-Niñon, and the Kokumin-no fomo; like these it has gone in for illustrations. The contributors to the first number are well-known men, and it is stated that articles on religious subjects have been promised by Missionaries. Politics are evidently to receive a large share of attention. Count Itagaki, Mr. Oi Kentarô, Mr. Shiro Sentarô, and s number of other prominent men have all expressed their views on the questions of the day,

The Sikai-no-Nihen, commenting on the literature of 1897, says that on the whole it has been of a most ephemeral type, the principal writers spending their time over novelettes or articles for magazines or newspapers. Some of the writing, says the organ we are quoting, has become very slipshod and ungrammatical, the Waseda school of writers being great transgressors in this matter. The "Nippon Shugi" sors in this matter, excitement, adds the Sekai-no-Nihon, has resulted in the publication of a good deal of injurious matter, which in country schools is fanning the flame of anti-foreign sentiment. This is just the way to manufacture men of the type of Isuda Sanzo and Koyama Rokunosuka (the two well-known would-be assassins).

. . .

The subject of sociology is attracting creased attention in Japan. Mr. Tajima Kinji has just published an interesting work on this topic called Nihongenji-no Shabai-mondai. On Society in Japan at the Present Time, which gives the results of recent investigations Numerous short trestises on sociological subjucts have appeared from time to time. There are the Shakaigaku-no-Genri by Professor To yama,the Shakat Shinkwa-ron,by Mr. Ariga, the Shakai Seisaku (政策) by Mr. Kanaye, and a few essays on the labour question. Then there exists the Shakai Zasshi, a magazine whose object it is to discuss social questions, and a society called the "Shakai-Mondai Kenkyu-Kai." Mr. Tajima's new work is a long way alread of all these efforts. According on the reviews it is the first book that has been published on this topic which has any pretensions to thoroughness. brings out prominently the distinctive features of modern society as compared with the society of the pre-Meiji eras, and for purposes of comparison gives a minute account of the state of society in Europe and of the sociological principles which are emphasized by leading writers on this subject in the West. The influence of Christianity on society is traced, but Buddhism and Shintoare left out of account, which, says the Withonjin, is much to be regretted, in they have undoubtedly done much to mould a crist, into its present mape. Mr. Pajilina score covers

360 pages and is for sale at 70 sen per copy at the Tokwado, Imagawa Koji, Kanda, Tokyo.

Last month we epitomised the views of an Outsider" on art, which appeared in the Zaiyō. The title in Japanese given to the article in the Zaiyō was Bişutsu Kyokugai-kan. Imitating the title, the Wateda Bungaku has published criticisms on current literature under the heading of Bungaku Kyekugai-kan (Views on Literature by Ontsiders), from which we extract the following observations, allowing each writer to speak for himself.

MR. UCHIMURA KANZÖ.-The two great sources of literature are the feeling of joy and the feeling of sadness. Of the former Japanese have none. The latter they possess to a limited The consequence is that the prevailing extent. tone of their literature is pessimistic. Having no deep and decided views regarding the nature of man, it is impossible tor our literary men to produce a great work.

MR. MIKAMI SANJI.--Modern fiction is too exclusively occupied with the subject of love. The area from which writers draw their materials is far too limited. There are those who attempt to utilise history, science, and wit in their romances, but they have made a poor show.

MR. KANEKO KENTARO .- The functions of modern literature may lie said to be three. has to arrange and preserve the records of the nest that have been transmited. It has to record the passing events of the age in which we live. It to open up the way for future progress. Modern fiction is wanting in originality. It is foreign fiction slightly transformed and modified. The Ukifung that has been appearing in the Asahi Shimbun in "Hamlet" remodelled. The original sources of most of the works that cause a sensation when they are published may be easily found. What a rich field of material do the various changes of the Meijs era furnish for narrative and illustration! How is it that there is no one of sufficient originality to make use of this material?

MR. TOGAWA ZANKA .- When I think of the character of our modern fiction I confess to m feeling of unter disgust. There is all the differ-ence in the world between "love" in the foreign novel and the Japanese Kei, and it is this difference that gives elevation and superiority to the one which is not possessed by the other. The intercourse of men and women in the west is something entirely different from what we are accustomed to in this country. We have heard enough about the women to be met in tea houses and places of assignation and should like to know nomething about the mon and women who assemble at such places as the Imperial Hotel, about the leaders of society, whether they be statesmen, missionaries, merchants, or what

MR. ONISHI SHUKU-Most of the novels of the present day are written in the upper stories of lodging-houses by mere students. This accounts for the sameness which constitutes one of their leading features. The most noted of modern novelists is Rohan. It is to be hoped that after a while this gifted writer will turn his hand to social subjects and endeavour to show up some of the injustice which characterises prevailing customs and habits. There is immense scope for a clever satirist in this line.

The Shigaku Zasshi (Historical Magazine) shows marked improvement. The number be-fore us contains a number of useful articles, among them one by Dr. Hoshino on "The numerous mistakes to be found in the Heike-Menogatari and the Gempei-Seisuiki; one by Mr. Uchida Ginzō on "The History of Political Economy," and another by Mr. Yoshida Tōgo on "Local names and the changes they undergo." Among the miscellaneous items appearing in the Shigaku Zasshi one has reference to the increase of population in the large cities of the empire, which the writer takes to bear a relationship to the progress of civilisation, the tendency of an advancing people being to as-semble in large towns. In Iemitau's time (in semble in large towns. In Iemitsu's time in three sailing vessels, and three hundred and a.p. 1630) there were 35,419 houses in Kyoto, Monty-two Junks were at anchor in Nagasaki which, allowing four persons the safe Rose, her rout of the glicingto.

would give a population of 141,676. The present population is set down at 300,000. 1693 A.D. the population of Tokyo was 353,582. It in now about 2 millions.

In 207 of the Kyōiku Köhō Dr. Katô passes some severe strictures on the present system of teaching in the Higher and Middle Schools, as well as in elementary schools. He says that numbers of useless things are taught and that sufficient attention is not paid to grounding in subjects in which every lad ought to be versed. The text-books used are in many instances unsuitable. Their compilers seem to thought more of showing their own capabilities than of furnishing the information required by students. The Mombusho has hitherto gone on the principle of keeping out of their schools all books that might prove harmful. This is a purely negative policy and does not go far enough. Surely the Department ought to adopt a positive policy and establish a standard for text-books. In the matter of general education Dr. Kato thinks that more simple methods of instruction should be adopted. It is unnecessary to trouble the pupil with numerous details which will soon be forgotten. In the matter of morality Dr. Katô is of opinion that much care should be exercised in the choice of teachers and that considerable power should be given to the Directors of schools to deal with cases of immorality. Ethical teaching should not be confined to exalting filial piety and loyalty to a rank above all other virtues.

#### SHIPBUILDING IN JAPAN.

Commenting upon the present condition of the Mitsubishi Dockyard, Nagasaki, the Osaka Asahi says that during the latter half of last year business was somewhat staguant in the repair works, but continued to be as prosperous in regard to the construction of vessels as in the corresponding period of 1896. The chief employes number at present 159, besides ten foreigners. Mechanics and coolies employed during the period under notice are reported to have numbered altogether 420,068; the average per day being 2,282. Compared with the average for the previous term the figures show a decrease of 105 per day. The vessels already constructed and those now in course of construction are as follow :-

Name of steamer. Classificati n. Tonnage. 2,530 Suspended. 6,150 In construction. (Uncertain)..... Steel Tokiwa seem w 6,150 Just begun. 1,540 In construction. Isukishima ... Wooden Uguisu .......... 517 Finishing. 10 Uguisu ...... First Saiyō ..... 689

In addition to the above vessels, the construction of fifteen special pumps for use in mines, sixty tons of cast iron pipes, and other plant in being undertaken. During the term under review repairs were effected to 107 vessels, of which 70 were Japanese and 37 of foreign style.

#### CHRISTIANITY IN KOREA.

We read in the Korean Repository that 1897 was the most successful year Christian pro-pagandism ever enjoyed in Kores. The Christian Church doubled its numbers during the twelve months. There are now 5 000 Pro-testant converts and 25,000 Roman Catholics; or about one Christian in every 540 of the inhabitants. It is alleged that one of the marked differences between Christian and Confucian households is that the wife beating, almost universal in the latter, is banished from the former. Cleanliness also enters with godliness. read, too, that some twenty-five thousand Koreans received medical treatment in Christian hospitals during the year.

Eight warships, thirty-five merchant steamers,

## JAPANESE FACTS AND COMMENTS.

The amount of silver and notes exchanged since the adoption of gold monometallism up to Feb. 17th was as follows :- From October up to Feb. 17th was as follows:—From October I to the end of January, silver pieces exchanged, 3.645.795 yen; notes, 15.458.085 yen; total 19.103,880; from February I to 17. silver exchanged, 265,841 yen; notes, 3.116.989 yen; total, 3.382.530 yen; grand total—silver, 3,116.636 yen; notes, 18.574,774 yen, the two aggregating 22,486,410 ren.

The question of opening tea stalls at the Paris Exhibition was brought upon the tapis at a meeting of the Central Tea Dealers' Council lately in the capital. The programme formulated by the committee requires a gross outlay of over 1,000,200 yen. It beems that the tea dealers are hardly able m bear such a large amount of expense, and it was decided to present a petition to the Government for a subsidy of 700,000 year. The authorities, however, says the Shogyo, can hardly be expected to comply with such a peti-tion, and a bounty of 20,000 ren will be the largest amount obtainable.

In order to facilitate the adjustment of coinage the Government seems to have resolved to shorten the period allowed for exchanging the yen piece. Count Inouye, Minister of Finance, having completed his investigations, has arrived at the conclusion that the measure must be resolutely enforced as quickly as possible. In-stead of submitting the question to the Diet, recourse is to be had to the issue of an Imperial Ordinance for shortening the exchange period. The Ordinance will, says the *Porosu*, be issued at no distant date, the expiration of the period for exchange being fixed not later than the 30th Tune next.

Thus the gold exchanged during the four months amounted to 22,486,410 yen, of which 18,570,000 yen were for the conversion of notes. Even subtracting from this a sum of 2,446,315 yen which was received in gold, a balance of 18,123,685 yen must be considered as having been withdrawn from the Treasury. If this money were in circulation in the interior there could be no cause for complaint. But as it was chiefly transported W Yokohams and Kobe, its outflow in consequence of the excess in imports is inevitable, the daily shipment of gold amounting to no less than 200,000 yen. This amounting to no less than 200,000 yen. tendency, the Nichi Nichi remarks, will never cease as long as imports are so overwhelming a factor in national trade.

Scarcity of capital has ever been the weakness of fishing enterprise in Japan, says the Mal nichi. When, some time ago, a grand meeting of the Marine Products Council was held in Kobe, one of the members suggested the ne-cessity of inserting a provision in the Bank Regulations extending the privilege of loans to marine industry as well as to agriculture, Investigations having been made, it was found that the issue of loans could only be effected on substantial security or on receipt of a bond from more than twenty persons who should declare themselves responsible for repayment. The risks attending marine enterprises are too serious in the eyes of bankers to warrant the issue of loans on ordinary terms. It was consequently proposed that a fishery bank with special privileges and offering particular accommodation to sea-faring men should be organised. A draft of rules with regard to the institution was drawn up for presentation to the Diet.

Count Inouye's programme, which was cautionaly withheld from the public on the plea that it was still under consideration, seems to have been decided at last. At a Cabinet meet-ing recently held the new policy, the *Forosu* sing recently held the new policy, the Forest sines, secured the unanimous approval of the Ministers, and the various Departments are being asked to prepare the supplementary budgets of expenditure. The administrative expenditure in each Department is to be considerably decreased, and steps are to lake the first half of every year is, as a rule, siderably decreased, and steps are to lake the first half of every year is, as a rule, siderably decreased, and steps are to lake the first half of every year is, as a rule, siderably decreased. The first half of every year is, as a rule, siderably decreased to the possible to similarly and year of the military and year of the imports under contract, chiefly cotton in construction the port of Nobiru, as a URBANA-CHAMPAIGN-

naval expenditures the " ten year " programme as formulated by the last Cabinet will be pursued for the time being, the funds required for the 3181 year being supplied from special sources. The scheme for increased taxation is to be suspended and the source of revenue deliberated upon after the 12th session of the Diet is closed. Does the Government, saks the Forosu, dream of being able in secure the country's future by such a temporising policy? No one can accept the programme in good faith. No one, we (Japan Mail) may add, can accept the criticism of the Foresu in good faith.

The ever-growing foreign trade of Japan. says the Kokumin, has naturally had the effect of increasing the arrivals of vessels and the accumulation of cargo in the various ports, and it has become necessary to bring in force strict regulations in these matters. The Government has now resolved to inaugurate a system of Harbour Offices. These will first be established in Yokohama, Kobe, and Nagasaki.

The Nippon Ginko's augmentation of rates of interest is, in this state of affairs, no extra-ordinary step. Unfortunately Japan is not yel cosmopolitan in her financial arrengements and the raising of interest by the Central Bank car hardly produce as rapid and effectual results as are luvariably noticeable in European and American markets on the adoption of that step The effect is slow and gradual. Another in crease in the rate of interest may reasonably be expected on the part of the Bank of Japan by March or April.

With a view to adopting a substantial system of currency in Formosa, Count Inouye, Minister of Finance, is reported to have held consultations with the young Counciliors of the Department by whom the necessary investigations have been conducted. The chief data are to be furnished by Secretary Arai, who was lately despatched to the Island with that object. The question all issue is whether the system enforced by the Matsukata Cabinet should be continued, or gold monometallism adopted. Whether the adoption of a bimetallic system exclusively for Formona is more convenient and better fitted to the wants of the island is a question which demands attention.

The Yiii recently remarked that while all other Japanese enterprises are steadily progressing the postal system shows lamentable signs of decline. The same paper now prints a table showing that the number of accidents happening to mail matter increases annually :-

MAILS.					
Yest.	Stolen.	Drupted.		at away. Cor	
1896.	1,588	304			5.728
1895 .	1,287	340	57	212,	3,387
1894.	511	1,069	40	2,988	5,243
1893.	105	278	71	265	1.148
1891	198	580	30	259	2,219
1891	344	271	68	81	758
1890	1,265	414	39	233	1,259
1889	190	4,398	15	442	2,220

The amount of mail matter trebled between they cars 1887 and 1896; but robberies increased eight-fold, while the figures relating to other accidents are scarcely less significant. This must be attributed in great measure to lazi y of regulations, and the small pay and bad treatment post boys.

Specie, remarks the Aippon, began to flow out of the country in November last, and the total subsequently shipped abroad reaches sixteen million yen,-3.500 000 yen in November, 5,800,000 yen in December, and 6,800,000 yen in January. These sums were not wholly employed in payment for imports, a portion of them being appropriated to the exchange of silver. It is said that the outflow of gold and silver for this month is to be compensated by bringing from London the balance of the sale of bonds, amounting to a little over one million yen. This is, however, a mere tem-porising scheme and the tendency to excess in

and machines, amount to a very large sum. The failure of the rice crop last year still necessitates the purchase of foreign cereals to the amount of several millions of koku. new Customs Tariff will become operative in October next. Imports for the first six months of this year will, from these circumstances, be as abundant as they were in America last March or April. An exodus of specie, reduction in reserves, and tightening of the money market will be the inevitable result.

Baron Suyematsu, Minister of Communications, is reported by the Tokyo Asahi to have issued the following private instructions to the Superintendents of the First Class Post and Telegraph Offices throughout the empire :-Now that machinesy for communications has considerably expanded, business must be conducted with the utmost assidnity and discretion. The secrecy of correspondence being maran-teed by the Constitution, each officer must strictly deserve that principle. Employes must behave civilly to the public, and must not identify themselves with any political party.

The jealousy of Americans against the growing Japanese trade in the United States has made itself apparent, says the Tokyo Asahi, in he import of Japanese oranges. The orange dealers in California, attempting to prevent competition on the part of the Japanese product, pre-vailed upon the inspectors to vigorously enforce regulations against fruit coming from Japan. All oranges bearing the eggs of parasites are to be rejected, and others on which microbes are found are to be steamed. The California oranges, with their thick crust, are strong enough to sustain such an ordeal; but the Japanene oranges, whose onter tissue is thin and weak, are likely to be greatly deteriorated. Consul Salto has failed to get the restriction remov-ed, and he advises dealers to brush the oranges cleanly, one by one, before they are wrapped in paper for export. He further suggests that a certain amount of money should be reserved "for the purpose of opening and consolidating social intercourse with the inspectors referred A charming tribute this to the incorruptibility of American officials.

Some of the emigrants to Hawaii appear is have succeeded in obtaining from the Headmen of their city, town, or village, certificates for women whom they fraudulently pretend to be their wives. These women have invariably proved a source of trouble, confusion, and disorder on every voyage, while on their arrival elopement, separation, and other complicasome of the municipal Headmen who seem to have issued these certificates knowing them to be fraudulent. Among the labourers recently enlisted were students, teachers, traders, ex policemen, &c., altogether of poor physique and utterly inexperienced in agricultural pursuits. Since the late protest by the Hawaiian Government, free emigrants have had a difficulty in landing there, and in consequence they effect the passage under cover of a temporary contract with the Emigration Companies. As soon, however, as they arrive they undeavour to annul the contract and to engage in business on their own account. If they are compelled to pursue agricultural work, the labour proves too onerous for them, and they soon find a pre-text for refusing duty. The fault lies in many respects with the over-zeslous agents of the companies, who mislead intending emigrants with promises and false representations. Government, the Osaka Asahi thinks, should look into the matter.

Tapan as a whole abounds in excellent sea ports, remarks the Tokro Asahi, but the coast north of Tsuruga, facing the Japan Sea, and the southern Pacific coast are utterly wanting in na-tural harbourn. The facilities of communication being thus extremely small, the development of

preinde = a programme of development. Their efforts, however, failed; and they next turned their exertions to the building of Matsushima The demand for harbours more and more clamorous, but as the enterprise requires an outlay of several millions of pen and many years' labour it is well to pause before embarking on it. Ofmato, in Kesen, Iwate, has a gulf sheltered from the sea, and is surrounded for several miles by mountains. This gulf is spacious, with a depth of eight or nine fathoms, which renders it possible for large vessels, as the Puji and Yashima, to safety at anchor. The port, however, being regarded as comparatively unimportant for commerce, has failed to attract the notice of the public. In its vicinity is Senningan, in the neighbourhood of which are numerous iron mines, which, however, have been neglected owing to the want of means of transport. If the main line of the Japan Railway Company be extended to the place through Kesennuma the mines could be developed into a source of immense wealth to the nation at large.

According to the Fifi, the bullion purchased by the Bank of Japan last year amounted to 90,755,473 ven, while sales aggregated 171,169,133 ven. These figures, compared with the previous year, show a decrease of 12,413,990 yes in purchases and an increase of 140,449,267 yes in sales. The stock in hand at the end of last year was 33,605.919 yen. The bullion at present in stock is composed as follows: Gold bullion in bar, 52.440.328 momme, valued at 25.373.514 yen; English gold coins, 8,250 pounds, valued at 78,123 yen; American gold coins, 513,376 dollars, equivalent to 1.046,753 yen; old coins, 3,795,074 yen valued as 9,831,132 yen; gold bullion containing silver, valued at 48,150 yen; gold contained in other old coins, 213,672 yen, silver bullion, 14,573 yen. Compared with the figures for the previous year a decrease of 57,601,039 yen is noticeable in gold and of 22,811,720 yen in silver bullion. So considerable a diminution in gold and silver bullion is attributable to the repayment of deposits from the Government and to the completion of the operation of minting a portion of the latter into one yen silver. 'i he alteration of the Coinage System has also contributed to

A petition presented by the Spinning Companies of Japan for special assistance from the Finance Department was, according to the Chuo, lately granted. On the 15th instant contracts were entered into between the Prasident of the Specie Bank and the delegates of the Spinning Guild, in the following terms :-(1) The Specie Bank shall issue through its agencies in Shanghai and Hongkong loans to a member or members of the Guild at those two places, on the security of cotton yarna, inthe amount of  $\frac{7}{100}$  of the market value when 20's are quoted at less than 77 tacls in Shanghai and II \$101 in Hougkong, or at the rate of 100 of the value when quotations are below the figures mentioned. (2) The rate of interest shall be six per cent, per annum and the period of loan six months. (3) The amount of ex-change bills shall be determined by taking into consideration the market value of yarns in Japan recognised by the Specie Bank, to which the expenses for transport are added, the rate being fixed at 150 when the calculation stands at less than 93 year and at  $\frac{160}{160}$  when it is above this figure. (Note,—If the Specie Bank deems that the consignees to whom exchange bills are issued are rich enough to pay the difference in converting the tills into loans, special allowance may be made in the amount of exchange,) (4) When any member of the Guild has under taken the export of yarns without previously entering into a contract with the Specie Bank for an order of exchange, and has applied for a loan on the security of those yarns, the Bank in question may comply with the request in cases only where the agent for such a member may be fully trusted. (5) This stipulation shall expire on the 31st December of the 31st year of Meiji, and the loans issued in accordance there- in Yokohama harbour sank at with must therefore be repaid within that period capsized: 150 cases were lost.

(Note.-Alteration, however, may be made eccording to the convenience of the Government,) There are two or three other provisions. The loan is limited in three million yen and exchange bills are payable at ten days aight, with three days grace for collection.

A representative of the Asahi lately had an interview with Mr. Shibusawa, who is reported to have made the following remarks on the subect of the introduction of foreign capital:-If the present decline of the economic world be really attributable to want of capital, the utilization of foreign funds at low rates of interest should be immediately adopted as the best means of redress. Count Inouye, Minister of Finance, has, since his entry into the Cabinet, been strenuously engaged in making investigations as to the means for smeliorating the depressed condition of the econo mic market. The practical business community has shown its sympathy in this direction, and it may confidently be expected that the Minister's schemes for the reform of finance will be strictly in accordance with the wishes of the leading merchants in the capital. It is advisable that the raising of loans abroad shall be quickly undertaken as a Government enterprise in the interests of the country, so that redemption of domestic loans may be effected. Apart from these considerations another plan suggests itself, The introduction of foreign capital may be effected on the credit of private individuals, under the guarantee of the Bank of Japan, the Specie Bank, or other influential institutions. But as a law still exists prohibiting foreigners from holding shares in Japan, they naturally shrink from investing their capital in the country without some safeguard for their property. This restriction must be quickly and thoroughly removed. But when foreign capital has been successfully introduced, the utmost discretion must be exercised in its appropriation or utilization. As a reaction after the long depression in the economic market, industrial mania may quickly follow the introduction of foreign money; speculative undertakings may become common among the reckless portion of the business community, the result being the utter dis-organisation of the financial world. That is the only point for serious anxiety on the part of Government and people. To avert the peril, in is advisable that foreign capital should be procured, not in one sum, but in several installments, the first of which should be appropriated for the consummation of the post bellum programme, and of enterprises which are programme, and of enterprises which are absolutely indispensable for public interests, but which are suspended on account of insufficiency of capital. With this is view the amount for railway and other undertakings of paramount importance may be estimated at twenty or thirty million yen. The use of foreign capital, however, is attended with as much risk of injury as hope of advantage. It is inevitably subject to serious fluctuations in times of emer gency among foreign nations. Still, Japan hav ing made gradual progress since she was opened in the outer world, anxiety on these points need not be permanently entertained. The tidal stream of civilization does not allow her to be content with poverty. She must push forward to secure her footing among the comity of nations.

#### SHIPS IN COLLISION.

A telegram received by the Nippon Yusen Kaisha reports that the Company's steamer Ryojun Maru—the old Port Hunter—while at anchor at Seattle, collided with a certain foreign ateamer and damaged her hall. The Ryojun is of 4,671 tone displacement and is commanded by Captain Moses. The vessel was to have left for the Chambers to act between the parties to Seattle for Yokohama about the 15th instant — a dispute on their application." Malnichi Shimbun.

During Tuesday's gale a lighter conveying 250 cases of kerosene oil to the Tokal Maru in Yokohama harbour sauk and her cargo was months that the Japanese Chamber of Com-capsized: 150 cases were lost.

QUESTIONS OF THE DAY.

Representatives of the Hiogo and Osaka Foteign Chamber of Commerce and a deputation from the local Japanese Chamber have recently been conferring on matters of mutual interest. Two subjects in particular were discussed. According to Mr. Baggallay, the late Chairman of the Foreign Chamber, the first referred to the introduction of foreign capital. We quote Mr. Baggallay's speech at the annual meeting of the Hiogo and Osaka Chamber of Commerce :-They had had another meeting with the Japanese Chamber of Commerce; the representa-tives gave them rather evasive replies as to what they would be willing to do in co-operating with the foreign Chamber with a view to getting the Treaties altered so that aliens might hold land in Japan or to getting the Law altered so that foreigners might become Directors of Companies and so obtain proper security for their investments. They agreed that it was very desirable foreign capital should come into Japan, but they were half-hearted evidently in taking action in any way to get the Treaties altered. They made a counter-proposition, which he would read from the Kobe Chronicle, as it gave a practically correct report of what they said. He would read the second proposition

first :"The Organization of a large Joint-stock Corporation by Foreigners and Japanese. To assist the future industrial and commercial development of Ispan in the interests alike of Ispanese and foreign merchants, the introduction of foreign capital is desirable. There may be many methods of effecting this purpose, but in regard to the right of foreigners owning shares in Japanese business companies the view that it is hopeless to expect foreigners to invest their money in shares, unless they are allowed to be-come responsible officials of companies at the same time, is justifiable. This, however, is impracticable while the system of extra-territoriality exists. It is too long to wait until the new Treaties come into operation, and we therefore propose a scheme for introducing foreign capital which can be carried out immediately. A large banking corporation might be organized by Japanese and foreigners, who possess public confidence, foreigners working as advisers without legal responsibility. They would, however, be morally responsible."

With regard to that point, it did not seem to them very practicable; but the present Com-mittee had really had no time to consider the matter as laid before them. They would have to leave it to the incoming Committee consequently to say whether such a scheme was feasible. Another point raised at the meeting was us to the possibility of joint-subitrations being carried out under the auspices of the Japanese and this Chamber of Commerce in case of disputes between members of the two Chambers :-

"Arbitrations by the Chambers in Disputes —Disagreements have occasionally arisen between foreign and Japanese merchants in connection with business transactions, resulting in considerable losses to the parties concerned. These disagreements are principally due to an imperfect understanding, in con-sequence of the difference of language. We caunot but deplore this. We believe it devolves apon the Chambers of Commerce to svert these disagreements. The provisions of the law allow a Chamber of Commerce to arbitrate on disagreements between Japanese merchants. Though there are no laws or ordinances relating to arbitration in disagreements between foreign and Japanese merchants, in view of the friendly relations of the two Chambers and in the interest of Commerce it would be satisfactory to both sides if an arrangement could be made

That would also be a matter for the new Committee to take up, to say whether a feasible working scheme could be devised satisfactory to all concerned. It was quly in the last few

but he believed that in the future by working together the two Chambers could do a great deal for the development of the trade of the port.

The following letter has been addressed to the editor of the Hiego News by Mr. H. L. Baggallav :--

Baggallay:

Sir,—I notice in the report of my speech at the Chamber of Commerce on Friday, that I did not express myself quite as clearly as I should in the matter of the co-operation between the Foreign and Japanese Chambers on the question of the ownership of land by aliens. What I intended to convey was not that the Japanese were expected to join with us in securing an alteration of the Treaties, but that they should co-operate with us in getting such an alteration of the law as would permit aliens to own land and thus give the necessary security, without which the foreign capital that is so necessary for the development of the country's industries cannot be introduced.

#### KOREAN ITEMS.

A new Secretary has been appointed to the six countries included in the diplomatic domain of Korea's solitary Minister to Europe. The new official's name is Me Myengsang. It has a decidedly egotiatical appearance from an or-thographical point of view. It seems that Mr. Me was Chief of the Criminal Law Bureau in the Judicial Department last year, but, being convicted of receiving bribes and practising extortion, he was sentenced to three years' banishment to an island. Pardon and appointment to the post of Privy Counciller followed quickly, and now the returned convict goes westward. "Travelling in Europe will do him much good," dryly observes the Independent.

Mr. Cho Pyengsik has resigned the portfolio of Foreign Affairs and been succeeded by Mr. Ye Dochai, a man of about fifty, said to be an exceptionally grod Chinese scholar and a Conservative in politics. Still, though an ardent Confucianist, he is supposed to recognise the necessity of reform. He served as Governor of Chuila when the Tonghaks ravaged that province in 1894, and he subsequently held the portfolio of Education in the Cabinet of Kim Hongehip, which he resigned on account of the hair-cutting decree.

An industrial school is about to be established in Soul. The instructors will be French. It is stated that the French Representative has undertaken the task of procuring them, and that the Korean Government has promised an appropriation of six thousand dollars annually for their pay and other expenses.

The Emperor of Korea has issued an edict ordering that all persons over seventy years of age or under fifteen who are confined in the prisons throughout the country shall be released, on account of the severe weather.

Mr. Cho Pyengsik, who recently resigned the portfolio of Foreign Affairs in Korea, had previously been Minister of Justice, and, still earlier, Governor of Chungchong province. One of his performances while serving in the latter capacity is thus described by the In-

He was told by a geomancer that the site of one O Henkeun's house was the luckiest spot for a grave. If anyone should bury his parents' bones grave. If anyone should bury his parents' bones on that site he and his posterity would hold the highest offices in the government. Governor Cho asked O to give him that site, but the latter refused. Then the governor changed his tactics from diplomacy to force. He issued a proclamation charging O with being the most modulind son in the province and his whole family as immoral. The law requires the governor to exterminate such criminals from the face of the earth, and he descriminals from the face of the earth, and he despatched a company of the governor's hody guard to the town where the O family lived, destroying every house in the village and killing eight persons and injuring six. After thus exterminating the O's the governor appropriated the site of their house and limit a want on it for his furnic grave. After the Japan China was the two remaining heirs of O brought suit against Cho before the supreme court in Séal. The court ordered the governor of the province to make a thorough investigation of the charge. The governor's fermions of the charge. governor of the province. The govern vestigation of the charge. The govern Digitized by The governo

port corrobotated the statements made by the complainants. The court restored the property to the lawful heirs and made Mr. Cho pay into the lawful heirs and made Mr. Cho pay in-demnity of \$10,000 for the minder of the eight person. After Mr. Cho became Minister of Law last time he ordered the present governor to imprison the two remaining O's and compelled them to give up the property. The two persecuted O's are now suffering cold and hunger in the pro-vincial prison of Kongju.

#### CHINESE NOTES.

The N. C. Daily News regards the Chinese domestic loan as a very hopeless affair. It thinks that a certain portion of the bonds will be purchased by officials who have practically no choice in the matter, but that the people will have nothing to do with them. "The whole scheme," says our contemporary; "is plainly either a dodge of the Government to squeeze. the officials-a perfectly legitimate game of diamond cut diamond-or else it is a specious but hopeless attempt on the part of the officials to enrich themselves at the expense of the public. The contending financiers who are pressing their assistance upon the Chinese Government need not be anxious. This smart attempt to atimulate them into being more generous in their offers will only prove once more that if China wants money she must get it abroad, and then only on condition of giving considerable security.

"A scientific school," writes a Shanghai journal, "for the instruction of youths in sericulture according to European methods has recently been established by Mr. Liu, the prefect of Hangchow, under the auspices of the Governor and high authorities of Chekiang province. The School is situated near the famous Habin or West Lake, and built in the semi-foreign style of architecture, and will be supplied with a complete set of foreign scientific appliances. Thirty students are to be admitted, after a competitive examination in the written language, each year, and the course will be for four years. The instructors will consist of both foreign and native experts.

The Mukden correspondent of the N. C. Daily News says that gold has been discovered in paying quantities in a valley about 100 miles east of that city, and that over 2,000 men are employed digging and washing. He adds that "the far more valuable coal and iron regions are left neglected."

The same correspondent confirms the statement-ridiculed by certain London journals-that the Russians have found in Manchuria a tribe called Hunghus, against whom military precautions have to be adopted. He says that these "red-bearded barbarians" have long been a terror to the peaceful Chinese agriculturist, and that, as mounted robbers, they are considered the most dreadful representatives of the human race, after foreigners.

Mr. de Linde's acheme for improving the Peiho has been accepted by all the necessary officials in Tientsin, and now requires only the sanction of the Ministers in Peking. It contemplates an outlay of £150,000.

It appears that electric tramways will soon become a reality in Shanghai. Mr. Rouffart, the projector, promises that the charges shall not exceed those levied by /inrikisha men. That, however, does not seem a very large concession.

There seems to be some truth in the rumours recently circulated that the Chinese Government is endeavouring to raise a serviceable body of troops. The following paragraphs from

A telegraphic dispatch from Peking reports the appointment by Imperial edict of General Tung Fulssiang, styled the "Pacificator of Maliomedans," to be Generalissimo of the Imperial Armies belonging to the provinces of Shanting, Shansi, Sheusi, and Honan. HE has also been authorised to raise a special army of 60,000 mln, comprising all arms of the service, to

be a supplementary corps to the Peking Field Force

be a supplementary corps to the Peking Field Force if the capital he in danger of attack. Generalissimo Tung is now at Pungyang, Shansi, which will be H.E.'s future headquarters. Pingyang is at the point of meeting of the frontiers of the three provinces of Shansi, Honan, and Shensi.

H. E. Nieh, Treasurer of this portion in Kiangsu province, has arrived in Shanghai from Nanking and made his headquarters at Ambassadors' Hall, North Honan Road. H. E. who was expected on the 9th instant it appears was detained by the Viceroy, who wished H. E. to consult with H. E. Sung, Treasurer of the Northern portion of this province, concerning the extra fund required for the uniforming ancer of the Northern portion of this province, con-cerning the extra fund required for the uniforming and arming of 15,000 extra troops ordered to be raised, at once, pending the ontcome of the Kiao-chou and other difficulties with foreign Pawers. Apropos of raising new regiments Viceroy Chang Chilating has also been ordered to form a corps of 20,000 extra troops to join the Kiangen troops in defending the Yangtze. Valley.

#### NEWS OF THE WEEK.

The Straits Chinese are said to be divided on the subject of getting rid of the queue.

The Osaka Municipal Council have resolved to sell Lot No. 35, and to devote the proceeds to putting the roads and drains of the Concession into good repair.

It is reported from Bangalore that labourers of both sexes are to be brought over from Japan on a "large scale," for an attempt on private lines, but under the Dewan's sanction, to revive the silk industry of Mysore.

Private Aylward, of the West Yorkshire Regiment, has been sentenced to a year's imprisonment for causing serious bodily hurt to a China-man at Singapore. The Chinaman was kicked into a state of insensibility.

Mr. J. Marshall has been elected Chairman of the Hiogo and Osaka Foreign Chamber of Commerce for the ensuing year; Mr. F. J. Bardens, Vice-Chairman; and Messrs. Reynell, Kochen, and Wood, Committee.

Many residents of Yokohama will remember the old wooden warship Marion, of the U.S. Navy-as well as some of her officers in 1892. After laying idle at Mare Island, San Francisco, for some years, she was turned over to the Naval Militia of California on Jan. 30th.

With regard to the Epps case at Nagasaki, a Washington dispatch reports that it is the intention of the United States Government to demand a suitable money indemnity, the punishment of the marderers, and the enforcement hereafter of auch police regulations at Japanese ports as will protect American citizens,

The American Board of Commissioners for Foreign Missions has decided to send pastors to China to study the condition of Congregationalist missions in that country. The repre-sentatives appointed are Dr. Judson Smith, the foreign secretary of the Board, and Messre. Charles Hawkins, and S. H. Shapleigh, well-known laymen. The deputation in sent at the request of the missionaries in China, who wish the executives officers of the Board to become acquainted with the work at first hand.

"The sale of the steamers Pennsylvania, Ohio, Indiana, Illinois and Conemaugh by the International Navigation Company to the States Steamship Company for the Pacific trade, leaves but five steamships flying the American flag crossing the Atlantic ocean," says the Marine Record. "They are the St. Paul, gross tons 11.629.21; St. Louis, gross tons 11.629.21; New York, gross tons 10.802.61; Paris, gross tons 10.794 86; Evelyn, gross tons 1,963 44; the latter three were built in English shipyards

two men became fast friends. The other day, however, it was discovered that these two old men, who had been close acquaintances for 18 years, were brothers. It seems that the one settled in Mitylene had left Smyrna when quite a youth, and had made a fortune in the United His family, believing him to be dead, went into mourning, and even said masses for the repose of his soul

The Very Rev. Henry George Liddell, the former dean of Christ Church, Oxford, died in London, on January 19. Dr. Liddell for many years was one of the prominent figures in a very famous group of Oxford dons. He was born famous group of Oxford dons. He was born in 1811, was educated at the Charter-house school, and in due course proceeded to Christ Church, Oxford, where he took a double first class in classics and mathematics. He was at one time domestic chaplain to Prince Albert and chaplain extraordinary to the Queen. His fame, in the outside world, is associated chiefly with the Liddell and Scott Greek lexicon, of which he was joint author with Dr. Scott of

Rear-Admiral Lester A. Beardslee, of the United States Navy, retired on Feb. 1st on ac-count of age. He was the second ranking officer in the Navy and at the date of his retire-ment was stationed in Washington as President of the Examining and Retiring Board. His last command was the Pacific station, and he was II Honolulu when the crisis came in the island government. Born at Little Falls, N.Y. on February 1st, 1836, the future Rear-Admiral received a common school education. He was appointed acting midshipman on March 5th, 1850, and from May, 1851, to January 1855, was attached to the aloop Plymouth, which craised among the East Indies. While attached to the Chinese station he participated in one battle and several skirmishes with the Taipings at Shanghai.

The Queen of England indulges now and then in a little amiable irony. Prince Henry was the last on whom Her Majesty operated with gentle surgical skill, says a home paper. According to a story which has gone the round of naval circles in Portsmouth since Prince Henry passed through on his return from Osborne, the Queen greeted him with the words, "My dear grandson, don't hill all the poor Chinese" The Prince, according to the story, thoroughly entered into the spirit of the thing, and repeated his grandmother's playful remoustrance with much satisfaction. Whe ther, however, the author of the "Most Mighty Lord, for ever and ever" speech is sufficiently spiritual to have discerned the irony may be questioned, since he so naively repeated the alory.

The St. Peteraburg journals announce that a public subscription list has been opened for the building of a Greek Orthodox Church at Soul. Subscribers are invited to send in their contribations to the Metropolitan of St. Petersburg. In the official notice it is incidentally mentioned that the Orthodox Russians resident in the Korean capital now number 100 souls. It in of course, says a correspondent, a matter of little moment whether or no the public of St. Petersburg respond generously to this invitation. since the Holy Synod can well afford to defray the cost of providing for the spiritual wants of the handful of Russians at Soul, more especially as there is a reasonable prospect of the new Orthodox Church in Korea shortly assuming the dignity and status of a Russian colonial

If the Indian Government could record the number of undetected and unauspected murders committed in the peninsula during a single year, the English reader would be frankly horrified. Though "antice" and female infanticide are put down by law the mortality among widows remains surprisingly greater than among any similar section of the population, while girl children die off at a deplorable rate compared with boys. The statistics of mortality caused by snake-bite during the year 1866, recently eclipsed sun; and two "prominences" blazed by anake-bite during the year 1866, recently eclipsed sun; and two "prominences" blazed by UNIVERSITY OF ILLINIOIS AT

issued by the Government of India, afford some explanation. In Burmah 3.484 cattle, including goals and sheep, died of soake-hite, and only 619 human beings. In Bengal the number of human deaths from the same cause was recorded as 9,250, and of cuttle only 963. In Burmah more than five times as many cattle as human beings, in Bengal nearly ten times as many human beings as cattle!

The effects of sea water on metals during prolonged immersion have been studied in France, various metallic objects dredged from the harbour of Brest having been presented for examination. A bronze arquebus, supposed to date from the end of the sixteenth century, was found to contain somewhat more than 80 per cent of copper, about 9 per cent of sniphide of copper, about 9.5 per cent of tin, and traces of lead, and the metal was in an excellent state of preservation. Such was the case also, it is recalled, with the bronze guns of the English vessel Mary Rose, which were recovered after being under water 282 years. Cast-iron shot found at Brest, however, had become so soft that they could be cut with a knife, but wrought iron objects were a little better kept, having a core of sound metal under the rust. The same effects on iron were noted in the cannon of the Royal George, after having been sunk only sixty-two years.

The Comercio published the following statement of the lines the respective Insurance Companies had on the property destroyed in the recent fire at Manila :--

The Kobe Chronicle learns from a vernacular contemporary (hat Mr. Fukui Toshi-mitsu, a Master Mariner, who has been in the employ of the Nippon Yusen Kaisha, has retired after 33 years service. Mr. Fukui was a shisoku of the Bakuiu and at an early age joined the Navy of the Bakuiu. On the fall of the Bakufu he turned his attention to the mercan tile marine service which the authorities were desirous of developing. He rendered valuable services to the State during the Satsuma Rebellion and the war with China in the transport service. He did not follow the fashion, set by his friends at the time, of joining the Government service, but was content to assist in the development of the mercantile marine. Viscount Enomoto, Admiral Baron Akamatsu, Mr. Mayeshima, formerly Vice-Minister for Communications, Messrs. Shoda, Kondo, and Kato of the Nippon Yusen Kaisha, and other friends ill Captain Fukui are taking steps to collect subscriptions for a testimonial in recognition of the services rendered by him to the mercantile marine.

Sir Norman Lockyer's Eclipse expedition at Viziadrug has done everything proposed, says an Indian contemporary, with triumphant success, and recorded twenty one points of observation. The work at Viziadrug was mainly spectroscopic work. Just before totality, there was a marked fall in the temperature. The scene was one of exquisite beauty. The solid

like firey bloodspots. Venus, Mars, and Mercury shone out, and were the only three stars visible. At none of the camps was the darkness very intense, and no lamps were required; but Venus remained in view for twenty minutes after totality. The totality at Buxar lasted one minute thirty seconds, and the spectacle was magnificent, and excited a feeling of awe and astonishment on the part of all beholders. The photographs taken by an American astronomer in Lick camp were the largest yet attempted. Lord Graham succeeded in kinematographing the eclipes. The natives in various parts of India are said to regard the event as presaging the downfall of the British Raj.

The Yorodau Choho was in great form on Monday. In its English column it had an sloquent and high flown leader on Marquis Ito. Here is an extract :--

Here is an extract:—

When the Marquis says "as for me, one of the topics that most frequently occupy my mind is the destiny of my dear fatherland, its people, and its civilization," we feel for him the feeling that the Nature poet of Windermere felt for poet Spencer, and call him "Brother, yepances, Friend." For we too are haunted by the very same topic day and night, and not a moment passes without our strenuous efforts directed to that to us all important question of our existence. We are sometimes afraid that it is the special weakness of our nature, which we cannot help sharing with our countrymen at large, that love of country is a sort of religion with us and is a source of endless superstitions to us. A calm, philosophic view of what our country will be in future will satisfy many a raging want of our nature.

What a gushing guileless child of nature is this

What a gushing guileless child of nature is this Japanese journalist. Imagine the gentleman who wrote there beautiful lines tossing on his midnight pillow and worrying over the destiny of Japan! What an example to the hireling Pressman of Great Britain, who is perfectly easy in mind in any national crisis as long as his salary is "brought reglar" like Mrs. Gamp's beer, and whose repose is broken by nothing less material than a cat fight on the

A gentleman who was recently in Canton in connection with the celebration of the marriage of a son of Mr. Li Sing, merchant, Hongkong, informed the Datily Press that a most during armed attack took place in the twelfth ward of Canton on the 11th February. It should be first mentioned that about six hundred guests, including about two hundred mandarins, were present at the wedding celebrations, which lasted four days, and m a precaution eighteen braves armed with carbines and revolvers were stationed at the entrance in the mansion where the festivities were held, while a police station is situated not fifty yards away. Yet, in spite of these precautions, there was an armed attack in the immediate neighbourhood and only ten houses away. These robbets entered a family house, gagged the inmates, and took away \$2,000 worth of money, jewellery, and clothing. The inmates were powerless to give an alarm and when the robbers had got all they could carry away they decamped by the back entrance. When the marriage guess heard of the robbery they did all they could to capture the thieves by directing the pursuit, but unfortunately no arrests were made. Armed attacks in Canton city are of almost daily occurrence just now. On the morning of the rith inst. a mandarin was stopped in his chair and a scent bottle, wrapped in a piece of paper, was pre-sented at his head. The mandatin was very frightened and thought the scent bottle was a revolver, and so he submitted in being stripped of his official robes and some money.

#### " NEWS" FOR JAPAN.

Here are a couple of telegrams that appear in San Francisco papers brought by the Coptic on Thursday :---

A dispatch to the Daily Mail from Nagasaki says?— The Far Eastern situation is very serious, and it is believed that Japan is actively preparing for war.

## THE "COPTIC" ARRIVES AT LAST.

#### TERRIBLE EXPERIENCES IN THE PACIFIC.

The Coptic, which arrived in Yokohama Harbour about 11.30 on Thursday morning, four days overdue, encountered terrible weather during her passage. The steamer, which is one of the best in the Occidental and Oriental Company's service, left San Francisco on the 3rd inst. and made a good passage up to the 11th. About 1 a.m. on that day a terrific gale aprung up from the west, and the wind blew with fearful violence for two days. Great waves swept the steamer from stem to stern, and the passengers had a terrible time of it. One huge billow descended with tremendous force on the "whaleback" of the steamer's bows, and smashed and bent it in all directions, injuring the auchor gear, and completely washing out the forecastle. The forty or fifty men who were there narrowly escaped with their lives, having to fight their way aft through eight feet of water and through the wreck of the broken bulkheads. Fortunately, however, no one was washed overboard. The Coptic's ill-fuck did not cease here, for some days after she ran into a succession of westerly gales. In her damaged condition it was not possible to force her against the sea and the captain had to go considerably out of his course. It will be some time before the damage done

can be properly repaired.

A representative of the Japan Mail who boarded the steamer on her arrival writes :-- The appearance of the ship forward bore eloquent testimony to the badness of the weather in one of the worst Pacific voyages on the Coptic's record. The "whaleback "-a massive structure of iton and wood-was simply a total wreck. Great iron supports as thick as a man's arm were twisted like a cork-screw, the solid from stanchious were half rooted out of the deck, the look-out man's nest was battered into all kinds of fantastic shapes, and, despite all attempts that had been made to put things ship-shape, it was simply a scene of chaotic ruin. The passengers all speak highly of the conduct of the officers, and on the day before reaching port they sent Captain Sealby a note expressing their gratitude and admiration. It is couched in the following terms:

S.S. Coptic, Yokohama, 24th February, 1898

Dear Captain Sealby,—
We enclose a copy of a letter which we are forwarding to both Messis, Ismay, Innie & Co., Liverpool, and to the Occidental & Oriental S.S. Co., San Francisco, which will, we hope, be gratifying to you as expressing the feelings of your passengers on the present voyage.

We have only to add our united thanks to you

d subscribe ourselves, Yours sincere friends and well wishers,

All the passengers.

Copy of testimonial letter to Ismay, Imrie & Co., Liverpool and the Occidental & Oriental S.S. Co., San Francisco.

Dear Sirs,-

We, the undersigned Saloon Passengers per S.S. Coptic having now salely reached Yokohama, desire to express to you our unanimous apprecia-tion of the admirable conduct of Captain Sealby and Officers during our voyage from San Fran-tisco, which, as you will learn from the official reports, has been an extremely difficult and

Captain Sealby has thoroughly inspired us with every confidence, and we wish to express to you our admiration for him as a sailor and our feeling of sincere esteem for him as a kind and consteous

gentleman.

We remain, dear Sirs, yours truly,
(Signed).—Mrs. F. K. Hunt, Mr. A. Azevedo,
Mr. Walter Brooks, Mrs. Walter Brooks, Miss
Edith Brooks, Mr. John Holiday, Mr. Hermann
Kobbe, Mrs. W. C. Davidson, Mr. M. Hori, Mr.
Jessie Rilot, Mr. James H. White, Mr. J. G. F.
Thyssen, Mr. F. W. Blechynden, Mr. R. H.
Wright, Mr. Ammann, Mr. E. J. Bates, Mr.
Alfred A. Nicholls, and Mr. F. Von Schoeller.

## SEAMEN'S MISSION, YOKOHAMA.

We have been requested to publish the following latter :---

To Rev. W. C. Stitt, Secretary, American Seamen's Friend Society, New York City, U.S.A.

Dear Dr. STITT,—As I promised in my last interview with you, I becein give you such information as I think may interest you regarding the Seamen's Mission of Yokohama.

Seamen's Mission of Yokohama.

A certain advertising publication (specimen copies of which I sent you last year) having in a recent issue insinuated that Rev. Mr. Austen has been presenting to the public accounts that were false, I called upon the editor to hear what he had to say on the subject. I was sorry to find him manifestly unfair in his reasonings and ungentlemantly in his remarks about Mr. A. However, I got from him several statements of mis-doings to move that his conclusions were well founded. prove that his conclusions were well founded.

One statement was that a certain boat had been

One statement was that a certain boat had been given to the Mission free of charge, and had been charged up = 125 pen in the yearly report (1891.)

Without saying a word = anyone about this item, I called on Mr. A. and asked him to kindly allow me the privilege of his account book covering the period mentioned. That evening in my hotel room I looked over the account, and found = charge in February 1891 of 125 pen, and a credit in Acul to the ower of the boat of 25 vez. making charge in February 1891 of 125 yen, and a credit in April to the owner of the boat of 75 yen, making the boat cost the Mission, 50 yen. Now I have before me a letter in which the owner offered the boat at a sum with discount because it was for Mission work, which made it net 50 yen, also a receipted voucher for 125 yen with a letter "enclosing" same and asking that balance be placed to bis cradit as his subscription. Voucher hears

to his credit as his subscription. Voucher bears date 10th April, 1891.

These things seem to show that the editor in question started off on a false statement as to the question staired out on a laise stairement as of the free gift of line boat, and, posing as an investigator and exposer of wrong doing, has tried to besmitch an honest man when he might easily have obtained knowledge of the truth.

The next statement was to prove that your re-

The next statement was to prove that your re-presentative was a grasping, money-making man, in that he had charged 15 yen for burying an American marine, (while the manal fee for English-men was 5 yen.) On asking Mr. A. for his state-ment of case, I learned that he never made a charge for inneral services in his life, save on this one occasion, and then only because he was repeatedly urged to do so by a gentleman who, in a letter that lays before me, acknowledges that he advised it, because he was informed that the U.S. Government had made an appropriation of 15 year. for burial services of its mannes. This gentleman told me that the Doctor at the Hospital said than told me that the Doctor at the Hospital said that he could not get a bill for the service from Mr. A. and not until the 28th August (inneral was 11th August) when that Doctor was about settling his affairs to leave Japan, and a note was sent down (which note is before me) asking him to "kindly send your bill," did be render his first and last bill for such services. The bill was for to yen, not 15) and when Mr. A. Learned that it was doubtful that an appropriation was made, he re-called it and destroyed it and so never executed a sem. (Mr. A's statement that he makes no charges for burial services is confirmed by letters from two Yokobama undertakers which I have recently received.)

which I have recently received.)

Another part of this affair which has been inmentioned is, that the man had gotten kinnelli
into financial troubles, and had importuned Mr.

A, for a loan. He could ill afford to make it, but

A, for a loan. He could ill afford to make it, but out of the meaness (?) of his heart did make it, to the amount of 25 yess, about half of which was returned, the rest being a dead loss, as the man shortly afterward committed suicide.

And for such transactions as this, this editor warmed up in his indignation and denounced Mr. A. as a "perfect damn(ed) fraud," and declared that he would not accept any proofs from the Mission records, not believing them to be true.

I was going to present the foregoing evidence at his office, but concluded that the chances were

his office, but concluded that the chances were that truth and justice would not be served if I did, so I concluded not to, but to offer it to the public

so I concluded not to, but to oner it to the public in another and better way.

With regard to Mi. A's salary, I find that the combined stipends of the three societies represented here amounts to the same as is given by at least two of the missionary boards, minus the al-lowance for rent and doctor's bills which he does not get. The rent item, which is only for the reading room and dormitory building, has misled some

friends who have been entertained by Mr. A. have made him money presents specifying that it was made him money presents specifying that it was for private use, but those occasions have been rare and monies given by those so entertained usually go into the Mission funds, and the books show it. Receipts from sailors for lodgings are all shown in dermitters account. dormitory account.

Many false runous and unanswered instituta-tions might easily be settled if people would make a little enquiry for themselves. As a rule I find that those who talk the most against missions and missionaries have investigated the least.

I am glad to hear of the donation of the Societies, which partly defrays expenses of sending Mr.
A's sick wife and their children to England.
A good spiritual work has been and is going on

cerely, HENRY BINLEY. (Representing John Wanamaker.) Yours sincerely,

Yokohama, February 22nd, 1898.

#### CORRESPONDENCE.

#### KYOTO IMPERIAL UNIVERSITY LIBRARY.

TO THE EDITOR OF THE " JAPAN MAIL."

Sir, I beg to inform you that the Imperial University of Kyoto has been established at Kyoto, and that the Colleges of Science and Engineering were opened in July last year. The Library attached to the University is to be for the benefit not only of the professors and students, but, as soon as matters can be accauged, for the benefit

soon as matters can be arranged, for the benefit also of the general public,

I should consider it a great favour to the University, if, in honour of the founding of our institution, you would have the kindness to allow me the use of your columns to address your readers on behalf of our Library. All books, pamplifets and literary materials of all descriptions will be most thankfully received and strictly devoted to the objects designated. We hope in time to make the Library worthy of being entitled "The Public Library of Kyoto."

Hooing that you may be able to use your kind

Hoping that you may be able to use your kind offices on behalf of a cause so directly bearing up-

on the public good. I cemain, yours very truly.

T. SASAOKA. Imperial University of Kyoto. Yoshida-machi, Kyoto, Feb. 17th, 1898.

#### WORLD'S CYCLISTS AT YOKOHAMA.

#### MR. FRASER TALKS ABOUT THE RIDE.

A cold night succeeded the peculiarly unpleasant weather of Tuesday morning and afternoon, A cold night succeeded the peculiarly unpleasant weather of Tuesday morning and afternoon, and it required a good stock of moral courage to face the bitter north-easter that was blowing. It was owing to this probably that Mr. Foster Fraser, of the trio of adventurous cyclists who have ridden from London through Europe and Asia, had so small an audience at the Public Hall. Mr. Fraser, who lectured under the auspices of the Literary Society, is a young-looking, fair-complexioned, clean-shaven man, whose appearance would hardly suggest a physique capable of the tremendous exection involved in this extraordinary journey. As a lecturer he makes no straining after effect, but tells his tale in a simple but interesting conversational style, with an occasional joke thrown in to relieve matters. He is modest in speaking of the dangers and difficulties of the ride, which must nevertheless have been most formidable. To ride 15.000 miles through 15 constries, many of them semi-batbarous, to cross howling steppes and fiery sands, to be pelied by ignorant and brutal peasants, chased by Cossacks, suffed at by wild animals who have not breakfasted, to be laid aside mals who have not breakfasted, to be laid aside here and there by lever and the effects of exposure—all this, if a joke, is rather a bad one. Mr. Fraser and his companions have been hicky to coming through it all not much the worse for wear, and we shall be glad to hear of their safe return to England after they have ridden across the States. The lecture last night was simply a narrative of the journey. The cyclists started from London on July 17th, 1896, and crossed the Channelto Autwerp. They rode to Brussels, where King Leopold received them in his Palace, and then went and on to Cologue, up then Rhine, then across to Vienna through Hungary to Roumania. Here; said Mr. Fraser, the roads, which had been gradually growing worse, became vile, and in Russia they growing worse, became vite, and in Russia they became simple cartitacks. Russia, in fact, was not a pleasant experience. The inus were generally a visit to the old country, by about 25 leaders of the mercantile and shipping community of interesting that it is not so. Occasional good ground, the folders and there are some who believe that there are the country and there are some who believe that there are the control of the stater port.

Digitized by

afte: war do the adventurers had an experience more exciting than enjoyable with the Cossacks, who compelled them to use their revolvers. The ascent ompened them to use their revolvers. It is ascent of the Caucasus, however, was comparatively easy pwing to the splendid road, and they enjoyed the finest coasting that ever fell to the lot of wheelman—an 80 miles glorious spin downlift. Though —an 80 miles glorious spin downist. Though the country round this region is wild in the extreme and travellers are frequently carried off, no misfertune befel Mr. Fraser's party, and they passed safely by Mount Aranat and the fabled Garden of Eden (which the lecturer described as a most dreary stretch of country) and on into Persia. At Teheran they saw the magnificent throne of the Shalt, estimated to be worth from two to five millions setting, shout the size of from two to five millions sterling, about the size of a four-poster bed and literally encrusted with iewels. A collection of cucios in the Royal possessinn was also shown them, containing articles of real value side by side with sixpenny tooth-brushes, oil paintings, and German advertising brushes, oil paintings, and German advertising chromography, and altogether a remarkable display of the worst possible taste. The riding in Poisia was execuable; there were no roads, and the wayfarers had to cross a corner of the great salt desert, whose surface in covered with flakes of salt like snow. They were at one time deserted by their Persian guide on a mountain 9,000 feet high, and spent 20 hours wandering about without food before a couple of men sent out to pick up their dead bodies arrived men sent out to pick up their dead bodies arrived and found them. Finally they descended by the Khotals and took boat to Kurrachee. Civilised India, with its excellent roads, and Rangoon and India, with its excenent toads, and transpoor and Burmah naturally yielded no very striking adventures, but the trio had many novel experiences in travelling through the almost unknown country of Western China. They were, in fact, the first Englishmen to receive passports for travel in those parts. The journey was for the most part discouraging. The roads were execrable, mountains week after week provented the travellers using their machines, they were often attacked and peli-ed by the natives, and the "chow" was naturally not altogether inviting to their palates. For weeks together they could not change their clothes, and could scarcely get a wash, and the only good point about the hotel accommodation was the tariff, which was not unreasonable, the neual charge for a supper of several courses, a bed, and a breakfast being the equivalent of about 12 cents. a breakfast being the equivalent of about 12 cents. Out of 1,500 unles they walked 1,200, and a part of the journey to Shanghai Mr. Riaser accomplished quite alone. As for Japan it had afforded absolutely no the illing adventures, but Mr. Riaser said he had been making use of his time by studying the American language, so that they might be able to find their way through the wild tribes that live on the other side of the Pacific.

At the close of the lecturer the Chairman (Mr. A. J. Wilkin) thanked Mr. Francr on behalf of the Society, and wished him good luck in his future wanderings.

#### AUSTRALIA AND JAPAN.

(PROM OUR CORRESPONDENT.)

Sydney, January 13
The scare produced throughout Australia by the The scare produced throughout Australia by the reported action of Russia and Germany in connection with China, has largely subsided, but there remains an uneasy feeling with respect to the possibilities of the future, and the increasing importance of Japan as a factor in the course of events is beginning to be more fully understood. The general impression seems to be that the present state of affairs mould have been suited. sent state of affairs would have been avoided, had not Russia, Germany, and Finnes refused to allow a Japanese occupation of Port Arthur. The reasons which animated the three Powers in assuming a hostile attitude towards Japan become sevented in the light of secent events. Russia," says a leading Sydney paper, "that guaranteed the addition of sixteen millions requir-ed to placate the Japanese for the loss of their conquest, in return for which that country obtained her Siberian railway concessions and the prospect of a port further south than Vladivostock. But an event more important, as giving her a controlling influence over the financial and trading concerns of China, was the establishment of the Russo-Chinese Bank in connection with the guarantee given. The whole effect of this policy was to throw the Celestial Empire into the hands of Russia instead of England, as completely as Turkey has been in the nearer East. In both quarters the been in the nearer Best. In both quarters the Concert of Europe has resolved itself into same. Concert of Europe has resolved itself into same, thing like the predominance of three active particles in the mers in counsel over one, and if British diplomacy is not muse successful over this Fix Eastern quity in the many particles. The Public Procurator, continuing, said that respect the project of the project o

It is admitted by leading. Australian statesmen that the isolation of the Australian statesmen that the isolation of the Australian colonies has been ended by the sudden rise of Japan as a naval power and the threatened partition of China by Russia, Germany, and France; and this may largely influence the proceedings at the meeting of the Australian Federal Convention, which opens in Melbourne next week. In the meantime the situation is being keenly discussed by the Australian press. The Melbourne Argus sees no pro-bability of an immediate breach of the general peace, so far as Great Britain and Australia are concerned, "The cause likeliest to precipitate bability of an immediate means of the peace, so far as Great Britain and Australia are concerned, "The cause likeliest to precipitate trouble is the adoption by the raiders of a policy openly hostile to others besides the bapless Chinese Government which they are despoiling. On this ground there is room for anxiety as regards the attitude of Germany and Russia towards both Great Britain and Japan. Of all nations Japan is cut at most keenly by these proceedings. She was browbeaten in the moment of victory, and now sees the prize for which she fought snatched from sees the prize for which she fought snatched from her. One footbold upon the mainland she still her. One footbold upon the mainland she still retains in the hardly won position of Wei-hai-wei, and, according to the Standard, Russia is actively intriguing to oust her from that post. To advance the Chinese Government the money necessary to complete the payment of the war indeanity and so compel Japan under the peace treaty to evacuate, is equivalent to intimating to the Mikado that he must remain an uninterested by stander while the territory he virtually conthe Mikado that he must remain an uninterested by stander while the territory he virtually conquered is out up." The Argus doubts whether the Jupanese will stand this, if the answer remains with the people alone. "Their Government were not foollardy enough to fight coalesced European Powers three years ago, but the Mikado and his Ministers earned dangerous mopopularity through their produces." through their prudence. The abrupt dissolution of the Diet seems to imply that the Sovereign and his advisers once more recognise the hopelessness of the odds against them, but have an excited Parliament and populace to reckon with.

"In a sense the treatment of Great Britain by au excited

the aggressors seems equally cavalier. It is quite possible that both the recent enemies, China quite possible that both the recent enemies, China and Japan, may at this moment be urgently bidding for British aid either in protection or alliance. One rumour has it that China, despite her ostensible docility to Russia, invites a British protectorate over her richest arteries of trade. If Japan has any thought of self-assertion it must be to Great Britain she will earliest turn for help. The indications are that the two nations will at least act in concert. For the powerful British squadron in the China Seas is reported as likely to winter at Wei-hai-wei---a step which aslikely to winter at Wei-hai-wei-a step which assumes the consent of Japan. Beyond any support that may be forthcoming from this quarter, England has evidently to fight for her own hand, and happily is strong enough to do it."

The excitement occasioned by the intelligence that the Resister.

the excitement occasioned by the intelligence that the Russian Government was endeavouring to arrange with that of New South Wales for the supply of shipments of frozen meat intended for Vladivostock is at an end. The cablegram which gave rise to all the talk was simply a question of enquiry, signed "Zuraroff," and there are many

who contend that the whole thing was an elaborate hoax, especially in view of the fact that no answer

has been received to the message sent by the New South Wales Minister of Agriculture in reply.

#### THE MURDER OF A FOREIGN SEA. MAN IN ISEZAKICHO.

On Thursday morning at 10.30 the public trial of Nagai Yoshito, charged with having killed Thomas Kennedy, a seaman belonging to the British ship Glenericht, on the night of the 17th Sept. last, was opened in the Yokohama Local Court before Judge Yamamoto Jonosuke and Assistant Judges Pujise Yaichiro and Oyagi Zaizo.

Public Procurator Kitaoka Hotel prosecuted, and Mr. Putami Tomovahuro, barrister, appeared for the defence. Mr. Foster, British Pro-Consul, was present and had a seat on the Bench. for the defence.

A piece of wood or club about 4 feet long, and several big stones were produced in Court in

The Public Procurator opened by suquiring of the prisoner if it was true that his name was Nagai, 38 years of age, shinoku and a carpenter by trade; a nature of Shizuoka Prefecture and a ward of carpenter Gen, of Yoshidamachi, his registration being lodged with Mr. Furnkawa Senze, of Snyeyoshicho Nichome, Yokohawa.

Prisonar admitted the truth of these ettremants

seamen belonging to the British ship Glenericht. seamen belonging to the films stip deserver, after leaving a saloon in Maisugaye-cho, got into a quartel with a jinrikisha coolie named Yosazo, and that one of the seamen, believed to be the deceased Kennedy, wounded the jinrikisha man in the neck with a knile. The prisoner, Nagai, afterwards pursued Kennedy and struck him

with a club, causing his death.

Judge Yamamoto-Have you ever been con-victed before. When did you come to Yoko-

Prisoner-I came to Yokohama in May last

Judge-Where does the carpenter Gen live?
-He lives in Yoshidacho, Yokohama.
Judge-Do many other persons live in the

Judge—Da many other persons tive in the number of carpenter Gen?—Yes, they do, Judge—Have you ever quarrelled when you ere in your native country?—Never once, Judge—Do you usually drink rake?—Yes, I take

Judge—Do you usually drink 12467—Yes, I take about 5 go generally.

Judge—Have you ever quarrolled with any one after taking liquor 7—No. Not at all.

Judge—Have you any vickname fixed on you!—

Judge-Is it true that you go by the nickname of "Bonmoto" ?-Yes.

Judge-Is it the case that you frequently sisit ir. Furnkawa ?- Yes, often.

Judge-Did you doink in Mr. Furukawa Senzo's one on the night of the 17th September !- Yes. Itook about 5 go of sake.

Judge—How are you affected by taking liquor?
I become sleepy usually.
Judge—At what time did you leave the house of

Judge—At what time did you leave the house of Mr. Furukawa Senzo?—About H pim.

Judge—What clothes did you wear at that time?—I was wearing black-coloured clothes bearing the sign of "Kimpo-ro."

Judge—Were you wearing at that time trousers (momohiki) of the same colour?—Yes; my clothes (kimono) and trousers (momohiki) were of the same black colour.

Judge—Were you not wearing any cap at that time?—No, I wasn't.
Judge—How did you come to Isezakicho after leaving the house of Mr. Furnkawa Senze?— About 12 o'clock at midnight I came to Isezakicho

About 12 o clock at midnight 1 came to 1sezakicho after rambling about Magane cho,
Judge-Were the streets of Isezakicho very crowded at that time?—There were not so many people then; but a crowd of people was assembled at a spot where the foreign seamen

were quarrelling. Judge—Did you see those seamen quarrelling?

I heard cries that a Japanese was cut by a seaman, and I soon became separated from my three comrades, intending to return to my abode by passing through Sugatamicho. When I came to Sugatamicho the seaman came running towards

le, so I fled away Judge-Were ti -Were there four seamen at that time?

No; only one.
Judge-At the first were there four seamen?-

Ves. inst so.

Judge—One in a white coat and the others in black !—Yes.

Judge—Where was the seamon making a disturbance!—In front of a fish-monger's shop in

Sugatamicho. Judge-At what distance were you when you saw the quarrel?—I don't know exactly, as I was quite intoxicated at the time.

Judge—How far apart?—About 5 or 6 cho off. Judge—Ho whar apart?—About 5 or 6 cho off. Judge—Is that true; don't tell a he. Were you not standing and flooking on about 2 ken off?—I don't know, as I was in drink.

Judge—What were the other people around doing at that time?—I don't know.

Judge—You had been standing together with three other comrades, and then you slipt away, did you not?—Yes.

Judge—Did you really see the seaman flourishing a knile?—I did not notice.

sming a knite?—I did not notice.
Judge—Did you hear the cries—"A Japanese is ent; Japanese is ent? I—Yes. I heard that.
Judge—Where were you standing when you heard the cries that a Japanese was ent?—I was standing in front of a pawnbroker's shop called Onaya, in Sugatamicho.

Judge—Have you not deposed during your preliminary examination that you were standing about 3 or 4 km off?—I don't know.

Judge—Did you not see the seaman cut the Japanese?—I didn't see it.

Judge—How many people were there around when the Japanese was on?—Many,
Judge—About 40 people?—More than 40.
Judge—Did the people around become excited;

have been s

Judge—Are you sure that the seaman was wearing a white coat?—I don't know exactly, as I was under the influence of drink,
Judge—What was the seaman doing?—The

seaman was raging with a knife in his hand.

seaman was raging with a knife in his hand.
Judge—How many men were on the secene when
the seaman can past the Isezakicho Police Station?—About 15 or 16.
Judge—Were you near to the seaman?—No.
Judge—Have you not stated in preliminary examination that you were ahead of the crowd;
that in lossy, very close to the seaman?—It might
have been so.

Judge—Were there some gas lamps near the scene of the struggle?—Only one.

Judge—Were many houses about the scene of the struggle open at that time?—No, very few.

Judge—Were you near the seaman ther?—The seaman came approaching me while I was

Judge—Why were you there when you returned to your abode to avoid a quarrel?—I happened to be there when I turned the corner of the road.

Judge—Why did you not fly away?—As I was intoxicated at that time, I could not well

manage myself.

Judge-Did you purposely face the seaman?

Not so,

Judge—With what object did you face the seaman with a piece of wood in your hand? Did you strike the seaman to avoid the seaman's blow, or did you strike him purposely?—I struck him to avoid the blow of the seaman.

Judge—Where did you pick up the piece of bamboo?—I picked it up near the fish-monger's.

Judge—Did you strike the seaman while he was standing?—Ves.

standing?—Yes.
Judge—If you were only avoiding the blow

the seaman there was no need to use the bamboo.

Prisoner—That was because I was intexicated.

Judge—Where did you throw your bamboo away?—Near the Isexakicho Police Station.

Judge—Your saying must be false: You did not only avoid a blow yourself, but you struck the seaman two or three times. Did you not say so in your preliminary examination? Did you not say at the Police Station that you struck the seaman two or three times, saying "Wicked fellow! wicked fellow?"—Yes, I did.

Judge—And again did you not say at the Police Station that, if you said you had atruck the seaman, the police inspector would let you go free from the Station !—Ves; I said to the police inspector that I had struck the man, as he promised to let me go free if I said I had struck him.

Judge—Did you not strike the seaman with a huge club instead of a piece of bamboo? Who was holding the club at the time? Was he not a small man wearing black clothes and black trousers, who grasped the club?—Yes; the man who was holding the club wore black clothes. Judge—Was he not a man aged about 30?—Vex.

Judge—Do you not know that stones were thrown at the seaman?—I don't know,
Judge—What is your stature?—I measure not

ore than 5 feet. Judge—Can you well manage this club?—Yes;

Judge-Do you remember that you struck the

Judge—Do you remember that you struck the seaman with this club?—I do not.

Judge—Is it the that you struck the seaman when he fell down?—Yes; that is so.

Judge—Did you telt some one that you struck the seaman the night before you were taken to the Court?—I didn't say such a foolish thing.

Judge—You are sure you did not say that?—No, I never said so.

Judge—You must have said so. Did you not say—"as I was clearly groved as to my act by lefe

Jange -- You must have said so. Did you not have as a my act by fellow prisoners I shall have to confess "P—No, no. Judge—Do you not recall to your memory that you struck the seaman with a linge club?—I don't.

Judge-A certain man states a man of about 30 Judge—A certain man states a man of about 30 years of age wearing black clothes and of small stance was seen running with a club at full speed toward. Sugatamicho; this corresponds to your figure and actions. Is it true that you struck the seaman purposely?—No; it is not a fact.

Judge—Then your statement is that you struck the seaman in self-defence?—Yes; that is so.

At this stage, after a short consultation with the Assistant Judges, the Pursident of the Court announced that as there were some documents to be examined and as there was evidence to be given

examined and as there was evidence to be given by Dr. Minuto and Dr. Sakakiyama, who had held a post morten examination on the deceased Kennedy, the bearing would now be adjourned sine die.

#### THE KOBE LOTTERY CASE.

We take from the Kobe Chronicle the judgment given by Mr. S. S. Lyon, the United States Consuland Judge, at Kobe, in the case of "Rothsprack v. Neumann:"
"This is not so much a question of fraud be-

"This is not so much a question of fraud between the complainant and the defendant, as it is a question involving a violation of the United States Statutes, Vol. 1, Ch. 68, which prohibits the sale of lottery tickets.

"It is a very grave charge and the penalties attached to a conviction may be made very severe. It has been shown by the evidence of several persons that they were induced to contract for the purchase of an alleged series of foreign bonds, and that they advanced certairs sums all money as a purchase or an aneget series or role in bonds, and that they advanced certain sums of money as a guarantee of their good faith to complete that con-tract; also that the alleged bonds, both upon their face and by the representations of the defendant ingelf, were purported to be entitled to a draw-ing in a game of chance, and that by such repre-sentations the said persons were induced to part with the money paid by them to the defendant,

"It has also been shown, and it is admitted, that in some cases the defendant has returned the that in some cases the defendant has returned the money to some of his pations, but that is no mitigation of the original charge; it does not in the least condone the violation of the Statute. It has been claimed by the defence that there are no blanks in the alleged drawings; it is thereby no less a lottery within the meaning of the law. It is held in Whatton's 'Criminal Law,' part II., Ch. 22, Sec. 149, that it does not affect the question that there are no blanks, and there is cited in support the case of "Wooden v. Shot-well," 3 Zab. 465; therefore the contention of the defendant that the scheme he represents is no lattery is not valid,

"The defendant has shown by his evidence that he knew the selling of his bonds was forbidden by law in the United States, and that there were severe penalties attached to their sale, but

were vevere penalties attached to their sale, but he claims that he did not know the same laws were applicable to this Consular district.

"The law does not excuse ignorance of this cheracter; he should ascertain, before travelling on his country's passport, that the same Government which guarantees his safety as an American citizen, also requires chedience to its home laws,

wherever it exercises judicial power.

"The modus operandi by which this business seems to have been carried on was to first try to sell, failing in that to solicit written references to others, which, in some cases, were probably too freely given, and resulted all too favourably for the defendant.

"The Court has endeavoured to give the de-

tendant an impartial trial, and, while finding but few extenuating features in the case, has nevertheless taken into consideration all of the cir-cumstances surrounding it, and is therefore dis-

cunistances surrounding it, and is therefore dis-posed to mivigate the punishment usually attached to an offence of this character.

"The finding of the Court, and one in which both the Associates concur, is that you, Sigemund Neumann, are guilty of the offence as charged, and you are hereby adjudged to pay a fine of fity dollars in United States gold, and, besides, the costs of procedure, and to stand committed until paid."

remember, the fate of the whole empire rasts upon what we shall decide to do. Let me therefore ask you is it to be a tame submission—as is evidently the desire of some know-nothings in power—or shall we do our duty to our country—and take the responsibility upon ourselves?" Needless to say the General's wish was heartily echoed. As an intimation of the licing of the army all the married officers have sent their families to their homes.

#### OUR PARIS LETTER.

(FROM OUR OWN CORRESPONDENT.)

Paris, January 8th. Europe for a while is left to itself; interest has Europe for a winter is tell to user; interest man emigrated to the Chinese seas and the Upper Nile, and it is upon British movements that all attention is concentrated. It was full time for England to show the world she was not asleep, but only awaiting the turn of the tide. That has now occurred, for she has taken it at the flood, which, it is said the shoot of the tide. it is said, leads on to fortune, and has very quietly brought Russia to book by re-installing, aided by seven battleships, her superintendent of Customs at Sönl, Korea, Mr. McLeavy Brown, whom a flux-sian functionary jockeyed away. That act means sian functionary jockeyed away. That act means protection and tranquility for Sie Robert Hart, the foremost and most bonoured functionary in the service of China. It will lead to other good things; among them that of the British Government re-garding favornably the negotiation of an English ican for the Celestials. This will lower by several pegs the cather excessive influence of Russia in the home affairs of the Sun of Heaven. England the home analys of the Son of Treaven. England will not consent—unless well squared by an equivalent comporting with her 67 per cent of the Far Eastern trade—to Port Arthur being handed over to Russin. She will consent to no Chinese port being held, and closed, by a European Power against the traders of the world. Port At this can allow what ships I pleases to anchor there for the winter; Russia has already removed her fleet there from Viadivostock to escape being frozen up; and England has sent two citisers to keep them compan

As to Germany, her speculation to China is not gay; the attitude of England reminds has in advance that she will not be allowed to seize and value that ships of other nations from Kizo-chau, It is that attitude which has given heart of grace to the Celestials; their backbone appears to be developing. As to what contract the Japanese will adopt, it will naturally be on the same lines as adopt, it will naturally be on the same lines as England's policy. Germany can do very little in China; her contingent of troops would be speedily awamped by Chinese numbers, while England will not remain merely a lacker-on. France is vor, it seems, bound to follow the Asiatic fortunes of her ally, and so will remain coy Beasides, her band will soon be drawn respecting the Lones Nile. Germany in China is in a five the sides, her hand will soon be drawn respecting the Upper Nile. Germany in China is in a fix; she has a homet's next about her ears, and one whither Pomeranians cannot be extensively shipped as they are more in season playing the Wacth am Rhem. The Raiser will soon find out that playthey are more in season playing the water am Rhein. The Kaiser will soon find out that playing at filthustering is costly work, and the founding of colonies no easy task. The internal condition of Austria-Hungary, and the resolution of Italy to abstain from all extra-European dangers, place Emperor William in an awkward position.

ptace Emperor William in an awkward position. It is a good influence that has stimulated Britain to accelerate her advance on Khartonm—Ondonanian. She will then be better able to penetrate deeper into the Soudan. Opinion inclines to conclude that the advance of French explorers is the cause of the quick march. Any one is free to help the Dervishes, but they must take the consequences. The English Government has more than once desired its applies to an in leading the leavest are successful.

aid her exchequer. Germany has yet to negotiate a commercial treaty with England, as the old ar-

rangements expite at the close of July.

Meteorologists have been analysing the weather Meteorologists have been analyzing the weather of Paris. There is a mean of 50 frosty days during the year, and 25 of fog. The mean average temperature varies from 50 to 58, degrees Fah., and the total yearly initial is 20 inches, spread ever 150 days. The duration of a shower is 30 minutes. Between March and October, 30 days are stormy, and the wind travels from 4 to 55 yards in a second; snow is never heavy, but in 1879 the soil was covered with a layer 20 inches

A singular cycle accident has occurred to bar-rister Monod. On December 17th last, he was wheeling with his daughter, when his bike caught in a tram rail; he was upset, and a cab that was following ran over him, the horse trampling him. He got, on his feet, and shook himself, complained of no internal injuries, and exteriorly had only a few busiess. Yesterday a relative paid him a visit; he was as merry as a lark and very gay. An hour later, he was dead. He was a model of health.

Nearly traif the taxes of Paris are raised by Nearly half the taxes of Paris are raised by the dues—the octrol—struck at certain classes of articles entering the city. The Municipal Council intend to abolish that indirect, in favour of a rational system of direct, taxation. Perhaps this is the commencement of the change that must ensue from the demolition of the fortifications of the city. The tax on the stomach is very unfair; thus the poor man's bartel of wine that costs but 70 francs, has to pay some 53 francs duty, just as much as the rich citizen's barrel, valued it may be at 700 francs. But what a regiment of excise officers to pension off, or to compensate!

Meccas must have their utility, since they exist, but none is so sad and dreary, as that to

Meccas must have then unity, such that to Jadies on New Year's Day. Jaidies was the residence of the ex-patriot Gambetta, and here the ex-patriot expired. It is a humble residence; not ex-patriot expired. It is a humble residence; not the remotest pretension, inside or outside, to greathess; it was there be lived with his mistress, and only his most intimate friends were admitted. Every year the apartmepts—they smell epulchrad—are opened, a green wood fire made; on a plain table are sheets of paper, where visitors write their names. The remaining leading men of his party, now very small, arrive there, deliver an oration, and tetire. On a small road in line with the dwelline, is a monument to Gambetta—jest in the dwelling, is a monoment to Gambetta—lost in the surrounding trees somewhat. The deceased's heart in in the possession of the family of Mr. Paul Bert; his brain is preserved in a bottle of spirits of wine in the Authopological Museum, with those of the other members of the society. The brain is light, 37 oz. but it is singularly rich in convolutions. Yet, as in the case of Voltaire, the interior of the skull was quite smooth. What say phrenologists to that?

Parisians do not like international exhibitions:

they are ever followed by three years of had trade. However, the works for the 1900 lête are getting along very well; there is a multitude of people employed everywhere; the hig wigs are not forgetten at banquets, where the uniform note is the rule and that will be so for at least three years.

#### H. & S. BANKING CORPORATION.

#### HALF-YEARLY MEETING.

The ordinary half-yearly general meeting of shareholders in the Hongkong and Shanghai Banking Corporation was held in the City Half, Hongkong, on February 12th. The Hon, J. J. Bell-living presided.

Mr. JACKSON read the notice convening the

A SATISFACTORY SPEECH FROM THE CHAIR.

The CHARMAN, after reading the report, said

Gentlemen, the directors have great pleasure in
coming before the shareholders with such a satisfactory report as the one just read, allowing of the tactory report as the one just read, showing of the usual dividend of £1. 5s. per share, and anddition to the reserve fund of to lace of dollars. The account under the heading of dead stock, which has appeared in the various reports since the establishment of the Brok, has been wiped out of the book by a debit of \$100,000 to the profit and loss account of the past half-year. Dead stock represented house and office furnitore, safes and stationery, all improductive or non-interest bearing items, and fitty grouped under the heading of dead stock. In future, it is intended that renewal of fundatore, stationery, &c., will be debited to the profit and loss account from half-year to half-year. The only non-

every half-year by charging the various offices a rentaln pon the premises they occupy. Our pre-mises at the head office and at the various branches unses at the head office and at the various branches are worth a sum considerably exceeding the figure at which they now stand in our books, viz., \$971,965.66. It is our policy to own the premises we occupy at the various centres of our business, and to continue writing down their book value. Our silver current accounts show the line off during the helf-hear of \$281.882.58 a fa ling off during the half-year of \$5.801,888.54 This was caused by the extreme tightness of money all over the East during nearly the whole of the latter half of 1897. This tightness first of the latter half of 1897. This tightness first began in the Straits in consequence of shipments of silver yen to Japan, where they were ex-changeable for gold yen, Japan exchange being at times as much as to per cent, over the rates unling in the Straits. British dollars were freely imported by the Banks in the Straits, but pending their arby the Banks in the Strans, but pending their arrival there was a great scarcity of coin in both Singapore and Penang. The change in the currency of Japan, while producing some inconvenience by tightening money in the Far East, resulted very satisfactorily to this Bank, as we were considerable holders of Japanese silver year at the time. siderable holders of Japanese silver yen at the time. Hongkong and Shanghai had to face abnormally large shipments of bullion, the former to Canton and the Coast ports, the latter to the River and Gulf ports, causing temporary stringency. In both markets, and high rates of interest ruled all round. Fixed deposits in silver show a slight increase during the half-year, say, \$31,730, 522.12, against \$30,641,249.52 the previous six months. Current accounts in gold show a decrease of £1,208,675.55, rod., being further withd awals. of £1,208,675 5% rod., being further withdrawals temporarily in our possession, as explained by my predecessor in the chair on the last occasion when predecessor in the chair on the last occasion when we met in this room. Our fixed deposits in gold show a slight increase, viz., £2,622,738 against £2,610,278 on the 30th June last. Bills payable show an increase of \$6,285,263.14 over the previous half-year, while bills receivable on the other side show a falling off of \$3,115,482.79. Bullion in hand and in transit shows an increase of \$5,557,768, and cash a reduction of \$6,615,132.47. The increase in bills payable and bullion in transit, and the decrease in bullion in transit, and the decrease in bullion in transit, and the decrease in bullion in transit, and the decrease in bullion in transit, and the decrease in bullion in transit, and the decrease in bullion in transit, and the decrease in bullion in transit, and the decrease in bullion in transit, and the decrease in bullion in transit, and the decrease in bullion in transit, and the decrease in bullion in transit. \$3,557,708, and cash a reduction of \$0,015,132.47. The increase in bills payable and bullion in transit, and the decrease in cash, show that the Bank's resources were fully occupied during the half-year, resulting in the splendid profit the report discloses. Bills discounted, loans, and credits show a decrease of \$4,011.405.53. The amount of our advances, viz, \$61,258.502, was just as much as we could afford consistent with sound banking. as we could afford consistent with sound can array. During the half-year the tightness of money already referred to required the most careful supervision of our funds in order to meet, as far as possible, the wants of our constituents, and this as possible, the wants of our constituents, and this fact emphasizes the wisdom of our adding largely to our reserve fund whenever we have an opportunity of doing so. We were most fortunate in not having to provide anything for losses during the period under review. Our holdings of Consols and other steiling securities are very little changed. None of our securities have been written up during the half year, not have we trenched upon the Chinese Government loan profits referred to at the last meeting.—(Applause.) An impression recently existed that we were large holders of Chinese and Japanese securities. The facts are, on the 31st of December last we had \$20,000 of the former and \$20,000 of the latter. Our funds were far no fully occupied in our ordinary business to permit of large investments in these stocks, good as we consider them to be. The half-year has been one of sider them to be. The half-year has been one of exceptional success, due in a very great measure, it is perhaps muccessary for me to state, to the ability and untiling energy of the Chief Manager (applause), ably assisted by the Bank's Managers and Agents and a most competent staff here and at all the Branches.— (Applause.) I very hearti-ly congratulate the shareholders and all concerned on the present position and prospects of the Bank, and I am glad to say that so far the new period entered upon has been highly satisfactory.—(Applicated). Gentlemen, I have no further temarks to make, but if any shareholders should desire any further information I should be pleased to give it.

There being no questions, the CHAIRMAN moved the adoption of the report any accounts.

SECONDING THE ADOPTION.

Mr. GILLIES—Mr. Chairman and Grutlemen,
I believe it is an undisputed fact that we have now
arrived at our sixty-fifth half yearly meeting, and
I rejoice in saying that on no former occasion have
shorthalders resided a processing that shareholders received a more satisfactory report on the progress and prosperity of our Banking Corporation than that now presented to us, and I heating of dead stock. In future, it is Corporation than that now presented to us, and I intended that renewal of futuritire, stationery, an sure your will all readily admit that the result account from balf-year and loss of the balf-year's working has more than justified account from balf-year to helf-year. The only non-intended interest-bearing item in the accounts now is the with much interest to the speech of our workly with much interest to the speech of our workly and in war of the most sanguine expectations. I have listened to us, and I ation.

THE "VICTORIOUS" RE-FLOATED.

The Victorious has been successfully with much interest to the speech of our workly and in war of the most sanguine expectations. I have listened to the profit and in war of the much interest to the speech of our workly and in the victorious has been successfully bearing item in the accounts now is the much interest to the speech of our workly and in the victorious has been successfully bearing item in the accounts now is the much interest to the speech of our workly and in the victorious has been successfully bearing item in the accounts now is the much interest to the speech of our workly and in the victorious has been successfully bearing item in the victorious has been successfully bearing item in the victorious has been successfully bearing item in the victorious has been successfully bearing item in the victorious has been successfully bearing item in the victorious has been successfully bearing item.

to him for his very clear and concise statement to him for his very clear and coucies statements regarding the movements of the meney market in the East, particularly in connection with silver, his careful combents on the extensive business done by the Bank, and for the assuming information reby the Bank, and for the assuming information respecting the very satisfactory position in which we stand with regard to our sterling and other securities. It must also be most gratifying to shareholders to find that the premises belonging to the Corporation at the many branches, including the head office, have been written down, to the extremely low figure of \$971,965, a sum which is certainly far short of the value of the land only; that it is proposed to pay the usual dividend of 25/- per share, and to place the large sum of \$1,000,000 to the credit of reserve fund, thereby anomenting its total to the equivalent of eightaugmenting its total to the equivalent of eight-tenths of the subscribed capital. The policy of continuing to build up the reserve fund when opportunity offers must commend itself to every me having a genuine interest in our welfare; it increases the resources of the Bank immensely, and in a short time will place us in such a position of strength and stability as to be almost without a precedented in the annuls of banking. Gentlemen, there is no better gauge of the successful working of any business than the balance sheet, and bringing this standard to bear on the returns before us, we have ceason for congratula-tion and being satisfied with the very able and efficient control and guidance of the Board of Directors and with the skilful management of our capable and well-trained staff. Concurring fully in the recommendations of the Directors regarding the appropriation of our profits, I have much pleasure in seconding the adoption of the report and statement of accounts for the past year.-(Applause). Carried.

#### BLECTION OF DIRECTORS.

Mr. EDGAR proposed the re-election of Messrs. G. B. Dodwell, R. Shewan, and R. L. Richardson as Directors, and the confirmation of the appointment of Mr. Armin Haupt to the Directorate, in room of Mr. St. C. Michaelthesen, who resigned his seat on leaving the colony.—Mr. C. Palmer seconded.—Carried.

Mr. WHEALLER proposed the re-election of Mr. F. Henderson and Mr. C. S. Sharp as auditors,—Mr. G. C. Cox seconded,—Carried,

The CHAIRMAN-I think that concludes the business of the meeting, gentlemen. Dividend warrants will be issued on Monday,

#### VOTES OF THANKS

Mr. Lawts — Gentlemen, before we leave, I think we should express our appreciation of the very satisfactory report placed before us. I am sure you will all join with me in a heaty vote of thanks to the Board of Directors, the Chief Manager, and the staff generally for the care and ability which has brought about such happy results.—(Applause.)

The CHAIRMAN-Mr. Lewis and gentlemen, helalf of my co-Directors and myself, the Chief Manager, and the staff generally, I beg to thank you for your cordial vote of thanks.—Daily Press.

#### LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.") ENGLAND AND CHINA. THE YUNNAN RAILWAY CONCESSION: STATEMENT IN PARLIAMENT.

London, Feb. 19.

Mr. Curzon, Under Secretary of State for Foreign Affairs, stated in the House of Commons that he was unable to confirm the report that China had agreed to the extension of the railway into Yunnan. It was in any case advisable to construct the railway to the frontier, before deciding as regards possible extensions beyond.

# THE ZOLA TRIAL

DRAMATIC EQUIVOCATION.

At the Zola trial yesterday, General Boisdeffre, attired in full uniform, dramatically appealed to the jury to trust the leaders of the Army, but gave no information.

#### THE DISASTER ON AN AMERICAN WARSHIP.

THE DEATHROLL: SPANISH SYMPATHY. Feb. 18.

The death roll in connection with the explosion on board the United States cruiser Maine comprises 253 men and two officers. It is officially declared at Washington that the explosion is believed to have been purely accidental. Spain has expressed her sympathy.

#### WRECK OF A FRENCH STEAMER. MANY LIVES LOST.

The French Transatlantic steamer Flachat has been wrecked off Tenerifie, Forty-nine passengers and thirty-eight of the crew were drowned; fourteen persons were saved.

#### THE TRIAL OF EMILE ZOLA. SENSATIONAL DECLARATION.

In the course of the Zola trial, intense sensation was produced in court by the declaration of General Pellieux (Billot?) that the evidence for the defence was calculated to disturb the confidence of the soldiers in their leaders in the day of danger, which was perhaps nearer than was supposed. This statement is regarded as mainly intended to, influence the jury and the country, to prevent the reopening of the case of Dreyfus, the illegality of whose conviction upon secret documents for the general safety. is becoming generally recognized.

London, Feb. 21.

#### THE QUEEN'S SPEECH.

The House of Commons has voted the Address in reply to the Queen's speech.

#### BRITISH ARMY INCREASE.

The British Army Estimates show an increase in the establishment, exclusive of India, of 16,946 compared with 1897. this number, 286 are officers.

#### ENGLAND AND FRANCE IN WEST any other Power. AFRICA.

PROTESTS AND COUNTER MANŒUVRES.

Mr. Chamberlain has received a tele gram from the Governor of Lagos, stating that the British Hausas occupied Boria, in the Lagos Hinterland, on Feb. 6th. The French arrived on Feb. 9th, and ordered the Union Jack to be lowered. This being refused, the French withdrew and encamped outside the town. The French also established a military post in the Hinterland of the Gold Coast, and marched past the British post at Nussa despite Major Northcote's protest.

#### BRITAIN AND FRANCE IN WEST AFRICA.

#### GRAVE SITUATION.

AN ENCOUNTER THOUGHT IMMINENT.

London, February 22. Reuter wires from Akkasa that two French expeditions are advancing on Sokoto. The Sultan has ordered them to halt within forty miles of the capital. The Niger Company's force is ready awaiting instructions to advance to the help of the Sultan and secure the evacuation of British territory.

The papers regard the situation in West Africa as of the gravest, and agree that the limits of British forbearance have been

reached.

## CHINA AND THE POWERS.

CONCESSION TO FOREIGN NAVIGATION.

It is stated that China has agreed to inland waters within four months.

#### PROBLEM No. 360. A BEAUTY. By LLOYD. BLIGE

WRITE,

White to play and mate in two moves.

#### RE PROBLEM No. 358.

This little South American is giving our solvers

This little South American is giving our solvers a lot of trouble.

W.K. sends a solution which, however, is incorrect, viz, 1—Kt to Kt 4, 1—P Queens or Knights, forced (?) 2—B takes P and mates next move.

W.H.S. suggests the same key move but points out that if 1.......P Bishops, a stale mate results.

This is but too true, the Key move therefore is not

"Skak" believes the composition to be a Two mover (!). For after 1...... P to 18 (forced), 2—
R takes P mate. Has our friend forgotten the rules that govern the movements of the pawns?
Miss S.—You are on the right track. Try

again!

Here are some comments by solvers in a home paper to whom we are indebted for the problem:—
"A charming composition....." "A beauty."
"One of the gems of Chess." "A luminous Novelty." "I thought the problem too simple to notice, but a close study shows it to be a master-piece."

This, we hope, will encourage our solvers to try their skill once more. Another week is given to them for solving the problem.

We take the following from the British Chass Magazine re Prince Dadian, of Mingrella. Mingrella is a province at Asiatic Russia between the chain of the Caucasns and the Black Sea. Obscure though his country may be, the name of the Prince is known throughout the chess world as that of an original and brilliant player. Prince Dadian was born at Zondidi; the capital of Mingrella, and from infancy displayed an extraordinary liking for various branches of science. He is an accomplished French scholar and has a powerful memory, speaks six moders farguages and the Digitized by

endition is known throughout Europe. He has played these from boyhood, and at Vienna in 1882 he played a blindfold game with such accuracy that he was heartly applanded by the masters present. He has little time, however, for overboard play. His end games are very heautiful, and will remain as chef-d'œreves of chess. The following was played at Homburg:—

#### NOTES

(a) We always think that the normal variation in the French defence leads to very interesting play. Here we have a typical position, in which the amateur has sufficient plack and spirit to give

the amateur has summer pinter and spint to give up a piece against the blindfold champion.

(b) If White plays (15) Kt to K 2, R to B 3;

(16) R to Q sq, Q to R 6, to be followed by III to III 3, admits of no defence.

(c) It was important that he should have taken with the rook's pawn.

(d) The complications in this extremely interesting game are manifold. Black has no other move

had been played, then (43) P takes P, R takes P; (44) Q to Kt 7 (cb), K takes P; (45) Q to B 7 (ch), K to Kt 4; (46) Q to R 5 (ch), K to B 5; (47) R takes R (48) Q to B 5, mate,—St. Fames' Budget.

#### NOTES.

One of the longest games we ever heard of was finished in January. It was a correspondence game between several German-Americans of New York City, and a Chess-club in Bremen, Germany. The New Yorkers won a Ruy Lopez which took about two years and five months to finish.

Messrs. Blackburne, Janowski, Bird, Burn, and perhaps one or two more leading players, are expected to take part in a chess festival at Hasting-, England, extending from February 23rd to Feb. 27th inclusive.

Dr. Comad Beyer, the great problem composer, has just died. Forty years ago his regulation spread all over Europe, but by the present generation he was scarcely known. One of his earliest successes was to win the first prize in the celebrated Era tournament of 1856, after a very severe struggle with F. Healey, who came second.

The return match for the championship of the United States between Harry N. Pillsbury and Jackson W. Showalter was to commence on Wednesday, February 2nd, and to be played Mondays, Wednesdays and Fridays thereafter. The match will be "first seven wins," extended to "ten wins" if each player should strive at the score of six, and will probably require about eighteen games to determine. The match last year required twenty-one games. (wenty-one games.

The international cable match between England and the United States will be played in March, Pillsbury, Showalter, Hodger, Hymes, Barry, and Delmar will be in the team. The other four players will be selected soon.

Steinitz is preparing the material for another book which is to contain some interesting novelties in the openiogs.

Chess with living figures is becoming a fad now all over the world. The first entertainment of this kind on record was given by Duke John of Ausmia (1650).

Was Shakespeare a chess-player? He only once refers directly to the game. In the fifth act of "The Tempest," Fordinand and Miranda are discovered playing at these.

Min.: Sweet lord, you play me false.

Fer.:

I would not for the world.

Mir.: Yes, for a score of kingdoms you should wrangle,

And I would call it fair play.

There is no evidence here that Shakespeare even knew one piece from another. It has, indeed, been suggested that the game was only introduced because ferdinand was Prince of Naples, and, in Shakespeare's time, Naples was the headquarters of chess play. On the other hand, it may be noted that the pieces used by Fordinand on this occasion must have here Prospero's, and Prosperowas Duke of Milao. It is a pity to imagine that Shakespeare had any other purpose than to show the lovers in a pretty and engaging attitude, to show how his darling Miranda bears herself in this sweet antagonism. But the fact that he nowhere alse refers directly to cless, and that, unlike many writers, from Bacon downward, he never even uses its terms by way of dilustration or metaphor, seem to warrant the inference that the pastime had for him no great attraction.—Boston astime had for him no great attraction. - Borton Traveller.

#### EXPORTS.

RAW SILK.

The activity and brisk demand which characterised the market in the early part of last week have died out, owing to a great extent to the high prices asked and the small stock of silk of the required quality on hand. The remaining stock consists of about 6,500 piculs, against 10,870 piculs at same date last year. Prices asked are generally from \$10 to \$15 per picul higher than our standing quotations. Shipments include 580 bales per China, 230 bales per Empress of India, 75 bales per Kagoshima Maru and 42 hales per Argyll, for America; and 81 bales per Hohenzollern and 17 bales per Rosesta, for Europe. Company collapsed, and half the houses supplied with gas in the capital were thrown into

A GREEK loan of four millions sterling at 3 per

A Council of Experts is to be formed in the Communications Department with a view to improving the railway system.

THE Yokohama Specie Bank will pay a dividend at the rate of 15 per cent. per annum for the second half of last year.

THE British House of Commons has passed the votes for an increase in the number of men and for higher pay in the army.

THE amount of tea sold to foreign firms in Yokohama during February last was 47,100 kin, the amount in stock being 94,900 kin.

It is rumoured in New York that inquiries have proved than the explosion on the U. S. battle-ship Maine was not accidental.

LIEUT.-GENERAL BARON NOGI has superseded in the governor-generalship of For-mosa by Lt.-General Baron Kodama.

EMILE ZOLA has been sentenced to a year's imprisonment and 3,000 francs fine in connection with his agitation against the trial of Dreyfus.

THE usual spring Exhibition of objects modern and ancient art will be opened in the Uyeno Galleries on April 1st, and remain open till May 20th.

A Young man named Yamamoto Seiyemon, of Shizuoka, murdered his brother's wife and six children on the 27th ult. He tried to escape, but was arrested.

BARON ROZEN, Russian Minister to Japan, on the 28th uitimo presented the Emperor and Empress with some valuable gifts sent by the Czar and Czarina.

THE Communications Department is now endeavouring to arrange for an increase in the speed of express trains running between Shim-

THE proposed festival to celebrate the 30th anniversary of the removal of the Government from Kyoto to Tokyo will take place on the 10th April next in Uyeno Park.

AT Yoichi, Hokkaido, early on the morning of the 21st ult., eight fishing boats foundered in a gale, and ten others were damaged. Twenty-three fishermen were drowned.

It is reported that in addition to the vessels already in course of construction for the Japanese Navy, two new war ships and eight torpedocatchers are to be built in England.

THE strike of engineers and stokers on the Japan Railway Company's lines still partially con-tinues. Some of the men have returned to work, but others are holding out.

A RESOLUTION by Sir Ashmend Bartlett has been adopted without division in the House of Commons, declaring it to be of vital importance to maintain the independence of China,

An extensive fire occurred in the godowns of the Kobe Pier Co., on the night of the 2nd at from half a million to a million dollars.

Just after 8 o'clock on Monday night one of M. HANOTAUX, the French Minister for Foreign last month reached 28,285 tons, valued at yes the two gas mains of the Tokyo Gas Lighting Affairs, has informed Sir Edmund Monson, the regions from

British Ambassador, that the Sokoto incident is against the wishes and instructions of the French Government.

According to investigations made by the cent, has been guaranteed by Great Britain, Formosa Administrative Office the Japanesa France, and Russia.

Population of the island now stands at 68;848— 36,272 males and 32,576 females, comprised in 12,920 families,

> MR. J. F. FRASER, one of the world cyclists, delivered an interesting reading on his journey through Upper Burmah and Western China to a meeting of the Asiatic Society of Japan in Tokyo on the and instant.

Owing to the extremely dilatory delivery of goods from Yekohama Railway Station, the merchants of Tokyo and Yekohama are considering the formation of a transport company with two steamers and 20 barges for traffic between the two cities.

It is reported that a loan of a hundred million taels is to be made to China by the Hongkong and Shanghai and the Germany Asiatic Banka at 4½ per cent., issue rate 83. The security is the unpledged portion of the Custom duties and the likin dues.

THE steamer Kelung Maru, of the Osaka Shosen Kaisha, left Kobe for Hongkong on the and inst. On her return voyage she will bring rice from Saigon. The Company will undertake four voyages a year on the same route, receiving a subsidy of yen 25,590 from the authorities.

DETERMINED attempt to assausinate King George of Greece was made by two men at Athens on the 27th ult. Nine shots were fired but none struck the King. A man named Karditza, employed by the municipality of Athens, has been arrested and admitted firing at the King.

Towards duck on the 28th ult., the steamer Otag : Maru. of the Osaka Shosen Kaisha, came in collision, with the steamer Shin-unyu Maru at Kobe, and both vessels sustained damage. On the 1st inst. another collision occurred at Wada Misaki, Hyogo Ken, between the steamer Kyoritsu Maru and the junk Asashi Maru.

THE Import business during the week can scarcely be said to show any decided improve-ment. The run on grey shirtings has entirely subsided and very little business has been done in fancy cottons and woollens. There has been some enquiry for yarns, but as prices are firmly maintained, no considerable business has been done. There has been a jump in the quotations for raw cotton of all kinds; consequent on the destruction of stock in the fire in the Kobe Pier Co.'s godowns on the 3rd instant, when over 7,600 bales of Indian and American cotton are reported to have been burned, and a further quantity damaged. The kerosene murket has much improved in tone and prices have gone up from 5 to 10 cents per case. A fair, steady business has been done in brown sugar, at rising prices. Metals are flat in view of heavy arrivals, and prices have a downward tendency. Large im-portations of foreign rice continue. In Exports there has been little done. The demand for raw silk has been light during the week for export, but a good business was transacted with native manufacturers and stocks have been considerably reduced. Nothing has been done in ten, and in general exports there have been a lair amount of uanaactions in fish oil and copper, the latter at very firm rates. Sales of coal at Moji are reported to be very active. The amount exported during the latter half of

#### SPIKIT OF THE VERNACULAR PRESS.

The Nichi Nichi Shimbun devotes a column to pleading the cause of small farmers. feudal times agriculture was regarded as the most honorable method of money-getting, and it still stands high in the esteem of the nation, though undoubtedly the fact that the future of the country lies in manufactures is coming to be more and more recognised. The farmer is, in truth, a vitally important factor in the national economy, and his interests deserve to be carefully consulted. Statistics show that the number of households registered as agricultural aggregate 5,518,041, among which those that own the land as well as farm it total 3,121,075, and those that till it merely metenants number 2,496,965. We may divide these totals again into households which make farming their sole business, and households which have some additional source of livelihood. We then obtain the following results :-

Households which swn as well as farm 2,170,652 

1,510,200 land having also some other occu-... ... ...

All persons farming land which does not belong to them must be classed as "small farmers. They constitute 41 per cent. of the whole agricultural population, and well deserve the attention of legislators. In certain prefectures almost the whole of the land is farmed by tenants. Such prefectures, for example, are Hyogo, Niigata, Takanashi, Gifu, Toyama. Shinano, Okayama, Tokushima and Fukuoka. Turning to the question of area, we find that out of a total superficies of 4,619,172 cho (11,547,930 acres) devoted to agriculture, the portion owned by those that farm it measures 2,795,707 cho (6,989,267 acres) and the portion farmed by lenania measures 1.813,465 cho (4,533.663 acres). Or, again, if there be question of wet fields (lowland rice land), it appears that the area farmed by owners of the land is 1,511.307 cho (3 778.267 acres), and the area farined by tenants, 1,173.083 cho (2,932.707 acres). These various figures show the great importance of the tenant farmer. In fact, out of every ten thousand cho (25 000 acres) of cultivated land, he farms 3,937 cho (9,842 acres), and out of every ten thousand cho of lowland rice fields, he farms 4,367 cho (10,917 acres). Industrial and commercial banks have now been established in various parts of the empire, providing monetary facilities for manufacturers and traders, and agricultural banks are to follow. But looking at the rules of the projected agricultural banks, it appears that they will be forbidden to make advances unsecured by real property to others than urban or rural communities, or public associatious organized in accordance with law and considered worthy of credit, or combinations of jointly responsible creditable individuals numbering at least twenty, The tenant farmer will not come under any of these categories. It will be almost impossible for him to obtain accommodation from the banks. No fault, indeed, is to be found with the rule, neither is it suggested that banks abould advance money to persons who can not offer security and are not worthy of credit, Still the tenant farmer's case needs some remedy, and perhaps the best plan would be to organise credit guilds (Shinyo Kumiai) such as would command the confidence of the banks.

The Jiji Shimpo devotes three articles to demonstrating the fact that Japan is becoming, and is destined to become, more and more dependent upon foreign countries for the neces. The satisfies of life. Rice presents itself first for be procured now, the task would be impossible. Rice presents itself first for possible. Cotton is a third example. The article of the people's diet. A curious point suggests itself in connexion with the production of this cereal in Japan. As a general rule, land the woollen manufacturing industry has begun as China's near neighbour gives her a vital in Original from Digitized by Google

becomes quickly exhausted if the same kind of crop be raised on it year by year. That is an experience too well established to require demonatration. But in this country farmers have been planting rice in the same fields for tens of centuries, yet the land shows no sign of exhaustion. The explanation is that very exmanures. Apart from vegetable manures, which, on decomposing, return to the soil some of the components taken from it by rice crop ping, fish manure can be largely employed owing to the teaming wealth of piscine life in the waters that wash the four shores of the island empire. Farther, the Japanese probably stand pre-eminent among nations for the value that they attach to human manure, which in European countries is scarcely at all employed. In England, for example, it is for the most part thrown into the sea. But in Japan there is no such waste. A reasonable estimate of the value of this one agricultural fertilizer is 40 million yen annually. After all, however, if the Japanese have been able to raise good crops of rice from the same land during fifteen or twenty centuries, it is not because nature has specially fitted the land for such a purpose, but because remarkable skill and untiring labour are devoted to the task. On the other hand, the capacities of the country for producing rice are plainly limited. It may be fairly doubted whether much land remains to be added to the area already under crops. Since the fail of feudalism there certainly has been an increase in the yearly yield, but it is only very partially due to land-reclamation. A more potent factor has been the abolition of the annual visits of the fendal nobles and their families to Tokyo. The immense demand created by that custom for carriers, inu-keepers and highway labourers in general drew bundreds of thousands of bands from agricultural pursuits, and the result was plainly visible, for the most neglected farms in the whole country were those lying along the line of the great trunk roads (Tokaido, Nakasendo, etc.). that has been changed. Further, in propor Further, in proportion an facilities of communication and carriage have improved, a certain number of new districts have been brought under cultivation. Still it would seem that the rice crop has very nearly reached its potential maximum. Several years have elapsed since 40 million Aoku came to be regarded in a full yield. That figure is seldom reached and seldom indeed surpassed. On the other hand, the growth of the population is an indubitable fact. Each year adds fully four bundred thousand mouths to the number that have to be fed, to say nothing of the growing prosperity which has converted into rice-exters multitudes of people who, in old times, never dreamed of such luxurious diet. It may even be questioned whether the supply of fish for manure will not grow scarce one of these days, for the demand for fish as an article of food has developed pari passu with that for rice, and its price has gone up correspondingly. Everything indicates that Japan must depend more and more upon supplies of rice from abroad, and, further, that people will gradually change their diet, turning to bread and meat. For these, too, they will have to look to foreign countries, neither the climate not the soil of Japan being anited for pasturage or wheat-raising. There is a prejudice against foreign rice. The Japanese class it all se Nankin mai. (Chinese rice) and turn from it with professed dislike. But, as a matter of fact, they consume large quantities in happy ignorance, and the import is steadily increasing. Timber is another article which will have to be procured abroad. The domestic supply is almost exhausted and prices are becoming prohibitive. Experts allege that it is difficult now-a days to find a tree of more then 15 years of age in a Japanese forest, and that if the timbers used in the frame of such a temple as Bongwan-ji had to be procured now, the task would be im-possible. Cotton is a third example. The

to make some progress, and will probably grow to large dimensions by and by, but the wool itself will have to be imported. The upshot of this analysis is that the Japan of the future will be dependent on foreign countries for her supplies of food, clothes, and building materials.

In the Mainichi Shimbun we find three articles signed "Sakabe Gyozaburo" which discuss the national policy that ought to be adopted by Japan and the resolution that should be taken by her people at this juncture. The writer's assertions would command more respect were they accompanied by intelligible arguments, but he seems to think that emphatic declarations of opinion are better than ucid demonstrations of facts. His view about China is that her fate is scaled. The preservation of her integrity has ceased to be possible and her partition among the Great Powers of the West is inevitable. The encroschment of the Occident upon the Orient is not a movement of recent origin. It began three hundred and twenty-four years ago when Portu-gal attacked Canton, and it has been going on ever since, fitfully but unmistakably, In recent years, however, a new impulse has been given to it by the absorbing auxiety of European Powers to shift the arena of their armed rivalry as far as possible from their own doors. - They have shifted it to the limits of the Orient, and Chius, the Middle Kingdom of the East, in their new battle-field. There is no hope for her: she must go down. At the same time, publicists are much mistaken who assert that the dawn of the iwentieth century is the opening of the era of brute force. This is not a question brute force; it is question of civilization against semi-barbarism; of progress against stagna-tion. The world has become such that no country refusing to embrace the civili-zation of the Occident can maintain its in-dependence. What, then, should be Japan's policy; what the resolution taken by her people now that she and they find themselves in the very field where these great events are pending? It is observable that all politicians who, three years ago, advocated a large expansion of the country's armaments, now plame themselves on their foresight. They are wrong. Strong armaments are but the crown of an edifice. Incomparably greater importance should be attached to the foundations. The foundations of a country's greatness are wealth and educated intelligence, It is to the devel pinent of these that Japan must direct ther attention. She is safe against aggression even though she does not devote any additional attention to her armaments. Their increase beyond a certain point can only mean that she intends to take a part in the acramble for territorial aggrandisement now commencing in her neighbourhood. But she is not ready for that. Her finances do not permit it; her material development is too backward. examples of Spain and Portugal do not suffice in demonstrate the unwisdom of stretching out the arms of a conqueror before its muscles are hardened, her own experience in Korea should have made the matter quite clear. What she has to do at present is to develop her resources; to obey the dictates of justice and morality; not to allow her attention to be engrossed by one object to the exclusion of others; not to increase her armaments beyond the sauction of ber strength, and to wait until she has fully qualified for admission to the rank of civil zed Powers before she attempts to compete with them.

The Kokumin Shimbun urges that upon England, the United States, and Japan devolves the duty of preserving the peace of the East, which end can best be effected by maintaining the integrity of the Chinese empire, Great Britain's enormously preponderating share of the trade of the Far East need not be demonatrated, nor need any reader of statistics be told that the United States of America comes

terest in the problem of the latter's fate. The object of all three should be to keep China's markets open and to contrive that her resources shall be peacefully developed. She is the trea-sure-house of the world. Her teeming millions are potent for purposes alike of consumption and production, and she has immense stores of mineral wealth waiting to be exploited. She is the Turkey of the East, and to save her from falling into the possession of Powers that pursue a restrictive and protective policy in commerce is just as essential as is the preservation of Turkey's integrity. It should be the aim of the three Powers to lead her into the path of progress. The contention asserted by some that she can not be led, that her conservation is invincible, does not deserve any credence. Her people are intelligent, industrious, and faw-abiding. They will follow the right when they weatt. If England, America, and Japan undertook a task so noble in itself and no serviceable to the world, can there be any doubt that they . would succeed?

Railways are the instruments of civilization. but the completion of the Siberian Railway is anticipated with dread as a harbinger of and violence. Navigation is the vehicle of progress, yet the development of Germany's maritime resources betrayed her into an act of international piracy at Kiao chou. With this exordium the Nippon proceeds to tear to pieces the moraliy of Western nations, and to show that their civilized principles find no practical expression in their acts. Passing then to the question of China's partition, it ridicules the idea that anything of the kind is imminent. Europe has been toiling for more than a century to find a solution of the Eastern Question and seems to be as far as ever from discovering what she Her only clear perception is that the life of the Sick Man, Turkey, must be preserved. We have now a Far-Eastern Question. It has just come upon the tapis. It is at least as vital a question the Eastern, and all the Great Powers of Europe are vividly interested in it. Is there the least chance of its being settled offhand? No more chance than there is of the Yangtaze junning dry. People may talk of the partition of China, but even supposing that the atrength to undertake such a task were available, no agreement could be come to about the method. As to governing the Chinese, history shows that the Middle Kingdom assimilates but is not assimilated. Foreign conquerors, in the course of scores of centuries, have imposed their away upon China and established their dynastics upon her throne, but they have all ended by becoming Her vastness has awallowed them up. She retains that quality as fully as she possessed it. The corruption of her officials, the ineptitude of her rulers, may have paraly-sed her means of defence and rendered her impotent in war, but the nation is the same nation that it has always been. A port here, a promontory there, may be seized by a Western aggressor, but those that attempt to govern her will find the task impossible. The true way is to lead her to the light. Germany, which supports the Turks though their hands are reekking with the blood of thousands of Arme-nian Christians, made an armed descent on China's territory because two missionaries were killed by Chinese bandits. The atone ment that Germany can offer is to utitize her position in Shantung for the breaking down The Nippon of China's conservatism. earnestly recommends the same object to England and to Japan.

The Shogyo Shimpo has a clever article the writer of which argues that there is not the least reason to dread an outbreak of hostilities between Russia and England. For many years, the says, Europe's eyes were fixed upon France and Germany, but of late Russia and Great Britain have become absorbing objects of observation. A collision between France and Germany would convulse Europe; a collision between England and Russia would convulse the world. But there is no danger of the latter catastrophe; certainly no importance of the latter catastrophe; certainly no importance of the latter catastrophe; certainly no importance of the latter catastrophe. Should this be the case the necessity would convulse the world. But there is no danger of the latter catastrophe; certainly no importance of the demands of each Department may be appreciated, but they of the latter catastrophe; certainly no importance of the demands of each Department may be appreciated, but they must resolutely be declined."

minent danger. A radical difference exists between Anglo-Russian relations and Franco-German relations. The sentiment that holds France and Germany spart is a sentiment of revenge. The motive of the rivalry between England and Russia in material interest. If the two former stand in the lists, it is because the wants to wipe out the disgrace of a defeat, the other to preserve the fruits of a victory. If the two latter harbour feelings of mutual hostility, it is because the one threatens to cross the other's paths to profit, England is enormously powerful. Her wealth is inexhaustible. Her strength at sea is absolu-tely matchless. She is entirely beyond she reach of Russia's arm. But she has a multitude of cares to harrass her. She has complications with France in Western Africa. She has trouble in the Transvaal. She has a campaign in upper Egypt. She has a war on the Indian frontier. She has just had to deal with a famine of unprecedented magnitude in India. She is embarrassed by America's protective policy and by Germany's industrial rivelry. War with a first-class Power could not be wecome to her. As for Russia, to enter the lists with England would be to imperil her very existence. She is thoroughly conscious of the fact. Why should the two Powers fight at immense national loss when national profit is the aim of each i England's object is to open the markers of China to the world and to develop the material resources of that huge country. Russia's obiect is to obtain access to ice free seas and to possess herself of Manchuria for that purpose. Each may compass its end without a collision. There is nothing to prevent them from agreeing to do so peacefully. Such an agreement might be difficult to elaborate, but what would the difficulty be when compared with the horrors of a war? During the past forty-three years England and Russia have been involved in many complications, since they stood in the lists before Sebastopol, but they have invariably extricated themselves without a collision. The lesson taught by their history is that they will exhaust every effort to avoid a conflict. Japan, therefore, may proceed to develop her resources in tranquillity. So long as England and Russia keep the peace, the Far East will remain undisturbed, and England and Russia can be trusted not to draw the

#### COUNT INOUYE ON QUESTIONS OF THE DAY.

An interviewer, alleges the Chuo, recently had a conversation with Count Inouys, Minister of Finance. Your embarrassment as Minister of Finance. "Your embarrassment as Multisler of Finance," he said to the Count, "must be overwhelming." "Yes," was the reply, "the trouble is at its climax. The clamour for money comes from all directions, while there is really no money to give. I am so perplexed as to be unable to open my mouth on the subject. The University insists upon introducing into its curriculum such and such a new branch of science,-its claim is quite reasonable; the Communications Department too makes a variety of suggestions for its own convenience, and its example is followed by the Home and the Agricultural and Commercial Departments, all having solid grounds for their demands. I do not ignore the importance of effecting the proposed improvements, but to listen to each of the Departmental claims advanced would bring ruin upon the country. Just as a State may be crushed by foreign invasion, so a serious blunder in financial airangements may produce a national catastrophe. Even in the ordinary course of things the issue of bonds to the amount of over forty million yen is absolutely indispensable this year, while the payment of the Chinese Indemnity is likely to be postponed. Should this be the case the necessity would arise of raising a loan of over eighty millions in bonds. Japan's capacity for such a large loan is doubtful; and foreign capital is not yet to be depended on. The importance of the demands

#### FORESTS OF HOKKAIDO,

The luxuriant forests in Hokkaido, remarks the Nichi Nichi, were long left to grow and to decay by themselves, but since the inauguration of the colonial system the woodlands have become the prey of merciless emigrants from the interior, and the wantonness with which the trees were cut down soon gave the country an aspect of utter desolation, especially on the Western coast. The fact has become apparent to men of public spirit, and there is now under contemplation the organization of a company to be designated the Hokkaido Forestry Company. Land is to be lessed to the extent of ten million tsubs, and as many as 15,390,000 valuable trees are III be planted during the first sixteen years of the hundred for which the land will be held. From the 17th to the 25th year necessary additions and improvements are to be made at an estimated expenditure of 245,997 pen, and the gross receipts are calculated to amount to 2,724,864 pen, realizable by the occasional cutting of trees in the 12th, the 20th, the 40th, the 60th and the 100th year. The net profits are (by sanguine people) estimated at 2,478.866 yen. The same sanguine people believe that although the total ontlay is estimated at 245,997 ren, yet as receints from the sales of trees may be expected from the 12th year, the actual expenses up to the 11th year will not exceed 160 000 yen, which amount is to be raised in shares of 500 yen each.

#### KOREAN STATISTICS.

The population of Korea, and other facts relating to the distribution of the people, remain still matters of conjecture. It is not to be supposed that no attempts were formerly made to compile statistics. On the contrary, the Department of War had a list supposed to show the number of males in the country, and the Department of Finance had returns, corrected every three years, giving the number of houses and their occupants for taxation purposes. But it appears that the provincial officials who Were primarily responsible for the compilation of these lists found their account in showing figures smaller than the reality. They collected taxes from every one, of course, but paid into the Treasury only such a proportion of the actual sum as the nominal population bore to the real.

It thus resulted that the census lists gave a population about three times as small as the true number, and that while 15 million yes were collected by the tax gatherers, only 5 millions went to the Government. Last year, a census was taken for the first time after Western methods. The result was a total of 1,332,501 houses and 5,195,028 inhabitants, being an average of between 3 and 4 per house. Moreover, the number of males was 3,869,767, and that of females 2,328,481; the males, contrary, to the general rule in other countries, being the more numerous by 541,212. It is strongly doubted, however, whether these figures are correct, or even approximately correct. The editor of the Korean Repository thinks that the population is about 17 millions.

#### RUMOURS.

Several rumours have been put into circulation, which are sufficiently interesting to observe notice. One is that, according to telegraphic information received in Tokyo, the Senate of the United States has rejected the Bill for the annexation of Hawaii, and the measure has consequently been postponed indefinitely. We have made inquiry in official quarters, and learn that no such intelligence has been received.

Another canard, for which the Nippon is chiefly responsible, relates to the formation of a Japanese American Bank with a capital of 130 million yen, its object being to supply funds for the construction of railways and for other public undertakings. The projectors are said to be Mr. E. Dun and Mr. Kaneko Kentaro. This, also, is a myth. No such bank is contemplated.

URBANA-CHAMPAIGN

#### THE CHINESE LOAN.

The news from Peking that China has completed her negotiations for a loan from the largest crop of explicit rumours were the Hongkong and Shanghai and the German Asiatic Banks finally disposes of the rumours recently circulated with so much pertinacity that Russia had stepped in where Great Britain had failed. Some of the rumours have been of the most ludicrous character. One correspondent of a Shanghai journal did not hesitate to affirm dictated by these gentlemen, and that Sir Claude had practically become a mere nonentity. Any one acquainted with Peking could at once detect the extravagance of such stories. So far as the foreign residents are concerned, the Chinese capital may be said to consist of the Legations, the Customs, a hotel and act would have been an unwholesome two banks. There is a club which affords the usual facilities for the manufacture and ventilation of "gup," but there is little or none of the general social intercourse which constitutes the best medium for the transmission of true intelligence. Rumour has no respectable mouth. The Legations are, of course, too well informed to be communicative. Within the ranks of the Customs Sir Robert Hart alone is on the inner track, and Sir Robert Hart is nothing if not circumspect. As for newspaper correspondents, failing information at first hand from a Foreign Representative, they are obliged to fall back on Chinese news-vendors, and these have proved themselves admirably competent to concoct marketable intelligence in stirring times but useless to garner trustworthy items of news. The Tsung-li Yamen is far removed from the quarter where the little coterie of foreign residents are located, and between the two stands a large section of the dirty, dilapidated Tartar city, across which news can not travel without extraordinary distortion. In short, to obtain an account of what occurs at the Tsung-li Yamên when a Foreign Minister interviews some of the patient procrastinators of that remarkable institution, it would be necessary to consult the Minister himself, or to rely on the word of some petty Chinese official, one half of whose narrative is conjecture and the other half sensational speculation. It must often have been observed by the most superficial reader of the Shanghai journals, and indeed of foreign-settlement journals as a whole, that those least likely to be accurately informed are always provided with the most minute intelligence. We never find that the correspondents of great English newspapers, men who enjoy the friendship and confidence of statesmen and diplomats everywhere, are able to describe what happens when this or that ambassador visited the Foreign Office, or to offer precise analyses of the motives animating Cabinet Ministers. It is only in places like Peking that such wonderfully detailed knowledge is acquired, and it is only by journalists too careless to be discerning or too sensational to be scrupulous, that it is published. For some time back the fact that negotiations for the loan now settled were in progress had been known China, Japan, and Korea, and actors so Digitized by Google

most intimately concerned that secrecy should be preserved. Yet it was precisely during this season of special caution that put into circulation. As to the transaction itself, we imagine that Englishmen will regard it with considerable satisfaction. Of course the salient feature of the affair is that Powers supposed to entertain aggressive designs upon China have ment of superficial exultation might have been evoked had England stepped officially into the breach and placed her immense credit at China's service to procure a loan on terms defying foreign competition, the departure from the best British traditions. According to the plan now struck out, China gets the money on a purely business footing, without any diplomatic obligations whatever. She could have obtained it more cheaply perhaps, so far as mere dollars and cents are concerned, by recourse to Russian official aid, but she has persuaded herself to make a pecuniary sacrifice for the sake of avoiding contingencies like those which her last officially promoted loan entailed. It is a good sign that she begins at last to display discretion. There will, of course, be con-siderable satisfaction in Germany since a German bank has obtained a share of the loan. About the middle of January, a rumour was circulated in Europe to the effect that the British Government had determined to guarantee the loan, and that the German Government would be invited to cöoperate. The news had a remarkable effect. It converted the previously hostile utterances of the German press against Great Britain into expressions of warm friendship. At the same time, the best informed publicists in Berlin declared their conviction that the German Government would not assume any responsibility whatever in connexion with such a transaction, however favourably it might regard the participation of German banks. Were the Chinese a united nation with a strong government, Were the Chinese a there would be little occasion to go abroad for loans such as that just now negotiated. The taxes accounted for to the Emperor aggregate only Ioo million taels annually, and if we assume-a tolerably liberal assumption-that 200 millions go into the pockets of the Mandarins and local officials, the total taxation per head is only about one tael, or three shillings, which is the amount levied in British India. The Chinese could of course afford to pay a great deal more.

## " UNDER THE DRAGON FLAG."

The public has not hitherto been exploited by romance-writers taking for their subject the China-Japan War, a fact not surprising, on the whole, when we consider the difficulties lying in the way of any author who should attempt to describe scenes so unfamiliar as those in

altogether unessayed, and it has now been entered by romancist calling himself "James Allan." The title of his work is "Under the Dragon Flag," and it professes to be "my experiences in the Chino-Japanese War." In fiction much is supposed to be allowable, yet we question whether Mr. " Allan " has not overstepped the bounds of due liberty when he undertakes to describe as an eye-witness events been deprived of the opportunity to tie that concern the reputation of an army, Shanghai journal did not he itate to affirm that either the Russian or the French Representative was constantly "on guard" that the British Government has stood at the Tsung-li Yamen, that the answers received by the British Minister when he aloof from pecuniary enterprises of this aloof from pecuniary enterprises of this author to say "I have simply written down my exact and unadorned remembers of the custom of the cu another strand of silk around her throat, and when, for the sake of dramatic effect, the Queen's Ministry to play the part of brance of incidents which I witnessed and international brokers, and though a sentitook part in," when in reality he has merely taken journalistic accounts and vague rumours as a foundation whereon to build a very lofty edifice of circumstantial and detailed fiction. If we change the venue of the story, and conceive it written by a Frenchman or a German pro-fessing to have been present with a British force on the Indian frontier and to have seen with his own eyes the events he relates, it will be apparent at once that Englishmen would not be disposed to condone any excursions made by him into the realm of fancy at the expense of British military reputation. Presumably Mr. "Allan" concluded that no one could be seriously deceived by his story, but it is quite certain that many people will be deceived—all persons, indeed, whose knowledge of the truth is not more intimate than that possessed by the average Englishman, or who approach the perusal of the volume in a spirit of credulity. We can not fail to note, too, that the author has been at great pains to guard against furnishing to incredulous readers any clues by which his narrative might be verified or contradicted. The steamer in which a part of his Far-Eastern life was spent carried munitions of war to the Chinese and was one of the transports forming the Talien-Yalu flotilla. He calls her the Columbia. Needless to say there was no vessel of that name in these waters at the time. The Columbia is boarded by an officer from a Japanese man-of-war near Chemulpo and escapes by throwing the officers over-board and steaming away from under the guns of the warship which is only 200 yards distant. Of course Mr. "Allan" forgets the name of the Japanese cruiser. By and by, he is taken prisoner and spends a month on board the Itsuku, a Japanese gunboat of 500 tons and 16 knots speed. A five-hundred-ton gunboat of 16 knots is a marvel, anyhow, but it will be at once guessed that there is no gunboat, nor any ship, called the Itsuku in the Japanese Navy. Then Mr. "Allan" relates some interesting conversations between himself and the gunnery-officer of this imaginary vessel, "Lieutenant Hishidi." There is no such name among the people of the Japanese nation, and there could not be any such name. In one sense the men-tion of names is good art, but Mr. "Allan's" invented names are not at all artistic. We can hardly assume that he added them expressly for the purpose of proving his narrative to be fiction. In short, he has been at much pains to compile a work which should sell for the sake of its semblances of truth, though in truth by those behind the scenes, but pending little known as the peoples of the Far it is false from cover to cover, and he has the conclusion of a definite arrangement. East. Still it would have been too much not hesitated to embody in it a long narit was obviously in the interests of those to expect that this field would remain rative which represents the Japanese

soldiers as having played the part of savage butchers at Port Arthur, though he knows nothing whatever about their conduct. Were it the conscientious record of an eye-witness, the book would possess much interest, but as the invention of a romancer, a mere work of fiction, it has no claim to attention.

#### THE NEW GOVERNOR-GENERAL OF FORMOSA.

All the vernacular journals by which the last change in the headship of the Formosan Administration is discussed agree that Baron Kodama, the new Governor-General, is a man of very exceptional capacity, and that his direction of the island's affairs ought to be successful. But no one seems to have any accurate knowledge of the reasons for Baron Nogi's resignation. Ill-health is the publicly assigned cause, and there can be no doubt that the climate has proved more or less injurious to the retiring official. Ill-health however, is too stereotyped an excuse to be satisfactory. Men recall the fact that when Baron Nogi went to Formosa, he was accompanied by his aged mother, and that he announced his intention of making the place his home and leaving his bones there. Thus when he gives it up after a year because the climate doesn't agree with him, the public is puzzled. On the whole the prevalent belief is that the new Cabinet wants a new man at the head of Formosan affairs, and perhaps nothing more need be said. So far as Baron Nogi is concerned, he has certainly proved himself an official of earnest purpose and the highest integrity, and it may be confidently asserted that his resignation will be much regretted in Formosa. One of the leading Tokyo journals scoffs at these frequent changes of Governor-Generai—three in three years—and declares that what is wanted is statesmanship, not a statesman. It is hopeless to think of administering Formosa successfully until there is a definite policy to form the basis of an administration. Is the island to be regarded as a Colony or is it to be considered an integral part of the empire? That is the question. Pending its con-clusive answer, every Governor-General of Formosa must find himself working in the dark. Another journal strongly urges the advisability of placing the island on the footing of a Colony and investing the Governor-General with powers such as would be wielded by an English official in a similar position. The Chinese, the Hakkai, and the aboriginal inhabitants of the island are not in a condition to be brought immediately under Japanese laws and Japanese systems. They must be left, for a time at any rate, to the free enjoyment of their own customs. The Tokyo Asahi hopes that the Government will take full account of the eight questions propounded by Mr. Kirkwood, after care-ful inspection of the island and the conditions existing there. These questions, according to our contemporary, are :-

- 1. Is it right that officials having direct relations with the people of the country—namely, police, gendarmes, and men serving in the various offices of Formess—should not be taught the native
- anguage?

  2. Is it advisable to bring into immediate operation in the island the Penal Code, the Civil Code, the Code of Civil Procedure, and the other laws and regulations now in force in Japan?
- 3. Should the present financial system of Japan be extended to Formosa?
  - 4. If it wise to show no respect for the religion hard labour.

Digitized by Google

believed in by the people, and to devote the temples to secular uses f

- 5. Can the system of government by communes be preserved and developed?
- 6. Is the system of local autonomy applicable or inapplicable?
- What effect must be produced upon the feel-7. What effect must be produced upon the feelings of the natives by observing that the high Japanese officials do not wear uniforms indicating their rack or carry any of the visible badges of

8. Should the system of bail that was followed by the Chinese Authorities in criminal procedure be still used?

It is gratifying to find that a Japanese journal openly attaches so much importance to the results of a foreign expert's observation.

## THAT CRAFTY FOREIGNER.

"Of late many foreigners residing in Kobe, when leasing land in perpetuity or renting houses from Japanese owners, have caused to be inserted in the lease a clause providing that, in the event of any complications' occurring with regard to the tenure, the contracting parties shall submit the question for arbitration by the Consuls of their respective nationalities. That is because of their dislike to subject themselves to Japanese jurisdiction. It is said to be a device for avoiding the jurisdiction of Japanese tribunals even after the Revised Treaties go into operation." Our readers can easily guess that the above para-praph is translated from the Nippon. We admire the patriotic vigilance of that stalwart journal, but can not help regretting that it so frequently drops one glass of its spectacles when scrutinizing affairs in which foreigners and Japanese are concerned. The Nippon seems to forget altogether that in attributing these crafty proceedings to foreigners, it inferentially assumes extreme simplicity on the part of its own countrymen. Has not the time yet come when Japanese owners of houses and lands at the open ports may be credited with some knowledge about questions of jurisdiction? And if they may be so credited, why should their voluntary consent to have recourse to friendly arbitration before plunging into the morass of a law-suit, be cited as a proof that they are victims of foreign wiles? We do not know that such clauses have been inserted lately in any leases, but it occurs to us that a tribunal of arbitration consisting of a Japanese Consul and a foreign Consul would not be at all a one-sided body, and that its intervention might be extremely salutary. Another thing occurs to us also. It is an objection somewhat like that finally urged by the whist-player who, having assigned five theoretical reasons for not leading trumps, concluded by add-ing that he had n't any to lead. Our difficulty is that there are no Japanese Consuls in Japan. Hence to have arbitrators of the kind named in the alleged provision, it would be necessary to specially import a Japanese Consul from Shanghai, Hongkong, San Francisco, or some other place beyond the seas. Possibly the Nippos will say that therein is to be found another evidence of the foreigner's foxi-A Japanese Consul being unavailable, the arbitration would perforce de-volve on the foreign Consul alone. What a wily cove he is to be sure, the ketojin!

Thomas Gay, A.B., for deliberately attempting to set fire to the American ship Luzon at Shanghai, has been sentenced by the U.S. Cousal General to two years' imprisonment with

#### THE UNITED STATES AND TREATY REVISION.

A rumour has been circulated in Yokohama to the effect that the United States Government has advanced some objection to the operation of the Revised Treaties. We have made inquiries and are in a position to state that the story is wholly groundless. Opportunity may be here taken to refer to a report alleged to have been addressed to the Navy Department in Washington by Commodore McNair. A Washington despatch represents the Commodore as having reported that the two seamen, Epps and Mont-gomery, were "murdered in Japan because of the antipathy the Japanese entertain towards all foreign sailors and especially those of the United States." It is incredible that a document couched in any such terms can have been officially compiled by a responsible naval officer, nor has the attitude of the U.S. Naval Authorities on this station in the matter of the Epps murder suggested that they entertain ideas resembling in any way those attri-buted to Commodore McNair. The reference to the Montgomery incident is especially inexplicable, for it occurred, if we remember rightly, in 1896, and did not become the subject of any official communications whatever. On the whole it appears to us that the so-called "Washington despatch" is a sensational tale with scarcely the proverbial grain of truth. It bears internal evidence of falseness, for on the one hand, it alleges that Commodore McNair's report was immediately forwarded by the Naval Department to the State Department, and on the other, it asserts that the State Department was "entirely ignorant that the two Americans had been killed" until a member of Congress called to ask a question about the matter, when a tele-gram addressed to the U.S. Representative in Tokyo elicited information. The deaths of Montgomery and Epps formed the subjects of judicial investigation according to due processes of law, and although there is room for criticism as to the justice of the finding in the latter case, it is not to be supposed that the United States Government would think of demanding the special punishment of men who have already been dealt with by Japanese legal tribunals.

#### PROPOSED NEW SETTLEMENTS IN CHINA.

There was some uncertainty on the part of the British public at the end of January as to the places in China which Great Britain desired to have opened should the loan negotiations mature. We now know, however, that not Siang-yin but Yo-chow was in question. The former was near the mouth of the Siang river where it flows into the Tungting lake; the latter, as explained by us in a previous issue, is at the head of that lake on the Yangtsze. Nan-ning is on the West River, a little eastward of the French territory of Tonquin. Concerning the opening of a place in Hunan, the London and China Express says :-

If we obtain a footing in Hanna we have en-tered one of the richest of Chinese Provinces, rich in mineral wealth, rich in navigable rivers, and rich in cultivated land of exhaustless fertility. fact, the area of the coalfields in Hutan a setimated attwonty-one thousand square miles, or twice the area of the coalfields in the United Original from

Kingdom. It has an area of about \$3,000 square miles, and a population of not less than 20,000,000. Its four main sivers, together with their numberless branches, give ready access in all the principal cities and towns. The Siang is a particularly fine stream, and at Chan-sha and a long way beyond it is quite halfa-mile in breadth, while the scenery in the Siang Valley is a dream of beauty. At Hengshan yon see the famous Nanyeli, one of the five sacred mountains of China, with its seventy-two peaks, ten caves, thirty-eight springs, and twenty-five streams. That there is a want of a Treaty port in Honan is clear from the fact that not long ago an attempt was made at Chang-sha by certain native capitalists to start a Steamship Company and run a line of small steamers between Siangtany Chang-sha, and Hankaw. Many of the chief people and scholars are in favour of the scheme, but the Governor of the Province has hitherto withheld his consent on the ground that such a step might possibly lead to the opening of Hunan to foreign trade. Chang-sha, the capital, is a fine city, with four miles of river frontage. It looks quite as large as Siang-tan, and the city is beautifully situated. For a long time the missionaries at Hankow have been desirous to establish a Mission in Hunan, and while they have been successful in making converts at Hengchou, the hostility of the better class of the inhabitants to missionary enterprise has prevented any great amount of work being done. The Tung-ling lake, which is within Hunan, is the largest lake in China. It is, however, very much smaller than it was fifty years ago, and is apparently gradually being silted up. In winter time a large portion of the lake dries and the whole becomes very shallow.

## THE COMING BY AND BY.

When the company of those who are labouring for a Christian moral basis in Japan shall have aufficiently increased, the license system will go; and instead of brothels alturing to hell, there will be house of covering (rich Ladius as because be houses of correcting (sic) leading to heaven.

That is from the Shepherd's Voice. We quote it for the sake of the prediction it contains. When "a Christian moral basis" is established in Japan, there will be no more brothels, but only "houses of correction leading to heaven." Houses of correction are places where people are confined and subjected to punitive discipline in expiation of criminal acts and to educate a less sinful frame of mind. On the whole we do not know that the multiplication of houses of correction is a very delightful prospect. But there can be no doubt about such an outlook as the disappearance of brothels. That, indeed, would be very fine. It hasn't happened anywhere as yet, however. The "moral basis" still waits to be established even in the most Christian countries of the Occident. Japan is to be a splendid exception. She ought to be much obliged to the Shepherd's Voice for its implied

to the Shepherd's Voice for its implied compliment.

We cannot believe that intemperance and immorality can prevait as extensively in the midst of Christian surroundings as where these conditions do not exist. Some other moral system might in non-Christian countries take the place of Christianity; but as long as we believe that the gospel is superior to any other or to none, so long must we believe that these evils will not prevait as extensively as elsewhere. This is an argument on general principles, independent of the lacts; but if the facts should set it aside, Christianity would also be set aside. The Mail's ascertion, then, is vertually (sic) equivalent to setting aside Christianity.

KUSSIA IN THE FAR EAST.

Some days ago, American newspapers brought intelligence that a St. Petersburg correspondent of the Daily Telegraph had interviewed the Russian Admiral, "now the chief of the squadron "-whatever that may mean—, and also "a celebrated Russian diplomatist." The Admiral had talked very "large." He had declared that Russia was about to despatch nearly her whole navy to the Far East so as to be as strong as England there; that Russia, France and Germany were leagued to prevent the opening of any port coming into their possession, and to oppose any European Power pursuing a free-trade policy of the kind, since such a Power would become the real mistress of China. The "celebrated diplomat" said that Russia was determined to prevent the raising of a Chinese loan in England and the opening of Talien; that in the spring England's attention would be diverted from China by a revolt of the most serious character in Índia, and that Russia would then be able without difficulty to invade India vad Afghanistan and the Pamirs. Tall talk, indeed, but not ill-suited to the Daily.Tell-a-cram. Wether any word of it ever proceeded from the mouth of a Russian Admiral or a Russian diplomat is a question that no level-headed person can have much difficulty in answering. Curiously enough, too, on the very heels of the American mail carrying copies of these remarkable interviews, comes a London telegram saying that Her Majesty's Under-Secretary of State for Foreign Affairs has read in the House of Commons a note from the Russian Foreign Minister declaring that any port occupied by Russia in China shall be open to the ships and commerce of the world. It is not often that a contradiction so conclusive follows in the immediate wake of canards so circumstantial and sensational.

#### RECEN' CRISIS IN THE FAR EAST.

We have generally the pleasure of a climax and an anti-climax in this part of the world—the climax when international complications occur in the Far East; the anti-climax when the telegraphic account of them forwarded to Europe comes back to us spiced and flavoured by the cooking it has received on the other side of the water. Sometimes our first discovery that we have been living in the midst of New York antiquated and falsified predictions of its imminence. That is with the facts should set it aside. Christianity would also be set aside. The Mail's assertion, then, is tennity. The Mail's assertion was that "in point of arithmetic the social evil is no worse in Japan than in a Christian. Therefore the social evil is no more in Japan than in a Christian. Therefore the social evil is no more in Japan than in a Christian. Therefore the social evil is no worse in son thin in a Christian. Reuter detected an imaginary Japanese fleet steaming out of Nagasaki; the Kobe correspondent of *The Times* observed other warlike phantoms, and Shanghai, of course, contributed its quota of sensational invention, so that quite a considerable quantity of alarming news about Japan's bellicose attitude and resolute preparations reached Europe. On the whole Shanghai, embroidered by the St. Fames's Gasette. has the paim for the most highly decorated legend. On the 21st of January, that great Oriental emporium of "bunders" furnished to London this item of intelligence:—"A powerful Japanese fleet will sail to-day from Yokosuka for Chinese waters," and on the basis of the fiction the St. James's Gasette raised the following structure :-

London, Jan. 21.

"Japan is prepared for war," the St. Fames's receive says. "That, in a nutshell, is the news

"japan is prepared to waitshell, is the news from Yokohama to day.

"It really is the beginning of the Chinese crisis. It was obvious that the Japanese Government had stopped telegraphic communication, which it never does except when mobilizing the army or navy. That is precisely what it has been doing.

"It is almost certain that the destination of the

"It is almost certain that the destination of the fleet is Wei-hei-wei, and there is no doubt themovement means that the stadus quo in China, as far as Manchuria and Korea are concerned, shall not be altered by Russia or any combination of Russia's allies in defiance of Great Britain and Japan. So long as the defenders' policy is equality of opportunity in China they are in a position to enforce their claims."

their claims.

After giving a list of ships in the Japanese Navy and noting its great fighting strength the Gasette

Continues:

"Even with Great Britain a mere sympathetic

continues:

"Even with Great Britain a mere sympathetic on looker, it is probable that Japan could finish off all the Russian and German warships east of Suezin short order. Great Britain, even including the Powerful, has not a vessel in the North Pacific capable of standing in battle line against three battle-ships which Japan possesses."

The foregoing comments were drawn out by a Yokelaana despatch amouncing that nine Japanese waters, that decrees have been issued appointing Lieut Gent. Viscount Kawakami Chief-of Staff, and creating a Supreme Military Advisory Council, consisting of Marquis Yamagata, Marquis Oyana, Marquis Sango and Prince Komatsu, who were prominent during the war between China and Japan. and Japan-

The telegraphists, correspondents, and paragraphists who worked up this pretty sensation must feel rather small at present.

## THE BURMAH YUNNAN RAILWAY.

Although China's consent to the extension of the Burmah Railway into Yunnan has not yet been obtained, the matter seems to have been brought on the tapis in recent pour-parlers in Peking. That there is still plenty of time, however, to discuss the matter without impeding the progress of the Railway, will be gathered

#### KOREAN AFFAIRS.

Assassinations are the habitual concommitants of all political struggles in Korea. Whenever the tide of popular sentiment begins to set against a particular faction of politicians, the murderer's weapon appears upon the scene. The pro-Russian party in the peninsula have hitherto escaped such mishaps. But there never was the smallest likelihood that their immunity would be permanent. are not at all surprised, therefore, to hear that an attempt has been made to "dispose of " Kim Heung-yuk, the Russian interpreter attached to the Imperial Court. Happily his would-be assassins failed, but their enterprise, if it may be interpreted in the sense bitherto attaching to such acts, signifies that the Russo-philes are losing favour. Of course efforts to overthrow them by lawless violence are more likely to become aids to Russian aggrandisement than means of overthrowing the dominant influence of the great northern Power. But it would be more convenient for Russian interests if incidents of this nature were deferred for a season.

There appears to be no doubt that, owing to the advice of the Russian Financial Adviser of the Korean Government and the President of the Russo-Chinese Bank, the Treasury in Soul has refused to receive stamped Japanese silver yen in payment of taxes. The reasons for such advice are not immediately clear. Theoretically a stamped yen is open to the objection that it has none of the qualities of a coin except shape and super-scription. It is, in effect, so many grains of silver and nothing more. But that objection disappears from the moment that the Koreans adopt it as a current coin. The chopped dollars that have done duty for so many years in China and the Straits are simply lumps of silver which, carried elsewhere, represent only a fixed weight of the white metal. The stamped yen might play just as useful a part in Korea if the Government recognised it as a legitimate token of exchange. The people want it. They have no good coin of their own and they find it very convenient to employ the ven, its fineness and weight being perfectly trustworthy and custom having familiarized them with its use. Assuredly, it is at least as serviceable as the Mexican dollars which will have to be substituted for it. Why, then, have M.M. Alexieff and Gabriel made recommendations unfavourable to its circulation in Korea? There may be some explanation, but we do not detect it. The stamped yen, being no longer exchangeable in Japan except at its bullion value, possesses no fixed ratio to gold. But the Mexican dollar labours under the same disquali-fication, and so do all silver coins except the silver subsidiary tokens circulating in a gold-standard country. Judgment must be suspended until fuller information is obtainable, but in the meanwhile the Japanese will naturally regard the advice of the Russian advisers with some umbrage, since the free circulation of stamped yen in Korea would have facilitated Japan's passage to the gold standard.

#### THE TAI WÖN-KUN.

The old Prince whose death took place at the Unhyon Palace on the 22nd February in Soul will be remembered chiefly for the deeds of violence and the intrigues that disfigure his record. Chlol-chang, the 25th Sovereign of the dynasty now ruling in Korea, having died without issue, the Tai Won-kun's third son ascended the throne, and during the young King's minority the Tai Wön-kun acted as regent. He was undoubtedly a man of great ability, but his unscrupulous obedience to the most masterful principles of administration rendered him notorious rather than famous. One of his greatest misfortunes was the success which natural obstacles enabled him to score against a French and an American expedition. The former saved him from punishment for his anti-Christian ferocity which had been responsible for the deaths of 200,000 persons, it is said, and the latter encouraged him to cling to the policy of seclusion one result of which will probably be his country's loss of independence. Those incidents loss of independence. also created such a false impression of his strength and competence, that his surrender of the administration to his son, when the latter came of age in 1873, seemed unbecoming in his own eyes and in the eyes of a large number of his countrymen, so that constant intrigues ensued on his part to wield the power behind the throne, and the nation was betrayed into reposing confidence in him which he frequently abused. It can not be denied, indeed, that the corruption, extortions, and tyrannies of the Queen's family, the Min, created opportunities for justifiable interference on the part of the Prince Parent. But that his restoration to power would have inaugurated a brighter era can never have been soberly imagined, and when the Chinese spirited him off into exile so adroitly in 1884, after his sanguinary triumph over his political rivals, the feeling throughout the Far East was one of relief rather than regret. The have to disburse yearly for the main-Japanese attempted to employ his in-tenance of the garrison. Neither does he fluence and experience for the benefit of discuss the question whether Japan can treacherous and useless, and his last great civilized Powers, the privilege of appearance in the political arena was in October of 1806, when he forther the political results in the political area was in Violating her engagements. October of 1896, when he finally disgraced himself by conniving at, or directng, the Queen's barbarous assassination. He died at the ripe age of 80, and his record is not enviable.

#### THE INDEMNITY.

There have been so many false rumours about China's negotiations for raising money abroad that it is unsafe to assume the accuracy of the latest telegram without official confirmation; especially in view of become suddenly conscious that his vocathe fact that the definite conclusion of bulary does not include the really polite arrangements relating to a loan was announced one day, to be followed on the of his vis-à-vis. Take this catalogue of next by an equally authoritative statement words all of which do duty for the simple that negotiations were still in progress. pronoun "you" of Anglo-Saxon direct-We must possess our souls in patience. Meanwhile it is understood that a commission to prepare the "Sincerity Bonds"

the whole number, namely, a million. The face value of the Bonds being a hundred taels, and the total issue a hundred millions, it is evident that unless the preparatory stages of the work are on a large scale, a considerable time may be needed for printing off. That need not interfere with the floating of the loan, however, as temporary certificates can be given to subscribers. We may note here that several inaccurate statements have been journalistically advanced with reference to the amount of the Indemnity still due. The actual sum is 831 million taels apart from the interest that will have in be paid if the installment system be continued. But if China discharges her whole liability on or before May 8th, the interest already paid by her, namely, to million taels, has to be credited as principal, so that the amount to be hauded over, in that case, would be 83\frac{1}{3}\text{ millions less 10\frac{5}{3}\text{ millions, or 72\frac{1}{4}\text{ millions.} In short, she can quit herself completely by paying a lump sum of 721 million taels.

Discussion as to the course that Japan should pursue in the event of China's discharging her debt by one payment, is again beginning to be raised in irresponsible quarters. The Yomiuri Shimbun has found an anonymous diplomat who speaks very freely on the subject. He says, in effect, that the conject. ditions existing when Japan pledged herself to evacuate Wei-hai-wei on receipt of the whole indemnity were very different from the conditions existing to-day. many was not then in possession of Kiaochou nor Russia in occupation of Port Arthur. The balance of power in the Far East has been disturbed, and until the two Europeans Powers retire from those positions, Japan ought not to withdraw her troops from Wei-hai-wei. This "diplo-mat" says nothing, however, of the steps that Japan would have to take if she wanted to remain at Wei-hai-wei; the great sums she would have to devote to fortifying the place, and the monies she would

#### AMENITIES OF SPEECH.

It is indeed true, as the Keisai Zasshi observes, that an immense contrast exists between the etiquette of Japan and that of the Occident in the matter of language. One of the greatest difficulties that a foreign student of Japanese has to overcome is precisely that. Many a time does it happen to a man possessing a good working knowledge of the language, to term applicable to a relative or connexion ness :- Gosen, danna, sensei, taisho, kimi, ani, oyakata, anata, omaye, kisama, sono-ho. As for the verb "do," one has to which the Chinese Government recently consider whether its equivalent shall be decreed its intention of issuing, has been asobasu, nasaru or suru, and in writing entrusted to the Printing Bureau in Tokyo, the honorary suffix sama there are no The death occurred in hospital on Wednesday evening, says the Nagasaki Press of the There are reports that several months will be required to complete the bonds, but it is one of which is supposed to represent a difficult to see why that should be the special degree of politeness. Can all this naval honours.

vive the wear and tear of modern moneygrubbing life, or did it need the calm, patrician atmosphere of old Japan to against the demeanour of the resident fo-flourish and be strong? We should like reign merchant towards the Japanese, the to hear the Keisai's opinion upon that former surely had no power at any time point, but it passes off to discuss another to command the custom of the latter. It not without interest, namely, the degree of proficiency, or ignorance, displayed by foreigners with regard to these linguistic To use coolie-language to a canons. superior is to get into trouble, says our contemporary, whereas to employ honorifics in addressing a coolie does not invite any censure. Hence the members of the ful, and he can scarcely be said to have various foreign Legations in Japan, concluding that for practical purposes there methods are disfigured by genuine abuses, is no occasion to study the differences be- or that a better agent is yet available. tween the two kinds of speech, confine These are not matters of opinion. The themselves to learning polite terms only. It results that they sometimes speak of stitute solid facts, not to be ignored or themselves and their own doings or say-minimized. Still less is it a matter of themselves and their own doings or saythe doings and sayings of exalted speaks of the large sums exacted by fopersonages, and one may hear them say to a jinrikisha-man, anata wa yoru nanji ni oyasumi nasaimasu, as though they were asking a high dignitary of State at what time he honoured his bed by condescending to lie down on it. Only those that have had exceptional experience know how to distinguish between anata and omage in common parlance. The Chinese residents in the Settlements, on the other hand, whose teachers are rashamen, never get beyond coolie speech, and have omaye, bakka, chikusho and such expressions constantly on the tip of their tongue. "The fact is," concludes the Keissi, "that the intricacies of the Japanese language are responsible for this confusion, and that everybody insisting on their preservation is placing an obstacle in the path of national progress, We wonder how the gentlemen of the Legations will relish the Keisas Zasshi's estimate of their linguistic attainments.

#### FOREIGN MERCHANTS.

The Keisai Zasshi thinks that the foreign trade of the country would not suffer by the elimination of the foreign middleman, namely, the resident foreign merchant. The bases of that opinion are partly sentimental, partly practical, and largely, we think, mistaken. Undoubtedly the Keisai is right when it says that the profits of business are very much less than they were in former years. The volume of the trade has increased immensely, but the margin of gain has dwindled in nearly corresponding proportion. We do not see how that argument tells, however, in favour of the Japanese merchant. The greater the difficulties to be overcome, the greater the value attaching to experience, connexions and cheap capital, all of which the foreign middleman possesses in an indubitably larger degree than the Japanese. There the Keizai's premises are right and its deductions wrong, in our opinion. It speaks, also, of the arbitrary methods adopted by foreigners in past years. But surely the most conclusive reply to that contention is furnished by the arithmetic of the trade. Our contemporary does not imagine-its own admissions prove as much—that Japan's foreign trade would ever have attained its pre-sent dimensions without the assistance of the resident foreign merchant. Of what use, then, is it to animadvert on his methods? If he has been arbitrary—a he takes the silk into his godown and excharge which, we observe, is invariably amines it bale by bale before completing preferred without any attempt to demonth the purchase. It is not unnatural that Digitized by Google

strate its truth-why have the Japanese submitted? Whatever objection be urged phase of the question, which, however, is has always been possible for the native not without interest, namely, the degree trader to work without the intervention of foreign middlemen. At least it has always been possible for him to make the attempt. He has made it too; made it to the extent of getting some 32 per cent. of the trade into his hands. But on the whole his efforts have been costly and unsuccesspractically proved that the foreigner's experiences of thirty-five years now conings as though they were referring to opinion that the Keisai is wrong when it reign merchants as bargain money. "With the exception of three or four large firms," are the Keisai's words, "the foreign mer-chants have very little capital. The majority of them receive Japanese goods on trust and export them, rendering accounts after sale; while, in the case of imports, they exact as bargain money sums large enough to be called loans." Nothing Nothing could be more incorrect than that statement, if the unanimous evidence of foreigners themselves be trustworthy. They allege that their great misfortune is to have given up demanding bargain money, and adopted the system of taking Japanese orders on trust. It is such procedure that exposes them so often to be left with ware houses full of goods of which their native clients decline to take delivery because the market has fallen. The Keisai concludes by saying that since Japanese merchants have learned how to organize companies and to put up large sums of capital, the foreign middleman's services may be dispensed with. It is very true that the formation of strong mercantile associa-tions with plenty of money is a step in the direction indicated by our contemporary. But it is only one step. is a long distance to be traversed still. We ourselves believe that, so far from dispensing with the foreign merchant, the Japanese must look to his cooperation as the best possible factor in developing the country's resources in the future at least as fully as has been the case in the past.

#### DIRECT EXPORTS.

In considering the foreign trade of Japan for last year we drew attention to the remarkable development of the part taken by Japanese merchants directly in the business during the past decade. Old residents are aware how strenuous and long continued have been the efforts of the Japanese in this direction, especially with regard to raw silk. The celebrated regard to raw silk. The celebrated struggle over the Kiito Ni-asukari-jo, or silk-conditioning warehouse, which threw Yokohama into such a foment in 1881, was the most prominent indication of Japanese commercial ambition that has yet been witnessed. The fact that the silk trade has attracted special effort of this character is of course due to the peculiar but apparently unavoidable plan pursued by the resident foreign merchant:

such procedure should present objectionable features to the Japanese, though unquestionably their own defective and untrustworthy methods are primarily responsible; nor can we wonder that they have applied themselves with special zeal to get the export of silk into their own hands. The essays, however, have been uniformly disastrous to themselves, and it is interesting to read the following reasons for their ill-success, as set forth by the Japanese Consul in New York, Mr. Uchida, in a report translated by the Japan Times :-

Mr. Uchida directs his attention principally to the exportation of raw silk to the United States. It is a grevious mistake, he says, to suppose that direct exportation of raw silk must always be advantageous to the Japanese. On the contrary, he believes "that, of all articles of commerce between Japan and America, nothing is more dangerous or less profitable for purposes of direct exportation are less profilable for purposes of direct exportation than caw silk. The reason why it is so unprofitable is the severity of competition between Japanese and foreign merchants. The dangers attending the direct export of this commodity are caused by the fact that the Amarican silk manufacturers are generally mustable in their financial position; secondly, by the imperfection of the bankruptcy law in the States and the consequent ease with which france can be practiced; and thirdly and lastly, by the circumbance that, milks the case lastly, by the circumstance that, unlike the case of European raw silk, it is customary for the American manufacturer to pay the importers of Japaness silk six months after the delivery of the goods, and that in not a few cases the Japanese merchants find their customers insolvent before they can claim payment, a contingency which in their p tion it is well nigh impossible for them to fore at the time of the original transaction. Such being the case, it will not be incorrect to state that direct exportation of raw silk from this countries. try largely partakes of the nature of speculation." Mr. Uchida says nothing whatever about the difference between silk which enters a foreign market with the cacket of an accredited foreign firm and an accredited foreign inspector, and silk offered for sale without such recommendations. He thinks, perhaps, that his duty is to speak solely of the difficulties peculiar to the conditions existing in the States. Be that as it may, his report fully bears out what we have always said, namely, that the foreign resident middleman is a uniquely advantageous agent since he pays ready money to Japanese producers and takes upon himself all the risks connected with finding a market for their productions in foreign countries.

#### THE FAR BASTERN QUESTION IN EUROPE.

The telegrams sent from Peking by The Times' correspondent with regard to the Far-Eastern Question are couched in very explicit and confident terms. On January 16th he telegraphed as follows :-

January 16th he telegraphed as follows:

Sir Claude MacDonald, in an interview yesterday, informed the Tanng-ti-Yamên that England was willing to usuist China to liquidate the Japanese indemnity and would provide a loan of £12,000,000 at part to run 50 years. The service is to be 4 per cent, annually, net, including sinking fund.

The conditions are as follows:

(1) The opening of three Treaty ports—namely Ta-lien-wan, Siangin in Hugan province [? Siangtan in Husan, or Siang-yang in Hupei], and Nan-ning, thereby increasing the Customs revenue.

(2) A declaration that no pertion of the Yang-tsze-kiang valley shall be alienated to any other ower.
(3) The right to extend the Burma railway

through Yun-nan,
In the event of default, China places certain revenues under the control of the Imperial Customs.
On this basis negotiations will proceed.

Four days later (January 20th) he sent tive of Her Majesty's Government, but this message :-

At his second interview with the Tsung-li-Ya-At me second interview with the Tsing-li-Yamen yesterday the remonstrance of the Russian Charge d'Affaires was in the nature of intimidation against the opening of Ta-lien-wan. He threatens reprisals and the withdrawal of Russia's friendship and protection. The Chinese, while recognizing the advantages of the British terms as affording the best hope of maintaining the integrity ill the applies. ampire, nie wavering.

These statements were accepted by The Times with entire confidence, and it com-mented on them editorially, assuming that the British Government had actually offered to provide a loan for China, and that the Russian Representative in Peking had gone to the length of using threats to dissuade the Tsungli Yamen from accepting the offer. Farcically empty threats they were, it must be admitted; for the notion of Russia's resorting to "reprisals"
—what kind of "reprisals," we wonder in the event of China's borrowing money from England though she had already borrowed from Russia, sounds like mere bluster, and the talk of "withdrawing Russian protection" which had just proved absolutely inefficacious to safeguard China against an act of unprecedented aggression at Germany's hands, was evidently meaningless. However, since China eventually turned her back upon the proffered loan, and since the incident -were it a fact-would be construed, not unfairly, by some critics as a victory for Russian diplomacy, it is interesting to read what The Times had to say when it received the news of Russian's menacing attitude towards China :-

It is, of course, for the Chinese authorities to It is, of causes, for the Counces authorities to deside whether they will accept the loan we offer them upon our terms or not; but they are fairly untitled in liberty of choice in the matter, and it is our business to see they have it. They seconize, we are told, the advantages of that offer. They see in it the chief hope of maintaining the interrity of the Funding tree which advantages. offer. They see in it the chief hope of maintaining the integrity of the Empire, upon which, after all, their own positions and emoluments depend. It, in spite of their perception of this truth, they of their own free choice make up their minds in reject it, we cannot, of course, dispute their perfect right to cannot, of course, dispute their objectes right to cannot a decision. But no decision to which they may come, whether of an adverse or a favourable nature, will affect the general character of our policy in the Far East. If, for any of the inscrutable reasons which weigh with such bedier, the Tsung-h-Yamèn resolve not a accept—the advance we tender them, we shall acquiesce, it is bardly necessary to say, in their acquiesce, it is burdly necessary to say, in their determination. In that event we shall be conscious, as the CHANGELLOR of the EXCHEMURA observed in his Bristol speech, we have done our best to show our friendliness to China in the time of her need. We shall take our stand upon our treaty rights and take great care to preserve to our commerce all the advantages which it can justly claim.

That seems to us to be precisely the view which all thoughtful persons must take. England might offer a loan to the Chinese, but certainly could not force them to accept it. At the same time one comment will suggest itself, namely, that the offer ought never to have been officially made until full assurance of its acceptance by China had been privately obtained. Sir Claude MacDonald will seem to have erred in that respect. Critics will say that he should never have given the Chinese an opportunity of publicly rejecting an and declaring it to be history worthy of English offer in deference to Russian all the credit of a personal narrative. One bluster. That would be a perfectly just may reasonably doubt whether the editor stricture had England made any offer. But on looking closely into the matter we find that the term "offer" is altogether misleading. England did not make an offer to China. It was China that made a proposal to England. Thus Sir Claude MacDonald's statement to the Tsungli Yamên was not put forward at the initia-

was Great Britain's reply to a question asked by China. That fact is very clearly shown in a speech delivered by the Chancellor of the Exchequer at Bristol on the 19th of January, and we are surprised that The Times, in its leading article of January 21st, failed to take note of the important distinction explicitly indicated in Sir Michael Hicks-Beach's words :-

Speaking with regard to China, he advised them not in believe all they saw in the newspapers as to the conduct of Her Majesty's Government at Paking. As certain definite statements had been made with regard to financial assistance to be granted by this country to China, he thought it well to tell them plainly that the Chinese Go-vernment had approached them with a request for such assistance, in order to enable them to provide for the indemnity still due to Japan. They had ex-pressed to them their willingness to consider such application, and the negotiations on the subject were now pending with the Government of China. But what had been stated with regard to the tenor of those negotiations was both inaccurate and incomplete. They were not ashamed of those negocomplete. They were not usually they should be disapproved by this country or by any foreign Power. If those negotiations did not succeed we should have done our best to show our friendliness. in the Chinese Empire in the time of her need, We should take our stand upon our existing Treaty rights, and should take great care to pre-serve to the commerce of this country all the advantage it at present enjoyed.

It will be at once apparent that the above explanation radically alters the situation. It is one thing for England voluntarily to offer money to China. It is another and a totally different thing for China to inquire whether England will lend her money, and for England, in reply, to state the conditions that would attach to an affirmative answer. In short, the initiative was taken by China, and that the Tsungli Yamen ultimately drew back when it became conscious of the opposition provoked by its project does not affect British prestige in the smallest degree.

#### AN INGENUOUS CRITIC.

We observe that "James Allan's " work of fiction, "Under the Dragon Flag," has actually been accepted as sober history by one of our English local contemporaries, and that the chapter about Port Arthur is quoted verbatim in support of the sensational exaggerations which were originally circulated by Mr. James Creelman and subsequently endorsed by more than one of the Settlement journals invariably so careful not to spare the rod in their references to Japan. "Under the Dragon Flag" is compiled with a certain measure of skill n simulation and dissimulation. That an Englishman, reading it without any previous knowledge of the events related in its pages, and without any Oriental experience, should be deceived by the author's adroit directness and spurious naïvété would not be very surprising. But we certainly did not imagine for an instant that an old resident of the Far-East could possibly be lured into such a trap. It is inexpressibly comical to find a newspaper solemnly and ponderously ously hoazed.

#### MR. FRASER AND THE JAPAN ASIATIC SOCIETY.

The reading of Mr. J. F. Fraser's paper at the meeting of the Asiatic Society on the 2nd instant, occupied just forty minutes, but it should be noted that Mr. Fraser's very clear elocution enables him to attain a rapidity of delivery which, in the case of an ordinary reader, would be scarcely compatible with distinctness. Very keen interest was displayed by the audience, and hearty applause was accorded to Mr. Fraser at the close. It will be seen from the verbatim report published in these columns yesterday, that the traveller treated his subject more seriously than the amusing and witty accounts of the Three Cyclists' Journeys, as hitherto compiled for journalistic purposes, might have led us to anticipate. The fact is that Mr. Fraser, though perfectly unassuming and not at all disposed to make much of the remarkable feat achieved by himself and his companions, Messrs. Lowe and Lunn, not only is a keen and intelligent observer, but also has the faculty of marshalling his facts in an instructive and succinct manner, and if, when writing for the general public, he draws freely on the rich vein of humour which he undoubtedly possesses, he knows also how to be grave and earnest when the occasion demands. He does not attempt, in his latest essay, to paint any picture of the hardships suffered by the three intrepid cyclists of whom he was the leader. If we catch glimpses, now and then, of what they had wrapped in astonishment that they wrapped in astonishment that they came through alive, it is certainly not because the narrator thrusts their personalities into the foreground. Perhaps to Englishmen in this part of the world the most interesting portion of the paper will be that relating to the Burma-Yun-nan Railway. Mr. Fraser judges that to carry the line beyond the Burmese frontier would be a task of enormous difficulty and expense, nor will anyone reading his description of the route be disposed to question his conclusion. The fact is that Ynnnan is simply ribbed with mountains ranging at right angles to the general direction of the projected road. It may be compared to a ploughed field with furrows varying from three thousand to eight thousand feet in height, and how to carry a railway across them must be a stupendous problem. Even supposing the line built, it would not tap the productive regions of Yunnan. These lie to the East of the province, and are far more easily accessible from the French possessions in the south, or even from the valley of the West River. Mr. Fraser thinks—and the same opinion has often been expressed in these columns-that the real object of a Burma-Yunnan railway would be to establish overland communications with quoting a chapter from a pure romance Szechnen, which is one of the wealthiest and declaring it to be history worthy of and most promising provinces in China. all the credit of a personal narrative. One But he also thinks—and the soundness of and most promising provinces in China. his view can scarcely be doubted—that the truly practical way to bring Szechuen into quick and easy commercial contact with the outer world is by utilizing the establish it—in the immediate future. #### ZOLA'S CONDEMNATION.

T such a distance from the scene it is almost presumptuous to form an opinion about the condemnation of M. ZOLA to a year's imprisonment and a heavy fine. There are folk, doubtless, who will rejoice over the sentence because of their antipathy to a writer of novels which even the least delicate can not read without astonishment. "Serve him right," they will say, not altogether unreasonably. But these prejudices apart, it must be confessed that the incident produces a very painful impression. M. ZOLA may have been intemperate in his recent journalistic campaign; he may have grossly transgressed the limits of discretion and even of propriety. But we can not forget that he was working for a cause which he believes to be that of justice; working to save a fellow-countryman from punishment which he holds to have been undeserved. Prior to the publication of the indictment upon which Captain DREYFUS was arraigned, the public had no choice but to assume that the charge preferred against him had been proved up to the hilt. He was tried in Nov. 1894 by secret tribunal, and the indictment was not published until January 7th 1898, when the eyes of the whole civilized world had been directed to his case. The accusation against him was that he had betrayed his country by selling confidential documents to the agent of a foreign Power. Naturally it was universally concluded that the accusation had been established by incontrovertible and abundant testimony. People had to be content with hypothesis, however. Outside the circle of those directly concerned, no one knew what had taken place within the closed doors of the secret military tribunal where the man underwent his trial. But when, more than three years afterwards, an opportunity of examining the indictment presented itself, its readers found that DREYFUS had been condemned on the strength of a solitary document supposed to have been written by him. Unless he wrote it, there was nothing to prove his guilt, for though various items of suggestive evidence were catalogued against him-as that his habits at the Ministry of War exposed him to suspicion; that he was often found at the office when there was no official work to do; that his replies when under examination conveyed the impression that he often concealed the truth and so forth-, such conjectural testimony would have been absolutely valueless had be not written the document, and the question whether he did or did not write it having been submitted to five experts, three decided in the affirmative and two in the negative. Moreover, the three admitted that they noticed dissimilarities between the writing of DREY- served only to deepen the feeling of un- tion, not punishment. ## JAPANESE PRISONS

PRISON administration remained for many centuries almost completely by the German Government can be set beyond the range of civilized progress in aside. The world cannot persuade itself Europe. When the great philanthrophist to imagine that Germany would be guilty Howard undertook the task of inspecting of perjury for the sake of shielding a British prisons a hundred and twenty-five French traitor, who, had he perpetrated years ago, he found a very shaking state the act charged against him, should be of affairs. "The jails of the Kingdom were universally execrated, not merely for the a disgrace to humanity. They were, for sake of morality, but also in the cause of the most part, poisonous pestiferous dens, general security. It came to this, then, densely over-crowded, dark, foully dirty, that DREYFUS was condemned for traitrous [not only ill-ventilated but deprived altodealings with a Power whose Government gether of fresh air. The wretched imdenied that any such dealings had taken mates were thrown into subterranean place, and on the evidence of a document dungeons, into wet and noisome caverns which two experts out of five declared he and hideous holes to rot and fester, a prey had not written. There remained, of to fell disease bred and propagated in the course, a possibility that in the history of prison-house, and deprived of the comthe document-a history disclosed only to monest necessaries of life. For food they the secret tribunal-some facts might be were dependent upon the caprice of their embodied fatal to the hypothesis of Cap- jailers or the charity of the benevolent; tain DREYFUS' innocence. But the French water was denied them except in the scanwould not be the people we know them tiest proportions; they were half naked to be if they rested content in the face of or in rags; their only bedding was putrid the possibility that a grievous injustice straw reeking with exhalations and achad been committed. They wanted-at cumulated filth. Every one in durance, least many of them wanted-to have the whether tried or untried, was heavily veil of secrecy lifted, and it was of that ironed; women did not escape the inship. The ESTERHAZY court-martial were primarily for purposes of detenexplained them by supposing them to be portant stages of its inquiry were con- writing frield, or debtors. It might

have been supposed that the exposure of three million yen to the disbusements of given to the subject in connexion with such an awful state of affairs would have been quickly followed by radical reforms. There was indeed some effort made, some improvement effected, but in 1819 we find Mr. Buxton writing of the prisoners in St. Alban's:-- "All were in ill-health; almost all were in rags; almost all were filthy in the extreme. The state of the prison, the desperation of the prisoners. the uproar of oaths, complaints and obscenity, the indescribable stench, presented together a concentration of the utmost misery and the utmost guilt." until 1835 did the principle receive official recognition that prisoners should be kept separate and apart, and not even then was the principle carried into practice, for the first Act on the subject-the Act of 1839-did not insist upon the construction of prisons fitted for separate confinement, but merely provided that individuals might be so confined. Pentonville Jail, the building of which commenced in 1840, was the first prison constructed with separate cells, and although that example found many imitators among the local administrations, in many cases also it produced no effect. Briefly speaking, it to was not until 1877 that uniformity of treatment was secured by vesting the control of all jails in a body of commissioners appointed by and responsible to the Home Secretary. We mention these things, not for the purpose of extenuating the defects of Japan's prison system, but in order to draw attention to the lesson they inculcate, namely, that prison administration can not possibly be uniform and satisfactory so long as it is left to a number of local authorities, among whom the greatest diversity of opinion may exist as to the proper management of jails. Moreover, the enormous expense of providing prisons suited for the application of the best principles, can not fail to be prohibitive in localities where people hesitate even to make disbursements sufficient for the comfort of the law-abiding portion of the in-The Japanese Government habitants. seems to have recognised these facts, partially at any rate, in the early years of the Meiji era, for it took into its own deal said about the dirt and the Central Criminal Court afford exceptional hands the complete management of prison odour resulting from such close contact, facilities, it is considered a matter for affairs throughout the empire. the Treasury, correspondingly reducing the abolition of Consular Jurisdiction may the resources available for lowering the have a wholesome effect upon Japanese Land Tax, it was opposed without reference to its intrinsic merits. Again and again the Government submitted the Bill, present no sensational features. Even but without success, and though the war and its resulting measures temporarily checked this useful legislation, another and doubtless a successful effort would have been made last session had not the Lower House been dissolved. It is understood that the Bill will be introduced once more when the Diet meets for its ordinary session in the fall of the year, and no difficulty is anticipated in passing it. So far as the five central prisons are concerned, reports by competent foreign inspectors show that their plan, equipment and system of management are in accordance with the principles now recognised in the West; but undoubtedly the local prisons leave much to be desired. Attention has been strenuously drawn to the affair by a Kobe English journal in connexion with the incarceration of foreign culprits or suspects after the abolition of Consular Jurisdiction, after they pass under the control of the and by way of illustrating the sufferings Central Government, do not offer facilities which they may be exposed, suitable for the purpose in view. our contemporary publishes an interwith a Japanese who spent some time in prison awaiting trial. he is said to have been 7 days in jail before The interview occupies a column and-a- being examined, and that he was altogehalf, but its salient facts are very simple. ther 47 days in confinement before acquit-The man was placed in a room 9 feet tal, bail being refused. public opinion. But there is no occasion to manufacture sensations out of facts which supposing that the administration of provincial jails were likely to remain for some years as it is now, the probability of any foreigner's being subjected to gross hardships in a local prison is of the slenderest description. But, as a matter of fact, the subject long ago received official attention, and a decision was arrived at that special arrangements must be made in the case of foreigners awaiting trial or undergoing punishment, not because the system pursued at the central prisons, where alone foreigners are likely to be confined during the early years of the new regime, presents abuses, but because Japanese diet, Japanese garb and Japanese modes of life would be so many additional penalties to persons unaccustomed to them, and because the provincial jails, pending the reforms that will be introduced there

We may note, further, with reference to the prisoner interviewed in Kobe, that appears to be attached to these points, paper sliding doors on one side, and up- and undoubtedly incarceration for a week a corridor: the floor had mats-in fact, an The Japanese Code is explicit on this point. #### THE FOREIGN TRADE OF JAPAN FOR 1897.

HERE can not be any question that, so foreign trade of Japan shows remarkable and highly satisfactory elasticity. Its aggregate value in 1897 was 382,435,848 yen against 289,517,234 yen in 1896, an increase of no less than 92,918,614 yen, or more than 32 per cent. Ten years previously, that is to say in 1888, the corresponding figure was 131,160,744, so that, speaking approximately, the trade may be said to have trebled in a decade. That is certainly very remarkable, especially when we recall the fact that, in 1884, the total value of imports and exports having remained nearly stationary for four years-between the limits of 62 and 67 million yen-a majority of the foreign residents came to the conclusion, and declared it very emphatically, that Japan bad no commercial future, that her resources had already reached their highest point of development, and that the opening of the country was an object unworthy of serious attention.

But there are certain points in the record that call for special notice. Not the least the domain not very long ago monopolized, or nearly monopolized, by foreigners. Thus, whereas in 1888 the direct exports by Japanese traders represented only 7,081,-324 yen out of a total of 65,704,510 they rose, in 1897, to 44,244,286 yen in a total of 163,135,077. In fact, they increased from It to 27 per cent. in a decade. Turning to imports, we find a still more remarkable result, for while the direct imports by Japanese in 1888 were only 8,483,739 yen in a total of 65,455,234 or less than 13 per cent., they reached 79,560,939 jen in 1897 out of a total of 219,300,771 or more than 36 per cent. To some readers the combined results may seem more interesting :-

Total Trade Direct share of Japanese merchants	1888.	1897. Yen. 382,435,848
	15,565,053	123,805,225

12 per cent, 32 per cent. During many years the efforts of the Japanese to get into their own hands the business done by the foreign middleman have been energetic, in profession at all events. But the great advantages of the foreigner as an agent have enabled him to keep his place, and he will keep it for a long time to come. He obtains for the Japanese prices they could not get working on their own account, and he secures them against risks of all kinds. Still there is no gainsaying the fact that his domain has been invaded by the Japanese to an extent which did not seem likely a few years ago.

The most remarkable figure in the last table is that relating to cotton yarns. Old residents remember, of course, that in 1883, when the cotton-spinning industry remarkable of them is the manner in which took root in Japan, the general opi-Japanese merchants are steadily invading nion among foreigners was that signal failure awaited it, and that, in a very short time, it would be abandoned, leaving a disastrous record. Anybody would have been laughed to scorn who ventured drawn within ten years by means of an to predict, at that time, that before to years should elapse, nearly a million spindles would be at work, and 131 million yen worth of yarns would be exported.

It is unnecessary to examine the tables in further detail. The exports show a general increase, spread over nearly every item, silk, however, being responsible for an addition of no less than 27 million yen. As to the imports, it appears that the net increase of 48 million yen is accounted for by raw materials and machinery (213 millions) and sugar, rice, and peas and beans (241 millions). The facts that 211 million yen worth of rice had to be purchased from foreign countries as against 51 millions for 1896, and that the exports of the cereal fell from nearly 8 millions in 1896 to less than 61 millions in 1897, are, of course, ascribable to the bad harvest of last year. The steady growth of the import of sugar is noteworthy. From less than 7 million yen in 1888 it increased to over 20 millions in

#### BIMETALLIC PROSPECTS

Two events have greatly darkened the outlook for silver. One is Senator Wolcott's account of the work of the Bimetallic Commission appointed last year by President McKinley; the other is

already known. It had proved that any cooperation on Great Britain's part was out of the question, for the present at all events, and that so long as England did not move, other European nations would certainly remain quiescent. These facts, however, were not new. What does seem new, and what must be regarded as a serious blow to the bimetallic cause, in that President McKinley's attitude has assumed a very uncertain character as depicted by Senator Wolcott. When Congress met on December 6th, the President expressed an apparently un-equivocal desire for the consummation of an international bimetallic agreement, but very shortly afterwards the Secretary of the Treasury presented to Congress a bill one of the objects of which, according to the Secretary's avowal, was "to commit the country more thoroughly to the gold standard, to remove, as far as possible, all doubts and fears on that point, and thus to strengthen the credit of the United States both at home and abroad." plain that unless Secretary Gage was speaking without the authority of the President and in opposition to his views, the Republican Cabinet can no longer be regarded as genuinely bimetallic but must be counted distinctly monometallic. That is the point brought out by Senator Wolcott. As to the Indianapolis Monetary Convention, its name seems to detract from its importance until we know that it was made up of many city boards of trade and commerce, and that delegates from 26 out of 45 States were present. The conclusions formulated by the Convention were that the monetary system of America should be based on the maintenance of the present gold standard; that all classes of United-States notes should be withthe silver dollars now in circulation should be redeemed in gold on presentation, and that all the gold and silver bullion now held by the Treasury should be gradually sold. That is gold monemetallism pure and simple, and to what point gold would appreciate under the influence of such a vast addition to the demand for it, only a rash man could venture to predict. tainly the prospects of the white metal never looked gloomier than they do at present. The danger in America's case is that impatience of standing at the parting of the ways will drive her to commit her feet finally to the gold path. She can scarcely afford to wait much longer. Uncertainty is doing her almost as much mischief as the most inveterate opponents of either system attribute to its adoption.

#### ARTS EXHIBITION IN TORYO.

The usual Spring Exhibition of objects of modern and ancient art will be opened in the Uyeno Galleries on April 1st and will remain open until May 20th. It does not seem pro-bable that any arrangement will be effected for bable that any arrangement will be enected for a large display of pre-Meiji articles, unless private collectors can be induced to take more interest in the Exhibition than they have hitherto displayed. The dealers in art objects, who generally find it worth their while to contribute to the filling of the cases, are not contribute to the filling of the cases, are not now in a position to accomplished much in that line, for the supply of so-called = curios" appears to be completely exhausted. Rarely indeed does a specimen of old porcelain or Another fact brought out by last year's the action taken by the Indianapolis Mone-tary Convention. Of course the general restriction were sultered for the Wolcott Commission were the sulfamont probabilities. a picture by an old master find its way into

#### RUSSIA AND AN ICE-FREE PORT.

Mr. Balfour, speaking at Manchester just two years ago, said that he " regarded without fear or dislike the idea of a Russian outlet of commerce in Northern China from which we ourselves should not be excluded," and has now repeated the dictum. Sir Charles Dilke has just made the following comment on that statement:

the following comment on that statement:

I retain the opinion that II was unwise on Mr.
Balfour's part to make what seems to me to have
been an unnecessary suggestion two years ago, and
one couched in language extending for beyond what
seems to me to have been his intention. Russia could
only reach such a port by cutting off Korea, in which
she has promised not to interfere, and by entering the
neighbourhood of the Chinese capital, where her influence could hardly fail to become dominant. As for
the suggestion of Mr. Balfour in his later speech—
that the trade privileges secured by Russia would
be open to ourselves—the outcome of atipulations
with regard to trade previously made by Russia (as,
for example, the Batoum case in the Treaty of Berlin)
is not encouraging. is not encouraging.

It is rather remarkable that Mr. Asquith, speaking at Birkenhead on the 19th of January, said, after noting that "we could dismiss as the idlest of alarms the notion that a European Government which possessed no coaling stations and no ports of call, and which was dependent for the propulsion of its ships in these parts upon the hospitality and good offices of other countries, had the power, even if it had the will, to dominate the Far Eastern scas:"-

Nor have we the least reason to gradge the Empire of Russia access to an open port in the Pacific, which is to her a geographic and an economic necessity.

gaining popularity in England with re-Evidently this idea of laisser-faire is pointed out more than once that Russia with an ice-free port in northern China and a railway connecting it with the centre of her empire, would differ from the Russia of to-day in many respects other than commercial. Whether continued efforts Whether continued efforts should be made to prevent her from attaining that goal has become, however, a very interesting and intricate problem.

#### PUBLIC LIBRARIES IN THE UNITED STATES.

There are those who, looking at the marvelons material growth of the United States during the past half century, are inclined to credit her people with the chief aim of hoarding the "almighty dollar," But if one takes time to study her educational, religious, and benevolent institutions, one loses sight of the fact that these States contain a third more miles of railroads than all the rest of the world combined, and wonders how so many and so great institutions could have sprung up where, in the memory of men now living, the buffulo roamed and savage Indiana pitched their tents.

I have just been reading about the public and school libraries in the United States and am sure there are many who would like to know some things that I have found out. In 1896, there were 4,026 public libraries that contained 1,000 volumes or more, and over 4,000 that contained less than 1,000 vols. but 300 or more.

The number of volumes in the 4.046 libraries was 33,000,000, besides 5,000,000, unbound pamphlets. The secords kept in 1,852 libraries show that 35,000 000 books were issued in one year to borrowers for home use. Of course these are but a mere fraction of the books read by the people as a whole,

There are two libraries that contain over 500,000 volumes each: the Congressional library at Washington with 740,000, and the Public library of Boston with 630,000 volumes, There are four that have over 300 000 volumes each and 28 that have over 100,000 each. libraries are valued at \$33,000,000.

Digitized by

These immense libraries are not mere orna ments of the result of a craze; they grew out of a desire of the people to read and investigate. Of these libraries not more than half a dozen had any existence at the begining of the present century. They are a part of that vast educagrowth of the country.

#### GREAT BRITAIN AND FRANCE IN AFRICA.

The clearest statement we have yet read of the questions pending between England and France in Africa is the following summary of the situation from the columns of the Literary Digest :- " Having taken possession of Egypt, Great Britain claims the exclusive right to possess herself of any territory ever possessed or claimed in Africa by Egypt or Egypt's nominal suzerain, the Sultan. In addition to these rights—regarded indisputable in England the British press is firmly convinced that England is morally obliged in annex the Nile Valley in its entire length, because, it another Power were to possess part of it, such Power might divert the waters of the Nile for its own purposes On the other hand the French are anxious to establish a French Central Africa extending across the entire continent from West to East, They assert that whatever rights England, or for that matter Egypt, may have had in the Upper Nile region, became invalid when the Mahdista defeated the Egyptian and British armice. Three French expeditions started for the disputed territory, and it is thought that they have either reached, or will soon reach, Farhoda, a fortified town on the White Nile, where they will unite. It is very possible that the French and British forces will come to blows when they meet, and that Abysainia will give her assistance

#### GERMANY AND SIBERIAN TRADE

Here is an item of news, sent to The Times by its St. Petersburg correspondent, which seems to have considerable interest for residents of the Far East :-

From a "thoroughly trustworthy source" it is stated that a company has just been formed at Hamburg moder the name of the German Siberian Steamship and Trading Company (Demisch-Siberische Handels-nod-Schiffahrts-Gesettschaft). Its founders are German capitalists and manufacturers in conjunction with experienced specialists who have long done business in Siberia and are thoroughly acquainted with the population and local conditions. Their arm is to apen up German local conditions. Their aim is to open up German trade with Siberia over the northern sea route and the rivers Ohi, and Yenişei, the waterway explored for so many years by Captain Wiggins and now being rendered practically useful by Mr. Leybourne Popham and his agents, Mossrs. Moir and Company. Commercial relations are also to be established in the Annur through Vladivostok, and offices are to be opened in Muscow, Timmen, and Yeniseisk, where samples will be on view of all classes of goods offered in return for Siberian raw classes of goods offered in return for Siberian raw materials. M. Nosiloff, the well-known Siberian traveller, writes to the Novoe Vremya to say that this new German enterprise in Siberia is far more earnest and is to be taken much more seriously than the half-hearted and unsatisfactory attempts of the English, who will certainly be onsted by the Germans from the Siberian market.

A curious incident occurred in a cricket match Singapore on the 7th February. Officers of the Garrison were playing the Cricket Club, and scored 158 in the first innings and 73 for 4 wickets (closure) in the second. The Club scored 79 (first innings) and had therefore 153 to score in order to win. Thanks to a fine innings of 67 by R. T. Reid the runs were secured and the officers defeated. With the score at 152 the players retired, thinking the game was over, the simmps were drawn and the screens lowered, when the scorer came over to explain that the match was still only a tie. It was still a few minutes to six o'clock, so the stumps were was scored.

#### KOREAN NOTES.

Nearly two years ago it was announced that France had obtained from Korea a concession to build a railway from Soul to-Wifu. The latter, as most of our readers probably know, is an insignificant town on the Yalu, which forms the northern boundary of Korea. Such a line could not possibly be a financial success : its construction, if undertaken, must be purely for political or strategical purposes. The news of the concession was, therefore, received with languid interest. But a French expert has arrived in Soul in connexion with the question, and attention has thus been directed to the matter, though the coming of one expert can not be considered very significant,

"Mr. Carl Wolter," says the Independent, intends to send a mining expert to the north for the purpose of locating a gold mine, the concession of which the Government has promised him. The engineer has arrived in the city.'

We take the following from our Soul contemporary :-

temporary:—

The magistrates of Richon, and Yeju and districts are doing their best to persecute the native Christians in these localities. It seems that some rascals who call themselves Christians went about these places and committed many outrages. The magistrates concluded that the best way to punish them in to punish everybody who professes Christianity. A wholesale arrest was ordered and several bundred innoceat Christians are reported to be among the prisoners. prisoners.

The news that H.M.S. Victorious had been ordered from Gibraltar to the China station, reached Soul in this form: - "Gibraltar Victoriana are to reinforce China Squadron.

The Korean Foreign Office was said to be în trouble ten days ago about Russia's request for a coaling station on Deer Island. The site chosen by Russia happened to be the very place selected by the Chief Commissioner of Customs in 1895 for an extension of the Fusan settlement. It was farther rumoured that Russia had asked to have 230,000 square metres of land set aside in both Mokpo and Chinnampo, the newly opened ports, to serve as sites for her Consulates. Considering that the whole area allotted at each port for a foreign settlement is only 250 acres, Russia's wents are distinctly liberal.

After the recent promulgation of an imperial decree announcing that no further concessions for railways or mines in Korea should be given to foreigners, the Japanese Representative in Soul is said to have forwarded the following note to the Korean Foreign Office :-

to the Korean Foreign Office:—

"I'he right to construct a railway between Soul and Fusan was granted to Japan by the treaty signed in August 1894. I have been informed that the Korean Government recently adopted a resolution that no concessions for railway, construction should be granted to foreigners, and imperial sanction was obtained for it. But such a resolution cannot override the provisions of the treaty. The matter has been left in abeyance for a long time without any decision being arrived at. I must therefore request that the contract for the building of this railway shall be signed without further delay in accordance with the terms of the treaty."

#### CHINESE NOTES.

It is alleged that the Emperor of China has granted permission to the native owners of a quicksilver mine in Kueichou province to procure from a French syndicate money for ex-ploiting the mine. The step is regarded as an excellent precedent which may mean the comparatively speedy development of China's mineral resources.

The Mukden correspondent of the N.-C. Daily News says that "one of the facts ineffaceably cut into his memory during his first winter in Newchwang was the finding on one morning about New Year's time thirty five masses of ice, each mass having been a living 605 libraries have an aggregate endowment again pitched and the batsmen and the Officers man at 10 p.m. the preceding night. The fund of 17,000 000 and buildings owned by 567 again took to the field, till the requisite single thermometer was a good bit below zero (Fahr.) ் இந்து ஆக்டிந்துக் just left the opium dens where

they had been enjoying themselves. The keen air sent them to alsep and they never wakened." Another correspondent of the same journal supplements the above experience by the following :--

On the plain to the south of Yingtze or Ying-chou, known to the world as the treaty-port of Newchwang, millet is grown where the soil is cultichou, known to the worth as the treaty-part Newchwang, millet is grown where the soil is cultivable and reeds grow equally high and strong where it in not. The whole falls to the reaper's hook in the antum and is gradually carried away hefore the closing of the port, and the gleaners, those why pay for the privilege, are left in possession of the field. After these have done with the ground, any waif a med with a rake and a piece of cordage can meander over the plain and help to make a clean sweep of the remainder. During one winter in the early seventies a terrific blizzard intercepted a number of these unfortunates on their return in the evening with their bundles of millet stalks, used as fuel for the Northern kang or stove-bed, and those furtherest to leeward, i.e. from the town, soon became weary of the struggle. They dropped their bundles on the ground, singly, in two and threes, or more, for the sake of the shelter from the blast and driving snow they afforded, in order to gain strength for the sake of the shelter from the blast and driving snow they afforded, in order to gain strength for renewed efforts. But exhaustion from want of food and their hard fight, conjoined with the rapid fall in temperature, usual in those regions during a N.E. blizzard, no doubt produced on them in their hastily improvised shelter such a delicious sense of comfort and languor, that the inevitable drowsiness would creep upon them unawarer, and an attempt to renew the struggle probably never occurred m sny one of them. Then nature kindly and tenderly officialing as her own high priestess conducted the ceremonies and assisted them one and all to a veritable enthanasia: and who will venture to say it was not a happier fate, for such would offer? would offer?

No one could venture out on these plains during that night with the temperature down to during that night with the temperature down to 14 degrees below zero (Fahr.), and the wind blowing with hutticaneforce, accompanied by a blinding drift rendering all objects invisible at the distance of a few feet. But towards the evening of the following day the sky brightened, the sun shone out and it became almost calm. The authorities then organised a search-party which, however, had very littlefulfficulty in finding the bodies, as the bundles of shakais formed mounds above the general level of the snow-clad plain.

I am not aure as to the exact number of those who perished on the occasion to which I refer, but

who perished on the occasion to which I refer, but Who persued on the occasion to which I relet, but I believe there were many over a score, and they formed but a small fraction of the total loss of luman file throughout Shengking during that short but terrible storm. Great destruction of life also occurred amongst domestic animals.

There appears to be considerable discontent in Shanghai. House rent has been raised by m much as 100 per cent. in some cases, and the butchess have taken advantage of the fact to make to the price of ment an addition three or four times as large as the circumstances

Germany has a "Governor" of Kiao chou Bay-Captain Truppe-and a "Residency" at Ching-tao which is 40 miles from the city of Kiao-chou.

Li Hung-chang has been relieved from the duty of ushering officials to the Imperial audience at dawn of day. The ex-Viceroy is ald enough to be gratified by the change.

We take the following paragraphs from the Peking and Zientsin Zimes:—

We are informed from Peking that during the We are info med from Peking that during the last week in January the Emperor sent a written ander to the book store of the American Bible Society, not far from the East Gate of the palace, for 160 books, 30 of them distinctly Christian. The list had evidently been made out from the catalogue of publications of the Society for the Diffusion of Christian and General Knowledge among the Chinese, of which Rev. Timothy Richard is Secretary. The order was written in a kind of Chinese character used only by the Emperor, so that there is no doubt that the order was from the Emperor limself.

The following week the same messenger came The following week the same messenger came again, this time wanting copies of all Christian books. As the American Board Mission is near the Bible Society's store, the store-keeper took the messenger to the Mission books now the messenger to the Mission books now the Bible Society's store, the store-keeper took the messenger to the Mission books now the political class, but even this is far letter than the classes I have mentioned unique to the Company a loan to the amount of 15 million yer at less than five far letter than the classes I have mentioned unique to the Company a loan to the amount of 15 million yer at less than five far letter than the classes I have mentioned unique to the Company a loan to the amount of 15 million yer at less than five far letter than the classes I have mentioned unique to the Company a loan to the amount of 15 million yer at less than five far letter than the classes I have mentioned unique to the Company a loan to the amount of 15 million yer at less than five far letter than the classes I have mentioned unique to the Company a loan to the amount of 15 million yer at less than five far letter than the classes I have mentioned unique to the Company a loan to the amount of 15 million yer at less than five far letter than the classes I have mentioned unique to the Company a loan to the amount of 15 million yer at less than five far letter than the classes I have mentioned unique to the Company a loan to the amount of 15 million yer at less than five far letter than the classes I have mentioned unique to the Company and the political class.

were given him, amounting in all to over 400 copies of 72 different books.

The Empress Dowager's Palace car left Tong shan Works, where it was built, by a special train on Tuesday last at 7.20 a.m., Messrs. Kinder and Churchward, the designers and builders, accome Churchward, the designers and builders, accompanying. The trial run was quite satisfactory, and Fungelai was reached at 520 p.m., where the car is to be viewed by H. E. He Vuch-ler, Governor-General of Peking and Duector-General of Railroads, together with other high officials from the Palace. It is a very substantially built, 12-wheeled bogiescar, with up-to-date improvements, after the "Pullman" styles and externally presents an imposing—nearly splendid—appearance.

Two new "Mandarin" cars, one fore and aft the Palace car, also made their maiden trip, and show many cunning contrivances (for comfort and utilizing otherwise waste space) combined with good solid work.

It is rumoured the Empress Dowager purposes travelling to Lu-tal shortly; to do this she must travel via Tientsin.

#### JAPANESE FACTS AND COMMENTS.

The foreign trade of Japan last month amounted to 29.787,485 yen in value, of which 10.916,330 yen were exports and 18.871,155 yen imports, the excess of the latter being 2,954,825 ves. Compared with the figures for January last year a decease of 932,382 yes in exports and an increase of 5,549,933 yen in imports are noticeable, the total of the two items increasing however, by 4,617,551 yen. The export of gold coin and bullion during the month under review aggregated 4,516,400 yen, and that of silver 3,087,355 yen, a total of 7,603,756 yen. The import, on the other hand, aggregated 1,034,019 yen for the former and 673,832 yen for the latter, the excess in export being 6,795,904 yen.

The Japan Railway Company, says the Shogro proposes to run a special sleeping car, to sc-commodate nine passengers. The car, which is well fitted and provided with bedding, will not be run with less than two passengers, unless double fare is paid. It will be placed between two 2nd class carriages whence attendants may be called by the passengers with a bell.

The province of Tokachi, in Hokkaido, remarks the Tokyo Asahi, was colouised by more than six thousand emigrants from the main island during 1896 and 1897. The amount of peas and beans produced last year was no less than 37,000 koku, and the colony promises to grow year by year. The district, however, suffers from want of means of transport and the lack of convenient seaports. Investigations have recently been undertaken by the Hokkaido Office with a view to the improvement of Tokachi bay. A petition on this subject is to be submitted to the Diet.

The original scheme for the installation of a telephone system in Tokyo provided for 10,000 subscribers during the seven years com-mencing in the 29th year of Meiji. The work has made remarkable progress, lines having been already completed for more than 3,500 members, and it is expected that 4,000 will be reached in March. The total number of applicants up to the present is reported by the Tokyo Asahi to be 8,000, and the average number of applications in each month does not fall below 105. The limit in fact is likely to be reached within a year. Though in December last the fees were doubled, the applications for membership increase daily.

A view of Japanese life and society:-"Nothing can be more pleasant or attractive than the life of a soldier," I said to myself, and so I went on board a certain war-vessel, in which I served about a year. But I was utterly disap-pointed; for there too I found the spirit of jealousy prevailing in its worst form. My next few years were spent among poets and painters,

above. I found journalists much more frankhearted and less detestable than I thought. Most of the newspaper writers may be good natured personages, but some of them are ut-terly wanting in common sense." This delightful sketch is published in the Tokyo Shimbun.

The petition of the Japanese railway companies for the raising of fares and freights has evoked much public criticism, and even at the deliberations of the railway council various hostile arguments were advanced. The Communications Department, however, has now resolved to grant permission for an increase of rates to a number of companies in whose case the adoption of such a step is deemed absolutely indispensable. The Hantan and Höshin companies have received permission, which will also be given to other companies on the completion of investigations. So asserts the Shogyo.

In an address presented to the Throne in the 20th year of Metri (1887) Count Itagaki, says the Perosu, described Marquis Ito as a man who, having secured almost predominant influence in the Court, pursued a policy of oppression and inveiglement. This year, however, an influential statesman in whom the strongest confidence is reposed by the Emperor, and who, having adopted the constitutional principles advanced by Mr. Kido, has rendered specially meritorious services to the State." Such is the change brought about by the lapse of time between the 20th and 3 tat year of Meiji.

The Shogyo calls attention to the questions submitted by the Agricultural and Com-mercial Department for discussion by the Central Tea Dealers' Council. They are as follow:—(1) Whether some amendment is necessary in the regulations for the tea dealers' corporations, and if so of what nature?
(2) In Kobe special offices for the inspection of teas are established under the auspices of several cities and prefectures. Is there no necessity to inaugurate a similar institution in Yokohama? (3) In every tea acason tea is frequently liable to depreciation on account of being accumulated at export ports. Is there no remedy for this, and if so what?

According in the Tokyo Asaki, the Government and bank paper in circulation at the end of last mouth amounted to 11,134,833 yes, which sum shows a decrease of 90,182 yen in Government and 261,209 yes in bank notes, as compared with the previous month. Below is the comparative table :-

		of January (878-	of December 1897.

A petition for postponement of the period of organization has been thrice presented by the Formosan Railway Company, and still no definite schemes have been announced to the public. On making enquiries of promoters of the

Total ...... 12,134,435... 12,475,826

Increase or Decrease at

together with the principal in fifteen yearly installments after ten years' retention. approval of this scheme is to be made only after conference with the Government, and the inauguration of the Company may be expected abortly. To raise a domestic loan, in the present state of affairs, is impossible. The Mainichi, however, speaks doubtfully of the matter, and does not see how the foreigner in question can have been induced to invest his capital in a Formosan enterprise without aufficient security.

The remittances sent abroad by the Bank of Japan, on account of the various Government Departments, through the agency of the Specie Bank and other domestic institutions, amounted, according to the Tokyo Shimbun, to 3,671,832 yen during the 30th year, showing a decrease of 3,433.812 yen as compared with the previous year. Following are the details:—To England 1,495,771 yea; in America, 332,132 yea; to France, 245,112 yen; to Germany, 178,477 yen; to China, Korea, and other countries 1,420,330

More than ten electors in Hibitan village, Aichi prefecture, have been arrested on a charge of receiving bribes, and over thirty other villagers are reported by the *Tokyo Shimbun* to have confessed to a similar offence.

On the 24th ult. Rangoon rice to the amount of 45,290 bags was brought to Yoko-hama by the Mitsui Bussan Kwaisha's steamer Hikoyama Maru. Of this amount 32,297 bags were transported to Kobe and 1,300 bags to the capital. The latter are chiefly to be sent to the north eastern districts. The same company is reported by the Tokyo Asahi to have chartered an English steamer for shipment of 2,297 bags of Rangoon rice to be delivered III Yokohama before the middle of next month.

During the war in the 27th and 28th years of Meiji, the mechanics in the Koishikawa Arsens received a great deal of extra pay. A few of them, putting their savings together, propose to establish a workshop in Oji village, where 400 trubo of land are to be purchased. A similar step, says the Tokyo Asahi, is being taken by another class of attiants employed in the Bullet Factory of the Arsenal. This is the first instance, the Asahi adds, of mechanics ever attempting to organise a workshop without outside assistance.

The following information is published in the Shogro:-The Russo-Korean Bank was opened on the 14th instant, the Bank's regulations having been submitted by the Russian Minister to the Korean Court for approval. These regulations are as yet kept strictly secret, but they are supposed to involve a great extension of Russia's power in the matter of finance. They are supposed to contain the following provisions:—(1) A special privilege of mining coin for Korea to be vested in the Bank. (2) Matters relating in payment of loans for the Korean Government to be exclusively conducted by the Bank. (3) The collection of taxes, disbursement of administrative expenditures, and all other financial affairs to be adjusted with special sanction of the Russian and Korean Governments. (4) Branches and agencies to be established in important parts of the country. If the above provisions are complied with, the power of the Russo-Korean Bank is really considerable. President Gabriel's opposition to Japanese silver seems, the Shogyo adds, m have been based on the special privilege of coinage referred to.

Sappore in Hokkaido is a seat of many important industrial enterprises. It abounds in manufactories for hemp, beer, silk, flour, etc., and prospects exist for the growth of industry and agriculture in the neighbourhood. Coal. has been a source of great inconvenience. In view of these facts Engineer Tanabe of the Hokkaido Office has formulated a scheme for the utilization of hydrographical electricity.

pose. Experts have given their hearty approval, and copies of prospectuses bearing on the subject were lately issued above the signatures of many influential personages. The sum of 4,500,000 ven is suggested as a preliminary capital, and it is proposed to raise this chiefly in Sapporo, a very large portion of the shares to be taken by the projectors. The scheme, the Chuo remarks, is one of the most hopeful undertakings in the North.

Governor Yasuba's programme in introducing the municipal system of administration into Hokkaido is, according to the Foresu, to put the system in force in Hakodate, Otaru, and Sapporo, this year, the divisional system being adopted for Nemuro, Yesashi, and Muroran. The cho and son system of administration is gradually to be put in operation as the development of the country renders it desirable.

Commenting upon the commercial condition of Shanghai, the Tokyo Asahi says :- The trade in woven goods was during this year extremely prosperous, business having been conducted on a large scale. The exchange market has undergone serious fluctuations, which led to the appreciation of the commodities under notice; still purchases are being eagerly made by brokers in view of the upward tendency of the market. The trade return received from the Japanese Cousul in Shanghai is 💵 follows :-Shirtings now in stock and those for arrival are selling in considerable quantities, the amount dealt in having already reached 200,000 tan at prices varying from 1.75 to 2.12 taels. Quotations on the whole have risen by five per cent. The market continues to be brisk with a still upward tendency. Bleached cotton fabrica remain firm, transactions having amounted to 28,000 tan, at prices ranging from 2.25 to 2.75 tacls. Demand for T-cloths of English manufacture has steadily increased, sales being reported to have amounted to 26,000 tan. Indian manufactures were quoted at 1.05 taels, business being done to the amount of 5,000 fan. Unsai stuff from England was sold to the amount of 15,000 tan at from 2.08 taels to 3 07 taels. German manufactures did not exceed 2.07 taels in value, transactions being conducted on a small scale, while American productions were in brisk demand, sales aggregating 13,000 tan. Chintzes found a very scanty while coloured calico was somewhat popular. Turkey-reds firm in price, but no remarkable business in this direction. Orders for muslin have reached 32.000 tan, quotations varying from 061 to 0.72 taels per yard. Woollen goods were sold in small quantities at increased prices, while camlets have a downward tendency. Long elis were firm, and figured camlets were rising.

The Jiji states that at the Senju railway station coals from various districts have accumulated to the amount of twenty million (!) tons. This is owing partly to increased facili-ties afforded by the Japan Railway Company and partly to the pertinacious holding of dealers in view of the steady appreciation of the mineral. Subsequently, however, there have been large arrivals of Kinshin coal, and it is supposed that sales can only be effected by lowering the prices to a considerable extent. Iwaki coal is now quoted at 32 yen. Onoda at 35 yen, Okada and Yamaguchi at 43 yen, and Iriyama at 32 yen.

The steamship Nagatsuru Maru, owned by Mr. Iwata, of Fukuyama, Hokkaido, is reported by the Chuo to have been wrecked on the 15th ultimo off the Yaoi promontory in the Vessashi on the 14th with a crew of 23 and over 90 passengers for Shittsu. On the evening of the 15th it was so dark that not an object was visible, and the captain gave orders for casting anchor, as the bay was studded with hidden rocks. The ship, however, struck on a rock and

in flames. Some of the passengers threw themselves overboard; others caught hold of broken spars. Fortunately relief boats were soon at work, and succeeded in picking up all who were still floating.

The revenue and expenditure up to the end of January, compared with the figures for the corresponding period of last year, were, according to the Tokyo Asahi, as follow :-

(The decrease indicated by an asterisk). In two months the 30th fiscal year expires. The extraordinary expenditure of 82 million yen, compared with the estimated amount of 138,230,000 yen shows the extent to which various undertakings of the Government have been curtailed.

Since the enforcement of regulations in America prohibiting the import of spurious teas, the Japanese tea trade has assumed a new aspect. A scheme is now under contemplation to establish a Tea Inspection Offica in Yukohama, so that the United States Government may eventually find it unnecessary to inspect the leaf exported from Japan- A bill for this purpose was lately presented in the Central Ten Dealers' Council and unanimously approved. The scheme, says the Nichi Nichi, will be put in operation early in the Spring.

A strike of engineers and other employes on the O-u line of Nippon Railway Company recently led to suspension of traffic for several hours, and serious inconvenience was experienced by travellers. A similar occur-rence is reported by the Tokyo Shimbun to have been imminent in the Mito Station, but was suppressed though the efforts of the station

officers was despatched to endeavour to per-auade the strikers to desist, but in vain. It was finally arranged that two or three delegates from each station should repair to the Company's head office and make representations of their demands. This course was accordingly adopted, and a final decision is to be given in a few days. The strikers are said to be determined, if they fail to obtain satisfactory answers from the Company, to abandon work

When aheep-breeding was first undertaken in Hokkaido, remarks the Yomiuri, the results were most unsatisfactory, most of the sheep dying from plague. Hokkaido was, from these circumstances, regarded as a place unfit for sheep breeding, and all establishments connected with the enterprise were closed. But the failure was subsequently found to have arisen from defects in feeding. The sheep are now fed in winter with radishes and other vegetables with a little salt, corn being entirely withheld. This mode of feeding suits the animals, and keeps them in perfect health. They are now rapidly in-creasing in number. In the 29th year of Meiji the number reached 208, showing an increase of over 150 as compared with the 22nd year.

The necessity of railways in Formosa is beyoud question, asserts the Shogyo. If the proposed Formosan Railway Company were able to accomplish its work with 150,000 shares instead of 200,000, for which amount the Government's sanction was obtained, and if there were pros pects of success, the Company's request for s reduction of capital might be granted by the Government. But it is plain that a reduction even of 50,000 shares would render it impossible to commence the work, while if the scheme is undertaken by the Government, the necessity. of funds is equally to be encountered. The Government, adds the Shogyo, is now engaged in investigating the new plans for the railway.

Sericulturists in Suwa have sustained and ous losses during the past few years, and many suspended or abandoned their businesses last year. Silkworms' food last year rose 24 per cent, while the other expenses incurred increased by 100 per cent. Further difficulties are expected this year, and with the exception of five or six influential companies the growers are almost on the brink of extinction. Several bundleds of old sericulturists have quitted the district for other provinces. There are numerons notices of houses "to let" or "to sell," and as Suwa's opilence depended en-tirely upon silk, the decline of the industry has led to the universal depression of trade, and the labouring classes are reduced to the last extremity. Foreign rice has been bought and sold to them at its original value, and a few leading personages of the district recently devised a scheme to provide work for the poor.

#### NEWS OF THE WEEK.

From a telegram that appears in American papers we gather that the Emperor William has pardoned Herr Trojan, editor of the Kladderadaisch, who was sentenced a few days ago to two months' imprisonment in a fortress for "lese majest?" in cartooning his Majesty.

Commenting on the teams engaged in the Interport football match played at Kobe on Saturday, the Hiogo News says :- The Yoko hama players were the younger and better trained lot; the Kobe men were cooler and, in the forward division, also the faster; in point of weight there was not much to choose, and both elevens were unusually light so far as our exparience goes of interport contests

On the 22nd Feb., at about 3 n m , says our Nagasaki contemporary, the Osaka Shosen Kaisha's coasting steamer Futami Maru, while entering the barbour, collided with the British sailing ship Semantha, lying at auction, the latter vessel receiving chimage by her hall

on the 1st instant. One of the principal the extent of 250 year. The matter has been amicably settled between the parties concerned, and the Futami Maru left for Misumi shortly after 3 p.m. on the same day,

> The exact figures of the poll that decided the striking Engineers of England to abandon the campaign against the masters, has not been divulged, but the proportion is said to be about 25,000 in favour of resuming work and 11,000 ngainst,

> Among Admiral Seymour's personal staff is Captain Jellicoe, who is the new flag-captain of This officer at one time bethe Centurion. longed to the ill-fated Victoria, which down with all hands in 1893. Captain Jellicoe had just time to jump off the vessel as she was sinking and saw the last of the ship as she was going down.

> Whilst riding in the neighbourhood of Tourane in Annam on the 10th January, M. Vivian, manager of the mines at Bongmien, was attacked by a large tiger and hadly mauled. The horse made a gallant fight against the tiger, which ultimately disappeared in the undergrowth. M. Vivian is recovering.

> The China Mail records the fatal poisoning of three men, two women and two children, the crew of a sampan plying in Hongkong barbons. It is the custom for these people to obtain the aweepings of the holds and decks of vessels. On February 17th, this particular sampan crew found a quantity of beans on an Australian steamer, which they forthwith used for making soup. Within two and a half hours of partaking of this mess they were all dead,

> The chief constructor at Devenport Dockyard has been furnished with some of the drawings of the battleship Implacable, to be built during the next financial year. Her dimensions will be:-Length, 400ft.; breadth, 75ft.; mean load draught, 27ft; displacement, 15.000 tons. She will have engines capable of developing 20,000 h.p., calculated to give her a speed of to knote.

> The death occurred at Ripon on the 19th anuary of Mrs. Oxley, wife of Rear-Admiral Oxley, after a long and painful illness. It will be remembered that Admiral Oxley, at the time second in command of the British Suadron in China, left the station hurriedly last summer in consequence of the ill-health of his wife. Owing to the fact that Mis. Oxley did not recover her health Admiral Oxley did not return to the atation, heing succeeded by Rear-Admiral C. P Fuzgerald, who came out in H.M.S. Edgar. Mrs. Oxtey was the elder daughter of the late Dr. Robert Kenteley, D.L., of Highfield, Ripon, She was in the forty-first year of her age.

> The committee of the British and Foreign Bible Society deserve much credit for the considetate way in which they have treated the recent bequest of £80,000 to its funds. Religious and philanthropic associations usually accept whatever is offered to them without regard to anything but their legal rights, but the Bible Society Committee, having ascertained that their benefactor, the Rev. E. N. Pochin, had left a widow and two children unprovided for, have determined to relinguish on their account one half of the sum bequeathed in the will. A generous self-abaegation by which it is hoped the Society will not suffer.

> The latest mail, says the Kobe Chronicle, brings the sad news of the death of Mis. Patnam, at the home of her parents in Eureka. California, on the 28th ult. Mrs. Patuam was married in Kobe in the apring of last year, and not long afterwards commenced the illness (an affection of the lungs, we believe) which could not be arrested. It was hoped that the trip home might do her good, though the gravest doubts were entertained of her living out the voyage. The deep sympathy which has all along been felt for Mr. Putnam in Kobe will be deepened by the news of his wife's death,

quoted. There was a provisional believ at Christ Church College, which was familiarly known to Oxonians of the time as "the meat safe." Mr. Dodgson, undertaking to explain this epithet etymologically, split up the word belify into two parts—the French word bella and the German word frei (free). Then he went to work as follows :--

Bellembenutifulmcomelymmeet (meat); Freimfreemeeuremsale, Result : " Meat-sale,"

One of his best repartees was elicited by an Oxford student driving a tandem. This candidate for academical distinction had the social honour of driving the late Khedive of Egypt through Oxford, and the misfortune to have "spilled" his Highness. On the following day the youth, driving the same tandem, overtook Mr. Dodgson, who looked somewhat tired. "May I give you a lift?" he asked jauntly. To whom the humorist: "Wilt thou slay me, as thou didst the Egyptian yesterday?

"When this ves fall out honest men come by their own "-a casual visitant to Hongkong experienced the truth contained in this saying of old time, while paying a ricksha coolie his fare the other day. During the transaction, this gentleman-according to the China Mail -dropped a five dollar note from his pocket. He did not observe his loss, and the coolie did not attempt to inform him of it, but pocketed the money. Another coolie had, however, noticed the occurrence, and demanded half of the money as his lawful right for keeping quiet on the subject. The coolies fought over the money and were arrested by a district watchman, and taken to the Central Police Station, where they were each fined \$1 for quarrelling. The \$5 note is now in the possession of the

There is a popular impression that the British cotton spinner is losing ground in Asia. But statistics show that the exports of yern from South Lancashire to the Far East during the past three years have been slightly increasing:-

YARN, lbs. China finel. 1206. 1807. affor. H'knng) ....... 11,246,000 9 076,400 11,824,800 

Total....... 37,311,600 34,513,000 35,715 300 In piece-goods the exports from South Lancashire were less satisfactory in the past year. The total to all countries showed a decrease of 400 million yards as compared with 1896, and 200 million as compared with 1895. this decrease, China and Japan showed nearly 100 million yards, while the Straits showed an incresse of 17 million yards.

Another death, directly attributable to the effects of villainous stuff sold to sailors under the name of whisky was, says the N.-C. Daily News, reported at the United States Consulate General on the 22nd ult., having occurred on Sunday night. It appears that a man named Charles Embold, who was twice charged in the course of last week at the United States Consulate General with drunkenness, went on board the British ship Marathen, lying outside the lower limits of the barbour, late on Sunday evening. Eruhold, it is alleged, was very drank, and a number of the ship's crew were in the same condition. A row commenced among the men, which apparently terminated in a free fight in which one or two were rather badly handled. The mate interfered and ordered Ernhold, who did not belong to the ship, to go ashore, and after some trouble got him into a sampan. The sampan had not got many yards from the ship's side, when Eruhold was seen by the mate to jump overboard. The sampan-man pulohed about in the neighbourhood of the occurrence for some fifteen or twenty minutes, but nothing could be seen of the unfortunate man. Eruhold was an American citizen, and after the necessary for-Stories of Lewis Carroll still abound. Among through the Birth Consulate General had been through the best consulate General had been sumposes, his "etymology of the best to sumposes of the best to sumposes of the best to sumposes of the best to sumpose of the best to sumpose of the best to sumpose of the best to sumpose of the best to sumpose of the best to sumpose of the best to sumpose of the best to sumpose of the best to sumpose of the best to sumpose of the best to sumpose of the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the winesses through the summoning of the summoning of the winesses through the summoning of

the U.S. authorities, but was adjourned on the 23rd ult, pending the finding of the body.

New York rejoices in a Rainy Day Club. It is composed of ladies, and exists for the purpose of advocating what is called a rainy day skirt in wet weather. The test of membership is that members pledge themselves to wear short skirts, about four inches from the ground, on rainy days.

The Tobacco League of Wellshorough, U.S. A. lately bought up the chire cigarette stock (about 20,000) of the local shops and made a public honfire of it. That was brave. And, meanwhile, the delighted tobacconists were, no doubt, telegraphing for fresh supplies and drawing up seductive advertisements of their "entirely

The Soudanese revolt in East Africa marks the contrast between civilized and uncivilised warfare. The rebels and mutineers retreated to a fort with their women and three white prisoners. Next day the women insisted that the white prisoners should be murdered; and they were. The British force outside was meanwhile "unwilling to shell the place on account of the number of women inside."

A lance-corporal of the Derbyshire Regiment named A. Young writes to the London papers that when the Gordons' pipers'struck up, all the troops went forward together, and an officer of the Devon Regiment was actually the first. The Gordons have got the credit, he says, because the British public " will praise the kilt regiment: it is no use a British regiment trying to get on where there is a regiment with an indecent dress." An Irish soldier, it is suggested, might may that the Army an a whole will never get credit for bravery till they are all kilt entirely.

The proposed Russian railway from Merv to the Aighan frontier was to have been begun early has month. Its length will be about 200 miles, and the cost is set down at nine million roubles. The chief importance of the line lies in the fact that it will connect the Afghan frontier not only with the Caspian Sea, but also with the whole of the network of railways which it has been Russia's ambition to build for the purpose of consecting all parts of the Empire.

Three latters written by the Queen were recently offered for sale in London. The first a brief note upon mourning paper, with a -inblack horder, dated July 14, 1862, realised only 17s. Another, in German, written m the Duchess of Nemours as far back as 1843, and dated Buckingham Palace, June 12, fetched &2 12s. The third of the series, bearing the royal crown and cipher in bright gold upon faint blue-tinted quarter-sized paper, and dated April 1, 1860, addressed to the late King of Holland, was in French, written in the clearest and boldest script. It sold for £7 5s.

A biography of the Prince of Wales has just been published. Here is an anecdote :one occasion, shortly after the end of the war. His Royal Highness, accompanied by General Teesdale, visited the battlefield of Sedan. He was naturally anxious that his identity should not become known. . . . When the time came to pay the hotel bill General Tecadale found with great dismay that he had no ready cash; the Prince was in an equally penniless condition, while any telegram sent would have disclosed the identity of the Royal visitor. At length, after much discussion, the equery made his way to the local Mont de Pieté, and placed both his own and the Prince's repeater in pawn." How or when the repeaters were redeemed deponent sayeth not.

An English M.P. has all kinds of claims made upon him. Mr. Robert Ascroft, M.P., in a recent address said: "In my hand I hold a roll of paper which is nearly 2011, long, and it is covered with the names of the applicants for subscrip-

he was elected he was asked to give no less than £27,000. Now, I simply mention this because I have made it a rule to send a cheque when I can afford to send it. But I am not an African millionnaire, and I have no shares in Klondike and do not intend to have. Therefore, you must please to understand that when I do not answer these letters, and do not enclose a cheque, it is for the simple reason that I cannot afford to do so."

Mr. John Ellerthorpe, special correspondent of the Daily Telegraph, arrived at Shangliai on Feb. 24th by the P. & O. steamer Bengal. The Shanghai Mercury understands he will remain there a short time before he leaves for Peking to represent his paper at the latter place. The exigencies of modern journalism do not allow its devotees much rest. Mr. Ellerthorpe had only been in London a few weeks after a trip through South Africa when he was ordered out here.

It is reported from Vladivostock that the Russians recently established a mint there for the coinage of ailver roubles, but the new roubles will be different from those current in Russia itself, as one side of the coin will have Chinese and Manchu characters, containing the name of Czar Nicholas II., like the Chinese dollars which bear the name of the Emperor Kuang Hau. The Chinese are very much in doubt as to what this means; but it is understood that this special coinage is to be used for payments on account of the Russian railway in Manchuria.

"Lewis Carroll," whose death we referred to the other day, was a mathematical professor at When "Alice in Wonderland" first published the Queen was so much delighted that she commanded the author to send his next work to Windsor. He did so and her Majesty was almost as bewildered as Alice on finding that it consisted of "An Elementary Treatise on Determinants"! "Lewis Carroll's" works in the order of publication, were: "Phantasmagoris and other poems"; "Songe from 'Alice's Adventures in Wonderland, Through the Looking-Glass and What Alice Found There;" " Facts, Figures, and Fancies relating to the Elections to the Hebdomadal Council;" "Euclid, Book V., Proved Algebrai-cally;" "The Hunting of the Spark, an Agony in Eight Fite;" "Doublete: a Word Puzzle, "Rhyme? and Reason?" "A Tangled Tale, "Alice's Adventures Underground;" "The Game of Logic," "Curiosa Mathematica, Part I .- A New Theory of Parallels," and "Symbolic

One more scheme is proposed for the benefit of bad sailors who have to cross the #1 miles between Dover and Calais. There have been A tunnel company was formed many already. in 1785, but although much has been done in the way of preliminaries, the promoters have never been able to get the sanction of the British Government, and so the project has fallen flat. After the tunnel came the bridge, but that, too, was vetoed, as it would have formed too great a danger to navigation, even with spans six hundred and fifty yards wide. The latest idea is to make the means of crossing in the middle of the sea, as above and below are not allowed. A viaduct would be built from shore to shore about fifty feet below the level of the lowest tides, and on this would run a platform supported on steel legs above the water. The train is intended to he run straight on to this platform, which would then be driven across the Channel by electricity, and the carriages would again be run ashere on French soil, so that it would be possible to go from London to Paris without changing carriages on the way. It sounds rather more dangerous than sculling across in a light oulrigger.

It is interesting, says an English naval expert, to compare with the Diadem Argonaut class

division, once told me the first 12 months that ty 1,000 tons of coal, and throw a broadside of 884th. The Montcalms, on the other hand, are of 9 515 tons displacement, 21 knots speed, 19,500 horse-power, carry 1,000 tons of coal, and throw a broadside of 700lb. The French and throw a broadside of 790lb. ships will have three screws, the English only Of the Diadem's heavy guns, which are 16 6-in, quick-firers, four are only protected by shields, which would be shot away in action, The Montcalm's, on the contrary, which are two 7.6in and eight 6.3in., are in closed thrrete or casemates, with a protection of six inches of hardened steel, and worked by electricity. The estimated speed of our cruisers is a trifle inferior to that of the French, but we keep up the guaranteed speed better than they do. At any rate, our additional 1,500 tons displacement will enable us to largely augment our supplies of ammunition, which is a great advantage.

> The hand of the destroyer is laid upon yet another landmark of Older London. Furnival's Inn, Holborn, is in process of demolition, and blocks of flats and chambers will be erected upon the site. The inn derived its name from the Lords Furnival, who had their town residence there as far back as the reign of Richard II. It was an Inn of Chancery in the time of Henry IV., and was sold early in Elizabeth's reign to the Benchers of Lincoln's Inn, the Inns of Chancery holding much the some position towards Inns of Court as some public schools do to the universities. The old structure was pulled down and rebuilt in the time of Charles I. The society of Furnival's Inn ceased to exist as a separate community about the year 1817; and more recently anyone has been at liberty to rent chambers in the Inu. From its literary associations antiquaties will regret the present demolition. Sir Thomas More was reader in the Inu for over three years. Whilst a reporter in the Parliamentary Gallery Charles Dickens Indged here; and here " Pickwick " was conceived and

In view of the conviction of M. Emile Zola, the following Paris telegrams of Feb. 12th and 13th, which are translated from Tonquin exchanges, should be of interest :-

Yesterday's proceedings in the Assize Court at the trial of Emile Zola were functions. M. Picquast was speaking, amid shouts of applause from his supporters and objugation from his opposite among the applause. Save all disorders neuts among the spectators. Several disorderly scenes occurred, and when the Court mae, the crowd went out and smarked the plate glass fronts

of two large Jewish slops, as a demonstration of feeling against Zola.

In the course of to day's proceedings, M. Demange testified that he had learnt, since the conviction and sentencing of Desins, that a secret piece of evidence had been communicated to the Council of Was appointed to try the case.

To day M. Jamès and M. Ranc in the witness

box asserted the sincerity of M. Zola.

M. Bertillon, expect in handwriting, gave his opinion that the memorandum (giving confiden-tial information to some foreign Government) in the writing of Dreylin.

No disturbance occurred in the Court to-day.

The U.S. Senate has rather unexpectedly passed the Lodge immigration-restriction bill. The vote was 45 to 28, none but Democrats and Populists voring against the measure. Some important amendments had been adopted, and the main provisions of the bill as passed are as follow:-All immigrants over 16 years of age otherwise qualified for admission shall be able to read or write English or some other language, but a person not able to read or write who in over 50 years of age and is the parent or grandparent of a qualified immigrant may accompany the latter or join him, and a wife or minor child not able to read or write may likewise accompany or join a qualified immigrant in spite of inability to read or write. Steamship companies are required to take back the wife and children of any immigrant who has failed to pass the examination prescribed by law. The act, however, does not apply to Cubans coming the new protected cruisers of the Montcalm type, from the island during the continuance of the with the names of the approached me since I became now building by France. The British ships are present disorders. The opposition to the educations who have approached me since I became now building by France. The British ships are present disorders. The opposition to the education of Parliament for Oddiam. The crist coo tons displacement, 201 to 201 knoth caping a present from his as a Chicago paper, will late Mr. Fielden without by the Middleth and, 16,500 and 18,000 horse nower care doubless and steater appoint in the popular

chamber than | has received in the Senate, and the debate may be a warm and lively The passage of the measure in some form is, however, believed to be assured, and the experiment of restricting immigration by a simple educational test will thus have a trial.

The Nagasaki Press of the 23rd February has the following:—The most notorious leave-breaker, we may say deserter and beachcomber, ever in the English Navy in the "Far East" was in tenthle on Manager 1. We refer to " Jack, in trouble on Monday. We refer to "Jack," the sailor dog who is known to all residents bere, an well an to every blue-jacket who touches this port. "Jack" is a fine, intelligent animal. He first arrived in November, 1894, on board H.M.S. Archer, and, with the exception of short intervals, when he has visited other ports on the Eastern Station, has made Nagasaki his home. Arriving here, he promptly jumped ship and got on the beach." He remained here for some months, and then he went on a tour of inspection on beard a man-of-war, subsequently again returning to Nagasaki. Shortly after his security and got saverally return, he got into trouble and got severely handled in a disreputable row. The Surgeon of H.M.S. Undaunted took him aboard, dressed his wounds, and gave him a feed, after which he swam ashore; but every day during the Undaunted's stay in port Jack was to be found at the ship's surgery, to see if his wound was progressing favourably, and to get his feed, after which he would again swim ashore. Yesterday "Jack" was found by his present master, Mr. Harley, 1st class P.O., H.M.S. Narcissus, with a severe wound in the back, evidently done by some inhuman wretch with a knife. The wound was stitched up, the dog bearing the operation with great fortitude, and it is hoped that a speedy with great fortitude, and it is hoped that a speedy cure will result. We understand it is Mr. Hartey's intention to take Jack to England at the end of his commission. The author of this dastardly outrage on a quiet and inoffensive animal has not been discovered.

The following appears in the N.-C. Daily News of Feb. 26th:—

Under the heading "A Little Tin God," the Echo de Chine of yesterday disgraces itself by making a savage attack, stuffed with falsebooks, off Mr. C. W. Kinder, the Engineer-in-Chief of the Imperial Railways of North China. The trouble is this. The Echo tells us that: "It is known that the Hanyang Ironworks, under the able direction of two Belgian engineers, Messas. Ruppert and Bougnet, make to-day excellent rails, comparable with the best made in Europe." These rails have been passed by two imperial authorities, a French engineer and a German engineer, but Mr. Kinder submitted them to a test under which they broke like glass; and Mr. Kinder has had the audacity to suggest that in such matters H.E. Sheng should take the advice of a capable expert. This is too much for our contemporary, which Under the heading "A Little Tin God," Slieng should take the advice of a capable expect. This is too much for our contemporary, which gravely tells its readers that: "Mr. Rinder belongs to a missionary family, and we believe that at one time he followed this profession. Animated with a very natural desire to escape from the despised caste, he made his dibut in lay life as a time-keeper or clerk of the works on a Japanese sailway. Thence he came to China, where his career was brilliant and rapid—int undenbtedly fess so than that of the lossion fort publish wan who was was billiant and rapid—int uncontribedly less so than that of the lossing ferry bost man who was shot into the position of Admiral during the war of 1895. Clima being the kingdom of the blind, this one-eyed wretch?" (Mr. Kinder) "exercised for a long time in the little domain in which he was installed an absolute and incontested empire." Later on the Echo suggests that in consideration of his age and services, Mr. Kinder should be offered an honourable retirement as keeper of a level crossing. And it is in that capacity that the Echo recommends him to the Director of the new

line from Hankow to Peking, Mr. Hubert, It would seem that there must have been something very wrong with those rails for their con-demonation by Mr. Korder to call forth such a tissue thing very wring with those tails in the demination by Mr. Koder to call forth such a tissue of vulgar abuse. We have not quoted half of it. As a matter of fact, Mr. Kinder is the son of Major Kinder, who was Director of the Japanese Mint. He learnt his profession as an engineer in barge works in England and Russia, then came out to Japan, where he was employed under Mr. Bayle (of Arrah fame) on the first rathways built in Japan. He came to China about twenty years ago, and is responsible for all the existing railways in China, all of which are working profitably. But the speculative gentlemen who are explorted H. E. A. Onderdonk cleared 5 feet 6 inches from Digitized by

Sheng object to him apparently because he does his work well and honestly, and does not waste his time in talking about the big things he is going

It may perhaps be mentioned that the Hanyang rails, equal as, we are assured, they are to the best European manufacture, are not used for the Woo-

oung railway.
Our Shanghai contemporary might have plained that Major Kinder was originally Director of the Mint in Hongkong. The Beho de Chine has certainly established a claim to notoriety for villainous and unscrupulous falsehoods.

#### CORRESPONDENCE.

# LEWIS CARROLL'S WORKS.

To the Editor of the " Japan Mail."

SIR.—There is an important omission in your bibliographical paragraph on Lewis Carroll, viz: "Sylvie and Bruno" and, "Sylvie and Bruno, concluded," the latter perhaps better known as "More Sylvie and Bruno," These were written, I believe, after "Alice in Wonderland," and before "Though the Looking glass."

H. T. S. Yours truly, February 28th, 1898.

#### YOKOHAMA CRICKET AND ATHLETIC CLUB.

The annual meeting of the Yokobama Cricket and Athletic Club was held on Riday aftermon at Kell's Building, Mr. J. P. Mollison presiding over a small attendance.

#### THE REPORT

The report stated that, notwithstanding a debit balance of year 669,82, brought forward from last season, the Club had now to its credit a sum of

yen 764 04.
The amount subscribed towards the new Pavil-lion did not meet much more than half its cost, but the Committee were hopeful that the present sur-plus, together with the estimated Credit Balance at the end of 1898, would fully make up the

phis, together with the estimated view the deficiency.

In cricket the Club, with the exception of the first two matches against H.M.'s Fleet, won all its engagements. The defeat sustained last season against Robe was fully atoned for, the Kobe XI, being besten decisively by an innings and 43 times. In batting, F. E. White was top of the har with an average of 57.30, R. B. S. Edwards being second with 37.82; C. M. Duff third with 33.89 Centuries were scored twice by F. E. White, viz:—106 not out v. H.M.S. "Grafton" and Visitors, and 135 not out against Kohe, and one by E. B. S. Edwards, against H. M. S. "Daphne" and "Redpole," viz:—131. First place in bowling was taken by E. B. S. Edwards, with an average of 4.76 ritis per wicket; F. B. White, coming next with 7.74 ritis per wicket. The hast-tick was accomplished twice by E. B. S. Edwards, twice by F. E. White, and once by A. Kingdon.

In baseball, ten games had been played, of

In baseball, ten games had been played, which number the Club had won seven. The fi which number the Club had won seven. The flist interport matches on the home grounds were played this year, and the Y. C. & A. C. were fortunate in winning the series, thereby offsetting the advantage gained by the sister port the previous year. A quantity of new baseball material had been added to the Club propery, and everything was in good condition to begin another prosperous season. The thanks of the Club were due to Mr. Cecilians, who had sery kindly presented a

Guinness, who had very kindly presented a become to be held by the winning team in future interport matches.

The Athletic Sports held on the 24th of April were a record meeting, and, it is believed, the first supporting one.

self supporting one.

The ground was crowded, as shown by the gate money and sale of programmes, the amount realized in this way being yen 22560. This sum, together with the entrance fees, totalled yen 328.10, and after paying all expenses, including 2nd prizes, yen 16641 was carried forward to the credit of the Y. C. & A. C. With one exception (the sack race) all first prizes were presented, and the Club's thanks were due to the German Consul for two prizes from the Consular Body; the Reliance Wheelmen; Messis, Blad, Isaacs, Coghill Jackson and Dare, t prize each; the Tea men for the "T" Cup; the Silk men for the Silknen's Cup; the Banks for the Banker's Cup, the Nippon

scratch. D. Tyng receiving 3 inches tied with Mr. Onderdonk, but in a sportsmanlike manner contented himself with second prize.

In lawn tennis the only match played was the "Single I limit Handicap," there heing 15 entries, and the Cup was won by Mr. H. Bent after a good finish with Mr. Pinckney. The grounds were well used during the season by both Mr. Inches, and Visiting Members.

Somewhat contrary to the expectations entertained by the Committee during 1895 and 1896, the Cricket-pitch, under careful supervision, and liberal manipulation with dressings of oil cake during last Spring, revived in a most wonderful manner, so much so that during the Interport Week in October, it was found practicable to discard the coccanut matting on which most of the matches had been played throughout the earlier months of the season, and use the turf, to the great satisfaction of the opposing teams. Its condition was now most promising, and under the same treatment, the members of Committee are sanguine that further improvement may be looked for. The outer portions of the turf are heing attended to in the seme way.

#### THE NEW PAVILION.

The CHAIRMAN, in proposing the adoption of the report, said it was of a satisfact my character and full of encouragement for the future. There had been 50 new members during the year, and the member ship list now included 250 names. He had received a letter from Mr. Gardiner, the architect received a letter from hir, Caronier, one of the new pavilion, to the effect that unless any unforeseen accident occurred the building would mobably be completed by the 15th April, Ar any probably be completed by the 15th April, Ar any rate he (the Chairman) thought they might safely depend on it being in readiness for the opening of the season on the 1st May. Unfortunately it was going to cost more money than he (the Chairman) had calculated last year, but every one knew to what an extent the price of building and building material had risen since, and would understand and sympath Grigith Alift Committee's position. The

balance for 1898 promised to be large enough to re-lieve them of the apprehension of difficulty ahead, but at the same time they would be glad to receive subscriptions from those who had not aheady contributed, and he also hoped that organises of concerts and amusements would bear the Pavilion Fund-in mind, as it was desirable that as little money as possible should be taken from the general funds for this purpose.

Mr. Stons seconded the motion for the adoption

of the report, and it was carried.

## ASIATIC SOCIETY OF JAPAN.

#### THROUGH UPPER BURMA AND WESTERN CHINA.

On Wednesday afternoon a meeting of the Asiatic Society of Japan was held at the Parish Hall, Tokyo, for the ourpose of hearing an adverse from Mr. John Foster Fraser describing his recent journey through Burma and China. Sir Ernest Satow, K.C.M.G., British Minister, was in the chair, and there was a good attendance of members of the Society.

Sir Ernest Satow at once called upon the transfer to delive his address.

traveller to deliver his address.

#### PIVE MONTHS IN WILDEST CHINA

Mr. FRASER, in the course of his speech said : To be asked to address the members of so learned a body as the Asiatic Society of Japan is an homous of which the worthiest of men might be prend of which the worthiest of men might be proud. But I stand before you this afternoon with absolutely no claim on your attention. Indeed, the fact that I have travelled through several little known constrice upon a bicycle, instead of astride a horse, a sufficient, I think, to make the wise pause and ask "What kind of eccentric person is this and what can be possibly know and tell us about topography and tribes and trade and other things that are dull?" So I confess that the little halo of athletic glory—which even a modest man like myself is constring of his policied to be a hindrance self is conscious of—is inclined to be a hindrance rather than a help on such an occasion as the preneut. And yet it was as a cyclist that I passed through the countries of which I am going to speak. Accompanied by two others I went through the with a knowledge of only two words of Burmaese, and after a five months' journey right across China, my acquaintance with the Celestial toughe did not an hervand halfastory sentences. With did not go heyond half-a-dozen sentences. With the exception of an aneroid and a compass we carried no instruments. The facts I gathered on the way were those merely of observation and from conversations with men who know more or less of the country. Therefore at the outset let me disclaim any idea of posing as an authority. It was as a sightseer and not as an expert that I travelled

#### THROUGH BURMA FROM RANGOON

and over China to Shanghai, and what I have to say are the casual impressions gathered haphazard in strange lands and the inferences I draw will be little more than those of the often quoted and not very much appreciated "man in the street." Now we were exceedingly infortunate in starting our journey through Burma at the commencement of the rainy season in June of last year. It would have been easy enough to be whisked us to Mandalay within twenty-four hours by train. But following tainy season in June of last year. It would have been easy enough to be whisked us to Mandalay within twenty-four hours by train. But following our affected regard for discomfort, hardships, and bad lood we travelled the distance on our wheels. There were little else than tracks through the imagles—jungles of tremendous bamboo and awill silence, a silence that impressed me greatly, for never did I hear the song or even the chirrup of a single bird. We were drenched to the skin and for a full week we slept in our sodden clothes. We preferred that to uncomfortable squerzing into clammy, damp garments. We lived on native Burmese food, slept in the rickety native buts, and were driven to frenzy and strong language by the hoats of masquitos that attacked us. Naturally we had as good an opportunity of studying the Burmese as any visitor to the country could have; and now and then meeting British Government officials we were able to hold interpreted conversations with the natives. The Burman struck me as an amiable, intives. The Burman struck me as an amiable, m-dolent, exceedingly conceited person. Favoured by nature and living on a soil that requires little tilling, he grows two and often three crops of rice in a year. He has little to do but make merry. He is improvident. However rich a harvest he may have, the money is soon squandered. The Madras

## MONEY LENDER IS ALWAYS READY

to assist, and I am only repeating what I heard from dozens of people when I say there is hardly a form ozens of people when a say nerve is naturally a poule over the mountains of vinitan-sen and then, farm in Burma that is not mortgaged to its ulmost striking in a north-easterly direction towards the on the female side. It however, he refuses extent. To get money the Burman will sell next province of Szechnen, get to the great city of in many his constitution than the minist pay a fine to season's rice crop at a richeslously low price. In Chung king for and then, keeping more or basic of the female side. It has been then he must pay a fine to Digitized by UNIVERSITY OF ILLINOIS AT

deed, in the interior I met several English gamblers in rice, staking their money against the Burman's harvests. The Burman is yearly becoming poorer uniform the Butman is yearly becoming poorer and poorer; his lands are slipping from him. Utterly lacking in patriotism, he acquiesces quite cheerfully to British rule; feeble in business capacity, he is pushed aside by the Chinese merchant; the Bongalee by superior intellectual power outs him from the Government posts, and the Madrasce labourer has to be imported for the haiding of calimans and alternations. building of railways and other public works. With the constant intermarriages between the Burmess and the natives of India and the tribes that hang about the westernand northern borders, and also about the westernand northern borders, and also the Chinese who are yearly settling in large numbers, they, as a people, are doomed. Burma itself is a great acquisition to the British empire. Its teak forests yield an enormous revenue, several fine petrolrum springs have been tapped; there is coal, though of an inferior quality, and gold and ruby mines are being worked, though not very lucratively. Burma is one of those

LANDS THAT ARE FULL OF INFINITE POSSIBILITIES and it only requires a few particularly lucky finds in rubies and the striking of a good lode of gold for it to, at oucr, become the happy hunting ground of the to, at our, become the happy hunting ground of the speculator and the company promoter. Burma at the present day is in a state of transition, and although while we plodded on through the jungle from village to village we saw the Burman in his natural state, in Mandalay—altogether a modern city with boad streets, a sailway station, cabs and bicycles, and where the British soldiers have little to do save make love to the Birmese girls and die of fever—in Mandalay he is struggling not very successfully into the garb of civilization. Pushing not the form Mandalay we gradually left behind a country inhabited by Burmans, and came to a region where the population was largely Shan. The Shans are a quiet, inoffensive people devoted The Shans are a quiet, inoffensive people devoted to agriculture. They are short in statute, suddy-cheeked, and inclined to be fat. I rather think cheeked, and inclined to be fat. I rather think they are the aborigines of Burma, but the fighting, bragging Burmese, coming evidently from the Malay Pennsula, drove the Shaos, who are really a plain-loving people, into the hills, and then in Upper-Burma, the Kachins—a fierce and them in Upper-Burma, the Kachins—a fierce and washike race of whom? I will have to speak presently—who arm bill-dwellers, drove them down again, so that, until the British came along, and put the district under what is practically military law the Shans were very much cally military law the Shans were very much

BETWEEN THE DEVIL AND THE DEEP SEA and through large tracks of the Irrawaddy Valley they came near extinction. Our route did not lead through the Shan States. Yet along our way to through the Shan States. Yet along our way to the Chinese frontier and in China itself, right up to the Mekong River, we were constantly passing through Shan villages. By the time we reached Bhano, the frontier military post in Upper Burma, we were in a sort of ethnological museum. There were Burmans and Stans, Karens and Chins, and especially Kachins. The only parallel I know is in the Cancasus Mountains, where there are distinct tithes innumerable, and where sixty-eight languages are spoken. Just as in the Cancasus, which in the old days were regarded as marking the end of the world, and where in the dark recesses of the hills there grew up separate caces, so in the stretch of mountains that wind in a semicircle round western China there are, one might say, a hundred races with individual might say, a hundled races with individual characteristics and curious customs, a race and delightfully interesting field for explorers yet to come. One can readily appreciate how it is that lofty, almost unscalable mountains divide a great race. But it would be interesting to know why it is that among mountains there are

#### ALWAYS A VARIATY OF RACES,

whereas the plains, as a rule, have only one race. What I may call a cursory theory is that these people are not aborigines—that, although settled now, they are the descendants of mignatory tribes who have been checked in their wanderings by these walls of mountains. It was at Bhamo we came into first touch with the Kachinas, a race who set their villages in the highest fastnesses and who ever since the amexation have been a thorn in the side of the British rule in Burma. It is owing to the Kachins that the demacration of boundaries has been so difficult. The summit of a range of mountains is generally The summit of a range of mountains is generally acknowledged to form the best boundary line, but on the Bunna-Chinese frontier the valleys were used as the line, because on the hills it would have sun through Kachin villages and all kinds of trouble would have ensued. At Bhamo we made our final arrangements for plunging into western China. It was one intention to follow the caravan route over the mountains of Yunnan-sen and then, striking it a noulteesstelly direction towards the

the valley of the Yang-tse river, work our way down to Shanghai. Our project I may candidly con-less, was regarded by the authorities at Bhaine as

#### RATHER WORSE THAN RECKLESS.

RATHER WORSE THAN RECKLESS.
The rainy season was just then at its worst, reports were coming in of whole districts being flooded, the valleys of the Shewli, the Salween, and the Mekong rivers were death-traps from fever, and we might have trouble from the border tribes. However, we determined that come what might we would risk it. We had no passports to enter China, but under the Pekin Convention of last year passports were to be granted by the Chinese at the frontier when application was made by the Bittist authorities. We begranted by the Chinese at the frontier when application was made by the B it itsil authorities. We became armed with this application, we manufactured Chinese names for ourselves, had large visiting cards of red paper prepared and stuck a couple of bottles of quinine in our bags. In apparel all was one change of underclothing. And that was our equipment of care Chinese.

that was our equipment III cross China.

The start I can assure you was discouraging. About four miles of the way between Bhamo and the frontier was moder water. The military authorities lent us ponies to get over this bad piece. But the flood was too deep for ponies and that idea was abandoned. Then the authorities lent us two dephants. However, fourteen feet of water was found in places and they had to return. So for a vesk we were

#### BALKED IN OUR EMDRAYOURS

to proceed. At lest we took to a Kachin boat and went round by the Taeping civer to Myothit, a distance of only twenty miles, but so strong was the current that it took three days for us to get there. We strock right into the hills, along a narrow, We struck right into the hills, along a narrow, ingged path, up steep, slippery rocks and through thick lorest. It was raining heavily. When the sim came out the air was hot and sickly. We were now in Kachindom and among the Kachins, who by their curious and silent jungle warfare have made many a British column pause, though the fact doesn't always get into the newspapers at home. When we met these half maked tribesneer: sinister looking, with matted hair, and men; sinister looking, with matted hair, and their hodies, especially their thighs, deeply tatoned, then bootes, especially then thights, weeply satured, every one of them carrying a dah—a short sword or a spear, we did not perhaps feel particularly comfortable. The Kachin is a little man, rarely above 5 it 4 ia. He is will y tather than muscular. Though there is not a distinct type of countenance, as a rule the Kachin has a longish face with high cheek bones, his eyes are oblique and his skin a dirty brown. The Kachins, according to Mr. George, who was formerly Deputy Commissioner at Bhamo, originally came from the south of the Gobi Desert. That there is

#### NOT A UNIFORM TYPE OF KACHIN

is met by the theory that in successive waves of migration they engulfed the small aboriginal ribes, though it is certain they never mixed with the Shans. They have no knowledge of writing and although on charm posts outside their villages I have seen crude drawings they do not have drawings for the conveyance of ideas. Their methods of agriculture are most primitive and the Perest Officers are most primitive and the Perest Officers are most primitive and the Perest Officers are most primitive and the property of the same and hillside and fell the jungle about March. When it is thoroughly dry they fire it in June. The ground is turned over with a hoe, the ashes mixing with the soil, the grain is thrown downingfly and then left to take care of itself till October when the crop is reaped. This method of agriculture prevents the same area being cropped two years running; indeed it has to lie fallow for from five to ten years. agriculture prevents the same area being cropped two years running; indeed it has to lie lallow for from five to ten years. There are customs among the Kachin tribes that are peculiar. At the birth of a child always two great tankards of native drink are prepared. The hiends drink of one tankard until the child is born and then the second is litted up and some one exclaims, "This child's name is "N Kam" and the drink is immediately swallowed as a preventive, in some way, to the evil spinits giving another name. And among the Kachins all the personal names are fixed. The first son is always called 'N-Kam, the second is always, 'N-Nawng, the third always 'N-La, the finith 'N-Tu and so on. In the same way the girls are called 'N-Kaw, 'N-Lu, 'N-Roi and the like. The sunnames are such as Paw-Sa, Chumlut, Lahang, Mi Tun, and sunnames always precede the personal name so that in the case of a family called Paw-Sa the eldest son's name is Paw-Sa 'N Kam. People of the same name, though belonging to different tribes, always consider themselves of like blood and therefore never marry. It is a general rule that a man should marry. It is a general cule that a man should

MARRY & FIRST COUSIN

sists chiefly in an exchange of presents and a feast at which the bride and bridegroom feed one another with rice. Personally I never saw such ngly creatures in the world as the Kachin women. They are stanted and awkward limbed; their hair in always matted and hangs over their foreleads; their faces are flat with means these. in always matted and hangs over their torcheads; their faces are flat with uneven usees. The Kachins are even dirtier than the Chinese and that is saying a good deal. Twice we slept in Kachin luts. These were interesting occasions though twice is quite sufficient for a lifetime. All the houses were built on the same plan. They were obloug, of lamboo and thatch and raised some two or three test for a lifetime. bamboo and thater and raised some the term the ground. Some of the houses were of enormous size, nearly a hundred feet in length and may be thirty feet wide, but whether large or small the internal arrangement was siways the same. the internal arrangement was always the same. The door was at one end and on the immediate right was a general room, where we slept. Next to it was the room occupied by the eldest son and his wife, next to them was the room occupied by the girls and then at the end was the one occupied by the head of the household and his wife. On the other side of the house was a room where the sons slept and a long room, into which the others opened, where anybody slept. Of course we knew nothing of the Karbin language and at night when we got into a Kachin language and at night when we got into a Kachin village we

HAD TO TALK BY SIGNS

Our tule was to walk straight into the biggest house in the village and at once make a present of a rupee to the woman in charge. The places were vitely dirty and as there were no windows and as the wood that was burnt was damp we choked with the amoke and our eyes ached. We generally got the natives to give us some of their rice; we had no difficulty in securing eggs and sometimes we killed a lowl. We had to do our own cooking, and yery indigestible was frequently the result. Now killed a lowl. We had to do our own cooking, and very indigestible was frequently the result. Now and then we found cobs of maize and the long wretched evenings were spent in grilling these in the ashes. I need bardly say that we did not take off our clothes. I used my boots and a volume of Shakespeare as a pillow, threw my jacket over my feet to keep them warm, lay a towel across my face to resist, in some small way, the onslaughts of the mosquitoes and then sticking my hands in my pockets tried to sleep on the ribbed bamboos that formed the floor. In those days we layed very readily into days we lapsed very readily into

A DELIGHTFUL CONDITION OF BARBARITY. Next to being scrupulously clean it is a real jny to be unscrupulously dirty. For days we went unwashed, unshaven and uncombed ; indeed none of us shaved mushaven and uncombed sindeed none of its shaved-from the time we left. Bhamo till Shanghai was reached, a period of over five mouths. Progress was slow, for cycling was out of the question. There is a good deal of the goat in the composi-tion of the Kachin and he never skirts a bill if he can climb over it. The paths were narrow and fearfully steep, the jungle was dense and the air palpitated with the roar of insects. Each day was palpitated with the near of insects. Each day was like the preceding in hard climbing. But a constant joy to us was the dazzling, bewildering beauty of the interflies we saw. In no museum have I ever seen such gorgeousness, such exquisite loveliness of tint. Frequently the outstretched wings were as large as two open hands. And the colours—such striking vermilions, such soft toned greys, a mingling of blues and greens, like shot silk, splotches of blood sed on a wing that was like black velvet, the body of the wing sometimes of rich emerald and the fringe of orange and carmine—never have I seen such mat vellous loveliness of insect life as in those wild border regions between Burma and Chims.

We always knew when we were approaching a Kachin village by the rude carved wooden designs by the path side and the singularly made festoors that lung overhead. These

larly made festoons that hung overhead. These were to keep off

TER VICIOUS PORIST NAT called Chitôn, But nats in Kachindon are without called Chitôn. But nats in Kachindom are without number. Every accident or sicknessis ascilled to some malignant nat, and every hill, forest and stream has its spirit. The Kachins have no knowledge of the cause of death. They have no idea of a future existence. Their nats are nearly all vindictive and have to be propitiated by the sacrifice of pigs or buffaloes or fowls. When the animal is killed parts of the thigh and shoulder are cut off, boiled, wrapped up in little packets of leaves, then hing on the bamboo shine and the nat is asked to accept the offening and be appeased. leaves, then long on the bamboosti me and the natis asked to accept the offsing and be appeased. At the entrance to every village we saw sometimes half a dozen, sometimes twenty of these shrines. No house is built, no marriage contracted, no journey undertaken, without consulting the nats. The will of the nats is obtained through a mi-tway, or supposed in spiced divines, when in a state of temporary research. build the last is obtained through a mixture of spanish in spired diviner, when in a state of temporary frenzy. When a youth shows signs of be changing, but frequently more were deducted and the spirit world—the signs generally a number of spurious coins were intro-land where no Chinamas will pass the night,

to my idea being generally a touch of insanity—his powers are tested by ordeal. A ladder is prepared, the steps consisting of swords with the sharp edges upwards, and this ladder is reared against a platform set with spikes. The youth must go up the ladder barefooted and

#### SIT ON THE SPIKES.

If he shows no signs of inconvenience and then comes down the ladder again, having received no marks of injury, he is accepted as a true diviner. Naturally the Kachins are superstitious. A snake or a wild cat crossing the path is a fatal sign and a journey is at once abandoned. The crossing of the path by deer or thinoceros is accepted as a good portent. Also they believe in witchcraft. If good portent. Also they believe in witchcraft, It a man has been bewitched he generally employs a mi-tway to start some counter-bewitching. Sometimes, however, he shoots his bewitcher from behind a tree. They believe in the evil-eye. A dying man always knows who has looked upon him with the evil-eye and he leaves to his family the settling of the "debt." Mr. George, of Bhamo, had to deal, a year or two ago, with one of these cases. C, the brother of A and B, happened to die of fever, and before dying declared D had bewitched him, Within a fortnight A and B collected a following, stacked D's house, shot him dead, and, contin-Within a fortnight A and B collected a following, attacked D's house, shot him dead, and, captining the whole of his household and relations, 13 in all, sold them into slavery. Even on trial A and B would not admit the possibility of C having made a mistake and were scandalised that the British Government should interfere on behalf of a wizard. The Kachins are fond of raiding and war. The Government of Burma, as I have already remarked, have endless trouble with them, and nearly every cold weather a column is out administering chastisement to some tribe that has administering chastisement to some tribe that has

Well, we passed through the Kachins that live on the borders of Burma-Chins, but never were we molested. They were

#### SULLEN AND SCOWLING,

SULLEN AND SCOWLING,
but this was their natural condition, and whenever we encountered a body of them on the narrow jungle paths they invariably made room for us. With the exception of their villations countenances and the dah, always carried by their side, we saw nothing to suggest they were raiders. Not till we got well over the border on the Chinese side and then we saw the Shan and Chinese villages were protected by stockades. These villages were protected by stockades. These villages were on rising ground and the jungle in the vicinity was cleated. First around the village was a heavy barrier of tree trunks, with a pit, crossed by a drawbridge, near the entrance. Outside the barrier of trees was another barrier of thick bambuos. Theo, where the inclined ground reached the level, were long, sharpened lamboo spears at three angles just as soldiers fix bayoness ready to receive cavalry. But within a day m two's journey these protected villages had ceased and the villages were ordinary Chinese-Shan collections of miserable lints. All the time it was aiming heavily; much of the way was under water, and frequently we had to wade long distances; with the fl. od above our knees. One night, being overtaken by darkness, we lay down to sleep under a foul shed open at the sides and were glad to get some Chinese mule-drivers, who were camping there, to give us some of their broth. As you know some Chinese mule-drivers, who were camping there, to give as some of their broth. As you know

#### NO PIXED CURRENCY IN CHINA

and we had consequent bother with our money matand we and consequent outer with our money maters. The super was serviceable through Manwyn as far as Teng-yuch or Momein, as it is called on some maps. At Teng-yuch we exchanged our supers for little pieces of silver of various weights. These pieces of silver we sold by weight in the towns we passed through, getting Chinese cash in exchange. Silver itself it heavy, but it is a perfect faither, weight compared with cub. exchange. Solver itself it heavy, but it is a perfect feather-weight compared with cash. Nearly four hundred of these go to the value of a shilling, and half a crown value of cash weighs just \$1\$ lbs. Once when we set off over the hills to do a long stretch, where there were no towns, we had to hire a coole to carry our money for us. At Bhamo we had deposited a large sum with a Chinese-merchant and he gave us a draft on another merchant at Tali. At Tali we got enough silver to take us to Yunnan, carrying another draft from the Tali merchant to still another merchant in Yunnan, and so we kept on to Suifu, ther drait from the Tall merchant to still another merchant in Vinnan, and so we kept on to Sulfu, to Chung king-fn, to Ichang, and to Hankow, where we got into the region of the dollar. Of course we lost tremendously changing our lump silver into cash, for the silver in different districts was of different quality. The money changers always declared our silver was inferior to the local silver, and their scales never tallied with ours. Then a hundred cash was never too cash. The custom is to deduct four out of every hundred for

duced which it was impossible to get hid of. sides in different districts the hundred varied. Outsides in different districts the hundred varied. Outside the gates of Yunnau-sen it was 96; inside the city the hundred was only sixty-lour. Then once we got into a region where

#### ALL THE COINAGE WAS SPURIOUS

and the hundred leapt up to 320. Every town had its own rate of exchange for the tach. The confusion was annoying. It was just the same in trying to measure distance. It might be ten it — a little over three miles—from A to B, but from B to A it was only seven li. Sometimes we would have a day's march of go li, and when we thought it was a long distance to climb over the hills we would be told "Oh, but they are only short li" or may be we would have only 60 it to do in a day, and we would hear they were long li. So we found often that sixty ti and ninety li were about the same distance. Thus, ti and ninety li were about the same distance. Thus, in a rather a confused state of mind we reached Teng-yueh. Here we were to be furnished with passports by the Chinese authorities and we immediately presented at the Yamen our documents from the British authorities at Bliamo. Staying in a draughty loft of a reaking foul Chinese ion, the air thick with the odours of a cesspool close by, we waited patiently for eight days to be furnished with these passports. When we got the telegraph master, who knew a few words of English, to accompany us to the Yamen we found the telegraph master, who knew a few words of English, to accompany us to the Yamen we found that nothing had been done. The Mandatin did not understand the documents in Chinese we had brought with us, and very laboriously we had to explain what their contents were and what were the provisions of the Pekin Convention of 1897. The Mandarin knew nothing about it and when he was told that a British consul would soon be setting at Teng-yuch he almost had a fit. The new spread rapidly—within twenty-four hours it was generally understood in the city that the city that the

BRITISH WERE COMING TO ANNEX YUNEAR.
But still the Mandarin besitated about the passports and it was not till we began to side the high horse, and got angry and told him we would telegraph to Pekin, that we got our passports. They were the most extraordinary passports in the would, large enough to paper an horel bedroom with, but they served our purpose. So after twelve days in Teng-ynch—a wretched twelve days of sickness and lever, with inquisitive dirty Chinese locking their curiosity upon us and those vile smells, "seven and twenty smells, all well defined and genuite stinks"—we got once more under way. A stinks "—we got once more under way. A tatterdemation guard of six soldiers was sent with us, not out of any desire to offer protection but rather as a precaution on the Mandariu's behalf, for he assumed that if anything happened to us he would get into trouble. Hi-therto we had been crawing along the meyen rough way of the valley of the Taeping River. But now we had to cross before reaching Tali-fu a series of enormous mountains maning due north and south with the great rivers of the Shwell, the Salween, and the Mekong,—three of the five great rivers (the others are the Yang tse and the

great tivers (the others are the Yang-tse and the Irrawaddy)—that are born in the wildernesses of Tibet. These hills are among
THE GREAT WALLE OF THE WORLD that have split the human cace in sections. I won't dwell upon the personal hardships on our way to Tall, the wretched food we had to sleep in, or the hostility of the natives at Yung-changfu. But I would like to impress on you what terrible barriers of mountain these are, what a horrible region of desolation and poverty we passed through, what difficulties there are in the way ed through, what difficulties there are in the way of rapid transit. I want to do so because, as you know, there is much airy talk at homesabout "tapping" Yuman, of building a railwa from Mandalay to Talisho, and so draining the wealth of the province into British territo y. Referring to my diarry written during our journey I find that on the day we left Tang-yuch all we travelled was on the day we let a sug-yien an we traveited was thiteen miles, that first we rose 2,000 feet by an exceedingly steep path, and then descended 2,000 feet in the short distance of two and a quarter miles. The next day when we crossed the Shweli river by one of those Chinese suspension bridges that are the marvel of all traveliers it took is five hours to go seven miles and we come to an altitude of the marvet of all traveliers it took us five hours to go seven unles and we rose to an altitude of 7,400 feet. Down we went again and then uphill we climbed through a forest to 8,000 ft. So the way to Yung-chang-fit kept vising and fulling, varying two ar three times a day from four to seven thousand feet. Yung-chang-fit lies in a plain of about fifteen miles by six, a very pleasant plain, famous in that part of China for its fruit. When we reached the Salween, the valley of which is said to be

Original from UNIVERSITY OF ILLINOIS AT

URBANA-CHAMPAIGN

Digitized by Google

we had an almost precipitous drop of from five to two thousand feet. The Salween used to be claimed by the Burmese Kings as the boundary of their territory and it is a thousand pities the British Government did not fix it as the line dividing Burmah and China instead of the predividing Burmah and China instead of the pre-sent erratic, ill-marked line which it is almost impossible to fullow. Another day, when we travalled only thirteen unles, we climbed from an attitude of 3,300 feet to 8,150 and then des-cended to 2,300. The morning we crossed the great Mekong river we full 2,200 feet, rose 1,500 feet and then fell 500 feet. So it was day after day—once we go gut up to 8,350 feet—a land of dreat hiess and dismay. Yet people at home talk and write enthur-

oreachies and dismay.

Yet people at home talk and write enthusiastically of cunning a railway out of Burma to Tali-fu. They look at a small scale map and nothing looks simpler than such a line. Folks think it is a magnificent thing to have obtained a concession from the Chitese Government to have a British railway in the heart of Yunnan. It would be just as magnificent, imy mind, to obtain a concession to run a railway to the maon. I am not daring enough to say that the building of a railway from Burmah to Tali-fu is impossible—nothing saems impossible in engineering—but I do say that the difficulties would be night insurmountable and the cost would be fabulous. But assuming for a minute that a railway into Yunnan is possible—the question arises what has Yunnan to give in the way of minerals or produce? Has it got coal, which would be acceptable, as the Burmese in the way of minerals or produce? Has it got coal, which would be acceptable, as the Burmess coal is poor stuff; could it grow rice in sufficient come is poor sum; come is grow rice in summer quantities to compete with the Burmese rice? Is there a prospect of gold or silver or copper being found is large quanties? In a word of what are you going to "tap" Yunnan? Now there is only one man in this world who can speak with any one man in this world who can speak with any authority upon the resources of Yunnan. That is Capt. Davies of the Intelligence Department, who makes a special study of the Burma-Chinese frontier and who has explored Yunnan on behalf of the Indian Government for the very object of investigating a possible route for a railway and learning what are the resources of the province. It is an open secret that in his report to his Go-It is an open secret that in his report to his covernment he was strongly against any attempt being made to construct a railway. At Mandalay I had long conversations with Captain Davies, because we would be the first to go into the country after it had been declared open to British trade, and I was naturally anxions to gain all the information I possibly could to form some opinion III this really interesting and

#### LITTLE KNOWN PART OF THE WORLD.

Captain Davies told me that the part of Yun-tan likely in trade with Burma includes 40,000 square miles, of which, however, only one-sevensquare intes, of which, however, only one-seven-teenth is plain, and contains a population of between two and three millions. On the route of the sug-gested railway to Tail, that is from the Kundong Ferry by way of Yin-cho, there is very little wood and the coal is extremely poor. The great coa-fields of Yusman lie on the eastern border of the helds of Yushian He on the eastern border of the province, next to Kweichau. But he said there are guld, copper, and lead mines which might be more advantageously worked than they are at present by the Chinese. Yet because there are such minerals there is by no means any evidence that they would be worth working by British subjects. Because gold is known to exist in almost unexplosed accious time completely much normal states the regions some people talk much nonsense about the untald and unknown wealth of those regions. It untold and unknown wealth of those regions. It must be remembered that Chinese will work a mine when the recompense is

#### A MERS PITTANCE,

Because the Chinese get gold out of the mud of the Upper Vang-tee it is not to be supposed that it only requiries loreign capital for gold to be shovelled up. If a Chinese gets four-pence worth of gold out of the Yang-tse mind in a day he is exceedingly well satisfied. Su I hope I may be permitted, with all satisfied. Su I hope I may be permitted, with all diffidence, to atter a warning against the idea that Yuman in extremely lich. As far as can be learnt Yuman is among the poorest of the eighteen provinces. Around Yuman-sen itself I believe there is iron in abundance. But this part of the province and the eastern border where there is coal could never be "tapped" into Burma. If there is to be any "tapping" by rail it is southwards into French territory or possibly northwards towards the Yang-ise valley. What Yuman at present sends inm Burma is gold-leaf—largely used in decorating the Burmese pagodas—a small quantity of silk, hides, horns, hams, paper and fibres. After examining the country carefully the most Capt. Davies could say was—"There seems to be a good cliance of a large trade in ponies, mules, goats, sheep, pigs. large trade in ponies, mules, goats, sheep, pigs, would die for certain."

geese, ducks, chickens and possibly cattle and Much of the land between Tall the buffaloes." The imports into Yunnan from Burma nan was bleached; there was not

in 1896 represented Rs. 1,364,000, of which cotton represented Rs. 1,127,168 and woollen cloth Rs. 45,640. The trade between the two countries would very possibly be increased through the agency of a railway but by no means to such an extent as would pay for building so expensive a line.

com unpatriotic for me to throw my little pail of cold water over what is generally considered a splendid scheme for extending the range of British commerce. And it will seem range of British commerce. And it will seem strange to you that the Indian Government—in the face of their own representative's report antagonistic to a railway—should yet strenusly advocate a railway into Yunnau, not to be built by themselves, but by railway speculators, and that they have actually constructed a line up to the Kunlong Ferry as an incentive. Now may I advance a theory. The province of Yunnau in itself is not worth having and the British Government well know it, but it is next door to tish Government well know it, but it is next door to

THE WEALTHIEST PROVINCE IN THE EMPIRE. that of Szechuen. Szechuen has been well explored by Englishmen and by Frenchmen. Both Britain and France know that it is the plum of the Chinese and France know that it is the plum of the Chinese provinces, that it is population is large and prosperous, that it is especially eich in silk and is full of minerals, especially gold. France is very anxious to reach Szechuen and "tap" it into Tonquin. That is why you so often hear of Franch callway schemes up to Yunnan-sen and beyond. The object of the Indian Government in fostering the idea of a railway out of Bunga into Yunnan is, I am convinced, to checkmate any advance from the direction of Tonquin. It is a race for Szechuen. It so happened to be my fortune not only to journey by the trade route out of Burma to Tali-fu and Yunnan-sen but also by the trade route from Yunnan-sen into Szechuen province to Chung-king-fu and from there, down the valley of the Yang-tse. And it was most clearly apparent, to even a casual traveller like myself, apparent, to even a casual traveller like myself, apparent, to even a casual travener rise myses, that when the day comes, as come it will soon, for Szechuen province to be opened up by foreign capital the communication between that province and the world will be by means of the Yang-tse river,

THE GREAT HIGHWAY OF CENTRAL CHINA. and not by any callways cuming into either French or British territory. And now having run counter to what I know is the general public idea about Yunnan I resume what I have to say about our journeying through Western Chine. China.

I was struck with the woe-begone appearance of the country throughout. There were towns that seemed crumbling to decay and there were hundreds of thomsands of acres of terraced "paddy" fields all bearing silent, gloomy evidence of how the population was reduced to a mere fragment, thirty years or so ago, when the Chinese imperial troops came in to do vengeance for the Mohammedan rebellion. At Tali-lin, a beautifully situated city by the side of a wide and charming lake and backed by a glorious range of mointains 14,000 feet in height—at Tali-fin, which was formerly the seat of power of the Mohammedans, we first saw the Maintagus, one of the few races that struck with the woe-begone appear I was ly the seat of power of the Mohammedans, we first saw the Man-tzus, one of the few races that have all along held themselves more or less independent of Chinese rule. Personally I had some difficulty in differentiating them from the Chinese. Those that were pointed out to me were studier, smaller and clearer skinned than the average Chinese. The women, however, were easily recognised, they diessed differently, had rather good features and they were free from the ugly, uncomfortable distortion of the feet which is supposed to produce exacefulness among the women of to produce gracefulness among the women of China. Later on, during our thirteen days journey to the capital city of Yunnan-ten we came across other people that were quite evidently not Chinese. But most of them seemed diseased, four out of every five women were the

VICTIMS OF GOITES,

and even men and boys were also suffering from this loathsome protuberance. The district is pestilential. I wanted to send letters back into Burma from Tali-fu but Mr. Smith, the missionary there, practically declined to get me a coolie to carry them, because on three occasions he had sent men to Bhamo and two had died by the way. When the telegraph line was being constructed some five or six years ago to connect Tali-fu with Burma sixty men were employed in the work. Of these fifty-six died. The observant Marco Polo, who was this way six centuries ago, wrote "The country is wild and hard of access, hill of great woods and mountains which it is impossible to pass, the air is so impure and unwholesome; and any foreigner attempting it would die for certain." and even men and boys were also suffering from this loathsome protuberance. The district is

of grase and only a few dwarfed and sickly Several times we missed the regular halttrees. Several times we missed the regular late-ing stage and had to stop in the hovels of the peasantry, getting little else to eat but badly cook-ed rice and eggs. Though in the towns we were more or less interfered with and molested by the rabble, the country people were courteous. All the time our clothes were sodden with the wet, we were splashed from head to food with mud, our shoes gave out so that we had to resort to native sandals and our clothes became ragged. We met plenty of people on the way, coolies, carrying enormous burdens. Every coolie was an opinin smoker and at night the little inn rooms recked with unsavoury odours. I had read a good deal about

THE OPIUM SMOKER IN CHINA.

of what a fleshiess wreck he is, how he is hollow-eyed and nerveless, always in tatters, and always beseeching for more opium. There and always beseeching for more opium. There may he such a person but I rather fancy he is a creature of romance. I saw many thousands of opium smokers, hundreds of thousands I might say, during those five months it took in crossing China. There were men who had smoked for thirty years, strong, healthy robust men, who certainly showed no signs of being victims. The coolie class, notorious opium smokers, invariably spent their evenings over the pipe. Yet during the day, without faltering, they would walk from twenty within the faltering, they would walk from twenty within the faltering is 120hs, and this not on our day, but day after day throughout their lives. I am not for one moment defending opium smoking, but I took caraful note by the way and I came to the conclusion that all the talk we hear about the Chinese opium victim is nothing else but gross and wilful exvictim is nothing else but gross and wilful exaggeration. China, we are told, holds out her
hands beseeching that the British Government
should not force Indian opium upon the Chinese.
Of course she does. But this is not to save China from the curse of opism but to prevent the Indian opium competing with the mpium of China. Why, I passed through miles and miles of poppy country, cultivated by the mandarins themselves, and it is well-known that a large part of the income of the Pekin Government is derived from the opium tax. team Government's universities in the opinion tax. In the capital of Yuonen, where we halted for a week—a fine specimen of the never changing western Chinese city—the great triennial examinations had just concluded and the place was full of students. We had several talks with them and they displayed, for students,

#### A REALLY REPRESEING IGNORANCE.

They pool-pooled the idea that China had been defeated by Japan in the recent war.

"We are the great glorious Middle Kingdom, so how could we be defeated?" was their method of arguing. They inquired whether in England there was a sin like the one in China, and whether there were trees and rivers? They and whether there were trees and rivers? They believed that foreigners have a hule through their chests, through which a bambeo pole could be stuck and the foreigner be carried by coolies. When we said we also had examinations in our country they replied that some of their great Chincountry they replied that some of their great Chinese scholars must have been in England to show us the way. They were interested in our bicycles and admitted that the foreigner was rather clever in mechanics. But it is the Chinese who are the learned people, they said. All the examinations for public appointments are in the sages. If a man shows a good acquaintance with the writings of Confucius and Mencius that proves he is just the person to have the administration of the telegraphs under his control. Constant downpours of rain continued after we had left Yunnan-sen. The inns were dirty, though cheap. The price The inns were dirty, though cheap. The price for a night's lodging was often not more than fifteen cash ahead, about a half-penny. Lunch generally consisted of boiled maize. On one occasion we purchased an eight pound leg of mutton for two-same feathing.

pence farthing.

We began to notice that many of the villages were guarded by high walls and that there were towers of refuge. We were in a regian

in front of his head. According to the brilliant-and intrepid Baber, the tribes are continually fighting among themselves; they are not Bud-dhists but make sacrifices to gods of their own; women, not thought much of among the Chinese, may in Lobo-land succeed to be chief of a tribe; they use knives and forks; they have slave hunts and carry Chinese women into their territory. But a Lolo never marries a Chin-ese woman. They are proud of birth and just as "blue blood" among us is the sign of heing high born the Lolo nobles call themselves "black-bones." Those of you who have read Baber will ramember the amusing difficulties he had in secur-ing a copy of a page from a Lolo written book, the in front of his head. According to the brilliant ramember the amusing difficulties no use of securing a copy of a page from a Lolo written book, the writing being quite distinct from the Chinese. That fac-simile is perhaps the only fragment of Lolo caligraphy that has been given to the outsi world. But at Tung-chuan I saw the baby boy world. But at Tung-chian I saw the baby boy of the missionary playing with a written book of quite unfamiliar writing. When I asked the missionary what it was he said, "Oh it is a Lolo book that I bought from a Lolo wizard; some day I will try to find out what it is about." I tried to get possession of that volume, but when I had explained its immense value the missionary decided to keep it himself and ceased to allow it means the property of the floors and continue to the floors and continue to the floors and continue to the floors and the floors and the floors and the floors and the floors and the floors and the floors and the floors are allowed the floors and the floors are allowed to the floors are allowed the floors and the floors are allowed the floors and the floors are allowed the floors are the floors are allowed the floors are the floors and the floors are t be thrown about the floor as a plaything for his child. The Lolos are

#### AN EXCEBDINGLY CURIOUS RACE,

about whom we know practically nothing. Where about whom we know practically nothing. Where they came from no one can say but they themselves have an idea they came from the west. Here, however, is certainly a distinct alien race planted in a corner of China and a splendid opportunity is now offered for somehody to prove they are one of the lost tribes. Striking towards the Yang-tse river we had a masty time. The country was still bare and barren, chill winds swept 'about the mountains, there was desolation everywhere. Carried on the shoulders of coolies it was with the atmost difficulty we got across the turbulent carried on the studieders of cooles it was with the utmost difficulty we got across the tunbulent torrents. For miles the rude path was through sinsh, ankle-deep. Then away up into the monutains we went again, once to an altitude of 9,100 feet. The rural folks assumed little better than savages.

We were glad to get to the town of Chao-tung-fu, though our arrival with bicycles nearly caused a riot. Chao-tung-fu is the darkest nearly caused miot. Chao-tang-fit is the darkest spot in that dark part of China. It is the slave market of western China and nearly all the girls of Chao-tang are sold into slavery. A Chinese only counts the sons as belonging to his family. In Chao-tang if he is too poor to rear his daughters to a selling age

THE INFANTS ARE MURDERED.

THE INVANTS ARE MURDERED.

Mr. Sam Pollard, the missionary there, told me that quite seventy-five per cent, of the daughters born are done to death. Babies from three days of age to three years are pitched over the city walls. They are not, how ever, always killed first. The pariah dogs may often be seen growing the arm of an infant yet alive. Mr. Pollard said it was no infrequent thing to find two or three baby corpses in the course of an afternoon's stroll. As there are no workbouses, the bodies of the poor are also thrown outside the city. The wolves and the also thrown outside the city. The wolves and the hygenes come down in the night, and when day hyænas come down in the night, and when day breaks there is no trace left of the unfortunate dead. Good Samaritanism is a thing not practised in Chao-ting. Should a man fall sick by the roadside, no one brings the oit and the twopence to succour bim. If he dies in your house the authorities put you to the expense of burying him. Therefore, the best thing to do is to leave him and let the wild animals do their work. Chao-tung is indeed indeed

## NOTORIOUS FOR ITS INBUMANITY.

The punishments inflicted for crime are horribly

ordinary drudge of a girl is sold for about five shillings. A pretty, healthy girl of sixteen years will, maybe, felch a couple of pounds, ravely more. All round Chao-tung lies abundance of silver, cop-All found Chao-ting lies abinidance of silver, cop-per, coal, and iron. But the Chinese have very primitive ways of getting the minerals. They admit foreigners are the best at that kind of thing because they have the power of seeing under-ground. Some years ago two Japanese came to the city

#### EXPLORING FOR SILVER

The authorities wanted to test their powers. They builed some silver ingots an the parade ground. Then they took the Japanese a walk that way. "Is there any silver about here?" they asked. "No," said the Japanese, "this is not the kind of soil in which silver is found." Then the buried metal was produced from under their very feet, amidst the loud hilarity of all Celestial officialdom. Since that time the Chao tung-ese have had a prodigious contempt for foreigners. We were glad to push on from this town. We got into a rugged district where even mules could not travel and all the carriage of goods had to be done by coolies. We skirted the river Hen, finding it first tearing out a subterraneau cavern and ing it first tearing out a subterraneau cavern and then we followed it till it became a big, swollen,

then we followed it till it became a big, swollen, noisy river.

We had a few rough times and discomforts on the way and I think our hearts really leapt for joy that day when the muddy breast of the mighty Yang-tse, that was draining a continent, was suddenly revealed to us and we saw the great junks and heard the melodious song of the carmen. We crossed the Yang-tse and reached the bustling city of Suifu. We were now in Szechsen and at once it was inticeable how much finer a country it was than Yannan. The land was under cultivation, the people were better nurtured, the villages were cleaner. Altogether there was an air of prospecity which forced itself all the more on our attention because we had just left a BLEAK AND INHOSPITABLE REGION.

A BLEAK AND INHOSPITABLE REGION.

So without adventure, but very worn and taitered, we reached Chung-king-fu, the Manchester of Western Chica, situated on a hump of cock at the junction of the Min River and the Yang-tse and the first of the treaty ports we were to visit on our way. Here there are Coosuls representing Britain, France America and Japan, and I date say they have other duties besides marrying missionaries, playing tenuls, and occasionally quarreling about precedence. However, that Chung-king is soon going to be an important city as far as the outer world is concerned there can be no doubt. This is the "tapping" station as far as the unquestionably rich province of Szechnen in concerned. Under realy steamers are permitted to go there, but, as yet, no steamer has as yet faced the dangers of the Yang-tse gorges. However, I believe, than this spring a Japanese steamship company intend to run the risk and as soon as it is found that A BLEAK AND INHOSPITABLE REGION. to tun the risk and as soon as it is found that steamers can safely go through the gorges Szechien will be like a great rich, newly-discovered country thrown open to the traders of the world. At Ching-king-fu western China stops and there for I stop also. I have been unable here in fore I stop also. I have been unable here in Japan, to make any references to books, and what I have told you has been merely scrappy information gathered by the way. As I said at the outset, I do not set up as an authority. My opinions are simply those of a wanderer who has passed through an interesting part of the world and endeavoured to keep his eyes open by the way.

#### SIR R. SATOW ON RACIAL CUSTOMS.

Sir Ernest Satow, in a few comments on the lecture, said he was interested by Mr. Plaser's reference to the costom among the Kachins of disreference to the custom among the Kachins of discovering a mi tway by making him climb up a
ladder of swords and sit upon a row of spikes. It
was a very curtons fact, which they were perhaps
all familiar with, that this was also a practice constantly used in Japan by jugglers. It was a very
favorite theory of ethnologists that when one found
very similar practices m inventions in two
different parts of the world it printed to the prohability that these two propoles must have had con-

reminded Professor Tyler, who was rather liberal in religious matters, on the result of his labours of comparison being largely to prove the common origin and homogeneity of the human race. Again, everyone was familiar with the Japanese footgear. Well, almost precisely the same kind of since was used by people in the North of Siam, and people in Western China, and yet there was no reason to suppose that there had been an importation of the fashion by the Japanese from the Chinese. The same sort of footgear was also seen in the Malay Peninsula. With regard to the lecture he had to thank Mr. Praser, on behalf of the Society, for a most interesting and, he must say, a most learned address. It would be read with great interest not reminded Professor Tyler, who was rather liberal address. It would be read with great interest not only in Japan but at home and specially by those interested in that much talked of but probably never to be accomplished railway between Burmah and Yuesan.

#### THE KOREAN GENTLEMAN.

The calm and composure that environs a Korean The calm and composure that environs a Korean gentleman is one of the mysteries of the Orient. Embarrassed his may be by a thousand debts, and threatened by a hungry wolf at every chink of his mud dwelling, yet the placidity of his life continues mutified. He is a master of composure, which forms the groundwork of other characteristics. From Confucius he has learned to mortify every Proof Confucius he has learned to mortify every natural impulse, and to move as though he acted his part on a stage, where a single misdirected smile or thoughtless turn would upset the greatest piece offrecord. His choicest word is nys or ys. If he but guard ys, he may offend against every command in the Decalogue, and still be the sage or superior man. If he breaks ys, he is covered with confusion and counts himself the vilest of the vile. Vé of course is the eternal fitness of things, the scholar's interpretation of Confucianism. II you

re or course is the electrial interes of times, the scholar's interpretation of Confincianism. If you mention a word in disparagement of yé, the gentleman is frantic, forgets yé altogether for the moment in his efforts at violence.

The Korean speaks respectfully of Mencius as mang, and of Confucius as kong, so that the names coupled together would read mang-kong. This word unfortunately I as another meaning, namely, the croaking of frogs. A Rorean gentleman who had travelled much abroad, and learned foreign languages, came home quite outdone with Korea's ancient civilization, and particularly set against Confucianism. In one of his public addresses to a company of Koreans he made use of the word mang-kong; "Of what benefit," says he, " has Confucius been to Kurea? Those hest versed in his doctrine are the most helpless people we have. They simply sit and coak mang-kong, mang-kong to everything." A scholar who heard him, and whom I know well, left the meeting in a piping fury. "Nothing," says he, "but the knile for a man like that." Yes, morder he would for the sacred name of yé.

sacred name of yé.

Any thing that interferes with the rigid requirements of yé is of course to be avoided, for which reason no gentleman indulges in manual labour, or in fact in labour of any kind. His life consists in a supreme command of coolie service, while the coolie responds nyé or yea to every order. The lighting of his pipe, or the tubbing of the ink on inkstone, must be done for him. Down to the simplest details of life he does nothing. Not even should be scold the coolie, who said he would, but neverthless failed to do what was told him. Consequently the gentleman's hands become soft, and his fingernaits grow long. From constant sitting his fingernaits grow long. From constant sitting his hones seem to disintegrate, and he becomes al-most a mollusk before he passes middle life.

When once they have attained to this physical condition of pulp, they are in a measure immuned The punishments inflicted for crime are horribly barbarons. Not long ago a woman, guilty of infidelity, was strong up by the neck with her nest just touching the ground. There she hung tild death closed her misery. A more dever was confired an one of the city gates and ted but nails were hammered through his wrists. The wretch tried to shorten through his wrists. The wretch tried to shorten the agony by haltering his head against the woodwork. So the authorities provided a pillow to prevent anything of the kind. It took four days for him to die. But it is for providing the whole of Western China with its slave gills that Chao ting is famously infamous. The majority of the gills saved from a pitching over the city wall are kept of the business who make a large profit by taking up groups of little girls to Yumanesen. Pour people-who cannot afford the necessary wedding gifls who chaont afford the necessary wedding gifls who cannot necessary wedding gifls who cannot necessary w

Digitized by Google

said he was none the worse, though I should cer-tainly have been damaged by such a fall.

Not all the gentry by any means are scholars, though they ought to be if they would come up to the standard of Confucian requirement. Those who have attained to this are marked and honored who have attained to this are masked and honored men. They are all but worshipped by the mass of the people, are given the freedom of every city in the kingdom, and are admitted as distinguished guests to the presence of the highest, free of pass. Chieses characters seem in have for this few a consuming fascination. Not so much the thought conveyed, as the character itself, seems the object of veneration. From them he "builds" (chiral forms of expression and verses, as a child builds enchanted castles from blocks of various sizes, and, as there is no limit to the variations and combinations. as there is no limit to the variations and combine tions possible, so there is no limit to the charm the possess. Two scholars can find sufficient to argue on, to interest one another, from a single character, and as there are in use some 12,000 characters, we might say they have a fund to draw on that will last for a quarter of a century. No attempt is made to write more than original ditties of Anathra Anathra Library and the control of the Anything like an original work in Chin motions. Anything like an original work in Chin-ase would be an attempt to outdo Homer in Greek, presumption unheard of. So the scholar plays his life away with this unending to any of ideographs, that entwines not his neck, but his mind, and heast, and soul.

For the unlettered gentry Chinese has no charm They keep a few learned expressions at their fingers' ends as a sort of bulwark of defence, when fingers' ends as a sort of bulwark of defence, when hard pressed, but as far as possible they avoid the subject. Their life, since shut off from intellectual pleasure, consists in material pleasures, dress, and enjoyment. This class of scholar is exceedingly common in Korea. In immaculate white he emerges from the holes and corners of every mud village. If he is an official of importance he does not age. If he is an official of importance he does not walk alone, but is assisted by the arms on each side. If he ventures by himself, it is with a magnificent stride that clears the street of indifferent passers, and commands only onlookers. In one hand a pipe, these feet long, in the other a fan; over his eyes two immense discs of dark crystal, not to assist him in seeing, but to insure his being seen. How precious these are! Many a man will forego the necessaries of life, if only he can gain a pair of free wire venture.

the necessaries of life, it only he can gain a pair of Kyeng-in crystals, and so cover himself with glory before an onlooking assemblage.

I once offended greatly against ye in an effort to befriend an imprennious gentleman, who had told me of his financial embarrassments. He was me of his financial embarransments. He was wearing at the time a pair of dark crystals, and thinking to make him a present under form of a purchase, I offered him six American dollars for his glasses. He was amazed to think that I should virtually ask them for nothing, for he had paid equal to fifteen, and a bargain they had been at that. This is one of the absurdities of the County and the absurdities of the County and the absurdities of the Orient, where a man pays equal to two or three mouths' entire income for something absolutely worthless. It was on the same principle that Chinese cavalry rode into the battle of Pyeng-

whitness. It was not the same principle that. Chinese cavalry rode into the battle of Pyengyang, with fan and paper simbrella, the servants bringing up the sea with Winchester rifles.

This impecusiosity of the Koraan gentleman is also a profound mystery. I have figured for years on the question as to how an idle man, who has nothing left to-day, shall outlive to-morrow, but he lives dressed just as well, and misses mone of his meals. He will tell you frankly that the last of his hopes for a livelihood have perished, that he is financially a total wreck, that his present condition is one of clinging to the rocks, where he is every moment in danger of the devouring element. You are exercised deeply on his behalf, much more deeply than the man is himself. Months pass and he is still in the same condition, no better, no worse. By way of encouragement I have said, "You have managed to eat and live for this month. Just continue on in the same month. have said, "You have managed to eat and five for this mouth. Just continue on in the same manner and you will do very well." "But and five?" says he, "Of course every dog eats and lives. You would not expect me to be down and die, would you?" and he leaves you in disgust, feeling that the delicate points of an Oriental question can never penetrate the shell that encases the "bat barian" brains.

The fact that tradesmen and husiness people are regarded as low encourages the Korean gentleman to neglect thought and training in this line. He is a varitable child in business. Many line. He is a writishle child in business. Many a foreigner entrusts his affairs to his native teacher and then wonders why they should turn out so unsatisfactory at the hands of a native of the country. It is explained on the ground that a man may be a foreignes and yet be incapable of taking command of a foreign ship. If business must be done, an honest "boy" will quite outdo in executive skild the best and most houest scholar.

Not only in business relations, but in other matters of life the Korean gentleman is a master

of inacuracy. He pretends to be absolutely certain of everything under the sun, and no object ever daunts him, or is beyond his ability to elucidate. The slightest clue gives him a key to the whole. Merely let him see the smoke from the funnel, and the will explain to you the why and wherefore of a steam-engine. He will tell you what a comet's tail is composed of, or what color the dog is that causes the eclipse of the moon. He compares the minor details of life about him with what went on in the days of king San (2255 B. C.) with as much certainty as we would talk of yesterday. The barbarian from the west begins to think what a marvel for information the man is, and what a fund of accurate knowledge for him to acquire, and he a heathen too. It is only when you put his statements to the test that you find he is wrong in everything. By the carest accident he may be eight occasionally but it is the exception and is purely accidental. He has no intention of decrivpurery accidental. He has no intention of deceiv-ing your. The defect lies in the fact that there is something radically wrong in his manner of rea-soning; his premises and conclusions are strangely and of harmony.

ant of naturary.

He has a profound contempt for woman, speaking of her generally as Ke-chip, or female. He takes for wife the one his father bargeins for him, raising on question as to ther looks, health, or avoirdupois. She is a subject altogether becauth bis consideration, as a member of the male sex, with its massive understanding. She is relegated to the inner enclosure, and lives a sectuded life. He refers to her as kosiki (what you-may-call-her) or ken (she) and never loses an occupies in his extensive operations. If the truth were told, however, we would know that the little woman, with delicately tinted skirts, within that woman, who dentately times surely with that enclosure, is by no means the cyplic he pretends her to be, that she is really master, commander, and skipper of the entire institution, and that no man was ever more thoroughly under petticoat government than the same Korean gentleman.

His prime object is to have a son who will sacrifice to his shades, when he is dead and gone. The boy is expected to obey his father implicitly. If he but develop this trait, he may grow up to be quite as useless or more so than his sire and yet be a model son. If no son is born to him, he adopts a model son. If no son is born to nim, ne acopts a nephew or near relative, as the best substitute under the circumstance, but the stranger never wholly takes the place of the real son, who is regarded, in this life, as his strong right arm and, in the life to come, as his eternal satisfaction. In order to make sure of this eternal life through

pasterity, the gentleman matries his son off when he is still a mere boy, sometimes but nine or ten years of age. Child marriage in one of the old years of age. and respected customs of Korea, and the reason it is not more common is the fact that it requires an outlay of money that parents are not always willing or able to make, and so the lad is sometimes left unmarried until he can provide for him-

self.
The serious question in the life of a Korean gentleman is the service of his ancestors' strades. His life is marked by periods of mourning, three His life is marked by periods of monoring, three years for parents, and lesser periods for those more distant. A succession of fasting and leasting, requiring forms of dress, and outlays of money, consumes more of his time and means than the service of the living. But to neglect these forms would degrade him to the level of a Mohammedan who had renounced his faith.

Molammedan who had resonanced his faith.

We have glimpses occasionally of the gentleman's ability as he shares in the games of the outer guest-chamber. Chess, and patok, a kind of draughts, he plays frequently. A half hom's teaching will show him the moves on a foreign chess board, and a very respectable player he becomes from the outer. His best work is seen in the leismely development of the game. I have seen excellent players who had no gitt whateves for the solving of a problem. When one attempt failed, he would give it up and say, "It can't be done." This again proves the jellyfish in his mature, his condition being passive, not active. Anything like a determined effort he is as entirely incapable of performing as the mollusk is incapable of performing the feats of the shark or swordfish. Were we to choose one common saying from the language that enters more largely into the life and character of a Korean gentleman than anything else it would be Hal su spita—There is no help for it, or It can't be done.

A marked characteristic of the Korean gentleman and his home is smire respectability. There is franktees and freedom in specific his to be seen in facilities and characteristic of the Korean gentleman in the property of the control of the c

A marked characteristic of the assistant man and his home is entire respectability. There man and his home is entire respectability. ness, and few conditions exist that would in an way offend in the best-ordered western homselpid Strange to say, even in a home where there are a number of concubiner, propriety and good order

I once made a journey in company with a strict Customs Port likin duty.

and devout Korean Confucianist. He had heard much of Christ and Christianity, and while he assented to and rejoiced in whatever of Il agreed with his ancient faith he remained a Confucianist with his ancient faith he remained a Confucianist firm as ever. We took ship from one of the eastern ports, and started for Japan. He had heard of the adoption of western life and customs in the Smirise Kingdom and was desirous to see something of the benefits it would confely upon a race. The first sight that met him was tee depraying of the women. "Selling themselves," says he, "in the eyes of the public and for copper money too." A year's residence confirmed him in the belief that what he had seen was not an exception. A year's residence confirmed him in the belief that what he had seen was not an exception, but a natural trait. "Where women are so deprayed, the men must be equally so, They know nothing of Canfucius and no fear of God is before their eyas. Western civilization only tends to encourage such deprayity." He lived as in a kind of nightmare, horror-stricken by sights that he had never dreamed of in his isolated kingdom. He saw two drunken English and American sailors, and the so-called "respectables," whose life was merely pleasune-seeking. "Your Christ," says he, "has but a meagre hold upon you after all." He had put off his Korean dress, and laid aside his top-knot, but his heart remained still faithful to the gaments of his ancient faith. The more he saw of tife abroad, the more he sighed for his straw thatch and mud but, where modesty and with some degree of regard for the teachings of the ancient sages.

So he passes from us, one of the last and most ancient sages.

ancient sages. So he passes from us, one of the last and most unique remains of a civilization that has lived its day. His composure, his mastery of self, his moderation, his kindliness, his scholarly attainments, his dignity, his absolute good-for-nothingness, or (better) unfitness for the world he lives in, all combine to make him a mystery of humanity that you cannot but feel kindly toward, and intensely interested in.—Jas. S. Gall in the Korean Repository.

(PROM THE "JAPAN TIMES.")

CHINESE LOAN CONCLUDED. OPENING OF WATERWAYS FIXED.

London, Feb. 24

The Chinese internal waterways will be opened in June. China has concluded a loan for sixteen millions at 4½ per cent, with the Hongkong and Shanghai Bank and the German Asiatic Bank.

THE ANGLO-FRENCH COMPLICA-TION IN WEST AFRICA.

OFFICIAL DISAVOWAL.

M. Hanotaux, the French Minister for Foreign Affairs, has informed Sir Edmund Monson, the British Ambas-sador, that the Sokoto incident is against the wishes and instructions of the French Government.

ANOTHER FRENCH OFFICIAL ASSURANCE. MR. CHAMBERLAIN'S DETERMINED ATTITUDE.

London, Feb. 26. In the House of Lords, Lord Salisbury stated that M. Hanotaux had since informed Sir Edmund Monson positively that no French force has entered Sokoto.

In the House of Commons, a motion by Mr. Labouchere to reduce the vote for the West Africa frontier force, which was a provocation to France, was rejected. Mr. Chamberlain said if the French hinterland extension were allowed to continue, without a corresponding British expansion, the latter's colonies would be strangled, hence the creation of a frontier force. Britain was anxious to maintain friendship with France, but could not allow her interests to be sacrificed.

THE CHINESE LOAN. "LIKIN" DUBS MORTGAGED. London, Feb. 25.

The guarantee for the Chinese loan includes the unpledged portion of the

#### HEAVY SENTENCE ON EMILE ZOLA EXCITEMENT IN PARIS.

Emile Zola has been condemned to a year's imprisonment and 3,000 francs fine. The sentence is the severest the law permits. It was hailed with frantic enthusiasm in Paris. The audience in Court was allowed during the trial to cheer and hoot unrestrained.

#### TRIUMPH OF MILITARISM.

The London press is unanimous that the sentence on Zola means the triumph of the military over the civil power.

# THE "MAINE" EXPLOSION.

EXCITEMENT ON NEW YORK EXCHANGE. Almost a panic prevails on the New York Stock Market owing to strong rumours that inquiry is proving that the explosion on the Maine was not accidental.

# RUSSIA'S POLICY IN CHINA.

HER PORTS OPEN TO COMMERCE.

Mr. Curzon, Under Secretay of State for Foreign Affairs, read a note in the House of Commons from M. Muravieff declaring that any port occupied by Russia in China would be open to the ships and commerce of the world,

## GREEK LOAN CONCLUDED. INTERNATIONAL GUARANTEE.

The Greek Loan negotiations have been concluded, Great Britain, France, and Russia guaranteeing four millions at three per cent. The remainder to be borrowed at higher interest without foreign guarantee.

#### DETERMINED ATTEMPT TO ASSASSINATE

KING GEORGE OF GREECE.

NINE SHOTS FIRED.

EXCITEMENT AND ENTHUSIASM AT . ATHENS.

London, Feb. 28. While the King of Greece was driving in the outskirts of Athens with his daughter he was assailed by two men armed with rifles. Nine shots were fired, and an attendant was wounded, but the King was untouched. His Majesty displayed great courage and sought only to shield the princess. All parties deplore the attempt. Thousands of persons gathered in front of the palace in the evening giving vent to ovations. On Sunday there was a Te Deum in the Cathedral. Immense crowds large majority. lined the route and acclaimed their Ma-The assailants escaped, and have not been traced.

#### ASSAILANT ARRESTED.

London, March 1. A man named Karditza, employed by the Athens municipality, has been arrested. He admits firing at the King, and regrets the failure of his attempt.

# PARLIAMENTARY BY-ELECTION.

Lord Edmond Fitzmaurice has been elected member of Parliament for Cricklade, in the Liberal interest.

# THE BRITISH ARMY.

LARGE INCREASE DEMANDED.

Mr. Brodrick, M.P., Parliamentary Secretary to the War Office, in submitting the Army Estimates, asked for 180,513 men, the largest number in the present century. He proceeded to rebut the charges that the Army was in a state of collapse. He showed by figures that after full army corps besides reserves, but the of Kim Heung-yuk.

artillery was deficient, hence the demand LIQUIDATION OF THE INDEMNITY AND to increase it.

#### THE FAR EASTERN SITUATION. FRANCE WILL MAKE NO SEIZURE.

M. Hanotaux has informed Sir Edmond Monson that France has not the slightest intention to imitate Germany and seize a naval base in China.

#### RISING IN BRITISH WEST AFRICA. DESPATCH OF TROOPS.

Reuter's Agent at Freetown wires that a general rising has occurred in the Sierra Leone hinterland. Officers of the frontier police have been attacked. A detachment of the West India regiment has been despatched to the interior.

#### THE "VICTORIOUS" COURT-MARTIAL.

#### OFFICERS REPRIMANDED.

The Court-martial appointed to inquire into the grounding of the Victorious has reprimanded the Commander severely and staff.

# CRICKET IN AUSTRALIA.

London, March 1. In the final test match between Stoddart's team and an Australian eleven at Sydney, the Englishmen were all out for 335 runs and the Australians made 184 for five wickets.

# LORD SALISBURY INDISPOSED.

London, March 2. Lord Salisbury is confined to his room with an attack of influenza.

#### THE SOUDAN CAMPAIGN.

BRITISH TROOPS NEARING BERBER.

The British Nile brigade is advancing rapidly southward in light marching order, and is already within 24 miles of Berber. This movement is owing to the threatened attack on the camp at Athara.

#### CRICKET IN AUSTRALIA.

In the last match at Sydney between the Australians and Stoddart's team, the former were all out for 239 in the first innings, and the Englishmen made 172 for nine wickets in the second innings, BRITISH ARMY INCREASE VOTED.

The House of Commons has passed the increased votes for more men and higher pay of the Army, Mr. Labouchere's motion to reduce the vote being rejected by a

# THE FIRE AT KOBE.

LOSS OVER \$500,000.

(FROM OUR OWN CORRESPONDENT.)

Kobe, March 3, 8.40 a.m. An extensive fire broke out in the sheds of the Kobe Pier Co.'s sheds, at one o'clock this morning. The estimated damage to the goods-principally cotton-exceeds a hundred thousand yen.

Kobe, March 3, 6.39 p.m. From fuller investigations it is estimated the damage from the fire is half million yen in cargo only. Owing to the impossibility of discovering the extent of individual losses the Insurance Companies are convening a meeting.

# (Received by the Fift)

ARREST OF YE CHAI-SUN.

Söul, Feb. 23. Ye Chai-sun was arrested at 3 p.m. toof a big war, they would still have another plicated in the plot for the assassination THE RUSSIAN WARSHIPS IN PORT ARTHUR

Peking, Feb. 26.

It is stated in trustworthy quarters that in the event of the Russian warships not evacuating Port Arthur when China pays off her Indemnity to Japan, and the latter withdraws her garrison from Wei-hai-wei in consequence, Great Britain seems in-clined to occupy Wei-hai-wei.

THE CHINESE LOAN.

Peking, Feb. 16. The Chinese Government is negotiating with the Shanghai and Hongkong Bank for a loan of 100 million taels.

Peking, March 1.
The negotiations for the Chinese Government with the Hongkong and Shanghai Bank for a loan have been concluded.

PRICE OF ISSUE.

Arrangements for issuing the English half of the Chinese loan have been completed at the price of 90, and a percentage of 41.

#### RUSSIA AND DEER ISLAND.

Söul, Feb. 27. Last evening Min Chhong-muk, acting Foreign Minister, gave a reply to the Russian Minister to the effect that the lease of Deer island will be granted to Russia.

Chemulpo, Feb. 26. The Russian warship Gremiastchy and the American warship Concord entered here to-day.

# RUSSO-KOREAN BANK.

Soul, March I.

The Russo-Korean Bank started business to-day.

THE CHIEF INSPECTORSHIP OF POLICE.

Söul, Feb. 28.

Mr. Ye Chungku, Chief Inspector of Police, has been removed from his post on account of the arrest of Mr. Ye Chaisun. Mr. Kim Chaipong was last night appointed in his place,

THE VICE-MINISTRY OF HOME AFFAIRS. Mr. Kim Changha, Director of the Provincial Bureau, has been appointed Vice-Minister of Home Affairs.

# KOREAN CABINET CHANGES.

Soul, March 2. Min Chhongmuk, Minister of Finance and acting Foreign Minister, and Ye Dochai, Foreign Minister, have been relieved from office at their own request.

# THE BIG FIRE AT KOBE.

Kobe, March 3. Last night fire broke out in a warehouse of the Kobe Pier Company. 9,000 bales of Bom-day and American cotton, 1,000 packages of miscellaneous goods, and four buildings covering 1,100 fsubo were reduced to ashes. The total damage is estimated at about yen 1,000,000, of which yen 7,00,000 are from the loss of cotton.

Osaka, March 3. The fire that broke out in Kohe Pier godowns at 1.20 a.m. this morning caused a heavy lose of raw cotton. 6.500 bales brought by the steamer Idsumi Maru on the rat inst belonged steamer Idsumi Maru on the 1st inst belonged to the Menka kaisha, Mitsui Bussan Kausha, David Harper & Co., Naigai Menkaisha, Nichiin Boyeki Kaisha, and others. 500 bales of American cotton and 1,500 bales Bombay cotton also belonged to the above companies, their value being yen 300,000. The cotton belonging to the Mitsui Bussan Kaisha is insured in the Tokyo Marine Insurance Company, and that of the Nichila Kaisha in the collapse. He showed by figures that after Ye Chai-sun was arrested at 3 p.m. tothe despatch of 75,000 men abroad in case day. He is believed to have been imof a hig war, they would still have another plicated in the plot for the assassination.

Other goods are said to be insured in the Nippon and other insurance companies.

The Tokyo Chess Club holds its meetings Uchi-Saiwai-cho Itchome (next to the Toky Club).

SOLUTION OF PROBLEM No. 358. BLACK \*\*HITE.

1—Ki to K B 4

2—Kt to Q 5

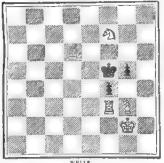

3—Kt to B 3, mate -P Queens, or Knights 2—Аоў P Bishap -Kt to R 5 2-P takes Kt 3-P to B 3, mate Correct solution received from W.B.M. only.

"Skak"-Kt to B2 is met by P Bishops

threatening stalemate.
D.D.—See our comments in last Saturday's

issue.
This problem is one of the most difficult that we have ever published, which accounts for the failure of most of our solvers. The composition would be simply perfect but for the "double" after P Knights, in which case mate can be given either by Bishop or Knight.

PROBLEM No. 361. By B. S. Laws. From Chess Players Chronicle.

White to mate in three moves.

YOROHAMA CHESS CLUB. The first cound in the Championship Tourney, concluded on Monday last, shows the following

120	Player.	Won.	Loab
1	Fox	2	3
1	Fox Mendelson*	3	2
è	Pollak*	3	0
1	Pollak*	ō	3
1	Friedlander	3	m
1	Thomas	0	3
4	Weilbach®	3	ň
į	Tennant Winners.	0	3

Messrs. Fox, Hodges, Thomas, and Tennant are therefore knocked out of the tourney, whilst the remaining four players are to meet in the second round and will be matched as follows:— Mendelson v. Pollak. | Friedlander v. Weilbach.

Some good games may be looked for in this round (which is to conclude by end of March) for the players are better matched than they were in the first round, if we are to judge from the above table.

Mr. Pollak has challenged Mr. Friedlander for mr. Poliak has challenged Mr. Priedlander for a friendly match—of 10 games up—the latter conceding to his opponent the odds of two games. The match has already begun, the score standing now Pollak 3. Friedlander 1, each of the players having scored one win. The loser of the match is to pay one year's subscription to the Y.C.C., a secretal subscription to the Y.C.C. very satisfactory arrangement as far as the Club

contestants are well known as representatives of Victoria in the telegraphic matches against New South Wales. GAMB, No. 366.

THE GREATEST WONDERS OF MODERN TIME

#### HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated Constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Barer, in his work entitled "The Nile Tribut taries in Abyssinia," says—"I ordered the dregoman Mahomete inform the Fakir that it was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many spilicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an enlover, as, possessing unmistalkable purgative properties, they create an undenlable edect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

#### HOLLOWAY'S OINTMENT

Is a certain emedy for bad legs, bad breasts, and ulcrations of all kinds. It acts miracolously in healing ulcrations, curing skin diseases, and in a rresting and subduing all inflammations, Ma. J. T. Coorse, in his account of his extraordinary travels in China, published in 1872, says—"I had with me a quantity of Holloway's Olatment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, mills, fowles, butter, and horse freed poured in upon us, until at last accepangular of the same of the sam

were committed for trial.

FIRES occurred in Ishinomaki, Sendai, and Inokama, Rikuzen, on the 8th inst., destroying 100 and 50 houses respectively.

THE Japanese cruiser Kong Kan, now at Shinagawa, is about to leave for a cruise to Australia, with 26 naval cadets on board.

Russia has made a request that she should be conceded the privilege of laying the Lianung railway terminating in Port Arthur.

THE 50th anniversary of the promulgation of the Italian Constitution was celebrated at the Italian Legation in Tokyo on the 4th instant.

A BILL for the abolition of the regulations for encouraging the direct export of raw silk is to be submitted to the furthcoming session of

It is reported that Dr. Tsuboi Jiro, of the Imperial University, who was despatched to Formosa, has discovered a cure for the black plague.

THE Department of Agriculture and Commerce has commenced the inspection of exhibits intended for the Paris International Exhibition

THE British Naval Estimates amount to £23.778,000 and provide for an increase of 6.340 men, three new battleships, four cruisers, and four sloops.

Our man was killed and several wounded in the course of the elections for the Lower House during the past week. A number of soshi have been arrested.

CHINA, investing full authority in her Minister Hu King-ching in St. Petersburg, has opened negotiations with the Russian Government as to the latter's demands.

The strike of engine-drivers and stokers on the Japan Railway Company has been settled, the company conceding the men's demands. Wages will be raised from 30 to 35 ten per day.

THE Russian Government is about to establish a Mint at Vladivostock. It is stated that the new coinage is chiefly intended for the payment of wages on the Manchurian Railway.

THE eight torpedo destroyers now in course of construction in England for the Japanese Navy are to be named after the most famous Japanese sword-smiths, such as "Masamune," 'Kanimisu," etc.

THE Daido Gakko school in the Settlement, Yokohama, devoted to the instruction of Chinese children, was opened on Wednesday. The number of scholars already admitted is said to be 100

ENGLAND, while advising China to take a firm decision, has informed her that were she to acquiesce in Russia's demands, England would make a similar demand in order to maintain the balance of power.

has been arranged to employ French steamers for the conveyance of reinforcements. 2,000 men.

accused, 12 were discharged, and one having Maru, Kaga Maru, Choshin Maru, Kyoyo died during the examination, the remaining 42 Maru, Yyumon Maru and Hiroshima Maru.

Russia had demanded the lesse of Port Arthur and Talienwan for 99 years, and insisted on a reply in 5 days. In the House of Commons, Mr. Curzon announced that the Government had telegraphed to Pekin and St. Peteraburg, enquiring about the matter.

H.I.H. Rear-Admiral Prince Arisugawa Takehito, Commander of the Standing Squadron, has been appointed to the Naval Command Bureau and a member of the Naval Council. Rear-Admiral Nomura, Commander of Yokosuka Admiralty, has succeeded the Prince in command of the Standing Squadron.

Szzious plague riots have occurred at Bombay. Mussulmans and Hindoos have stoned the plague authorities and police, who fired, killing several persons. The riots spread to an alarming extent, and troops, artillery and volunteers, were called out. Two European soldiers were battered to death, and many Europeans seriously injured.

Ar a Cabinet council held at Soul on the 9th inst. all the Ministers of State, with the exception of Min Chhun-muk, acting Foreign Minister, maintained that a reply should be forwarded to Russia, in the sense that the Russian drill-instructors, financial adviser, and others should be dismissed. Min Chhun-muk opposed this contention and avowed that the independence of Korea could not be maintained except by the help of Russia. Min Chhun-muk has submitted his resignation.

THE following dates have been fixed for the regattas on the Samida river, Tokyo:-Kinjo Middle School, 19th March; Mitsui Zenyukai, 3rd April; Imperial University, 9th April; Higher Commercial School, 10th April; High School, 11th April; Bank of Japan, 17th April; Nihon Chugaku Taiiku Kai (Japan Middle School Athletic Society), 23rd April; Nobles' School (Gakushuin), 14th April; Higher Commercial School, 1st May; and Keiwo Gijiku, 13th March off the shore of Shibaura, near Shinagawa.

The Import market during the past week resumed to a great extent the dead and duli condition that prevailed three months ago. Some little business has been doing in yarns, but not much, and in shirtings, fancy cotton, and wool-lensthere is nothing to report. There has been a fair demand for raw cotton for the spinning mills, and in view of the destruction of this stock in the fire at the Kobe Pier Godowns, prices are on the rise. Metals generally are very flat, but there has been, according to Japanese papers, quite a rush on foreign nails, several large purchases having been made on behalf of a Tokyo buyers, from foreign firms in Yokohama. The kerosene market is quiet, at steady rates, and in sugar only a small business from day to day has been transacted. The import of large shipments of rice from Bangkok, Rangoon and Saigon continue, and the grain appears to be meeting with increased favour among consumers in the interior. Russia continues hurrying troops to the Far In exports the only item of importance is silk, East. Her own cruisers being insufficient, it and in this staple the transactions during the past week have been very moderate. Holders are not willing to make any concessions in first of these will leave shortly with a force of view of the small stock in hand, and as this is of inferior quality for the most part, buyers are wrecked on the Hachijo Islands on the 10 n Since the beginning of this year the following Japanese steamers have either been stranded.

The preliminary inquiry in the Kobe Customs or in collision—the Ariiseura Maru, Eikaku scandal concluded on the 7th instant. Of 55 Maru, Kosaki Maru, Kamogawa Maru, Meiji and the market is practically closed.

Original from

The Nichi Nichi Shimbun writes about the recent strike on the part of the Japan Railway Company's operatives at Utsunomiya and elsewhere. Naturally our contemporary insists on the difference between the employes of a simple commercial and industrial enterprise, the prosecution or interruption of which concerns only a few capitalists, and the employer of a railway which constitutes a public vehicle of communications and acts = a carrier of the nation's mails. Happily the recent strike did not prove a protracted affair, so that no very serious inhave been much larger, and, at any rate, the fact of its occurrence is unpleasantly suggestive. Without attempting to discuss the rights or wrongs of the question at issue between the Japan Railway Company and its servants, the Nichi Nichi impresses upon both the gravity of their responsibilities, and upon the Authorities the advisability of providing by legislation means of dealing with such emergencies. In 1885, a law was enacted imposing severe penalties upon sailors who should combine for mutinous purposes, or refuse to obey duly constituted authority, or desert their ship. But there is no corresponding law for the restraint of railway, post-office, telegraph and telephone employes. That is a plain defect. It is not to be understood, of course, that in pointing out the need of such a law the Nichi Nichi implies the existence of fault on the side of the employes only. There is no question of passing judgment on either party. Our contemporary claims that it simply calls attention to a legislative lacuna which ought to be speedily reme-died in view of Japan's greatly altered and rapidly altering circumstances.

The Jiji Shimpo discusses the same subject and is evidently inclined to lay the blame chiefly on the railway officials. It recalls the fact that the inauguration of the Japanese Railway Company was not a mere affair of money-making. Sixteen years-ago people's minda had not yet turned to railways as a lucrative enterprise, and it was only through the great influence of Prince Iwakura that capitalists were induced to embark in the affair. They took the step reductantly, believing that they might as well throw their money into a mud-heap, and without a large measure of State aid and official persuasion the project would never have matured. Hence the Japan Railway may be regarded in the main as an official enterprise, and in the administration of its affairs and the conduct of its business one may detect many of the abuses incidental to all such undertakings when the Government is connected with them. As an example of the looseness that disfigures the management, reference may be made to the defalcation that occurred some months ago. A sum of some twenty thousand yen was involved, and the frauds had extended over a long interval, yet discovery resulted only from the voluntary con-The fact is that fession of the guilty parties. the officials of the line are still infected with the evil custom of former times. They think that their chief duty is to run about currying favour with the big shareholders instead of attending to the business of the line. If they reflected that times have changed radically; that the abares have passed from the hands of men who invested through public-spirited motives into the bands of men who want good profits before everything; and that the company has come to possess nearly a thousand miles of lines, and to be answerable for the discharge of all the public responsibilities connected with such a charge, they would probably see the wisdom of altering their methods. It is indubitable that the recent strike was long pending, and that the Railway officials had full cognisance of the fact. They ought to have been well able to avert it, for their ultimate action shows that they were prepared to make satisfactory concessions.

SPIRIT OF THE VERNACULAR PRESS. Strikes are regarded by our contemporary as one of the concomitants of Western civilization. the tendency of which is to accentuate inequalities in the distribution of wealth and widen the gulf between the rich and the poor. Socialism is the inevitable outcome of such condi-There are as yet no strong evidences of socialistic impulse in Japan, but in truth the O do-monarchical system—of former times embodied the best principles of socialism, and was in marked contrast to the ha-do-sway of the strong-which is the essence of Western civilization, owing to the absorbing pursuit of self-aggrandisement and money-making. To what our contemporary's reflections tend for practical purposes it is not easy to discover, but the Nippon's general idea seems to be that men's attention should be directed to these problems before they develop dimensions that dely solution. Passing from the realm of theory, our contemporary prefers sweeping charges against the Government for leaving the nation entirely without laws adapted to these new conditions, and for such displays of incompetence and corruption as totally disqualify it to be entrusted with the charge of enterprises which, in consideration of the relation they bear to public convenience and the discharge of public business, are elsewhere regarded my pro-perly falling under State control. The Nippon hinks that among the most serious dangers of the time a foremost place must be given to railways run solely in the money-making interests of selfish companies, and that to institute a proper system of official supervision is an imperative duty.

> The Mainichi Shimbun continues to insist upon its familiar argument that Japan's policy should have for its main objects the development of her material resources, the avoidance of all entangling alliances and the rendering of such assistance to Chine as shall lead her into the path of progress. Our contemporary thinks that the first chapter in the history of the Far-Eastern problem has now been closed. The fierce monsters that threatened to rend China into pieces have disagreed between themselves, and paused out of mutual jealousy. They now stand in an attitude of readiness, Russia on the north, France on the south, and England in the Yangtze Valley. In view of Russian menaces, England sees no help except to court an alliance with Japan. Japan must remember that such alliance would array the other Powers against her. Equally if she joined hands with Russia she would alienate England's friendship. Her course, then, is to stand neutral and prepare vigorously for the opening of the second chapter of the problem's history, an event that can not be very far distant. In the meanwhile she should space no effort to contribute to the safety of China, her neighbour, her relative, the parent of her civilization. China's plight in miserable at present, but she has immense resources and an enormous population of industrious, intelligent people. If she only emerges from her conservative groove, she can not fail to become strong. It should be Japan's sim to bring about that end. Our contemporary's article-signed " Abe Toyo "-abounds in generalities but is entirely devoid of practical details.

The closing of the first phase of the Far-Eastern question is discussed by the Kokumin Each of the Great Powers concerned, according to our contemporary's view, has gained something. Germany is established at Kiao-chou; Russia has obtained a footing at Port Arthur, and England has not only announced apolicy that does high credit to her states manship. and hermorality, but has also secured its recognition by Russia, Germany and France. Kokumin refers at some length to the declarations made by British publicists, and says that the sentiment of the nation is evidently quanimous. It does indeed appear that England received a "set back" in connexion with the opening of

min's analysis: it is merely a recapitulation of the statements forwarded by the telegraph with reference to the outcome of the negotiations between the Governments in Peking and in London. But we may call attention to our con-temporary's conclusion that England having obtained from Russia a promise to respect the integrity of Korea, and from all the Powers a virtual engagement that they will not attempt to seek any exclusive advantages in China, owes it to her prestige to see that these pledges are fulfilled.

Now that there is a tolerably certain prospect of China's paying off the remaining portion of the Indemnity in May, the Shogyo Shimpo urges the advisability of following Germany's example, as recommended by Bismarck; namely, laying the money aside to serve as a fund for belligerent purposes should the occasion arise. The facts connected with the storing of a moiety of the French Indemnity at Spandau to form a War fund are related by our contemporary, and the impossibility of using national armaments to advantage, however strong they be, unless funds are available, is insisted on. it have fared with Japan when hostilities commenced with her neighbour had she not happened to possess a surplus of some forty million yen in the Treasury? It is not for the purpose of making war that she expands her armaments: it is for the purpose of preserving peace. From the moment that a country is known to be thoroughly well prepared to fight, the disposition of other States to defy it sinks to zero. But a country is not prepared unless it can lay its hands on a sufficient supply of funda at a moment's notice. Failing that ability, a nation's armaments are valueless and its tranquillity may be disturbed almost with impunity. The very wisest policy that Japan could now pursue would be to store away the gold she is about to receive from China and keep it resolutely intact to serve as a war fund.

Now that the larger excitement connected with China's fate has temporarily subsided, attention is once more directed to kussis's doings in Korea. The Tokyo Asahi is very emphatic on this subject. There ought to be no difficulty, it says, in determining the mesa-Prince Lebanow is dead but Marquis Yamagata remains, and the Minister who was at the head of the Japanese administration at the time of the Convention's signature, is again in power. Can Russia's proceedings in the peninsula be reconciled with any reasonable interpretation of the document? She interferen almost without a semblance of reserve in the domestic affairs of the little empire. At her fiat the Emperor's Ministers are dismissed or appointed. Her officers and noncommissioned officers direct the country's military affairs. One of her subjects controls its finance, having obtained that power by ousting an Englishman on whose behalf Great Britain made a fruitless naval demonstration. She has preferred extravagant demands for concessions of land in the newly opened settlements, and she insists upon receiving a large area for a coal depôt on Peer Island, opposite the Japanese Settlement of Fusan, careless of the fact that her application can not be granted without impairing Japan's already acquired rights. In short she is acting without the slightest regard either for Korea's independence or for the interests of England, Japan, and the United States. She ought to be attenuously reminded of the Lobanow-Yamagata Convention, and the representation of the three States flouted by her should combine to restrain her arbitrariness.

The Hiogo News announces that the German steamer 2 rilos, on her way to Kobe in charge of an unlicensed pilot, ran down a junk in Shimonoseki Straits, and then went ashore hear to Dancoura Lighthouse at the eastern entrance. This strike furnishes a topic for a very long dissertation in the columns of the Nispon.

#### THE SILVER YEN.

It is a matter of surprise that the Government does not adopt a more resolute policy with regard to the exchange of silver yen coins. Whether any real responsibility ever devolved upon Japan to redeem all these coins with gold, is a question open to discussion. Certainly the holders of silver yen in Hongkong, Singapore yen coins hitherto presented for exchange and so on, never had the least thought has been trifling. By far the greater about redemption when they began to use the coins as tokens of exchange. They took them simply as discs of silver, the weight and standard of which could be certainly trusted not to vary beyond yen in China and the Straits will find its narrow limits. There was no more idea about the gold value of the yen than there was about the gold value of the Mexican dollar. It might be contended, with considerable show of plausibility, that although the Japanese Government was bound to like the silver yen tends to check the exchange any silver yen found within its growth of the world's faith in the stability exchange any silver yen found within its own horders, since the coin would cease to be legal tender under the new gold desirable to eliminate such elements as system, it was not bound to do anything of the kind with regard to silver yen cir-culating outside Japan in lieu of Mexican dollars and on precisely the same footing as Mexican dollars. Coins belonging to the latter category might be left to perform currency functions in foreign markets. Their intrinsic value to their holders would have remained precisely the same as the intrinsic value of the dollars they had replaced. In Singapore, for example, great inconvenience is now felt owing to the withdrawal of the silver yen from circulation and the resulting insufficiency of tokens of exchange. A few enterprising persons have doubtless benefited by collecting the yen and sending them to be changed in Japan at the ratio ruling in them. this country; but had no such operations been undertaken, Singapore would have remained in exactly the same financial of the subsidiary currency which, it is position as ever. It had no right to look for said, has been inconveniently inflated by anything in the silver yen except a fixed weight of silver of a stated fineness, and that right would not have been disturbed by the demonetization of the yen in Japan. One argument in the opposite sense may, indeed, be based on the fact that the circulating area of the year is diminished when it ceases to be legal tender in Japan, and that the conditions under which it was originally issued having thus been arbitrarily changed, its issuers have incurred the responsibility of withdrawing it. But it will not, we think, be seriously contended that the demonetization of the yen coin in Japan would have impaired its efficiency for currency purposes in China and the Straits Settlements. If Mexico were to adopt the gold standard to-morrow, would she be expected to exchange all the dollars that circulate in the Far East bearing her The latter figure seems scarcely credible. "image and superscription"? Certainly London advices put the rate at 90, less Orient is quite independent of their mone- sum required for the service of the debt tary quality in Mexico. Had the gold will be £840,000 annually, namely, price of silver remained where it was £720,000 interest and £120,000 sinking when the Japanese ratio was fixed, not fund, the time of redemption being 45 one yen coin would have been shipped to years. At the present low price of silver, Japan for exchange. Some might have China will receive \$986, approximately, returned in the ordinary routine of busi-ness, but none would have been sent in out of the account, so that what she loses to buy gold. That consideration is almost by the selling rate she recovers, in part, conclusive. Japan undertook no respon- by the appreciation of gold.

within her borders, when she decided to cease using the coins herself. Arguments of that kind might, we think, be advanced with much show of reason, and though their validity may be variously estimated, they certainly tend to prove that Japan is entitled to treat the problem of exchange it exists in Europe, there are still some more heroically than she seems disposed to treat it. It is true that the quantity of part of the gold demanded from the banks has been in exchange for notes. But if with a thick envelope of unemotional gold continues to appreciate, or even if it remains at its present point, every silver way back to Japan. Possibly there are not many yen to come back under any But that is a matter of circumstances. conjecture, and the point is that the existence of a conjectural, uncertain element of Japan's new monetary system. It is speedily as possible. Had the Diet continued in session, a bill for shortening the period of the yen's exchangeability would have been presented, and we really fail to see why the Government does not act independently since the Diet's cooperation can not be obtained before May at soonest. An objection has been raised in the sense that, with gold at its present price, an announcement shortening the redemption period would have the effect of drawing a flood of silver yen to Japan. Such an apprehension seems to us quite baseless. If the rate of exchange does not bring the yen coins to Japan, no announcement as to the time of exchangeability will have influence in attracting

There is a good deal of vernacular journalistic talk just now about the volume large coinage operations-30 million yen is the sum named. That, of course, is an altogether independent question, but our readers doubtless remember that part of the official programme at the time of the adoption of the gold standard was to utilize from 40 to 60 million yen of the stock of silver for purposes of subsidiary coinage. No one at that time predicted that such an issue would saturate the market, and there is a strong probability that the inconvenience now complained of is more imaginary than real."

#### THE CHINESE LOAN.

Conflicting accounts have been received with regard to the rate of issue of the new Chinese loan. The first statement from Peking was 90, and the second 83. Their usefulness as currency in the 2 per cent. commission, and say that the

#### BENEATH THE SURFACE.

We have had occasion to remark, from time to time, that while in the majority of traits humanity as it is found in Japan differs nothing from humanity as points of marked dissimilarity. Among these perhaps the most striking is the extraordinary thoroughness of the Japanese when he resorts to physical violence. His nervous system seems to be overlaid calm and suave self-possession, but let excitement be sufficiently keen to cut through this rind of restraint, and a kernal of the hardest nature is reached; a kernel which, under the strokes of agitation, emits not solitary sparks but a continuous flame of destructive fury. It results that while many of the cruelties that disfigure domestic intercourse and the social struggle in the Occident are almost unknown in this country, we hear occasionally of crimes so unrelenting, so wholesale, that they attest a fury bordering on in-sanity. Such a case is the massacre recently reported from a hamlet in Shizuoka. A youth of twenty-one, arming himself with a knife and a hatchet, slaughtered his sister-in-law together with her six children-ranging from a tiny girl of two to a lad of thirteen-for no profounder reason than that his dissolute habits had been rebuked by her husband. Not many instances of thoroughness so appalling have come under our notice, but the difference is one of degree only. Frequently the criminal records of Japan show us demented beings whose thirst for blood, though not entailing such awful results as those reported from Shizuoka, seems to be slaked only by want of further opportunity. Of course these extensive crimes are not peculiar to Japan : they are common enough in the West also. But it appears to us that there is a dif-ference of quality. We hear of jealous husbands killing their unfaithful wives and children in England, or of parents who, rendered desperate by poverty privation, make away with their families. But the cause seems to be in more reasonable proportion to the effect : the strain that breaks down moral resistance is more palpable and more appreciable. dangerous to theorize on such subjects. We may be told, for example, that the delirium of wanton destruction finds nowhere such conspicuous display as in the revolver-practice of an American rough. That, however, is an outcome of special circumstances, and, moreover, has to be classed as a peculiarity of the communities it disfigures. What we are disposed to think about the Japanese is that, while generally remarkable for selfrestraint, he allows himself to be driven over the border by motives which would have no such potency in the case of an Occidental, and that, having once stepped across, he displays a singular and shocking thoroughness of phrensy. The principle of vicarious revenge illustrated by the Shizuoka murder is probably a legacy from feudal times when the taint of treason was supposed to extend to the whole kith and kin of a traitor, and when children inherited the consequences of a parent's crime. But the desperate massibility with regard to the sterling value same reason, the sum paid to Japan, 721 siveness of the deed, so entirely out of of the silver in her yen coins when she million taels, will not represent as many proportion to the ostensible motive, points siveness of the deed, so entirely out of issued them from her Mint, and she did yen as would have been its equivalent to a moral trait which we are disposed to not incur any such responsibility, except had the sterling value of the dollar re-regard as essentially racial. It is a trait to her own nationals and to persons mained at about a shillings.

UNIVERSITY OF ILLINOIS AT

purposes, but it is also a trait of unpleasant suggestiveness. For one of the greatest obstacles to the consummation of murderous crime is the perperator's solicitude on his own account. If the destrucmodern furnished by tive agencies science come within reach of men wholly indifferent to the danger of manipulating them and to the dimensions of their destructiveness, society can not rest as calmly as it does at present.

#### " RUSSIA'S DOINGS."

In an article under the above heading, the Mainichi Shimbun concludes that though England seemed so quiet at the commencement of the recent complications in the Far East, she has emerged at the end with far the largest gains to her credit. These gains are catalogued by the Mainichi as (1) the public assertion and recognition of her claim to have a controlling voice in the destiny of the Yangtsze Valley; (2) a concession that China's inland waters shall be opened to foreign steamers; (3) an engagement that certain new ports shall be opened; (4) permission that the Burmah Railway may be extended into Yunnau; (5) an engagement from Germany and Russia to open to general trade any port obtained by them in China; (6) Germany's actual opening of Kiao-chou; (7) France's disavowal to England of any aggressive purposes against China; and (8) that England and Germany have obtained the That is a formidable catalogue, new loan. but it includes at least one incorrect item, namely, the extension of the Burmah Railway. Germany, the Mainichi thinks, stands next to England on the list of gainers. She obtained everything for which she asked China; she has a lease of Kiao-chou, and she shares with England the new loan. Russia has fared worst. When all is said and done, it appears that she has simply received the use of Port Arthur for a winter station, from which she will be expected to withdraw in the spring, and, per contra, Kiao-chou, where she was supposed to have acquired certain permanent privileges, has passed into Germany's hands. These, it must be understood, are the views of the Mainichi Shim-bun. We offer no comment.

# A DOMESTIC CELEBRATION.

Mr. and Mrs. R. Masujima entertained a large party of friends-some two hundred-, on the afternoon of the 6th inst., to celebrate their little daughter's first arrival at the Sekku festival, which constitutes such an important epoch in the lives of Japanese children. Everybody having any acquaintance with the manners and customs of Japan, has heard of the "Girls' Fête" on the 3rd of the third month and the "Boys" on the 5th of the fifth month. The observances special to those occasions have been so often described that we need not allude to them here in detail. They were seen to great advantage in the spacious garden of Mr. Masujima's residence at Sakurada-machi, in the Azabu suburb of Tokyo, and were thoroughly enjoyed by the guests, both Japanese and foreign, though the little lady on whose account so much rejoicing took place and so many congratulations were offered, remained wrapped in the

#### " SCOTUS" AND " CALIBAN."

"Scotus" has been accorded two columns by a Kobe contemporary for the purpose of "sizing up" the Japan Mail and its methods. An old adversary is "Scotus;" an adversary with whom we have broken many a lance in not unfriendly tilt, for he keeps his temper and hits fairly. Reading his latest lengthy analysis of ourselves, we find much in the way of generalisation which, of course, must be left unnoticed, for a discussion based on generalities is in truth what the Oriental proverb describes it to be, m clutching at the clouds. But "Scotus" has an explicit grievance which we desire to notice, first as a point of journalistic courtesy, and secondly because of the imposing edifice of inference that he raises upon it. The grievance is that we deferred for a whole week the publication of his letter discussing an article which had appeared in the Mail; the inference, that we did so with malice intent, our crafty purpose being to spoil the potency of his logic by placing a long interval between its sharp points and the flaws in our own armour. This infer-ence is not limited in its scope. "Scotus" accords to it a position among the Mail's "minor tactics;" charges us, in short, with making a habit of holding over unwelcome correspondence until the matter it refers to "has become blue-mouldy stale," and then, a week later, commenting on some paltry point as though it were "the whole gist of the communication." Were we not sure that "Scotus" is entirely free from the petty vanity often fatal to school-men's moral equilibrium, we should hesitate to acquaint him with the facts of this case. But on the whole he will probably be more amused than piqued when we assure him that the editor's connexion with his letter was limited to writing in the margin proof to author." The letter having been forwarded from the Japan Mail office to the editor in manuscript, according to usage, and being a little difficult to decipher, the customary instruction was appended that "Scotus" himself should be given an opportunity of revising the proof, and thereafter the document received not even a passing thought from the editor. As to the time of its publication, he remained absolutely unreflecting and indifferent. Reproduced by Kobe journals, it next attracted his attention, and he then took occasion to comment briefly upon the strange epithet applied by "Scotus" to the Japanese coolie-" a high smelling edition of Caliban." "Scotus," having had some experience of journalism, ought to know that a letter to a newspaper possesses in the eyes of the correspondent a much larger place than it occupies in the editor's thoughts. Whether his dissertation on coolie conduct saw the light five days sooner or five days later may seem to him a large problem, but we can assure him that it did not present itself to us in even the faintest outlines. It thus becomes apparent that our old adversary's subtle inferences about the Mail's" minor tactics" are based on an airy nothing, and we may be permitted to recall to his classical recollection the time-worn apothegm-ad tristem partem strenua est suspicio.

Concerning the "scent" of the coolie,

the language they address to ladies in the streets of Kobe." Scotus was thinking, streets of Kobe. in short, of fator ex ore rather them fator ex corpore. We don't know whether "Caliban" will accept the amende or justify it by a figurative retort. But these are in truth minor questions. What demands notice in the strictures of "Scotus" is his assertion that coolies use foul language to ladies in the streets of Kobe and that according to his own experience, the demeanour of the lower orders towards foreigners has changed from one of remarkable courtesy to one of comparative rudeness. Such evidence, being based upon individual experience, must be accepted for what it is worth. It does not tally with our own observations, but one witness is as good as another, and for the rest, we are as fully persuaded as "Scotus" can be, though our speech may not be pitched in quite so high a key as his, that Japan is in danger of losing her reputation for courtesy and that her public men would do well to give the subject serious attention. Whatever evidences the streets of Kobe and the suburbs of Yokohama may furnish, however, we still hold that the great bulk of the Japanese labouring classes are hard-working, polite, goodhumoured folk, and that any rudeness dis-played by them towards foreigners is a matter rather of education than of instinct.

It was probably inevitable that what we recently wrote on the subject of coolie rudeness and its causes should invite comment from our local contemporaries. We were not prepared, however, for exactly the kind of comments that have appeared. Thus the Kobe Chronicle accuses us of inconsistency because, on Feb. 11th, we said "there is not much to be gained, perhaps, by discussing the cause or causes of such a state of affairs," whereas on February 25th we undertook to set forth one of the causes-the principal cause, as we think. Well, if the dictates of consistency compel a journal to abstain permanently from all discussion of a subject because it has ventured at some time to express a doubt whether much could be gained by discussing it, we do not care to be consistent. Circumstances alter cases, and a very important circumstance—the receipt of information about a memorial forwarded by the Kobe residents-, which constituted the explicit reason for our second article, had occur-red in the interval. The Robe Chronicle suggests also that as the editor of the Mail speaks so confidently about the ill-treatment of Japanese coolies in former times, he must himself have been one of the offenders, and further declares that it "quite fails to see what he can be aiming unless "remembering the 'glorious at, doings' of the early days, he wishes to covertly suggest that the present genera-tion of foreigners should go and do as their predecessors did." What may be meant by "glorious doings" we do not pretend to understand. The words were not used by us though the Kobe Chronicle's method of quoting them suggests that they were. There is no mistake about our contemporary's accusations, however. It encourages its readers to believe that the editor of the Japan Mail used to maltreat the Japanese in former times, and that he recommends the foreign commuwere offered, remained wrapped in the Concerning the "scent" of the coole, blissful unconsciousness of babyhood. It is a pity that these pretty observances do epithet "a high-smelling edition of Calinot find a place in the domestic life of ban," he referred not so much to the Europe and American of the cooling that every witness of acts the conclusions that every witness of acts the conclusions that every witness of acts the cooling that every witness of acts the cooling that every witness of acts the cooling that every witness of acts the cooling that the recommends the foreign community to revert to such methods now. That is at once polite and logical. It involves the cooling that the recommends the foreign community to revert to such methods now. That is at once polite and logical. It involves the cooling that the recommends the foreign community to revert to such methods now. That is at once polite and logical. It involves the cooling that the recommends the foreign community to revert to such methods now. That is at once polite and logical. It involves the cooling that the recommends the foreign community to revert to such methods now. That

and that to explain the abuses which have produced a certain unhappy result is to advocate their practice. But there is one semblance of a sober argument in our contemporary's article. It is this:—" The important point is that the Mail inferentially admits that the lower classes are not treated with cruelty or harshness now, and yet that cases of coolie outrage upon, and molestations of, foreigners are frequent." Well, in the very article criticized by our contemporary, we wrote:-

Truly we may go a step farther, and say that by many Europeans or Americans they are still in treated. Not by the better classes, of course. in treated. Not by the better classes, of course, if we except the scarcely avoidable petulance due to ignorance of the language of the country, the demeanour of respectable foreigners towards the Japanese at present leaves little to be desired. But it is not always so with liberty-men, with the denizens of "Blood Town" and with the lower orders of foreigners generally. Their manner towards the Japanese in too often unde and offensive the manner of superior beings to infector. sive, the manner of superior beings to inferior.

If these explicit expressions formed the basis of the Kobe Chronicle's version of our views, we suggest to our contemporary the not invariably neglected precaution of reading the matter one undertakes to cri-But we are perhaps wrong in supticise. posing that the Kobe journal intended to be taken seriously. It surely can not have expected to do more than raise a laugh when it accused us of advising the renewal of abuses to which we attributed the origin of an unhappy and regrettable state of affairs. In the course of years we have been favoured with various specimens of striking ratiocination by our local contemporaries, and it is pleasant to find that the Kobe Chronicle also belongs to the group of keen reasoners. We trust that its vein may not be quickly exhausted, for the most sparkling novel- the wares that he has for sale is not less ties may be expected from a journal which admirable than his faithful appreciation argues that to diagnose the causes of a malady is to recommend their operation.

We have been favoured by the Hyogo News also with some comments, but, as they are limited to arraying against us inconsistencies for which our contemporary is alone responsible, we need not devote space to a reply. The Hyogo journal has had the fairness to quote our conflicting statements in juxtaposition, and for that most effectual method of rebutting its own charge and vindicating our consistency, we have to thank it.

#### A COURAGEOUS DETRACTOR.

Had Mr. Gustavus Detring been in Japan, or even in the Far East, an anonymous correspondent—"A Britisher" The Minister of Foreign Affairs acted—writing to the Japan Gasette, who independently, and his arbitrariness speaks of him in most agreeable terms, seems to have furnished a ground of comwould doubtless have been pleased to plaint against him, rather than the nature extend his eulogies. But Mr. Detring is of the step he took. Still we may reason in Germany. There is not one chance in ably assume that had the leasing of land a thousand of his seeing "A Britisher's" on Deer Island to Russia been acceptable letter, which is a misfortune that the in the eyes of the Cabinet, Min Changanonymous correspondent must bave muk's act would not have been challenged foreseen with regret when he penned the under whatever pretext. From that point ing the gold standard to the Chinese. The foreseen with regret when he penned the epistle. He describes Mr. Detring as of view, therefore, there appear to be grounds for inferring that Russia is not unofficial Agent of Krupp and of other producers of articles made in Germany." It is a pity that these high-sounding epithets are not more intelligible. "The ler desire to defer Far-Eastern complications until she is "good and ready" to deal with them, cares very little whether quietly submit to the financial convulcing the producers of articles and the substance of the koreans and probably Russia, apart from easiest way of silencing complaints. The ler desire to defer Far-Eastern complications until she is "good and ready" to deal with them, cares very little whether quietly submit to the financial convulcing the point ing the gold standard to the Chinese. The wide-spread suffering and injustice for wide-spread suffering that Russia is not wide-spread suffering that Russia is not which the demonetization of silver is such a person grata in Korea as she involved the demonetization of silver is such a person wide he demonetization of silver is such a person grata in Korea as she involved the demonetization of silver is such a person grata in Korea as she involved the demone claimed to be the adviser and was not, or the Koreans are sympathetic or antipahad appointed himself adviser without the Viceroy's initiative. Now Mr. Detring they don't "like," unless some third arbitrariness of the creditor classes or
enjoyed the fullest confidence of his party takes them by the hand.

Peking Authorities. To try and fail
portant affair, although it is complicated would have been incomparably worse by the fact that a part of the area involved is said to have been already set aside for use in connexion with the development of the Japanese settlement at Fusan. Possibly the concession would not have pro- we may fairly assume that he took an voked any opposition on the part of the Korean Cabinet had the members been duly consulted. But they were not consulted. The Minister of Foreign Affairs acted toms' revenue as security for China's last plaint against him, rather than the nature on Deer Island to Russia been acceptable

#### PAY OF THE CHINESE CUSTOMS EMPLOYES.

Sir Robert Hart has at length taken up the cause of the Customs staff in men, urging that the example set by the Indian Government should be followed by China. The rupee was originally worth 2s., and on that basis the salaries of the Indian Civil Service officials were fixed, so that when the rupee fell to a shilling and even less, the sterling value of their salaries was correspondingly reduced. Recognising the hardship of such a change, the Indian Government decided that, for purposes of remittance to England, the salaries of its officials should have a fixed sterling value equal to three-fourths of two shillings, or eighteen pence. Sir Robert suggests a similar concession in plan, but as his memorial has not been published in full, we can not speak with certainty. He appends figures showing the growth of the trade upon which the Customs officials collect revenue for the Chinese Government-namely, in 1866, a foreign trade of 118 million taels and an interport trade of 32 millions, returning a revenue of 82 millions; and in 1806, a foreign trade of 334 millions and an inter-port trade of 62 millions, with a revenue of 25 millions. These statistics ought to have weight with the Chinese Government.

There has been a good deal of vehement writing on the above subject-writing couched in terms which repelled sympathy, hard as the case of the Customs' employé undoubtedly was, have always said that to doubt Sir Robert Hart's recognition of the hardship was impossible, but that, on the other hand, than not to try at all. It seems to us that Sir Robert has selected his time with active part in extricating China from her recent difficulties. Moreover, the hypothecation of the remainder of the Cusloan from English and German banks, renders it imperative that the service should be maintained on its present footing of efficiency, and from that point of view Sir Robert's proposal derives additional force.

Difficulties of the above character can not fail to have the effect of recommend-

#### FARMING IN JAPAN.

The Japan Times publishes a very interesting article on the question of tenant in consideration of a yearly payment of farming in Japan. Nothing can be more important at present than to know the exact condition of the agriculturist and the land-owner in Japan, for without such folks who seriously pretend that the land-knowledge it is impossible to estimate the owners are heavily taxed. No reference knowledge it is impossible to estimate the tax-paying capacity of those classes. Our contemporary takes the case of a family consisting of five persons, three of whomthe father, mother, and one son-are capable of working in the fields; the other two being an aged parent and a young child. The farm is supposed to have an area of 21 acres, the ratio of wet-field to upland being 6 to 4, and the locality chosen is the fertile provinces of Owari, Mino, Ise, and so on. The Japan Times enters minutely into the quantity and nature of the various crops raised-the land gives two crops annually, the wet fields being drained and planted with rape after the harvesting of the rice-but we need not follow these particulars. salient points of the statement are quite sufficient. It appears, then, that the rent paid to the land-owner for wet fields-i.e. rice-fields—is 56 yen per acre, and for upland 28 yen; and that the total value of the crops raised is 294.13 yen, of which 112 yen goes to the landlord and 182.13 yen to the tenant. Our contemporary then proceeds to estimate the expenditures of such a family, and arrives at the conclusion that they aggregate 176.52 yen annually, which total includes 30 yen on account of manure. Thus there remains a margin of 5.61 yen per annum. The calculation is on the basis of 10 yen per koku for rice. Hence it is plain that if the market price of the cereal stood at a lower figure, the family could not possibly make ends meet, unless the prices of other necessaries fall correspondingly. is one point that will at once strike our readers. It is that a man, his wife, and a son who is a mere lad, are supposed to till 21 acres of land, cropping it twice in the year, as well as to discharge all the duties connected with the household. Is that possible? It certainly indicates extraordinary industry.

The rents, however, are the most remarkable feature in the account. Tenants in the provinces indicated pay £5.12 per acre for wet fields and £2.8 for uplands. Those would be fine figures in the richest European country. Let us see how they work out for purposes of taxation. The area of wet fields under cultivation in Japan is 6,869,443 acres, and the area of dry fields, 4,653,438 acres. If we put the average rent of the former at £4.10, or, say, 45 yen, and the average rent of the latter at £1.10, or, say, 15 yer—figures which ought not to be too high—the result is that the rent of all the agricultural land in Japan is 379 million yen, in round numbers. Of course the land is not all in the hands of tenants : the larger half is farmed by the proprietors thempose that difference need not be taken into consideration. What we want to refer to this ramification-brains know is the actual sum that the land is

feudalism the Government, which then tween possessed all the land in the realm, handed over permanently to the people, 35 million yen, property from which its holders now derive an income of more than ten times that sum. Yet there are is made here to the actual tillers of the soil. We speak only of the income that the land is capable of bringing to its proprietors without the least expenditure of toil or capital on their part. That income is ten times the sum derived by the State from its some-time property.

#### LATEST DISCOVERY IN MEDICINE.

Among the many startling facts recently enunciated by medical journals, not the least remarkable is that there is merycism among human beings. What on earth does "merycism" mean, the average reader will no doubt exclaim. It means simply chewing the cud. There are ruminants among our fellow-mortals. That is now beyond question. The published accounts of this curious faculty, or abuse, go to show that it is a condition generally accompanied by dyspepsia or idiocy. Children, however, may develop the habit from mere imitation, and may be cured of it either by Solomon's method or by suggestion. The latter, indeed, seems not unlikely to become the final substitute for all medicines. Professor Gates of Washington is the great exponent of the theory. Briefly stated his contention is that an individual has "power to confine his consciousness exclusively to the sensations of any selected part of the body, and by practice to send more blood to that part, thus altering therein the lym-phatic and thermic functions." If that be the case, then evidently cures can be effected by volition. But the question at once arises, how to bring about the necessary operation of the mind. Professor Gates proposes to effect that by environ-ment. Certain surroundings produce cer-tain cerebral actions, and the Washington investigator believes that it will be possible, some day, to predict with accuracy the precise mental change resulting from any given change of outward conditions. Such is his theory, reduced to the simplest terms. It will not surprise anyone inter-ested in electro-biological research to read the Professor's contention that "in proportion to the degree of the mentation every living thing gives off electric waves and other kinds of waves, and these forms of radiant energy falling upon other living clined to entertain any applications of the things at once modify their mental processes." What a field here offers for explaining things hitherto regarded as miracles. One consequence of Professor much permanent vitality, and had better Gates' theory, were it elaborated into a practical system, would be that criminal inclinations in young folks could be effec-But for our immediate purtually cured, and to go a step farther-at difference need not be taken though the Professor himself does not hitherto unconceived power might be built capable of bringing to its owners, apart up, for since the brain is nothing more sprung into existence during the past from the returns it gives to those that till than a part of the physical organism, its three years. It is further reported that it. The sum appears to be 379 million defects and deficiences must come within among the petitions for railway charters yen, out of which 35 millions are paid to reach of the new curative method equally now in the hands of the Bureau, a hundred

certain germs armed deadly poisons, or toxins, and the white blood-cells which fight to conquer the germs and preserve life. In short, we carry about with us always a family of foes ready to take advantage of every opportunity to attack and destroy us. Such an opportunity, for example, is exposure to cold or privation, or anything that lowers the vitality of the body and thus diminishes its power to resist these watching enemies. If the theory of Prof. Gates be valid, why should it not be possible to develop or multiply the white blood-cells until the poisonous germs are completely destroyed? Then we should be proof against the ravages of disease and decay. It is not wise, however, to ridicule the work of learned persons. Many years ago a witty writer conceived the idea of a race of men independent of the vulgar necessity of eating. Their stomachs being removable, they simply took them out at set hours, and hung them over the backs of their chairs until a waiter came round and filled them. Everybody laughed at the quaint, if somewhat coarse notion, but now-a-days we are confronted by the medical fact of a Swiss woman whose stomach has been entirely removed, and who, three months after the operation, isenjoying good health. Dr. Carl Schlatter of Zurich was the operator and Anna Landis the patient. A tumor involving the whole stomach was the trouble, and the doctor simply took away the stemach and joined the esophagus with the intestine. Civilization tends to deprive us of hair and of teeth, to make us web-footed, and to develop our heads to a monstrous size. A great surgeon proves that we can do without stomachs, and an eminent philosopher endeavours to demonstrate that we want mind only. The world is progressing.

# RAILWAY SPECULATION.

It is alleged by a vernacular newspaper that among the numerous companies organized after the war for the purpose of building railways, no less than a hundred and twenty find difficulty in getting in their capital, and have consequently been obliged to apply to the Railway Bureau for an extension of the periods within which, according to their charters, the work of construction must be The Authorities at the commenced. Railway Bureau, however, baving long appreciated the necessity of imposing every reasonable check upon the mania of railway enterprise by which the nation began to be afflicted in 1895, have debe relegated to the limbo of "unsound," The result will be, presumably, that these hundred-and-twenty companies will have to dissolve into their primitive elements, an issue not to be lamented, we think. of They can be very well spared out of the host of cognate undertakings that have the Government in the form nominally of with the ailments and diseases of the tax but really of rent to the original proprietors. We may state the case in another way thus:—After the abbillion of price of the ailments and diseases of the ailments and diseases of the ailments and diseases of the ailments and diseases of the ailments and diseases of the ailments are now convinced that our bodies are he were a sanguine man who should say other way thus:—After the abbillion of price of the ailments and diseases of the ailments and diseases of the ailments are now in the hands of the Bureau, a hundred with the ailments and diseases of the ailments are part of the Bureau, a hundred with the ailments and diseases of the ailments are part of the Bureau, a hundred with the ailments are part of the Bureau, a hundred with the ailments and diseases of the ailments are part of the Bureau, a hundred with the ailments and diseases of the ailments are part of the Bureau, a hundred with the ailments are part of the ailments and diseases of the ailments are part of the bureau, a hundred with the ailments are part of the ailments and diseases of the ailments are part of t

#### FOREIGN TRADES OF CHINA AND JAPAN.

In 1866 the foreign trade of China aggregated 118 million taels; in 1896, the figure was 334 millions. The ratio of figure was 334 millions. We have not increase was as I to 2.83. before us at present the figures of Japan's trade for a more remote date than 1878, but that will suffice for purposes of com-parison. It appears, then, that Japan's trade in 1878 was 58½ million yen, and in 1897 it rose to 3821 millions, the ratio of increase being as 1 to 6.54 approximately. Thus, whereas China's trade was not quite tripled in 31 years, Japan's was more than sextupled in 20 years. Reducing the totals to yen for purposes of direct com-parison, we find that China's trade in 1896 totalled 445 million yen and that Japan's trade in 1897 totalled 382 millions, omitting fractions, the difference being only 63 millions. Japan, in fact, has marched steadily up until she is now treading on China's heels, and will soon actually take the lead, unless something very unforeseen occurs. Mr. Consul Longford was the first to call attention, some five years ago, to the fact that Japan was getting within measurable reach of China in this field. But he did not venture to predict, no one ventured to predict, results such as now confront us. China's results such as now confront us. potentialities are enormous, but that the commerce actually carried on by her three hundred million inhabitants with foreign countries should have been overtaken by the commerce of Japan's forty-two millions is a fact bearing eloquent testimony to the comparative slowness of the former's development and the rapidity of the

It is worth notice that, in 1896, China collected a customs revenue of 251 million taels on a foreign commerce of 334 millions and on an interport trade of 62 millions. Hence her revenue was 61 per cent. of the trade from which it was derived. same year-1896-Japan collected 7 million yen-the exact figure is 6,904,187on a trade of 290 millions-the exact figure is 289,517,234. Thus in Japan's case the revenue was less than 21 per cent. of the trade. Had Japan's rates been the same as her neighbour's, the revenue derived by her from her customs duties would have been 184 million yen instead of 7 millions.

#### A CONTECTURE.

A correspondent writes :- " Under the Dragon Flag has interested me much. It seems to me that your criticism contains a little mixture of cause and effect. You say that the author took his ideas, etc., from journalistic accounts. I am as sure as a man can be without absolute proof that something nearly the reverse represents the truth of the case. Thus-I can have no doubt that the book was written by Stephen Hart. I have no doubt that Creelman's writing about Port Arthur was entirely based on the lies he heard from Hart at that place. Unfortunately, though I feel sure that what I say is correct, I have no absolute proofs. If I had I would take some means to make the matter I do not know whether you ever met Mr. Hart. I met him both before and charge of them, so as to introduce a better after he was imprisoned in Kobe for some months. He was a man of most plausible, well as to provide more commodious I may almost say fascinating, manners, buildings; reforms of which the local ginal from and of endoubted bablity: 30 is as communes, if left to themselves, will not ginal from UNIVERSITY OF ILLINOIS AT

know, without any of the common vices that afflict such poor creatures as myself, but with the simple determination to live in no way but 'on his wits,' and of these he had plenty. He had also a deal of imagination, and, for no reason that I could find out, a deadly hatred of the Japanese." We know nothing about Mr. Stephen Hart, but have heard a good deal. But if he be the author of "Under the Dragon Flag," he appears to be in a fair way to achieve the notoriety desirable in the interests of his publishers. On the same hypothesis we may add that he has rightly judged the Port Arthur episode to be capable of further exploitation. Mr. James Creelman manufactured out of it a first-class sensation which proved much more effective for self-advertising purposes than his marvellous account of the Pingyang fight, written before he had even visited the scene. There is a great deal to be made out of such matters when the people at whose expense the honorable profit is realized are not in a position either to exhibit the ingenuous annalists to the public in the light that their illustrious veracity deserves, or to bestow upon them the more forcible reward that patriotic gratitude would suggest.

#### TAPANESE PROVINCIAL PRISONS.

A visit was paid a few days ago by a party of foreign residents of Kobe to the Hyogo prefectural prison. Among the visitors were the editors of the Kobe Chronicle and the Hyogo News, and both journals publish detailed accounts of what was seen at the prison. There is nothing specially novel or striking in the accounts, hich are just what they ought to beplain, unvarnished narratives, setting forth the dimensions of the cells, the manner of their construction, the clothing and food of the prisoners, and so on. We food of the prisoners, and so on. need not quote these accounts, but it seems well to re-produce the conclusions arrived at by the two editors :-

The impression left on our minds by this visit The impression left on our minds by this visit in the most important prison of the prefective is that, while the system adopted may be suitable enough when applied to Japanese and the manner of life to which the people of this country are accustomed, it is totally mitted for foreigners. Even as regards Japanese accustomed to a fairly good standard of living, we feel convinced that lasting injury to health must be the result of even a brief imprisonment. The unconvicted prisoners are worst off, as has been shown, and, when the difficulty of obtaining bail is taken into consideration, together with the character of the food and the limit of expense in the quantity and quality of food supplied, we have no hesitaand quality of food supplied, we have no hesita-tion to saying that a term of imprisonment in a jail under such conditions would be for many fo-ceigners, if not a sentence of death, at least the infliction of lifetong injury, -Kobe Chronicle.

Our conclusion is this that, as in most other

things, much depends upon the responsible head as to the conditions of the Prison tife; properly administered it is not an impossible one for the average Japanese to pass through without suffer ing permanent injury; but at its very best it would be a cruel infliction upon any European, and could not be endured for any length of time without life-long traces remaining in a broken constitution. There must be material changes introduced for possible foreign offenders under the new Treaties. -Hyogo News.

We have already explained that the condition of the provincial prisons has been for some years considered unsatisfactory, and that the only effective remedy is for the Central Government to assume the system and uniformity of treatment, as

support the expense. The two editors do not condemn the Hyogo jail as unfit for Japanese prisoners, though their admission of its fitness is qualified. As to that, however, their opinions are not likely to carry much weight. The Japanese will be disposed to judge for themselves. For our own part we merely point to one fact, concerning which there can scarcely be much room for discussion, namely, that no arrangements exist for warming the cells. Undoubtedly that is a great hardship. The importance of the two journals' views consists in their reference to foreign prisoners. It would certainly be a serious prospect were foreign suspects or criminals to be fed, clothed and lodged after the fashions of the Hiogo jail, which, it may be assumed, is by no means the worst among provincial prisons. Happily nothing of the kind is to be apprehended. As stated recently in these columns, the Government long ago decided that to condemn foreign prisoners to a diet and a costume entirely strange to them, would be an unjust aggravation of their punishment, and that special arrangements must be made to prevent such an abuse. The matter has not been neglected by the Foreign Representatives also. Meanwhile we have no doubt that the energy of the Kobe journals will produce a salutary effect upon Japanese public opinion.

#### THE " MAINE."

We seem to be reading an epitaph as we peruse the various comments made by the United States' press on the despatch of the Maine to Havana. These comments were penned at the end of January, and within a few days, the ship had been destroyed and 258 of her crew had perished. No American man-of-war had visited Havana for two years when the Maine was sent, and the political opponents of the Cabinet were not slow to denounce the step as a deliberate display of disregard for Spanish susceptibilities and an attempt to set the match to American inflammibilities. Of course it was nothing of the kind, being simply a natural precaution on account of American life and property. Consul-General Lee had represented that a war vessel was needed at Havana in view of disturbances which had taken place there. The Spaniards, indeed, were disposed at first to take umbrage at the measure, but their Representative in Washington, Mr. de Lome, finding that Consul-General Lee's requisition would inevitably be complied with, adopted a very adroit course. He pointed out that the re-appearance of United States menof-war in Cuban waters meant nothing more than that America's relations with Spain had once more become normal, and that her vessels could now renew their friendly visits to Spanish ports without risk of misconstruction.

Telegrams to the Manila Comercio state that the disaster to the Mains at Havana was caused by the dynamos of the electric light installation communicating fire to the magazine, which caused an explosion of the powder and torpedos, blowing up the ship with the whole of the crew. Two hundred and eighty were killed and hundreds injured. The greater of the crew. number of the aurvivors were picked up by boats from the Spanish cruiser Alfonse XIII. Hongkong Daily Press.

DEATH OF THE REV. G. F. VERBECK.

The Rev. G. F. Verbeck, D.D., expired in his residence at Reinan-zaka, Tokyo, on Thursday the 10th instant at 12.20 p.m. He had been ailing for some three weeks, but his condition did not suggest serious uneasiness or oblige him to keep his bed all the time. On Thursday, he seemed better, but towards noon he lay down, desiring his servant to bring luncheon to his bed-side. The servant obeyed, but in the act of swallowing the first morsel Dr. Verbeck expired. Dr. Whitney, who lives close at hand, was summoned at once, but death had apparently been instantaneous. There There can be little doubt that the cause was heart-failure, for the symptoms of the illness had clearly indicated trouble of that nature. Dr. Verbeck was in his sixty-ninth year and had spent some forty years in Japan. The first era of his sojourn was passed in Nagasaki. There, by untiring assiduity, he acquired an admirable mastery of the Japanese language, written and spoken; a mastery so exceptional that he was able to preach fluently in the vernacular. Indeed, his capacity in this respect was almost without parallel, and considering his linguistic facility, his gift of oratory, his singlehearted devotion to the cause of Christian propagandism and the fine example of his blameless life, he may be said to have contributed more to the spread of Christ's creed in Japan than perhaps any other of the noble men whose lives have been given to that purpose. There is, in truth, no brighter chapter in the history of America's intercourse with Japan than the chapter which tells of the work done by Drs. Brown, Hepburn and Verbeck. In the field of education and even in the realm of politics Dr. Verbeck played an eminently useful but always unostenta-tious part. His transparent sincerity of character won the immediate confidence of all that came into contact with him, and his clear insight, just views and un selfish sympathy made him an invaluable counsellor. It was he that organized the Kaisei-Gakko, Japan's first college, the embryo of the present University, and many schools now flourishing derived able and kindly assistance from him in their early days. How much aid he rendered to the politicians of the Meifi era in carrying out their progressive programme, we cannot attempt to estimate: but curiously enough, on the very night before he died, the present Prime Minister and Count Okuma, little thinking that the subject of their conversation had only a few hours longer to live, reminded each other that in a memorial penned by him at the time of the Restoration, he recommended the measure which probably contributed more than any other to promote the spread of liberal ideas in Japan, the despatch of publicists to Europe and America for the purpose of studying the civilization on which Japan had so long turned her back. The death of such a man is not merely a source of keen grief to innumerable friends; it is also ■ loss to Japan and a loss to Christianity.

The Rev. Jas. H. Ballagh, in a letter referring to the late divine, says that he was a Hollander by birth, an American by adoption, but failed to get his proper papers of naturalization, so that H.I.J.M.'s Government accorded him the peculiar privilege, for himself, and members of his have joined an anti-opium league which more than 500 privilege, for himself, and members of his have joined Boyeki.

family, of citizens for periods of one year at a time. This privilege was especially granted in view of his long service in educational and parliamentary matters, for which also he a received an Imperial decoration some years since.

#### FOREIGN JOURNALS IN JAPAN.

In the Proceedings of the Institute of Journalists for January, we find the following :-

Mr. Lionel F. Gowing (for Mr. E. P. Nuttall), on behalf of the Landon District, called attention

to the following resolution quanimously adopted by the London District:—
That the London Representatives on the Council be instructed to call its attention to the letter of Mr. H. Tennant, editor of the Fapan Gazette, and a member of the Institute, republished from the Times in the Languaghet for Ottober 222d 1822. Times in the Journalist for October 23rd, 1897, on the subject of English newspapers in Japan, with a view to action being taken thereon. and moved :-

That the President be requested to take such steps as may be necessary to bring the malter under the notice of the Marquis of Salisbury.

It was well known that a treaty had been con-cluded with Japan, and would come into force a year or so hence, by which Englishmen in Japan year or so bence, by which Englishmen in Japan would become subject to Japanese law, and so, therefore, would the English newspapers in that country. Under Japanese law a foreigner could be forbidden to own or edit a paper in Japan, and this, it would be seen, was a most important subject therefore to English Journalists in that country. Mr. H. W. Strong seconded the motion. As a personal friend of Mr. Tennant, he could say that that could say that

that gentleman would not have written as he had except with a very serious sense of personal responsibility.
The resolution was unanimously agreed to.

This is a subject which has been discussed ad nauseam. The letter referred to above contained the erroneous statement commented on by us at the time-the statement that the clause in the Japanese Press Law interdicting the publication or editing of newspapers by foreigners, had been inserted with a view to the operation of the Revised Treaties. It would scarcely have been possible to make a more misleading asssertion, for the fact was that the clause had stood in the Law for many years, and that the Law itself was enacted solely for the control of Japanese vernacular journals. Mr. Tennant represented the Japanese Diet and the Japanese Government as legislating with the direct object of excluding foreigners from the field of journalism in Japan after the abolition of Consular Jurisdiction, whereas they had legislated simply with reference to the effective control of their own nationals in that field. and the reason of the insertion of such clause was the existence of Consular Jurisdiction, not its pending abolition. Of course Mr. Tennant erred unintentionally, but certainly it should have been his duty to lose no time in correcting the false charge preferred by him against the Japanese Diet and the Japanese Cabinet. The "very serious seuse of personal responsibility" with which he is credited by Mr. H. W. Strong, ought to have suggested to him that to leave uncontradicted and unacknowledged a very gross error, the publication of which was his sole work, is not the course usually pursued by conscientious persons.

# JAPAN AS A MARITIME NATION.

The foreign trade of Japan, remarks the Yiji, has considerably increased since the war with China, though there has been an abnormal excess of imports. This may be only temporary, but it is a cause for apprehension in view of the adjustment of national finances. The expansion of commerce has, however, given a small stimulus to the direct export business, which, according to last year's statistics, seems to have increased 4.4 per cent, over the previous year, The exports and imports carried by [apanese vessels in 1896 covered a little over ten per cent. of the whole trade, but last year the amount swelled to 18.6 per cent. This fact must be chiefly attributed to the Nippon Yusen Kaisha's adoption of a resolute scheme towards opening a regular service to Europe, America, and Australia. The foreign trade conducted by Japanese merchants covers from 28 to 33 per cent, of the entire transactions, but the goods shipped by ]apanese vessels do not exceed 12 to 16 per cent. It is hardly necessary to say that the profits of foreign commerce can be secured only by maintaining a balance between trade and navigation. The development of foreign steamship services is the only sound device for the expansion of direct commerce. Japan is geographically bound to make navigation her chief source of profit, and it is seriously to be deplored that she has not yet come near her goal. Her maritime enterprise is utterly wanting in vigour, and foreign commerce is consequently crippled. At present Korea and Hawaii are the only countries in regard to which over half the quantity of experts and imports are carried by Japanese vessels, Japan's carrying trade with other countries being atterly insignificant. In the Oriental trade the proportion between Japanese and foreign vessels is 28 to 72 per cent. The ratio as regards Europe is 6 to 94 per cent., that for America 4 to 94 per cent, and for other constries 8 to 92 per cent, the general average being 18 to 82 per cent. These facts may be taken us a conclusive testimony of the immaturity of Japan's maritime power in the East and the West. In the 30th year of Meiji, the Japan Steam Navigation Company having opened new routes of navigation to Europe and America, a certain amount of progress was made in shipping enterprises, but the results are yet far from reaching the ideal conceived by the promoters. Following is a comparative table showing the amount of imports and exports undertaken by both Japanese and exports undertaken o, foreign merchants in Japan :— Domestic

merchants. Yen The cargo shipped in both Japanese and foreign vessels was m follows :-

Damestic vessels. Foreign vessels. Meiji. 29th year...... 33.721 727 30th year...... 98,800,546 250.860.784

The amount of imports and exports both undertaken by native merchants and transported by native vessels may be totalled as follows:-

Native merchants. Native vessels. Meiji. 29:li year...... 80,777,293 33,721,727 68,800,548 30th year.....123 935,070

#### FATAL EXPLOSION AT THE ELEC-TRIC LIGHT WORKS.

Shortly after 6 o'clock on Wednesday evening one of engines in the Yokohama Electric tag one of engines in the rosonama electric Light Company's works suddenly exploded with tremendous force, owing it is said, to the racing of the engine. The ceiling and a portion of the brick wall of the engineroom were broken, and one of the workmen was scalded by the escaping steam: a woman, we hear, was killed. At the time of the explosion the Minato theatre, near by, was alled with speciators, amongst whom great confusion aross, but no accident occurred.

UNIVERSITY OF ILLINOIS AT

#### CIVILIZATION.

WHAT is "civilization"? We suspect that many people who prate glibly about the great abstraction would be just as much puzzled to answer the question as are not a great people. They have PILATE was to define truth. The Japanese simply a veneer of civilization. Next could be proved that TENNYSON had once savant upon whom devolved the task of year treaties of extra-territoriality fall in, been an inebriate, or that DICKENS suffered finding a vernacular equivalent for the and then you will find your mistake. in his youth from kleptomania, the persons word, must have been sorely perplexed. Japanese prisons are places which are eagerly interested in such revelations Looking back to the origin of the term, hardly fit to keep animals in. They are he can not have obtained much help, for cages and dens, not houses." A Russian than the delighted readers of "In Memo-"civilization," according to its Latin talking about prisons is an example of riam "or "Martin Chuzzlewit." No one significance, meant simply the state of admirable courage. And talking to Eng-understands that tendency of the human belonging to an organized community as lishmen, too, whose place in the ranks of mind better than the American journalist, distinguished from a state of rusticity or "civilization" a few decades ago would and none has at once the ability and the savagery. Obviously a literal rendering have been very low indeed had it been opportunity to exploit it more successfulof the word would have conveyed to the appraised by the state of their prisons. ly-ability because United States customs, mind of a Japanese no distinction between But the phrase, "a veneer of civilization," difficult of analysis, have educated to a his own state and the state of the men has a convincing sound. What is "civili- high standard of expertness this particular proudly standing in the "foremost files of zation?" One would suppose from the talent; and opportunity because the almost time," for he too belonged, just as much statements of "Sigma," the Russian boundless spaces at the command of the as they did, and had belonged for fully traveller, and from the glib talk of many American newspaper-man on Sunday, and fifteen centuries, to a highly organized another critic who takes care to be " in community. The translator was conser the fashion," that Japan had no civilizaquently obliged to have recourse to a tion of her own when she re-opened her essays from which English editors would paraphrase. He selected four ideographs arms to foreign intercourse forty years shrink dismayed. Sir EDWIN ARNOLD is, from the inexhaustible Chinese store, and, joining them together, obtained a quadrisyllable including the meanings "learning, enlightenment, improvement, and progress" (bummei kaikwa). It was certainly say that Europeans and Americans would be content to accept it as a full equivalent. Americans understand by "civilization" is obedience to Occidental manners and phic heights ascended by Western nations in motorwed hide, like the humble quadcustoms. The devout Christian, indeed, will tell you that to embrace Christianity is to be civilized; but we leave him aside, since his definition would exclude the Greeks and Romans, and they, it may be if critics like "Sigma," instead of stultify- much more considerable unscrupulouspresumed, will not be denied a title to the ing themselves by blind subservience to a ness. He began by making a discovery term. Consider the average Englishman, phrase, would sit down and compile a in the pages of "Japonica," a very pretand you will find that everything at conscientious catalogue of the details in tily written and charmingly illustrated variance with the social conventionalities which Japanese "civilization" falls below work on Japan, the combined production countered a party of British tourists in years in Japan, yet he would never have observed such a flagrant breach of civilitas in superficialities. on the part of an educated Japanese. #### SIR EDWIN ARNOLD AND THE SENSATION ALIST.

NY celebrated man is a good subject Afor sensational journalists. The public revels in exposés of every kind, and if it would be a thousand times more numerous the microscopic type of the American compositor, encourage the publication of in England. The series of lectures delivered by him in the States drew immeuse audiences, and the more people should tear off this lion's skin in the sight of American multitudes, and show that magnificent, and a purveyor for the New York Herald recently set himself to act make such ascents? It appears to us that upon it with considerable adroitness and which, as our readers well know, has been pleasant traits that he displayed during his residence in Japan was a most unassuming receptivity. He took infinite pains to instruct himself, and made industrious application to all available sources of information. Naturally when he wanted to speak of flower arrangement he went to Mr. CONDER'S writings and personally to Mr. CONDER himself, and the inevitable consequence was that the portion of "Japonica" treating of this subject came to embody many of the results of Mr. CONDER'S research, sometimes set

> Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

forth in Mr. CONDER'S words, sometimes paraphrased by Sir EDWIN. Here it was that the sensationalist of the New York Herald made his "discovery." Sir ED-WIN ARNOLD had not always been strictly careful to use the conventional inverted commas when he quoted from Mr. CONDER. short order. The treatment that China is at the appropriation of the stolen goods Sometimes he used them; sometimes he receiving partakes largely of the comical. by Russia. Would she have deemed it did not. That was enough foundation for a It closely resembles the method of the her duty to insist upon her confederates' charge of plagiarism. Is Russia prepared to place herself will be much hurt. But since he can not outside the pale of civilized Powers so descend into the lists to defend himself, completely and unequivocally? That is we, who are in a position to speak with what we doubt. It has long been the habit authority, venture to set down the true with some Englishmen to lay all kinds of facts of the case, with the further remark sins of perfidy and unscrupulousness at that the Herald's essayist has fallen into the door of Russian statecraft. Such errors not only of judgment but of fact, to views have never been endorsed in these say nothing of taste concerning which columns, and nothing short of accomplished every man has his own standards. The fact will convince us that the Government essay alleges that when Mr. CONDER dis- of St. Petersburg has deliberately comcovered how he had been served in the mitted itself to a course which, so far as pages of "Japonica," the "pride and pleas the canons of inter-state morality are consure" with which he had placed his manu- cerned, is absolutely without precedent. script at Sir EDWIN'S disposal "were There is, perhaps, something in the backtion," which statement we have Mr. will be wise to suspend judgment. As CONDER'S authority to deny in toto; and things now stand, the most credible inthat "when the information about Japo- ference is that Russia counts on China's European colony," we deny absolutely. The whole incident merits mirth rather than grave treatment, but if we in Japan remain silent, our reticence may be very wrongly construed.

THE FAR EASTERN SITUATION.

N Wednesday we learned by telegrams from London that Russia had preferred certain arbitrary demands in Peking, giving China only five days to consider her reply. On Thursday we were inthe House of Commons, had disavowed any knowledge of the above facts. Mr. CURZON'S statement is not easy to understand, for there appears to be no room to doubt that Russia has asked China for a lease of Port Arthur and Talien, and has required an answer in five days. Telegrams independently received in Tokyo confirm that news, so that Mr. Curzon's made one, should have been furnished on the 7th, at latest. But it does not appear age overland through Manchuria would be that China has given any answer. She an immense task, requiring transport facilities on a vast scale. The use of the spared. This is the kind of story that ought to

folly of attaching any importance to moral principles as guides of international against China solely because the lataspect. But as it stands it is frank robchanged to wrath, chagrin and mortifica- ground, and until every detail is known it nuca reached Japan, the European colony yielding and does not seriously contemrose in wrath against the plagiarism," plate the contingency of a resort to armed which statement also, as a member of "the force. The threat which is said to have accompanied her demand, the threat of moving troops into Manchuria, means so much that one shrinks from contemplating the results. It practically means the annexation of Manchuria by Russia, or, at any rate, the annexation of the whole portion lying eastward of the Liao River. We may reasonably doubt whether, even in the absence of strong military opposition, Russia would attempt an operation of such magnitude with Vladivostock for her sole base. Many wild rumours have been circulated about the numerical strength of the forces massed formed through the same channel that in and about Vladivostock, but on the Mr. CURZON, replying to a question in most liberal estimate we cannot suppose Eastern nation simultaneously with the an army of more than forty thousand men first proposal made to it, especially when available for a campaign into Manchuria. That is a ludicrously inadequate number. Every mile that separated the advance column from its base would involve the detaching of additional troops to guard the communications, and long before the invading force reached Kirin, the strength of its fighting line might be measured by alleged ignorance seems very singular. hundreds. Besides, it is more than doubt-Russia's demand is understood to have ful whether sufficient supplies could be to force in the event of China's refusal. been presented on the 3rd instant. Con- drawn from Vladivostock. Even suppossequently China's reply, supposing she ing that they have been accumulated there

the use of the sea-board requires neutrality on the part of Korea, Japan, and England, and access to bases of supply other than Vladivostock is a condition inconceivable under existing circumstances. After the completion of the Siberian Railway, establishing direct overland connexion with Europe, and after the organisation of large depôts at various points along the route, it is not difficult to imagine a Russian campaign against Manchuria, as all the vital lines of communication would then be beyond an enemy's reach. At present, however, the talk of invading Manchuria sounds like an empty threat. Yet, we can not hide from ourselves that after Germany's experience at Kiao-chou no project seems too daring when China alone has to be reckoned with. And it is just possible that Russia may have made up her mind to seize the opportunity; may have determined to strike an almost reckless blow for the consummation of her Far Eastern programme while England is occupied in the Soudan, in West Africa, and on the Indian frontier; while China is impotent, and before Japan is prepared. She could not well be less prepared herself, indeed, but perhaps she counts on entire immunity from interruption. That is an imaginable interpretation of her acts, and it gathers some strength from her strange proceedings in Korea, where, also, she seems disposed to force a crisis. But so far as we are concerned, we are unable to put such constructions on the situation. We doubt the truth of the statement that an invasion of Manchuria has been threatened, and are inclined to believe that Russia has done nothing more than prefer a somewhat peremptory regest for a lease of Port Arthur and Talien, basing her demand on the precedent of Germany at Kiao-chau, and not accompanying the intimation with any menace of war as a consequence of China's refusal. After all, some sketchy outline of international etiquette may still be detected in the communications between Occidental and Oriental Governments. A cannon is not pointed at an the proposal refers to a friendly concession. In short, while there appears to be no room for doubting that Russia has applied for a lease of Port Arthur and Talien, and has asked for an answer in five days, there is much room to doubt whether any threat of armed coercion accompanied the application, or whether Russia contemplates recourse

One of the home sporting papers tells a

# THE "JIJI" ON THE REVENUE.

The estimates for the 3 tst fiscal year, says the Jiji, will correspond with those for the previous year according to Article LXXI. of the Constitution. But it is absolutely necessary that a supplementary budget should be presented at the special session of the Diet in May. Whether the proposed revenue is to be derived from increased taxation, and how the railway and public undertakings loans in arrear are to be raised, are questions now under investigation by the Minister of Finance. Supposing, however, that the programme of increased expenditure contemplated by the Matsukata Cabinet is to be followed in its entirety, and that in lieu of resorting to increased taxation or to raising loans, foreign or domestic, appropriations may be made of the Indemnity already received, the accounts will stand thus:

ustallments of Indemnity received	245.745 046
Special war expenses	78,957,164 40,022,623 50,509,118
Loans for railways and public undertakings	15,400,000
95 - 1	184.488.205

When this deficit is added to a loan of 13 million yen—which must be obtained from the Bank of Japan for the 31st year—and reductions are made in various taxes under revision the figures will stand as follows:—

Deficit	51,943,781 13,512,566 3,795 646
Total	

Thus it is plain that even though the portions of the indemnity already received are appropriated, there still exists a deficit of over 79 million was

We (Japan Mail) think it well to point out that the installments of the Indemnity entered in the Jiji's accounts do not include the portion still due, and now certain to be paid in May, namely 72½ million taels, or 108 million yen, approximately.

# MARRIAGE OF MISS SAITO.

On the 6th instant Mr. and Mrs. Saito Shinichiro entertained a large party at the Maple Club to celebrate the marriage of their eldeat daughter to Mr. Kasai Nobu. The guests, numbering about a hundred and thirty ladies and gentlemen and including many of the most proniment men in officialdom, journalism, banking and commerce, met in the suite of spacious rooms forming the western wing of the building, and after inspecting the wedding gifts, which were sumptions and numerous, proceeded to the upper storey, where dinner was served, and where many beautiful dances were subsequently performed by the artistes of the Club. Mr. Saito, whose services in the Foreign Office and afterwards in the Department of Agriculture and Commerce, seemed to promise a brilliant official career, resigned his position as Vice-Minister of State owing to a grossly unjust attack made upon him in the House of Representatives in its stormy days, and after two or three years of work in the capacity of a railway president, became chief editor of the Shogyo Shimpo, which is proving a great success under his able management.

#### FIRES IN TOKYO.

At 9 o'clock on the evening of the 10th inst., fire broke out in the northern portion of the following account of the destructive fire which barracks lying outside the Sakurada Gate and occurred that morning at the Kobe Pier Co. overlooking the Hibiya Parade Ground. By godowns:—This morning about one o'clock the northern portion, we mean the wing standing opposite the back gate of the Foreign Office, on the lower slope of the street leading to the Privy Council Building. There are not any troops now quartered in these barracks, and at the appnear of writing we have not learned any the moment of writing we have not learned anything as to the origin of the fire. Fortunately the night was perfectly calm. Had the conflagration occurred on either of the preceding nights, when half a gale was blowing, wide-spread destruction of property must have resulted. Indeed, a very slight breeze from the north-east would have carried the flames across the narrow street to the outer buildings of the Foreign Office, and thence, perhaps, to Prince Arisugawa's residence. Five steam-engines were speedily at work, and although the situa-tion was not favourable for obtaining water, the firemen succeeded in confining the conflagration to the building in which it occurred.

#### MONTHLY CUSTOMS RETURNS.

#### FIRE AT KOBE.

The Kobe Chronicle of the 3rd inst gives the godowns:-This morning about one o'clock fire was discovered to have broken out among the raw cotton under the Pier Company's largest shed. An immense quantity of cotton was there, and the flamea must have got a firm hold upon it before they were discovered. As the first fire brigades appeared on the scene in response to the alarm, the flames broke through the wooden roof, and the volume of fiame which ascended cast a lurid glow all over the harbour and the town. The roof soon fell int. Superintendent Sim, who had four Settlement engines at work, Sim, who had four Settlement engines at work, directed his attention first to saving the shed in line with the K. R. and A. C. boathouse premises. The flames had already leaped across the little roadway and had got a hold upon the cotton stored there and the roof mithe shed, but skilful work and an abundant water supply enabled the brigades to save this shed. Of the great quantity of cotton stored therein only about 50 or 60 hales were this shed. Of the great quantity of containing astored therein only about 50 or 60 bales were damaged by the fire. The larger abed and all the cotton under its roof, which amounted to hundreds of bales, was destroyed completely, much of the cotton being reduced to white ash. At the back of this shed were some brick godowns and a wooden godown quite full of rice. It must have been an extremely difficult job for the brigades to save the wooden godown, but they succeeded. One end of it is completely burnt off, but the principal damage to the rice has been caused by water. Between the brick godowns were wide passages with wooden roofings which readily lent themselves as fuel to the flames. These constituted a great source of danger to the other godowns as yet out of harm's way, and it is due to the work of the brigades in the neighbourhood of these sheds that the conflagration was not doubly as disastrous as it has proved to be. One of the passage roofs was burnt completely, but only the end of the other suffered. The heat was so intense that the brick godowns had begun to crack. The damage to cotton alone is estimated at not less than 100,000 yen. The other cargo which has suffered includes cement, iron plates, and rice. Upon what insurance companies these losses fall it is scarcely possible myet to say. The cotton is still burning me we go to press, and engines will probably need to play upon the debris all day. Only the Settlement engines and one or two Japanese brigades are standing by, and the men look throughly tired out.

Particulars are to hand of the fatal fire at Kobe, on Tuesday. The fire occurred in Sannomiya, Ichome, on the south side of the railway, between one and two o'clock. It originated in a grog-shop kept by an Englishman named Talbot, where some American sailors are said to have been staying, and one of these, a mannamed George Eaton, was burnt to death. When taken from the dibris the body was unrecognisable. Next to the grog-shop was a kerosene store and this burned so furiously that about half a dozen Japanese houses were burnt to the ground. The fire was caused by a lamp accident in the room which Eaton, who had been drinking heavily, was occupying.

The cost of improving the public thoroughfares in Tokyo is estimated, says the Chuo, at 173,314 yen, which amount is to be disbursed from the 1st April this year to the 31st March next. The area to be repaired covers one-fourth of the highways, as it extends over 478,534 fsubo, the average expense being 36.2 sen per fsubo. With regard to bridges, improvements have already been made in some, but others are to be repaired during the 31st year at a considershie expenditure, the number marked out for whole or partial reconstruction being twenty, of and four of iron.

URBANA-CHAMPAIGN

## TAPANENE FACTS AND COMMENTS.

The issue of the Industrial Bank's Special bonds is to be undertaken, asserts the Zokyo Asahi, by April next.

On the evening of the 1st instant, an entertainment was given by Count Itagaki at the Maple Club to Marquis Ito, the Premier; Baron Suyemaisu, Minister of Communications, and Mr. Sone, Minister of Justice. Several of the Liberal leaders, Messrs. Kataoka, Okageki, Suzuki, Nishiyama, Saito, and Sugawara, were also in attendance. The cordislity displayed may im regarded, the Tokyo Shimbun remarks, as a sign of future co-operation.

From the Tokyo Shimbun we gather that the government forests in Hokkaido extend to about one and a half million cho (3# million Some of them must be reclaimed for colonists, though others may be retained in their present condition. The area which has already been faid under cultivation is in Ishihari 635 cho, in Iburi 1.399 cho, in Shiribeshi 6,922 cho, in Toshima 471 cho, and in Kitami 1,219 cho. An area of 59,767 cho was reclaimed in the 28th year of Majji and 93,116 cho in the 28th year of Majji and 93,116 cho in the 29th year, the aggregate total being 152,884

Total ..... 9,724 17,621 28,396 10,435 20,024 Sales of tea last month amounted, according to the Nichi Nichi, to 47,100 catties, while stock in hand aggregated 94,000 catties.

The High Agricultural, Commercial, and Industrial Council was, according to the Tokyo Asahi, inaugurated on the 2nd instant, with Mr. Shibusawa as President and Mr. Masuda as Vice-President. The members, twenty-two in all, are as follow:-Messrs, Yasuda Zenjiro, Yamamoto Tatsuo, Takahashi Korekiyo, Okura Ribachiro, Shoda Heigoro, Otani Kohei, Naka-no Buyei, Yamamoto Kametaro, Kanematsu Fusajiro, Okuda Shōko, Suguki Chozo, Yendo Rusajiro, Okuda Shoko, Siguni Chozo, Yendo Keishi, Metaudo Gengoro, Tauaka Gentars, Nakamura Yeisuke, Inouye Kakugoro, Inouye Zintaro, FujitajDanzaburo, Thaka Ichibei. Sano Rihachi, Suyinoba Miehinari, and Kondo Rempei. Mr. Otsuki, secretary of the Agricultural and Commercial Department, and Mr. Micoba Conneillor of the same Department. Minobe, Councillor of the same Department, were appointed as Mausgers (Kanji).

The tendency to excess in imports noticeable since last year is not, remarks the Shogyo, likely to cease in a year or two. The trade for January this year presents surprising features of inequality, the imports reaching 18.870,000 ren in value, while exports fell short of 16,900,000 yen. In investigating the condition of trade since 1887 it will be found that an excess of imports in the trade for January was noticeable in 1888, 1890, 1894, 1896, and 1897, exports predominating in all other years. The amount of excess in January, 1988, was 560,000 res; in 1890, 720,000 yen; in 1894, 1,290,000 yen; in 1894, 1,290,000 yen; in 1896, 6,520,000 yen, and in 1897, 1,470,000 yen. In no year has the excess reached 8 million yen, as in January of this year. The outflow of gold during January did not fall short of 6,790,000 yen. The Shegye anticipates that this disadvantageous tendency will continue for some time to come.

The imperfection in the means of communication in the capital in universally recognised, asserts the Jifi. There have been two different

Digitized by Google

The indifference of the anthorities, our contemporary remarks, is indeed startling. The latest information places the length of tram-ways at a little over three rf, railways at 13 and the number of jinrikisha at 42,005. While the capital is possessed of 230 ri of high-ways of over 6 feet in width its citizens cannot be contented with rail and train lines of less than

The idea of extending the silk trade in Kobe will, remarks the Chuo, be discussed at a general meeting of silk dealers from Kwansai to be held there on the 10th instant. This project has a near connection with the opening of a branch in Kobe of the Yokohama Specie Bank, inasmuch as the trade in silk cannot be successfully carried on without special loans by the Bank on the security of goods. These loans are granted free of interest by the Bank of Japan. But the amount already appropriated for this purpose by the Head Office in Yokohama has been considerable, and it may be supposed that the issue of similar loans in Kobe will be attended with more or less embarrassment. The Specie Bank. however, having approved the Kobe silk trade scheme, will, the Chuo asserts, shortly arrange to increase its present capital.

The Nichi Nichi has from time to time published reports with regard to the new agricultural and industrial banks throughout the empire. The same paper now states, as the result of the latest investigation, that the district branches and amounts of capital for which Minister are as follow:—Tokyo, 350,000 yen; Kanagawa 400,000 yen; Chiba, 800,000 yen; Aichi, 1,500,000 yen; Shizuoka, 1,000,000 yen; Yamanashi, 300,000 yen; Shiga, 500,000 yen; Gifu, 1,000,000 yen; Yamagata, 600 000 yen; Tottori, 300,000 ven; Okayama, 1,000,000 ven Kagawa, 300,000 yen; Kagoshiina, 500,000 yen; Miyazaki, 500,000 yen; Saga, 300,000 yen. Of the above prefectures thirteen have already received funds from the Treasury.

The excessive abundance of subsidiary coins in the market has, alleges the Chue, caused serious inconvenience to the various banks in the capital. The Central Bankers' Council was lately entrusted by the Finance Department with the work of investigating the matter with a view, if necessary, to altering the policy hitherto pursued with regard to the withdrawal of one ven paper. But so long as the scheme for the recoinage of subsidiaries is in operation, it is impossible to suspend the exchange of paper. A certain financier has remarked that the teminting of yes pieces into subsidiaries is not an enterprise just devised, but that it was contemplated at the time when the new coinage system was introduced. A sum of forty million yen was to be minted into anheidiary coins, while thirty millions were to be sold as bullion. The stock in the Treasury amounts to fifty millions, and if out of this sum forty millions were sold, the Government would incur serious loss in view of the present depreciation of the metal. Recoinage, under the circumstances, is a step absolutely indispensable.

We have already commented, says the Jiji, on the curtailment of the means of com-munication and the increased risks to mail matter. It may now be added that number of telegrams has increased fourfold during the past ten years from the 20th to the 20th year of Meiji, while the lines show an increase of more than double the length, and telegraph offices are about five times the original number. Despite the expansion of machinery, however, delays and errors have greatly increased. The authorities are disposed to attribute these defects to the insufficiency of the funds available, but it is none the less certain that perfunctoriness and want of activity on the part of the Government in making necessary arrangements are the direct

a disproportionate arrangement naturally contributed to the occurrence of delays and errors. The length of wire is still quite disproportionate to the number of offices where telegrams are dealt with. The bungling of the authorities, the Jiji adds, necessitates an outlay of twenty million yes for the improvement of the telegraphic system.

The inequality of foreign trade seems to grow more serious with the lapse of time. The figures for the two ports, Yokohama and Kobe, during last month show an excess in imports of ever 8,300,000 gen. Thus :-

-		Yen.
Exports	**************************************	9,933,060
Imports		18,255.966
Totall	*******************	28,189,026

The chief factor in the inequality is the increused import of rice, cotton, machinery, and iron, while a serious decrease is noticeable in the export of silk, (?) ailk textiles, and cotton fabrics. The present adverse condition of commerce, remarks the Shogpo, is likely to continue. As a result there was a large outflow of gold and silver, as the following figures will

• • • • • • • • • • • • • • • • • • • •	Yan.
Export of specie	5,966,294
Import	796,670
Total	6,762,964
Excess of exports	5 160 624

The four prominent marine insurance companies in the empire recently passed a resolution with regard to the revision of fees, and the boats and sailing vessels are now dealt with according to the altered regulations. The next amendment, which is to come in force from the 1st May, refers to steamboats and their cargo. The ordinary rate of insurance, says the Shogyo, was formerly three sen, but it is now the Sacgro, was formerly lines sen, but it is now raised to five sen. As regards the insurance of cargoes in steamships, the following increases are made in the rates:—(i) Anything contained in a box lined with zinc plate, increased by 20 per cent. (2) Things packed with varnished paper (shibukami) and then wrapped over with oil paper, riukiu, or coarse mat, or those packed with rugs after the foreign fashion, 30 per cent. (3) Goods not definitely specified, but perfect in package in all ordinary points, 40 per cent. (4) Sugar, tea, tobacco, flour, faucy goods, matches, cotton-seeds, &c., 60 per cent. The 1st and 2nd of the above items are to apply only when the mode of packing is a curately stated in the application for insurance. In all cases of disspeciation for insurance. In an cases of dis-sion, full componention is to be made whether the losses are entire or in part. The fees for ordinary boats as against ships of improved plan and greater size are considerably raised. Below are the details :-

That China will pay the remainder of the indemnity at once is now to be assumed as a fact asserts the Hochi. How the indemnity should be used is a question under discussion in all parts of the empire. The arguments may be epitomized into tour as follow:—(r.) Finan-ciers are of opinion that the full payment by China of her indemnity affords a unique opportunity for adjusting tangled finances; the amount of public loans—60 or 70 million yes—to be raised for the 30th and 31st fiscal years, together with the deficit in revenue of 70 or 80 asserts the Jiji. There have been two different making because, and selected for providing an electric railway, the causes of the grievance. From 1887 to 1891 million year might be supplied by the indemnity, applications for them being presented in telegraph wires increased in length at the target for the 23rd and 28th year of Meiji respectively. The course of the grievance while offices show money should be appropriated for the redempent to neither was official sanction granted. An increase varying from 3 to 43 per cent. Such the Original from

various companies which are about to crumble to dust in consequence of the policy of curtailment adopted by the Bank of Japan, will revive, and no more complaint about tradal depression will be heard, (3 Scientific economists assert that as the indemnity installments received during the past two years have had the effect of fostering an excess of imports to the amount of over 100 million yes, so the receipt of the whole re mainder, whether the money be appropriated for government undertakings or for the liquidation of domestic loans, will surely bring about greater embarrassment and more serious depression in trade than has hitherto been experienced. The prosperity which the Indemnity money seems to secure is anything but real. The indemnity, if paid, ought to be preserved = a deposit in the Bank of England till the economic community is restored to its normal condition. (4) Politicians suggest that in order to show the magnanimity of the Japanese the remaining installments of the indemnity shall be given to China as a present.

The ordinary general meeting of the Central Tea Dealers' Council was held on the 26th ult. to discuss the estimates for the 31st fiscal year Of a subsidy of 5.715 yes for the year under review, 2,007 yen were delivered to each of the Corporations in Kwanto and Kwansai, while 1,700 yes were allotted to the Kiushiu Corpora-The estimated exponditure for the extension of the market for the 31st year was also discussed, and fixed at 70,000 yen, 57,000 yen to be appropriated for expansion of the trade in Canada, 10,000 yen in Russia, and 2,800 yen as expenses for the Central Council. above amount is to be supplied by a subsidy from the Government. The programme is re-gard to the extension of the market is as follows :- (1) Advertising the excellent quality of Japanese tea in the principal newspapers and magazines published in North America and Canada, and by the adoption of other means.

(2) Distributions of green tea and tea-utensils gratis in the important parts of North America and Canada. (5) The despatch of a number of commissioners to those countries on a tour of inspection, and the maintenance of branches in New York and Chicago. (4) A tea house or houses to be established in North America, or a subsidy to be granted to such an institution already existing there. (5) Advertisements or notices to be put up at shops opened in the above mentioned countries or at places of public resort. As to Russia, sub-offices in Vladivostock are to be maintained, and commissioners despatched to the Siberian districts as occasion requires. There is to be a rigorous inspection of iea in the three leading ports—Yokohama, Kobe and Nagasaki. There is to be a rigorous inspection

On the night of the 3rd inst. Count Itagaki, accompanied by Mr. Suzuki, repaired to the Premier's official residence to deliberate upon the various topics which require the immediate attention of the Cabinet. The points at issue attention of the Cabinet. The points at issue were the adjustment of finances, the reform of domestic as well as Formosan administration, the revision of the Election Law, &c. The Count is reported by the Chuo to have freely expressed his opinions on those problems. The question of financial adjustment, he stated, is now under investigation by the Finance Department. To put the finances in order for a year or two is a matter of no serious concern; but to establish the foundations of a permanent financial arrangement is a matter of immeasurable difficulty. The condition of the economic market as well as the future prospects of the foreign trade of Japan, must be taken into considera-The necessity of introducing reforms in domestic administration can not be denied With this in view the former Cabinet had appointed a special commission consisting of officers from the various Departments, and not infrequently had it happened that, in discussing military affairs, a delegate from the Agricultural and Commercial Department, who was entirely ignorant of matters of warfare, committed the folly of expressing his views on the subject. How could success be expected from such a hetero-assassins turn out to have been under the geneous Council? It was absolutely necessary, leadership of a Russianized Korean. Digitized by Google

therefore, that a general policy should be followed by the various Government Departments in regard to the proposed reform of finances. Formosan administration, too, ought no doubt to be reformed, and steps in this direction would shortly be taken. The revision of the Law of Election, the Premier remarked, had long occupied his mind, and he pledged himself to make it a far better system than it now was. Steps would be taken to remove all the abuses inherent to the free municipal systems of administration.

#### INCIDENT OF THE RUSSIAN INTERPRETER.

We take from the last-received issues of the Soul Independent the following items with reference to the recent attempt on the life of the Interpreter of the Russian Legation in that city—not the Russian Interpreter of the Imperial Court, as we stated when the telegram arrived in Tokyo:--

Mr. Kim Hongnink, interpreter of the Russian Mr. Kim Hongniuk, interpreter of the Russian Legation, was attacked by three assassins last Triesday night about half-nast 8 o'clock on his way from the Palace to the Russian Legation and received several cuts on his right ear and shoulder, t seems that Mr. Kim went to the Palace early in the evening and transacted some business and later was returning to the Russian Legation. He had with him two policemen who were waking behind him as body guards. Three Koreans appeared on the road as soon as Kim and his policemen reached the lane behind the customs buildings. Two of the three men grabbed she policemen and threw them down the bank, while the other man attacked Kim with a swood. Kim policement and threw their down the hand, while the other man attacked Kim with a swood. Kim raised his caneaud warded off the blow and can into the little back gate of the Palace. While he was running he received another blow from was running the received another blow from behind. His screams and noise brought out the soldiers and policemen from the inside of the Palace gate, who rescued the wounded man. The assessing escaped as soon as the escaling party ceached the spot. It is said that the wounds are not serious, and by careful treatment Kim will

Edict :- How is it that police authorities permit hereby order the Police Department to Capital within three days (from the 22nd inst.) and if it should fail the chief commissioner of police will be severely punished. The Home Office is also hereby ordered to use special efforts in capeturing the perpetuator of the crime, (The edict is intended to facilitate the capture, of the would-becomes of Kim Monthing the interrete of e assassin of Kim Hongnink, the interpreter of the Russian legation.)

the Russian (egation.)

The Police Department has an ested several suspicious men in connection with the attempted assassination of the Russian interpreter. The Pa assassination of the Russian interpreter. The Po-lice Department thinks that some of Kim's briends from Hamkyeng Do attempted the deed to satisfy from Hamkyeng Do attempted the feed to satisfy a personal grudge. A man named Kim Seikuk is supposed to be the guilty one and is now lodged in the police station. The suspected man is from the same viitage in Hamkyeng Do where the interpreter formerly lived. Romour has it that Kim Seikuk is a naturalized Russian and has been very intimate with the wounded man. If he is found to be guilty the Romour has recommended. to demand of the Russian government ampli-ted demand of the Russian government ampli-rediess for the wounding of a valuable and useful citizen of this country, that is if the guilty man is

a Russian subject.
The following official despatch has been received by the Foreign Office from the Russian Minister:
"As the meritorious interpreter of our Legation, Rim Hongrick was returning to his own house inside the Legation compound last evening from the Palace, he was attacked by a hand of scoundiels who intended to kill him, but fortunately they missed him. I extremely hate such unheard of daring gang and hereby request Your Excellency to report the matter to His Majesty, Your Emperor; and to search out the compitators. It is necessary not only to punish the acmal culprits but to find out the instigators of the crime. Even if the instigators be high in rank, their stations must not be considered in the proper administration of justice," etc.

We give verbatim our contemporary's quaint version of the Russian Representative's note, It will be curious if the Interpreter's would-be

#### KOKEAN NOTES.

In an obituary notice of the late Prince Parent, the Tai Won-kun, the Independent, alter stating that from 1863 to 1872 he was practical ruler of the country, gives the following resume of the remarkable incidents of his sway:—

Some of the leading features of internal administration were the rebuilding of the Kyengkok palace at a tremendous cost; construction of the stration were the rebuildings in the typesquare palace at a tremendous cost; construction of the government buildings in the front of the same palace, now used by the various departments, widening of the streets in the city; repairing of the city gates and walls; establishment of arsenals in five different localities; mganization of war junks in Kangwha and Tongyong districts; minting high denominationed cash and manufacturing old fashioned cannon for the army. Besides these improvements, he also inaugurated some of the most corrupt practices among the officials and cruellest punishments for the people. He commenced the practice of selling offices, especially the provincial offices, to the highest hidders, and instituted the custom of borrowing money from the well-to do classes without the least intention of paying it back. One of his most cruel acts was the wholesale massacre and persecution of the native Christians. It is said that he had some ten thousand innocent men, women and children killed because they were supposed to be believers in Christianity. In this men and children killed because they were sup-posed to be believers in Christianity. In this connection we might mention that many brave souls suffered martyrs' deaths with Christian for-titude and misweeving faith. This massacre may titude and miswetving faith. This massacre may be an indelible stain upon the character of the Prince, but the hernic deaths of so many faithful followers of the Cross will go down in the history of the Korean church as a glottons demonstration of the firmness of faith which the native Christians possessed. We must not criticise the Prince too severely for the cruelty he practised because he thought such was his duty. In recent years he realized his mistake, and, to some extent, he confessed his barbarity. he confessed his barbarity.
The unfortunate and noncessary bloodshed at

the infortunate and numersary bloodshed we kangwha between the crew of an American war ship and the soldiers in the Korean fort took place two years after the beginning of the Tai Wônkuo's régime. This unpleasant affair could have kun's régime. This umpleasant affair could have been avoided if each side had understood the

motives of the other.

For nearly ten years the Prince was known among the people as a tiger. His name was reverenced in all parts of the country and his orders were obeyed from the highest to the lowest. However, he was more feared than leved by the

It is stated that the Korean Foreign Office failed to offer any expression of condolence to the Japanese Representative in Soul on the announcement of the news of H.I.H. Prince Yamashina's death.

An appleasant little affair has occurred between the Japanese Legation and the Police authorities in Sönl. A Korean employe of the Legation, while en route for the telegraph station carrying message from the Japanese Minister to be despatched to the Consulates in Chinnampo and Mokpo, was arrested by the police for smoking a long pipe in the street. Despite his remonstrances, he was detained five hours at the police station, and finally re-conducted to the Legation by two policemen who asked the Japanese Minister to authorize his arrest. The Minister declined to consider the application unless it came through diplomatic channels and complained to the Foreign Office of the conduct of the police, the Chief Commissioner of the latter having refused to apologise. There the matter rested at the date of latest advices,

The Independence Club in Soul has addressed a very strong memorial to the Throne protesting against the surrender of financial authority and military control to foreigners, The memorial is, of course, directed against

The Tai Won-kun's death occurred at 7 p.m. on the 22nd of February. He had completed his 88th year in January. It appears that he had suffered for a considerable time from chronic dysentery, and that the death of his wife last December aggravated his ailment to such an extent un to dispel all hope of his recovery.

It is stated that the life of the Interpreter of Original from

the Russian Legation was caved by the British marines stationed near the Custom House. They interfered in time to prevent the consummation of the deed.

There are now six Korean newspapers in Soul. Two of them are Christian publications.

The first locomotive for the Soul-Chemulpo Railway has arrived in Chemulpo from America.

The camp of the Soul-Chemulpo Railway Company on the other side of the river at Soul was destroyed by fire on the 15th February. Mr. Carley, the Engineer in charge, lost some 300 yen worth of clothes and instruments.

It is alleged that the Russian Representative in Soul has asked the Korean Foreign Office to grant to the new Russo-Korean Bank the privileges (1) of issuing notes and mintingcoins, (2) of transmitting the interest, &c., on the country's foreign loans; (3) of collecting the Govern-ment's revenues and paying the officials' salaries; and (4) of establishing branch offices and agencies throughout the country. To the officials of this Bank is attributed the objection to the use of stamped yen and chopped dollars which, they are represented as saying, bring only the value of bullion and thus cause loss to the Government when silver depreciates. We should like to know what silver coins-spart from subsidiary—bring more than the value of the bullion they contain.

#### CHINESE NOTES.

Shanghai is to have a system of electric trams. At least the Municipal Council has decided to submit a scheme at the next annual meeting of the rate-payers, and no doubt is entertained of its acceptance.

"We understand," says the N.-C. Daily News of February 28th, "that an Imperial decree was issued last week authorising the construction of a railway from Tientsin to Chinking by way of Shanting; and that on this the German Minister, Baron Heyking, protested on the ground that Germany must have the first right to construct railways in any part of the province of Shantung." We regard this news as very apocryphal. No Power can obtain from the Chinese Government a national concession In construct railways in any part of China to the exclusion of other tresty States. That would be a plain violation of the most-favoured nation clause.

Prince Henry of Russia is expected to arrive in Shanghai about the 19th instant. It is proposed to give a ball in his honour.

Seven or eight years ago we used to hear a great deal about the navigation of the upper Yangsize; Mr. Archibald Little's presistent attempts to obtain permission; the carious objections raised by the Chinese Authorities, who declared, among other things, that the monkeys in the gorges would toll rocks down on any steamer attempting to pass, and the apparent supineness of the British Government. Perseverance, however, conquers all difficulties. We now read in a Shanghai journal as

follows:—
We have already noticed the departme from Ichang for Chungking on the 15th inst, of Mr. Archibald Little's small steamer, the Leachnen. We understand that Mr. Little had a great deal of trouble in getting off, pilots and engineers all getting frightened at the last moment. The Chinese officials did all they could—of course, they had never heard of the Shimonoseki treaty or "fayoured-nation" clauses, and had no instructions from Peking—to delay the Leechnen's departme, but Mr. Holland, the British Countl, showed himself most capable and energetic, and successfully frustrated all their devices. Dr. Collins, who went a little way in the Leechnen, reported on his fully frustrated all their devices. Dr. Collins, who went a little way in the Leechnen, reported on his return that she reached a point twenty miles above Ichang in three hours, thus making between six and seven knots against the stream, though towing a suspan, with 15 men and 8 tons of coal in her, on one side, and mired life-boat with her crew on the other. We trust soon to hear of her arrival table for mattern part to which he is hound. on the other. We trust some to hear of her arrival at the far western port to which she is bound.

The Japanese were understood to be planning

a steamship service from Ichaug to Chungking, commencing this spring. How will Mr. Little's proceedings influence them, we wonder. now will Mr. Little's vessel get past the New Rapid? The enterprise is of the greatest in-terest. It successful, it means that Szechuan, with its twenty millions of inhabitants and immense resources is at length open to trade.

A noteworthy departure has been made in the Chinese tea trade. It is the organization of a company by the teamen of Hankow for preparing tea by machinery. China has lost the British market almost entirely and now depends chiefly on Russia for a market. The fact is attributed to, her faulty preparation of the leaf, and judging from the result of experiments made last year at Wenchow, the theory seems to be right. The new Hankow company is remarkable in the fact that while its members are Chinese of good commercial standing, its chief director, who is to have full power to manage the affairs and engage the employer, is a foreigner, Mr. R. B. Moothead, Commissioner of Customs at Hankow.

It is alleged that something in the nature of a sharply defined difference of opinion has occurred between the Emperor of China and the leading provincial authorities. His Majesty desires to do away with the territorial regiments, which proved themselves quite useless in the war with Japan, and to apply the funds squandered on their maintenance to the organization of an efficient, foreign-drilled army. He issued orders in that sense at the beginning of last year. But the provincial authorities find their account in handling the pay of the regiments. Hence they desisted from disbanding the regiments. Then came the recent troubles with Germany and Russia. Once again the Emperor sent an urgent decree requiring the disbandment of the useless regiments. But several Vicerays and Governors replied by sending up memorials in which they virtually refused to carry out the Imperial instructions. The Emperor is now said to have sent round a peremptory order which must be obeyed within six months on penalty of imneachment for treason.

The municipal budget of Shanghai for 1898 shows an estimated revenue of 992,408 Tls. and an expenditure of 989.368 Tls. The Land Tax is raised from  $\frac{3}{10}$  to  $\frac{7}{16}$  of one per cent., and the Foreign House Tax from 8 to 10 per cent. on assessed rentals. The outlay on roads is 80,000

"Viceroy Chang Chih-tung," says the N.-C. Daily News, " according to a letter received from Wuchang yesterday (March 3rd), has appointed six of his most promising young military officers to go as a Military Commission to Japan for the purpose of studying the military system of that country. It is not unlikely that as a result of the Commission a number of Japanese officers will be invited to come over to China to give the benefit of their knowledge to the mililary organisation of the Liang Hu provinces. It is also reported that the Viceroy has been atrongly advised to employ Japanese in preference to German military instructors for his new disciplined army.

It is stated that the Chinese Government has decided, for strategic reasons, to build a railway between Hankow and Chinking before commencing the great trunk line from Hankow to Peking. Dr. Yung Wing D.c., otherwise Ex-pectant Taotai Yung Hung, is to have the direction of the construction of the Hankow-Chinking road.

The pantomime of "Cinderells," with ballets and all accessories, was given at the Lyceum Theatre in Shanghai by the Shanghai Amateur Dramatic Society on the 3rd instant. Over 120 persons took part in the performance. It seems to have been m brilliant success.

We find the following in the Peking and been taken. Tientsin Times :-

duty, can be taken to any place in the interior free of likim—were valid only on the condition that the goods described on the pass were actually taken to the place of destination given on the pass and there disposed of. The goods were sot ablowed to be sold on their way to destination, i.e., in transit. But Baron von Heyking has persuaded the Isung, if Yamén to alter this regulation and in future imported goods will be allowed sale in transit. Only some trifling formalities have to be gone through, in order to safe-guard fiscal interests, otherwise there are no longer say restrictions, and merchants will thus be able to take advantage of every favourable opportunity of selling their goods on the way. We may add that by the direction of the Isung-ii Yamén the regulations for the new mode of inland transit were drawn up by Sir Robert Hart, and in a form entirely meeting the wishes of the German Minister, to whom great credit and thanks are due for having opened a new road for fair trade.

#### MR. YUNKER'S CONCERT.

Mt. A. Junker, who, assisted by a number of Yokohama amateurs, gave a concert on Thursday night at the Public Hall, is a violinist of quite exceptional attainments, and his performance was one of the most enjoyable the music lovers of the Treaty Port have had for a long time past. Mr. Junker has a complete mastery of the instrument, his technique is perfect, and he plays with great expression. All his selections—and he appeared in seven out of the ten items on the programme—were ex-cellent, but perhaps the most appreciated were solo, De Berlot's Ninth Concerto, a duet with Mr. Ellis (who also contributed in capital style Chopin's E. Flat Polonaise), and two solos, F. Riess's Gondoliera, and a Gavotte by C. Bohm. The singing of Mrs. Mollison and Mrs. Payne corrected any tendency to monotony in the pro-gramme. The duet, Rubenstein's "Song of the Birds," was very nicely rendered, and fully deserved the unmistakable encore it received. Mrs. Mollison was also heard to great advant-age in Gounod's Serenade. Mrs. Doering played several of the accompaniments.

#### NEWS OF THE WEEK.

Dr. James Cantlie, late of Hongkong, has been appointed joint editor with Dr. Simpson, late Health Officer at Calcutta, of a new medical journal entitled The Fournal of Tropical Medicine. Dr. Simpson was at one time Medical Officer of Health for Aberdeen where Dr. Candie graduated.

What a terrible thing a misplaced comma can be! The China Mail desired to pay a high compliment to one of the amateur scireses high compliment to one of the amaicur actresses in the recent A.D.C. performance, but this is how the "comp" frustrated its good intention:

"Kathleen," as we have already slated, is what the critics correctly call an "acquisition," and we can only express the hope that we shall see Mrs. Bagnail, Wild in many more important called driving this and other express. roles during this and other seasons.

The steamer Setsuyo Mars, which arrived in Yokohama on Friday morning last, is reported to have encountered a very severe gale in Genkaiuada while on her way from Nagasaki, and had a narrow escape from foundering. The same steamer is also reported to have ex-perienced a terrible time in a storm while on her way from Taku to Nagasaki, the vessel having left the former port on the 19th ult. with a cargo of rice and augur.

We learn from the Boycei Shimbun that legal proceedings were Instituted in the Yokohama Local Court on the 4th inst. by Mr. J. M. Cotta, of No. 114 Settlement, Yokohama; against Mr. Kobayashi Kurakichi of No. 30 Nichome, yamainoto-cho. Yokolisma, for the recovery of yen 150 yen. It appears that Mr. Cotta sold 405 cases of leather for yen 400 to Mr. Kobayashi on the 23rd February last and received yen 250 in cash, the balance to be paid by the 28th February. The date having passed and payment not having yet been made of the balance due to Mr. Cotts, the present action has

Hitherto, inland-passes—that is to say, passes under cover of which all imports, on paying an extra half ham & Co., represented by Mr. C. N. Crosse, Original from On Monday afternoon Mesers. L. D. Abra-

brought a claim in the U.S. Consular Court at Kobe for the recovery of a sum of \$3,000 (gold) against Mr. C. W. Collier, formerly a partner in the firm, as money due for advances on goods consigned to the defendant in the United States. Mr. Collier filed no answer, and did not appear. Messrs. Olmstead and Ziegfeld were sworn in as associates to act and belowith the Judge, Mr. S. S. Lyon. Judgment was given next morning in favour of plaintiff.

A and accident is reported by a Kobe contemporary :-- " On the afternoon of the 28th ult. three children, two ten years old and the other thirteen years, were playing together in a match factory at Knjo, Osaka, and in the temporary, absence of the father of one of them, who had been crushing muriatic potash, the children took hold of the pestle. The potash suddenly exploded and one of them was killed instantly. The two others were badly burnt and died on the following morning.

On Saturday afternoon Superintendent Morgin of the Yokohama Fire Brigade was called in to the Central Hotel, No. 179, Settlement, one of the chimneys being apparently on fire. On examination Mr. Morgin found that smoke was coming through the floor of one of the rooms over the kitchen, the wall of the room, which was of wood and plaster, having caught fire from overheating of the cooking range, which was erected too near the wall. After the wall had been broken into a few buckets of water extinguished the fire.

In the Far East it is hard enough to follow the Chinese question; but the English of Sierra Leone must find it harder. Here is the "news" provided in an issue of their local paper:—

London, December 29th. It is reported that thirteen British warships and

Chemulpo, Russian, have occupied Kinchan.
December 31st. The report is confirmed that four British war-

ships are at Chemulpo.
Protest supersession of the Britisher Brown by
Russia as Financial Adviser.

A real Chinese puzzle this.

The association of the different Japanese emigration companies has been practically effected. The chief officers of the various companies have been holding their general meeting at the Imperial Hotel since the 28th ult., and on Saturday important resolutions were passed, and signed on behalf of the Oriental Joint Stock Emigration Co., the Japanese Emigration Co., the Hiroshima Co., Ltd., Kissa Emigration Co., the Japan Emigration Co. of Osaka, the Kosei Emigration Co., Ltd., Kumamoto joint-stock Emigration Co., Morioka Emigration Co., and the Emigration Co. of Tokyo. A deputation has waited on the Vice-Minister of the Foreign Department. Mr. T. Huga, M.A., was elected President of the Association.

The recent scenes in the French Chamber were so exceedingly rowdy that even the reporwere so exceedingly and became rampant.

the seats and yelled our own ideas." Students the seats and yelled our own ideas." of French history, remarks a home paper, know that every revolution in France has begun by the interference of the public in Parliament. One of the "heroes" of the disgraceful scene has refused a duel. M. James, one of the foremost in bandying insults, says :- " When, in reply to an insulting interruption of M. Bernis, I treated him as a scoundrel and a coward. I made up my mind to call him out, but as a few minutes later he attacked me and struck me from behind, I consider that he has placed himself outside the rules of honour, and henceforth I ignore him."

On Friday evening last the house occupied hy Mr. W. Styles in Yamoto-dori, Sanchome, Kobe, was burnt to the ground. Mr. Styles, we learn from the Chronicle, was in the act of opening a drawer in one of the bed-room upstairs, but the drawer being locked the force of the pull caused the small glass lamp which had been standing on top of the chest of drawers to topple Digitized by Google

over on to the floor. The oil container broke and the room was at once enveloped in flame. The fire alarms were slow in being rung, and when the fire engines came upon the scene it was too late. Even had they been earlier, it would scarcely have been possible to save the house, which was built not twelve months ago and belongs to a Japanese. The furniture was

On the evening of the 9th instant, Baron Y. Iwasaki and Baron H. Iwasaki entertained Mr. T. Walsh, who is now on a visit to Japan, at T. Walsh, who is now on a visit to Japan, at their Fukagawa mansion. Among the guests were their Excellencies Marquis Ito, Count Matsukata, Count Incuye, Count Okums, Sir Ernest Satow, Colonel Buck and Baron Rosen, and Mr. G. Lowther, Mr. H. W. Denison, Mr. E. Duu, Mr. T. B. Glover, Mr. J. Conder, Mr. N. Zumoto, Mr. Uriu and Captain Brinkley.

A Japanese employé of the Yokohama Engine and Iron Works met with a fatal accident on the P. & O. steamer Borneo on Sunday night about 11 o'clock. The unfortunate night about II o'clock. The unfortunate man fell down the hold of the vessel, a dis-tance of some 30 feet. The doctor of the ship was on board at the time and did all that was possible, but the injuries received were so serious that the man died a few minutes after the fall. The body was removed to the Police

Early on Sunday morning the body of a seaman named Rock, belonging to the British steamer Oopack, was found by the police near the northern gate of the Yoshiwara enclosure at Magane cho, with very severe injuries on the The Kotobuki-che Police advance the head. theory that the man had gone to sleep under the influence of liquor and had been frozen to death during the night. A Coroner's Inquest will be held at H.B.M.'s Consulate at 10 a.m. to-day.

Unrest seems to have existed in Saltama prefecture for some time past in consequence of the electoral campaign of Mr. Hagino and Mr. Mochida, the former being a Liberal and the latter a Progressive. On the 6th instant a dispute arose between the adherents of these two candidates the result being that five of the Progressives were more or less wounded. Mr. Kamishio, of the injured party, went to lay information against the rioters at the Police station, but on his way was stabbed to death. The whole prefecture, according to the vernacular press, is in an uproar.

#### ARNOLD, NORMAN, AND AN INTERVIEWER.

Concerning the Arnold-and-the-New York Herald incident to which we have already re-ferred, the London Morning Leader prints a couple of interviews that will certainly interest our readers. Before reproducing these interviews we may note that the London journal shows itself fairer than the New York, for it points out that Sir Edwin prefaces his pages on flower arrangement with an explanation which leaves no doubt as to the source of their facis. The first interview is particularly delightful, for it shows Sir Edwin baffling his questioner with the suave and polished resolution which he knew so well how to display :-

A representative of The Morning Leader called upon Sir Edwin Accord last night to show him the Herald's half-page article, and ask him what he thought of it. One reporter writes as follows: The great journalist welcomed the small one with extreme kindness and courtesy. He led me from the thing-room, into which I had been shown, to his cosy study, and, pointing to a couple of big easy chairs standing close together before the fire, said we would make ourselves comfutable in them for our conversation.

New York Herald," I replied, and started to hand tile paper across.

" Indeed I " said Sir Edwin, as he looked at the

"Indeed I" said Sir Edwin, as he looked at the paper and was closing his fingers upon it, "What is it about?"

"It is about yourself, sir; but you have seen it, or heard of it perhaps?"

"About me, is it? What is the date?" and Sir Edwin withdrew his hand from the paper.

"It is the latest Sunday issue to reach this country, and is dated 26 Dec. last."

"Ha! I have not seen it and I won't,"

"But Sir Edwin, this——"

"I do not care what it says. I never read them, never—reviews, flattery, nothing, no, never. I won't look at it put it away."

"But this is neither a review nor flattery." won't look at it put it away."
"But this is neither a review nor flattery."

What do you say it is, then !"
It is about your book 'Japonica,' and it says

you—"
"I tell you you are not to tell me what it says, I will not hear it. What odds is it to me what it says? Now, I am imperative, put it away, and we'll telk of something else."

"Sir Edwin, I'm sure you'll forgive me, but this is a sarious—"

is a serious—"
"I do not case. I haven't seen it and I do not intend to. No! I say I won't hear even what it's about, and then I shall never know."

"But, sir, this acticle says you—"
"Let it. That's no reason why I should know what it does say, and I will not know. Put it away at once or I shall bid you "Good night."
"Indeed, Sir Edwin; but you should know. My people might publish something of this. It is a matter of public interest. But I should not like your refusal to be misunderstood."
"My dear sir. The Meaning Leader will take

"My dear sir, The Morning Leader will take care of itself. Nice thing! Here you want to thelme and hear my defence before-hand and all I've got to say about it. I tell you I do not know that the article says, and I will not. There, he done. Sit down. Is there anything else I can do for you? What, you came about that alone? Then I must wish you good night." Delighted to have met you. Very kind of you to come and to take so much trouble about me. But I won't talk about myself, nor care what anyone says of talk about myself, nor care what anyone says of me. Good night, sir, good night,"

Consequent upon the public interest excited by the accusation of plagiarism levelled at Sir Edwin Arnold by the New York Herald in relation to his work entitled." Japonica," a representative of The Leader yesterday waited upon Mr. Henry Norman, the author of "The Real Japan," and resistant editor of the Daily Chronicle. It should be stated that the interviewer himself by should be stated that the interviewer himself has travelled much in the Far East,

"Clearly it is a matter for Sir Edwin Arnold and for him alone," said Mr. Norman, "It is impossible for anyone else to say one word, interesting though the matter undeniably is,"

" Here," said Mr. Norman, producing a beauti-"Here," said Mr. Norman, producing a brantiful volume magnificently illustrated with Japanese
points, "here is the copy of Mr. Conder's book—
the volume said to have been 'plagiarised'—
which Mr. Conder was kind enough to send me
all the way from Tokyo. I scarcely think Mr.
Conder's knowledge of his fascinating subject
could be bettered or improved upon. He loves
Japan, its people, its institutions, its wondroms
flowers—a language in themselves, as it were—in
short, so saturated is he with the atmosphere of
the Flowery Land that I believe Mr. Conder
thinks Japanese." thinks Japanese."

At this point Mr. Norman's clever wife—the much-travelled "Méné Muriel Dowie," whose "Girl in the Karpathians" is yet in demand—joined in the conversation with an evident interest in the accusation and in Si Edwin's possible at-titude. Alis. Norman knows and likes "Japoni-ca," and knows and likes the Conder hook, too.

ca," and knows and likes the condct. "that my "It is a cutious chance, said sue, that my husband should possess a copy of the billiantly clever and interesting book by Mr. Conder, upon which is based the New York Herald's 'grave charge,' is it not? I shall be quite concerned to see what — if any—developments attend this storm in a Japanese tea-cup,"

with extreme kindness and courtesy. He led me from the thining-room, into which I had been shown, to his cosy study, and, pointing to a couple of big easy chairs standing close together before in them for our conversation. For a moment we stood in front of the fire while I took the copy of the Herald from my pocket and spread it open, with its linge type headlines standing boldly out making its charge.

"And what is it I can do for you?" began Sir Edwin.

"I want, sir, to show you an article in the

# CORRESPONDENCE. THE GOLD STANDARD.

TO THE EDITOR OF THE " JAPAN MAIL."

Sir,-Was there any definite reason actuating the Japanese Government when it determined to establish a gold instead of a silver standard in Japan a year ago? This is a question that must Japan a year ago? This is a question that must puzzle the minds of all who have taken an interest in the monetary legislation of Europe and America during the past quarter of a century.

To anyone who has studied the advantages of the silver standard and who securizes the fact

that Japan industrially and commercially has reaped those advantages as long as she clung to that standard, "T.W." in his letter to the Japan Mail of February 11th, gives the only rational explanation. According to this opinion the Govern-ment in power intended to fix or crystalize the benefits it had derived from the silver standard, do so beyond the possibility of recall Were silver to be restored by any legislation of at international character to its old parity with gold, Inpanese industries would aufler a reverse in al japanese indistries wante suffer a reverse in al-most direct proportion to the benefit received from the so-called depreciation of silver, and to avoid this contingency Japan adopted the gold stan-dard at the ratio of 1 to 32 (nearly). This same explanation of the motive of the Government was given in a Routil particle of The Division. given in an Roglish periodical ("The Bimetallist") when the news of Japan's monetary legislation reached London. It was also the reason at first assigned by the Japan Mail when it became evident that the Matsukata Cabinet intended to introduce a gold bill into the Diet.

But little or no evidence in support of this view can be found. This was not the reason offered by the Government, it was not mentioned by mem bers of Parliament, or even, with a single excep-tion, by the Japanese press. If one were m question a fundred intelligent and well informed apanese I is doubtful whether a single individual would mention this motive as the true raison d'stre of last year's monetary experiment. It is clear from this that another reason or other reasons

must have been at work.

I should like to offer the following explanation of the change. The adoption of the gold standard in Japan was a Government measure. If was not demanded by any political party or by any definite being of business men. The then Government was dominated by a belief in gold par so, as are certain Americans and Europeans at the present time, In Count Matsukata's speech before the Diet will be found abundant proofs of this preference for gold. The speech is a long glorification of gold and a deprecation of silver. The same attitude a depiecation or suver. The series when taken by all the other gold advocates when hill was under consideration. Their speeches the hill was under consideration. show an enthusiasm, a state of mental elevation, when they refer to the supposed superiority of the when they refer to the supposed superiority of the gold standard. According to these penetrating intellects prices in Japan fluctuated more than in other countries and these fluctuations were attributable to the variations in the value of silver. They did not stop to consider the changes of prices with which gold countries have been afflicted in the past twenty five years. According to their views the labouring man in Japan was defrauded of his seal wages by the fall of silver! Did they compare the conditions of the labour market in Japan with these of gold countries? Nay more, these savections critics attributed to the silver Japan with those of gold countries? Nay more, these sugacious critics attributed to the silver standard the want of foreign capital in Japan, and prophesied an economic paradise when the gold standard was adopted.

From all this it is clear why the motive offered by "T.W." as an explanation of Japan's action is inapplicable. In order to accept his explanation the gold advocates would have been constrained to acknowledge the benefits conferred by the silver standard upon Japanese industries and commerce. They would have had to confess that Japan derived immense advantages in nearly every department of her economic life from the decline of the gold value of silver during the past fifteen years. But this did not suit their purpose. Count Okuma, Count Matsuketa and their supporters—the entire coterie of gold standard-men—have always had a strong pre-ference for the gold standard. They have gone so far in extreme cases as to confess regret that Japan ever departed from the gold standard. It was out of the question, then, for them to urge rationally the resumption of gold only on grounds of prudence or expediency, as "T.W." does, viz. to guard the prosperity that Japan had derived from

guard the prosperty the white metal.
It is difficult to get even from the best informed to difficult to get even from the change of

That the gold standard would facilitate the introduction of foreign capital.

That it would eliminate the fluctuations of exchange with the countries of Europe and America.
That is would prevent a further rise of prices

That gold is the money of the more civilized countries.

That gold is by its nature better than silver as its value is much greater weight for weight. Connected with this is an unreasoning pre-judice forgold existing not only in Japan but in certain circles of Europe and America.

After much sifting of evidence I have come to he conclusion that the last two reasons had most influence in promoting the gold legislation of last Some well informed people assign other motives, but as the latter are strenuously denied by other equally well informed individuals, we can hardly accept them as true.

#### CALIBAN.

TO THE EDITOR OF THE " JAPAN MAIL."

Six,—I really do not know if it be worth while to bore yourself and your readers by reverting to the subject of our late little encounter. Only with respect to what you call my "explicit grievance" about the delay in the publication of my letter to you, I think it only fair to say that I have no reason whatsoever to doubt your explanation of it, more especially as I must frankly acknowledge that my handwriting is not unlike the fist of an ancient Egyptian in an advanced state of intoxication, and that the manager of the Fapan Mail very courte-ausly did send me a proof of the communication in question. But with respect to your editorial com-ment a week later, you must do me the justice to acknowledge that I wrote in the Kobe Chronicle Question. (what is the use of always referring to it as a Kobe journal?) as follows:-

" Possibly the crime of republishing it (my letter to you) with approbation in the Robe papers supplied a legitimate pretext for adverting to the matter at such a belated date. However that may be, at all events the *Mail* has justified my calculations and played my game just to a nicety."

Your explanation shows that the supposition in the first of these two sentences was correct. Now, it is equally true that I honestly did count upon what has actually taken place, when I primed the letter to you. Once already (in Oct., 1890, I think,) I sent you a letter which you refrained from publishing till I had it in type in the Gasette office (with an accompanying note of explanation), and when you did publish it on the morning of the day when it was to appear in the Gasette, I got into sad trouble with Paddy Auglin in consequence. Since then I have, with much amusement, seen you play their people in the same artistic way; one gentle-man especially you luted on to thin ice in a fashion that showed that the gods must have originally masked you sate either for a diplomatist or a Socra-tic philosopher. It is certainly not by any means on my last letter to you that I venture to rear what you call my "imposing edifice of inference" about your "minor tactics." The inference about them your "minor tactics." The inference about them was drawn long agn, and the letter in question was concocted to fit in with my theory (whether right or wrong). And it suited too,—pat,—although after your explanation it would seem that, as we say in Scotland, that came "mair by luck than gude guidio."

However, that is not the main thing, and I don't lancy the local public find much spiritual joy in fancy the local public find much spiritual joy in the casual fencing of a pair of journalistic gladiators. All that I am anxious about is that for the good name of Japan, and for the comfort of myself-and my fellow-lieges—more especially of the petticoated section of them—Caliban be put in his place. Of course cooles have rights (we have left the age of shita m iso far hebind us) and these rights must be respected. But His Majesty King Coolie must understand that other people also have rights, and that these too must be respected. ights, and that these too must be respected.

Very truly yours, Omori, March 5th, 1898.

TOPICS FROM THE UNITED STATES.

SCOTUS.

[SPECIALLY WRITTED FOR THE " JAPAN MAIL."]

Ithaca, February, 1898. In this age of the world, when the ocean no In this age of the world, when the ocean no longer separates but unites nations, and when even wars may be decided on sea rather than land, the interest in naval matters has reached high water mark. Captain A. T. Mahan has done not a little to ravive the general interest, both and a state of a st Japanese a consistent reason for the change of an a little to ravive the general interest, both tor. I doubt not that one could, in the archives standards. A list of motives would include the emplessional and popular, by his writings on the of the lighted his of the lighted his of the lighted his of the lighted his of the lighted his order in battle, caused following:

made his mark first in 1883, by his fascinating monograph in the handy series issued by the His was the third volume, and dealt with "The Gulf and Inland Waters," the work showing not only the conscientious historian but also a grasp of principles and details and a mastery of language, that were in themselves the prophecy of greater things. An account many and the second control of the second cont Scribner's on age, that were in themselves the prophecy of greater things. An equally warm welcome to his later writings has been given in all countries where the English language is spoken, and in nearly every maritime country in Europe and in Japan his works have been translated.

Even the launching of a ship has become a matter of considerable popular interest. This is matter of considerable popular interest. This is not only because of the personal element which enters into all things human, but (1) because of strong opinions both for and against the continuance of ancient pagen customs; (2) because of strong prohibition and temperance opinions as against the sentiment for and personal liking of Kentucky whisky, California wine, and imported it on the sentiment of the sentiment of the sentiment of the sentiment of the sentiment of the sentiment of the sentiment of the sentiment of the ship. It is well known that among anilors, who are usually reckoned superstitious, there are with are usually reckoned superstitious, there are very strong notions of orthodoxy concerning the personages and auguries at a ship launch. To this day, as I have seen in new books published only last month, and as I know from acquaintance with sailors, the tradition about the Chespeaks with sailors, the tradition about the Chespeaks with sailors, the tradition about the theory that there but here. still holds its own, like a dogma that defies both science and ridicule.

The unprejudiced historian reckous as the chief elements in the victory of Captain Broke and the Shannon over Lawrence and the Chesapeke in 1813, the superiority of British seamanship, discipline, valour, and perfect unity on one side, as against disorganization and even matiny in a new and raw crew and the death, early in the battle, of the American commander. All these, however, weigh as feathers only in the scale wherein is placed, on the other pan, the fact that the Chesplaced, on the other pan, the fact that the Chespeake was a failure from the first, that she stuck fast on her ways when being launched, and was always an unlucky ship from this formal hitch between land and water. No wonder, then, that she struck her colours, when assaulted, in an atterly imprepared condition, by the treacherous broadsides of the Leopard. This was during a time of peace and only a few miles away from the spot where the new battleship Kentucky is, during this mouth to slide from her ways and chause the month, to slide from her ways and change the world of her habitation from land to water.

It is no wonder, then, that the nautical teapot has been recently quivering with a tempest of no slight force, for the proposal to have a married slight force, for the proposal to have a married lady christen a man-of-war has roused the wrath of all upholders of traditional naval orthodoxy. From the time of Helen of Troy, has it not been appropriate that a wirgin only should break the bottle over the bow as the keel kissed the water in tribute to Neptune? The idea that a married woman should usurp the function which belongs only to the maidet, is something horrible to the mind of Jack Tar. To-day it is orthodox that only a virgin should name the ship. Hence the flutter in Washington society, naval and official, because of the alleged promise to a wife rather than to a virgin that she ahould name the Keniuchy. There seems to have been some lack of formality in making and keeping covenant, but no sooner is the Secretary of the or some some the best of the secretary of the Navy out of one trouble, than he is in another, for whereas the possessor of a bottle of fifty-year old Kantucky whisky, which is famous all ever the United States, complains of the use to which his nectar was applied—to the delight of a dinner party rather than to Neptune—there are others who protest against the idea of baptizing (by affirwho protest against the takes of specific by white since is sign) the battleship Kentucky with either native or imported champagne or with mellow whisky. It is now definitely decided that the fair sponsor, Miss Christine Bradley, will meork a beautifully embellished vessel fall of pure Kentucky water. embellished vessel full of pure Kentucky water. This is to come from that unfailing spring of cold, clear water in Jarne country, where Abraham Lincoln was born and at which he used to slake his thirst in boylood. There was a precedent for this; during the civil war the gunboat Bedford was launched at Philadelphia, a bottle of Bedford spring water being broken the bow.

But now the Japanese have come to teach us a good lesson, which lovers of temperance and believers in prohibition welcome with delight. The love of liquor in mankind generally, and especially in pations, needs no artificial or sentimental

ly in patriors, needs no artificial or sentimental stimulus. I have often wondered why some teetotaler, with a taste for research and a powerful pen, did not attempt what awaits the clover investiga-

by too much alcohol in the stomach of captains, com-modores, and admirals. I have myself read enough in the archives of Washington to know that frequent disaster has happened to American aims and property, because of too much love of the bottle. One may not be too certain that the sinking of the Victoria or the Oneida was directly or indirectly caused by indulgence in the convivial glass; yet there are those who do believe that the prime cause of the defeat of the Union arms at the first battle of Bull Run was too much brandy in the stomach of a certain officer. To push sumour too far, without documentary basis, might encourage rar, without documentary basis, might encourage presidents like Lincoln, who, on being told that General Grant drank whisky, proposed to send a barrel of the victorious General's favourite brand to every other general in the army. Whatever may be said of officers, it is certain that the abolition of the liquor ration in the United States Name. tion of the liquor cation in the United States Mavy has given us a better set of men and improved general discipline.

The breaking of a bottle of alcoholic liquor of some kind over the bow of a ship, as it first touches the water, is a survival of the old classic libasome kind over the bow of a ship, as it his towners the water, is a survival of the old classic libations and of the association with pagan mythology. To propitiate Neptime, a bottle of wine is shivered in his honour over the prow, but the Japanese ceremony of releasing doves seems to be better. I have not been able to find the origin of the custom, which has been used, I believe, only since the modern navy of Japan began. The lamoching of a ship means the changing of worlds, and the symbolism may be that of new life, possibly of resurrection. We remember that Yamato Daké, the legendary conqueror of the Kwanto, was brided in Ise, and that from his tomb a white bird flew up. In his memory, his father bad white birds (pranes) brought from every province in Japan. According to the report gathered from the Japanese officers at the lannthing of the Kasagi, it is said that "a feudal chief of the Shintofaith, whose devotees worship the spirits of the ancestors, had devotees worship the spirits of the ancestors, had a daughter who was asked in marriage by a chief of another faith. Refusal made their a daughter who was asked in marriage by a chief of another faith. Refusal made their determination to wed firmer, and an elopement followed. Pressed by the father's followers, the fugitives hid themselves in a cave in the mountain. As the hiding place was about to be invaded, two dows flew from the entrance. To the father they betokened the spirits of ancestors protesting in a feeble way at the desecration of their abode. Rebuked by them he turned away, his depandents went with him, and the lovers soon made their way to the shore and put out to sea. Ever since Japan had a may, the custom of liberating doves has been in vogue."

I should be glad if any of your readers can verify the statement or give in full the story and tell us in what book it is found. There is a good deal of symbolism in Chinese art, concerning doves and pigeans. Every one of us from childhood has been familiar with the blue porcelationates of Canton, with the trees and river, and bridges and pageadas, above which were flying a pair of love birds or turtle doves, which were the spirits of the two lovers, separated in life, but united in death.

Moved by the appropriate that Miss Helen

but united in death.

Moved by the announcement that Miss Helen Long, the daughter of the Secretary of the Navy, would loose a white pigeon, (though coloured ones were released) a well-known poet [Miss Edith M. Thomas] sent to The Critic this graceful quatrain) :--

O Land of the Isles in the ocean afar,
O lovers of symbol—of Beauty, of Worship, of

symbol we choose you (launching a strong

A large party came on from Washington to be on board. Despite the rainy weather, thousands of speciators gathered in the yard. At the right time, just before one o'clock, the rain ceased. When all was ready, Miss Helen Long, daughter of the Secretary, began to pull the white sibbon of the Secretary, began to pull the white suborn which held the great white sphere, about 2-1/2 feet in diameter, which hung from a pole projecting from the bow. The sphere was in reality a cage, composed of concentric strips, exactly like an orange cut from top to bottom, but covered on the outside with tulips, lilies, and other fragrant flowers. Inside were six doves, of the usual slate colour, that were gladly awaiting their hour of deliverance, for the rain evidently made them un-comfortable. The cord, however, slipped from the hand of the fair sponsor and fell down in front of the great steel close of the mighty rain. Forof the great steet dose of the mighty rain. For-tunately, however, the workmen who were stand-ing below leaped up to catch the string and release the imprisoned life within. One of them, James Engard, caught hold of the ribbon, and the concentric strips fell away. The birds whired and wheeled for a moment or two and then sailed away to the northeast, while the people below enjayed the fragrant shower of bloom. The below enjayed the tragram shower in mooth. The omens were all, from our point of view, favourable. Soon the graceful hull slid into the stream, while the lively breeze kept the num-flage at right angles with their staves. There was a large number of Japanese, both ladies and gentlemen, as well as of Americans

Meanwhile, we are all waiting for naval news from the Far East. The number of telegrams, which we have for breakfast every morning, suggest that "to be or not to be, that is the question." I remember when first arriving off Yokohama on the P.M.S.S. Co. steamer Great Republic, when friends came on board, besides French and Germany inquiring for the latest news, British officer from the 10th regiment, then in the camp on the fift at Yokohama, inquired whether there was to be war with Russia. The answer, which events gave I trust, be the same now. much for Russia, Japan, and England to do, be-

sides,
Concerning Cuba and Hawaii, the two "Islands of desire," it seems to be the sincere purpose of President McKinley, backed by the larger portion of our people, to wait. The harmony of ripeness and gravitation is desired rather than the forcible placking of half-ripe fruit. One element forcible placking of half-ripe fruit. One element in the case, scandalous, but working in the interest of peace, is our bloated pension system. To the reform of this, and of the revenue and currency, our law-makers must give their attention for the contraction.

#### THE RECENT "COUP DE GRACE OF THE DOSHISHA.

[WRITTEN FOR THE " JAPAN MAIL."]

BY J. D. DAVIS, FOR TWENTY-ONE YEARS PROPESSOR IN THE SCHOOL.

PROPASSOR IN THE SCHOOL.

In Oct., 1874. Mr. Neesima, who had spent ten years in the United States, was present at the annual meeting of the American Board of Foreign Missions, in Rutland, VI, and made an appeal for money to found a Christian College. He had himselt experienced the benefit of a Christian education during ten years and in response to his tearful annual nearly five thousand dollars were tearful appeal nearly five thousand dollars were learful appeal nearly five thousand dollars were given. Returning to Japan, he tried in vain for eight months to get permission to start his Christian school in Osaka; the governor of the city refused permission because it was to be a

bers who shall own the property of the com-pany, and shall see that it is used for the main-tenance of Christian schools, and shall have charge of all business arising between said schools and the Japanese Government.2 The present Constitution. which was adopted a few years later, bagins with six articles, constituting the first chapter which is headed "Fundamental Principles." The first, second, third and sigth articles read as fol-

Kers Cherry D. J.

1. This company is established to promote moral and intellectual education in close union.

2. The name of this company is the Doshisha Company. All schools of the company must have Doshisha as a part of their name, and this Constitution applies to them all.

2. Chairmants is the foundation of the maral.

stitution applies to them all.

3. Christianity is the foundation of the moral education promoted by this company.

6. The above five articles are nothingeable.

The Trustees at their meeting in Tokyo, February 23 d, voted to strike out article six entirely, and to strike mit the last clause from acticle two. They took this action because they wish to secure privileges for the Jinjo Chu Gakko of the Doshisha from the Mombusho, as I hear, refuses to grant any privi-Gakko of the Doshisha from the Mombusho, which, as I hear, refuses to grant any privileges if the Chu Gakko has any relation in Christianity. By striking out number six, they think they can change any of the other articles at will, and they have changed number two so that they man say that Christianity has no connection with the Jinjo Chu Gakko. But so long as they leave number three, Christianity must be the foundation of the morality taught in the Chu Gakko, if they teach any morality there. Number three will also have to be changed or stricken such a present there are very few students out. At present there are very few students left in the Doshisha, except in the Chu Gakko, and if Christianity is to be discreed from that it changes the whole nature of the school.

The first printed appeal for the Doshisha University was prepared and issued by Mr. Neesima in May, 1884. The following extracts from that appeal show Mr. Neesima's firm and miswerving pose to make the school thoroughly Christia purpose to make the school thoroughly Unristian, "When we look carefully at the condition of the country, there is one thing which gives us great socrow. What is that? It is that there does not exist in Japan a University which is founded upon the most pure morality and which teaches the new science. This is a necessary foundation of our civilisation. . . In the year toxo, the Pigram Fathers landed at Plymouth, Mass.; the gram that they might enjoy freedom to worship God. They established a school which was founded upon Christian morality. Since that time, for 260 years their descendants have inherited the spirit years their descendants have interested the spins and carried out the purpose of the fathers; they have believed that such schools would diminish the number of toose who do good; that they would encourage the spirit of liberty and become the foundation of the State; they have believed that in order to become a union with the best for growth. order to become a nation with the best free govern-

order to become a nation with the best free government they must have universities which are founded upon Christian morality, where the sciences will be taught. We cannot doubt but that their free institutions have been the result of this spirit. . . . Some are trying to improve the morality of the people, but they demand that the old morality of China shall be used with the people, and hence we cannot rejoice at their efforts, for the Chinese morality has no influence upon the mind of mee generally. All Oriental States are almost destinute of liberty and Christian morality; they cannot therefore rapidly advance in civilization.

"The growth of liberty, the development of scients."

"The growth of liberty, the development of science, the advancement of politics, and the power of morality have brought forth the European civiliza-

and spiritual principles and to train up, not only men of science and learning, but men of consciencions supera and learning. This we believe can never be attained by one-sided intellectual education, nor by Confucianism, which has lost its education, nor by Confucianism, which has lost its power to control and regulate the mind, but only by a thorough education founded on the Christian principles of faith in God, love of truth, and benevolence to one's fellow men. That our work is founded on these principles in the point in which we take differed from the prevailing views one-education, and owing to this we failed to gain the sympathy of the public for a number of years. At that time our condition was very weak, with almost a friends in the whole country with our notice. ne friends in the whole country, with our principles of education not only despised by the igno ciples of education not only despised by the ignorant, but treated with contempt even by men of enlightenment. Nevertheless, being convinced of the ultimate victory of truth, helping and streng thening each other, we proceeded on our way with a single eye to the end, and with strong determination amid the greatest difficulties. Formostely, general opinion has now changed respecting religion, so that even those who do not themselves believe in Christianity are ready to arknowledge that it contains a living power for themselves believe in Christianity are ready to acknowledge that it contains a living power for the regeneration of men. Thus society has been prepared to walcome us. . . . . We think that Western civilization, though many and various in its phenomena, is in general Christian civilization. The spirit of Christianity genetrated all things even to the bottom, so that, if we adopt only the material elements of civilization, and leave as a clinical in the heidelings are a human hode. out religion, it is like building up a human body of flesh only without blood.

or nesh any without clood.

"Our young men, who are studying the literature and science of the West, are not becoming fitted to be the men of New Japan, but are, we regret to say, wandering out of the true way in consequence of their mistaken principles of education. Alas, of their mistaken principles of education. Alas, what a sad prospect this offers for the future of our counity? . . . . To express our hopes in hief, we seek to send out into the world not only men versed in literature and science, but young men of strong and noble character, but young men of strong and noble character, but which they can use their learning for the good of their fellow mess. This, we are convinced, can naver be accomplished by abstract speculative teaching, nor by strict and complicated rules, but only by Christian principles—the living and powerful principles of Christianity—and we therefore adopt these principles as the unchangeable foundation of our educational work, and devote our energies to their realization."

The above extracts are taken from Dr. Nes-ma's appeals for the University addressed to the smals appeals for the University addressed to the unochristian public of Japan. It is needless to say that he emphasised the same Christian foundation for the school in all his appeals for aid to the Christian public in the United States. That Christian public had faith in Dr. Neesima. They had faith also that his successors would keep the sulemn compact contained in those articles of the constitution which were declared to be forever malterable, and that Christianity to be forever malterable, and that Christianity would remain the foundation of the school. Not one dollar of all the hundreds of thousands of dellace which have been given to the Dashisha by earnest Christian friends in the United States would have been given had it not been believed that the school was securely established on a Christian foundation.

It was this conviction which called forth the princely gift of one hundred thousand dollars from Mr. J. N. Harris, of New London, Conn. Many things have occurred during the last few years which have caused solicitude on the part of the friends who have supported the school during more than twenty years. Its Christian spirit declined; lecturers were allowed upon its platform, and professors retained who publicly attacked the Christian foundations of the school. These things wen so far that two years ago the American Board and its missionacies were separated from the school. Mr. Harris was greatly troubled at this change and his anxiety probably bastened his death. A short time before his death he wrote as follows:—" This

gift, and had revealed almost an absence of what the regarded a moral sense of integrity. He could not understand why his wishes as to the use to be made of his gift should not have weighed more with those who administer the funds. I had never seen him appear so grieved and pained. It may be that this hastened flis death. White revealing such pain, he repeatedly said, "Nevertheless, I ne that this hastened flis death. While revealing such pain, he repeatedly said, 'Nevertheless, I cannot believe that the prayers and faith of Dr. Neesima and those who have been so interested in the Dr. State of the said in the Doshisha for twenty-one years of its history, will all go for naught, but that the institution will yet be a centre of Christian influence and power for Japan."

What would Mr. Harris say could be speak today, after the trustees have taken this entirely un-lawful action which no one of the foreign friends of the school would have believed it possible to

By this action they virtually annihilate any sure foundation. When the object in view is consider-ed the action virtually takes the Christian foundation away from the school. By this act they strike a fatal blow to the school, for if it is not to be a tion away from the school. By this act they strike a fatal blow to the school, for if it is not to be a Christian school it has no sufficient reason for existence, and they strike out the only thing which can possibly give the school success. It can compete with the government schools only on its moral side. With a growing Christian constituency; if it kept its original genuine earnest Christian spirit and reputation, it would be supported by the increasing number of parents who will desire to place their sons to be educated under the influences of Christian morality. By this act they also strike a heavy below at Christianity in Japan, for the Doshisha has been considered one of the Christian centres of Japan, and such an act by a Christian board of trustees will do much to disparage Christianity in the eyes of the such an act by a Christian board of trustees will do much to disparage Christianity in the eyes of the whole nation. By this act also, the Trustees of the Doshisha have struck one of the heaviest blows at the fair reputation of Japan among the nations of the world which could possibly have been given. If a board of trustees, all of whom are or have been professing Christians, many of whom are men in high positions to-day, and who have inherited such a sacred trust, can deliberately strike out, sweep away, that which has from the beginning been the foundation of the school, and which was

sweep away, that which has from the beginning been the foundation of the school, and which was declared in the constitution to be finever matterable, where is the honour, and what foundation is there for trust, among the Japanese people? This will be the inevitable and swift verdict which will be passed by all the enlightened nations of the carth as soon as this action is known.

The writer has put most of his life into Japan, twenty-one years of it into the Dushisha. He loves the school, he loves Japan; it is hard work for him to tell which he loves most—bis native America or Japan; and hence it is with unsiterable sorrow that he witnesses this fatal stab at the school and at the fair reputation of his adopted country. He feels that it is due to his loved and country. He feels that it is due to his loved and sainted friend Dr. Neesima, who founded the Doshisha on Christianity and gave his life for it, and also to the many thousands in the United States who have given their prayers and their money for the school, that the above facts should be made known.

Kvoto, March 5th, 1808.

# THE KENNEDY MURDER CASE.

On Wednesday morning at a little past 10 s.m. the adjourned trial of Nagai Yoshito, charged with having killed Thomas Kennedy, a seaman belonging to the British ship Glenericht, on the night of the 16th September last, was continued in the Yokoliama Local Court before Judge Yamanuto and Amirtust Intera Entited A. mamoto and Assistant Judges Fujise and Oyagi. Public Procurator Kitaoka prosecuted, and M. Futami, barrister, appeared for the defence. Mr. Lay, of the British Consulate, was present and

had a seat on the bench.

After the case was called, Dr. Neil Gordon Minro gave the following evidence through the

the effusion of blood in the fourth ventricle. brain was broken in two places, corresponding with the fracture of base of the skull. There was a large blood clot under the brain and another between the brain and the bone. There was not only compression of the brain, but wounding of the brain, and either were sufficient to have caused death.

Caused death.

This concluded Dr. Munro's evidence.

The Chief Judge, addressing the prisoner, asked

—When you struck the seaman in what direction
were you facing?—For Kanenohashi (the iron
bridge, near Isezakicho Police Station).

The Judge—Did you not say in your preliminary examination that you were not so much intoxicated at that time and that you had only drink sake worth 20 sen together with your commades? Sake worth only 20 sen is not much when divided among your comrades?—Mr. Furukawa, my master, added some more among us.

Judge-I do not think that you could become Judge—I do not think that you could become quite intoxicated with sucil a small quantity when you generally take 5 go of liquor?—From the morning I had been taking some liquor,

Judge—You did not say that till now,—It might

have been so.

Judge—You must have been following close on to the seaman, when he turned round you must have faced him?—I changed my position when the seamen turned round.

Judge -You must have been following the sea-

Judge—Southeast did you strike the seamen first,—with the bamboo or the huge log ?—I do not

Judge—You said in the preliminary examina-tion that you struck the seaman many times. Did you not?—No.

you not?—No.

Judge—Your statements are utterly incompatible. Each time you speak your words are found quite different. Is it true that you struck the seaman thinking that he was a wicked fellow? -Yes, that is so.

Judge—Do you want to say any more on your own behalf?—I have not any more to say,

An Assistant Judge—Where was the place that you struck the seaman in the presence of the multitude ?-I cannot tell exactly, as the streets were filled with people.

Assistant Judge—Near the fish-monger's shop or the fire-watch box?—Near the fish-monger's.

Assistant Judge—When you were quite near the seaman did he brandish his knife over you?

Just when 5 or 6 people were pursuing the seaman Japanesed to search him and after this. man I happened to approach him and after strik-

ing him I can away.

Assistant Judge—Was not there any moment when the seaman faced against you?—There was, for the space of a moment when the seaman faced

me as I was coming close to him.

Assistant Judge—Did you not have any time to pick up anything?—I had some moments to

pick it up

Assistant Judge-Can you pick up anything so fast?-I was able to pick it up as the stick was just lying there.

Assistant Judge-How many people were about when they pursued the seaman?—About 15 people were pursuing the seaman, and two or three ahead of him.

three ahead of him.

Assistant Judge—Is it not false that you used a bamboo stick? You must have used the huge club?—No, no. Assistant Judge—Did you see the seaman vomiting blood?—No.

Clief Judge—You must have been looking? your present statement is quite contrary to the

tatement made previously.

Public Procurator—He stated that on the night of the 16th of September four seamen belonging to a British steamer, then at sector in Yokohama quanteled in the streets of Isezakicho under the influence of liquor, when the crowd becoming excited, pursued the seamen, one of them, who is thought to have wounded a jurikisha coolie being Thomas Kennedy, and upon seeing Kennedy flying towards Sugatamicho the prisoner, Nagai, struck the seamen with a club in Sugatamicho. It is usual with every man not to speak against himms anxiety proparty described as follows:—"This is not the end of Christian education at the Doshisha. God will not permit the sun of Neesima to go down in darkness so soon. He is yet to reckon with unfaithful ones who succeeded that great ethnics. I do believe that rich harvests are yet to be respect from this field.—I shall see it, but not here; I shall behold it, but from above." Secretary Barton of the American Board, wrote the next day after Mr. Harris' death, October 19th, 1896, as follows:—'I was greatly shocked this moning, as this bouse, of Mr. Harris. He was leve last Friday to talk over the situation in the Doshisha. He was intensely pained at the still de symmetry and the caused an effusion of blood on the base of the still de symmetry of the knees, elbow, which was broken, nuder the presoner they moning, at his bouse, of Mr. Harris. He was leve last Friday to talk over the situation in the Doshisha. He was intensely pained at the still de symmetry and not to speak against himself. But there is evidence as to the prisoner to salud the seaman, for the prisoner to salud the seaman, for the prisoner to shout half a dozen slight bruises on the body, in different parts—on the knee, elbow, which was broken, and the salud over the view of the salud over the prisoner was a swelling over the left temple. Only two were severe, there was other evidence to show that the death of the seaman was caused by the prisoner was from the sudden death on Sunday, (yester day) moning, at his bouse, of Mr. Harris. He was five last Friday to talk over the situation in the Doshisha. He was intensely pained at the still the prisoner was skull, which caused an effusion of blood on the brain. There was a blood clot in the fourth venity to the fourth particles. The brain substance was broken, and this source the prisoner said.

I have nothing to say about the assault, I have nothing to say about the seaman, in the prisoner told was the fellowing to say about the seaman in the should dozen the body in different particle the body a Furukawa, his master, that he should hereafter put a stop to taking liquor as he generally become quarrelsome when in liquor. Again on another occasion the prisoner tried to fly away from Yokoliama by pawning his carpenters's instruments. The evidence that the prisoner is the man who struck the seaman Kennedy, causing his death, is now apparent. Such being the case the prisoner is subject to Art, 299 of the Criminal Law and is liable to undergo imprisonment with labour. Not alone in the present instance, but in others, the abuse has recently become marked, or ordered called yajimma, (meddlers.) taking the law into their own hands, which they have no sight to do even when, as in this case foreigners may have been guilty of creating a disturbance. This is an abuse which cannot be too strongly condemned. Even though the seaman struck him he ought not to have returned the blow. So the prisoner should be dealt with severely by the Court.

Court.

Mr. Fonami, Counsel for the defence, submitted that the evidence that the prisoner had killed the seaman was not conclusive, for it was clear that the prisoner used the bamboo and not the huge club. When the prisoner ran after the foreigner he did not pass the spot where the piece of wood was standing, so that he had no chance pick up the club. He believed that the prisoner had struck the assman but not with the club. Hence he did not believe that the prisoner was the murderer of the seaman. As to the statement that the prisoner told his comrade in Maganecho that he killed the foreign seaman, Counsel would suggest that it was contrade in Maganacho that he killed the foreign seaman, Counsel would suggest that it was rather strange for the prisoner to speak of his having killed the seaman in such a place. At the time of the struggle there were plenty of other men wearing similar clothes, though the murderer was also of short statue like the prisoner. He begged the Court that the prisoner might be treated as the striker of the seaman but not as the ed as the suiker of the seaman but not as the

Chief Judge-The Court will announce its judgment upon the prisoner on the 11th inst. at

) a.m. The Court theo cose.

# LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

ENGLAND AND FRANCE ON THE NIGER.

London, March 7.

The Niger Company has despatched a force to Sokoto, to assist the Sultan, should the French refuse to re-cross the Niger.

HEALTH OF LORD SALISBURY.

Lord Salisbury is making fair progress but is still extremely weak.

FATAL DUEL BETWEEN ITALIAN DEPUTIES.

The Italian deputy Signor Cavolotto has been killed in a duel with swords with deputy Macola owing to a press polemic.

"VICTORIOUS" ON HER WAY AGAIN.

Said, and not at Suez as was at first to compass her designs in the affair by stated, left Suez on the 2nd inst. for the ordinary method of diplomacy.

CABINET CRISIS IN AUSTRIA. The Austrian Ministry has resigned.

SOUDAN CAMPAIGN. The British battalions have reached

Atbara.

#### THE FAR EAST.

London, March 8.

The Times Pekin correspondent telegraphs that Russia has requested China to surrender her sovereign rights over Port ther for the laying of a railway between Arthur and Talien-wan with the same conditions as granted to Germany at RUSSIA MAKES ANOTHER DEMAND; RAIL-Kiao chow. Russia also asks for the right to construct a railway from Pekin to Mukden and Port Arthur, and in the event demanded within five days.

REPORTED RUSSIAN DEMANDS.

In the House of Commons, Mr. Curzon stated that he had no information confirming the Times' statements.

Almost a panic prevails on the Stock Exchange owing to fears of a conflict with Russia in connection with Chinese Affairs.

# SPAIN BACKS DOWN.

Finding that the United States of North America resented her demands, Spain has withdrawn them.

A bill has been introduced into the House of Representatives, with the approval of President McKinley, appropriating fifty million dollars towards the national defence.

# RUSSIA'S LATEST DEMANDS.

London, March 9.

Russia has demanded the lease of Port Arthur and Talienwan for 99 years, and

insisted on a reply by to day.
In the House of Commons, Mr. Curzon announced that the Government had telegraphed to Pekin and St. Petersburg, enquiring about the matter.

# BRITISH NAVAL ESTIMATES.

The British Naval Estimates amount to £23,778,000 and provide for an increase of 6,340 men, three new battleships, four cruisers, and four sloops.

#### AMERICA'S DEFENSIVE MEASURES

The Washington House of Representatives has passed the Credit for Defensive Measures unanimously.

#### CRISIS IN THE FAR EAST.

Russia continues hurrying troops to the Far East. Her own cruisers being insufficient, it has been arranged to employ French steamers for the conveyance of reinforcements. The first of these will reinforcements. The first of these w leave shortly with a force of 2,000 men.

#### UNITED STATES DEFENSIVE MEASURES.

The Washington Senate has passed the the Appropriation Bill for the defensive measures.

(Received by the Fift)

# THE PORT ARTHUR AFFAIR.

Pekin, March 6.

Russia has sent an application to the Chinese Government for the lease of Port Arthur and requested an answer within five days.

Peking, March 7. The Tsung-li Yamen shows no sign of complying with Russia's demands in re-The Victorious, which grounded at Port believed here that Russia will not be able

#### ARRIVAL OF PRINCE HENRY.

cruiser Deutschland, The German having on board Prince Henry of Prussia, has arrived here.

ANOTHER RAILWAY CONCESSION SECURED BY GERMANY.

Peking, March 9.

Besides the railway concession already secured, Germany has also acquired ano-Chinampho and Ichow.

WAY IN LIAOTUNG.

Peking, Mar. to.

Russia has made a request that she of non-compliance, threatens to send should be conceded the privilege of laying troops into Manchuria. A reply has been the Liaotung railway terminating in Port Arthur.

CHINA NEGOTIATES WITH RUSSIA. Peking, March 10.

China, investing full authority in her Minister Hu King-ching in St. Peters-burg, has opened negotiations with the Russian Government as to the latter's demands.

#### ENGLAND COUNTENANCES CHINA.

England, while advising China to take a firm decision, has informed her that were she to acquiesce in Russia's demands, England would make a similar demand in order to maintain the balance of power.

# LATEST FROM KOREA.

Chemulpho, March 9.

The Maya entered here to-day.

Soul, March 4:

Cho-pyong-ho has been appointed Minister of Finance, and Min Chhong-muk Minister of Foreign Affairs.

Soul, March 6.

The Ministers of the other State Departments have impeached Min Chhong-muk, Foreign Minister, to the Throne on the charge of having arbitrarily leased Deer Island to Russia without having consulted the opinion of his colleagues. At the same time they have submitted their resignations, which, however, have not been accepted. Min will probably be dismissed from office.

Söul, March 9.

On the 7th inst. at 6 p.m. the Russian Minister presented the following demands to the Korean Court.

In compliance with the Korean Court's request the Russian Government assisted the Korean administration by dispatching military officers and other advisers to Korea, but the ibehaviour of the Korean Court of late has greatly changed towards Russia and it has refused a proposal made by Russia. Should the Korean Court see no necessity for accepting Russia's help it must return a reply within 24 hours.

Soul. March o. The Consuls of Great Britain, Germany and the United States had audience with the Korean Emperor yesterday. This audience is thought to have connection This with Russia's recent demand.

Soul, March o. The members of the "Dokuritsu Kai" are engaged in a hot discussion regarding the dismissal of Kin Koriku and others.

Inquiries made regarding Russia's demand show that the Korean Government gard to the lease of Port Arthur. It is has asked for a delay of three days before answering Russia.

Soul, March 10. Yesterday a Cabinet Council was held as to the reply to be made to the Russian Legation. With the sole exception of Min Chhun-mak, acting Foreign Minister, all the Ministers of State maintained that a reply should be forwarded in the sense that the Russian drill-instructors, financial adviser, and others should be dismissed. Min Chhun-muk opposed this contention and avowed that the independence of Korea could not be maintained unless by

the help of Russia. To-day, at various principal points in the city private gentlemen of repute, literati, and leading merchants will address public meetings, in order to ascertain the opinion of the people as to the reply to be made

to the Russian Representative.

Söul, Mar. 10. The acting Foreign Minister has forwarthin als resignation.

Correct solution received from W.H.S., Skak,
D.D., and Voila.

"Marshall" (Kobe) is to be credited with correct Solution of Problem 358 which reached as last Saturday just after we had gone to press.

PROBLEM No. 362. By W. B. Mason, Tokyo.

White to play and male in three moves.

GAME. No. 368. The Hastings Chess Festival has been conducted with great success. Four masters were engaged—namely, Bird, Blackburne, Gunsberg and Janowski, Each of these played a number of very interesting consultation games against the others. There were also simultaneous against the others. There were also simultaneous and blindfold, as well as consultation games against amateurs. A notable performance was that of Janowski, who played twenty-nine games in three and a half hours, winning twenty-four. We append a consultation game played.

#### THE GREATEST WONDERS OF MODERN TIME

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BARRE, in his work entitled "The Nile Tribut tarles in Abpssinia," says—"I ordered the dragoman Mahome in inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice graits. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistabable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

#### HOLLOWAY'S OINTMENT

Is a certain emedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseasee, and in arresting and subduing all inflummations, Ms. J. T. Coorea, in his secont of his extraodinary travels in China, published in 1871, 1822—171 had with me a quantity of Holloway's Olintment. I gave some to the people, and nothing could exceed their graitfude; and, in consequence, mike, fowls, outer, and horse feed poured in upon us, until at last a teaspoonful of Olintment was worth a fowl and any quantity of peace, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Venders throughout the World

Printed and Published for the Proprietor, at 51, Main Street, ettlement, by Aktiber Brilland Brown, of "Nocklands," to 150, Min, Yokohama. —Saturday, Marcu 12, 1898.

#### MARRIAGE.

On the 19th inst, at Christ Church, Yokohama, by the Rev. E. Champheys Irwine, M.A., Rector, Thos Wallace, fourth sou of the late Rev. John Mclimith, M.A., of Erskine, Renfrewshire, N.B., to EDITH HELEN EMMA, fourth daughter of A. T. Walson, B-q., Yokohama.

#### SUMMARY OF NEWS.

A JAPANEER Stenmer was upset on her trial trip near Osakijima. on the 12th inst. and 13 persons were drowned.

In the Saudan campaign the British brigade arrived at Barber after a splendid march of four days and three nights.

A PARRWELL dinner was given to General Kodama, the new Governor-General of Formosa, at Uyens, Tokyo, on the 14th inst.

LORD SALISBURY'S health is in a very uneatle-Loan Salissuar's health is in a very unsatisfactory state and his physicians have forbidden A Perting telegram states that a great change in tea, the market for the latter being practically him to transact any business. He has taken place in the feelings of the Chinese oldsed. It other exports, such as copper, etc., ordered to the Riviers and MA Binear and Court and people toward Japan, and that the party little business has been transacted.

conduct the business of the Foreign Office in

SIR CLAUDE MACDONALD, British Minister at Pekin, has been appointed Knight Commander of the Order of the Bath.

THE German issue of the Chinese loan has been postponed until the 21st March, owing the regulations of the Berlin Bourse.

JAPANESE war-ships now in foreign waters are the Maye at Mokpho, Korea; the Tsukuba at Shaughai, and the Akagi at Taku.

On the night of the 10th inst., a woman of about 23 years of age was run over and killed by a train at Takanawa, Shiba.

Mr. Ishizuka Yrizo, Secretaryof the Legisla tive Bureau, has been appointed counsellor to the Governor-General of Formosa.

Tax triennial Memorial Service of the late Ito Juzo, father of Marquis Ito, took place on the 19th inst., at the temple of Shirokaue.

THE first steamers of the season for the ports of Newchwang and Vladivostock left Japan on the 17th and 18th inst. respectively.

Postman named Naito Hideo, Kamiya-Shiba, Tokyo, has been arrested on a charge of stealing money and cheques from letters.

A serrous fraces occurred on the British steamer Pathan, at Moji, on the 14th, between the crew and a number of coolies engaged in loading coal.

MR. GOSCHEN, First Lord of the Admiralty; in introducing the British Navy Estimates, dwelt on the continued expansion and improvement of the Navy.

A Russian Imperial Ukase has been issued ordering an extraordinary expenditure of minety million roubles for the construction of warships.

THE new steamer Tankijima Maru was launched at the Mitsubishi Yard at Nagasaki on the 12th instant. Baroness Suyematsu attended the ceremony.

MR. MURAKANI KYOTO, editor of the Shin Fakuin, has been fined 20 yen for having published statements made by some prisoners at their preliminary examination.

STRIKES of labourers occurred in Bombay, owing to the plague preventive measures, in the early part of this month, but were ended and quiet restored by the 15th inst.

A FARNER named Kaneko, of Fuchige-mura, near Tokyo, was arrested the other day in the act of putting stones on the railway line with the intention of wrecking a train.

MEDICAL-INSPECTION regulations have been put into force at Yokohama, Kobe, Nagasaki. etc., in the case of vessels arriving from Hongkong and China ports, in view of an outbreak of piagne.

THERE have been several skirmishes between the Japanese troops and the rebels in Formosa. On the 14th inst. a Japanese sergeant and eight men were killed in a fight with the rebels near

GREAT excitement is reported in New York on account of the Maine disaster, which has not yet been officially accounted for, and there was a semi-panic on the Stock Exchange on the 14th instant.

idea of looking to this country for support is spreading.

THE general election of members of the House of Representatives took place on the 15th and 16th inst. Up to Friday the results of the polling in 166 constituencies out of 300 were slightly in favour of the Liberals and allies.

The Times says that never since the Crimean war have the British people been less disposed to brook tamely the infringement of their just rights in any quarter. They are convinced of the justice of their cause and the magnitude of the issues both in China and West Africa.

M. MURAVIEFF has informed Sir Nicholas O'Congor, British Ambassadur as St. Petereburg, that Russia is negotiating for the lease of Port Arthur and Talien for a certain number of years, and for a railway across Manchuria. Russia had not demanded sovereign rights, and the ports if leased, would be opened to foreign trade.

THE half-yearly general meeting of the Yoko-hama Specie Bank was held on the afternoon of the roth inst. The total profits during the term amounted to yen 3,496,211 and the expenses to yen 2,440,747, leaving a balance of ven 1,055,464, to which yen 251,303 brought forward from previous account were added, making a total of yen 1,306,767. Of this amount yen 618,750 was appropriated to pay a dividend at the rate of 15 per cent. per annum.

THE projected Tokyo Kisen Kaisha (Oriental Steamship Company) will shortly start their line between San Francisco, Hongkong and lapan. One of the Company's steamships called the America Maru was launched on 9th inst., in England and the other two steamers—the Nippen Maru and Hongkong Maru—are expected to be finished and brought to Japan at no distant date.

THE Japanese torpedo destroyers now being built in England were named by the Minister of the Navy on the 16th inst. as follow: -No. 1 Ikasuchi, No. 2 Inasuma, No. 3 Shinonome, 1 Ikasuchi, No. 2 Inasuma, No. 3 Shinosome, No. 4 Murakumo, No. 5 Akebono, No. 6 Sagasami, No. 7 Yuyuri and No. 8 Shiranui. Those building in France are to be called the No. 1 Hayabusa, No. 9 Kasasagi and No. 4 Manasuru, and the one constructed in Germany the No. 3 Shirataka. All the boats are of 120 tons displacement. Six torpedo-boats are also being constructed at Vokosuka and Kure.

THE uncertain, if not critical political situation in the Far East has naturally had a considerable iffect both upon import and export business in Japan during the past week or more. In Imports some business has been fransacted in yarns-when buyers could get concessions on rising home prices,—but in cotton piece goods and woollens nothing is being done. Metals share the same fate and stocks are accumulating. In kerosene some transactions have taken place at the advanced quotations reported a week ago. but still something under the normal rates, another considerable import of cheap sumatra oil having arrived. A fair business has been transacted in brown sugar, a considerable shipment of Formosa having been disposed of on arrival at a small reduction from current quotations. The Export market has suffered fully as much from the war rumours in the air as the Import. Purchases of silk for Europe have been wil, in apite of considerable concessions from holders, but some little business has been done for America. No transactions at all have taken place in waste silk, nor

#### SPIRIT OF THE VERNACULAR PRESS.

Always conspicuous as an advocate of liberal and enlightened processes, the Jiji Shimpo now takes up the subject of anti-foreign sentiment (haigai shise) and discusses it in a frank and impartial manner. It declares that even among school teachers, of whom more cosmopolitan and sensible views might be expected, there are men who apply opprobrious epithets to foreigners, and the fact may well inspire unessiness now that the country is on the verge of being completely opened to foreign intercourse. Old traditions die hard; Japan long ago committed herself definitely to unrestricted intercourse with the outer world, yet the feeling of seclusion which, in the course of three hundred years, had become a kind of national instinct, lingers still in some quarters. The feeling is responsible for the assassination of Viscount Mori, the maining of Count Okuma, and the attack on the Czarewitch. Prior to the Restoration, the creed of aeclusion rested on foundations which, however they had been laid, were natriotic. Men lionestly believed that the only way to preserve the integrity of the empire was to keep aliens out of the country. The Tokugawa Regency discovered the error of that policy and concluded treaties of friendship and commerce with Western States. But the feudal system, at whose apex the Tokugawa samily stood, had run its course; its downfall was inevitable, and the reformers who plotted to bring about its overthrow did not hesitate to employ its proforeign policy as a weapon for attacking it. that way the haigai, or joi, sentiment received a fresh impluse, and when the new Administration was organized with the leaders of the Tokugawa's opponents at its head it might reasonably have been expected that they would give effect to the principles of seclusion which they had seemed to endorse before they came office. The result, however, was far different. It appeared that the promoters of the Restoration movement were themselves imbased with the conviction which the Tokugawa Government had obeyed. They adopted every means of weaning public opinion from its unti-foreign soutiment and putting an end to outrages such as the cutting down of for eigners, the burning of legation buildings, and so forth; outrages which, had they been con-tinued, would have permanently disgraced and discredited Japan. During the first fourteen or fifteen years of the Meiji era things moved in a very satisfactory groove; but a reaction then set in, and most unfortunately it was reflected in the educational policy of the Government, Confucianism once more found favour in the schools. Education is immensely powerful. In five or six years the ence more found Education is imeffects of that retrograde policy began to make themselves apparent. Their extreme form was illustrated in the attacks upon Viscount Mori, Count Okuma, and the Czarewitch; their more subtle workings found expression in a want of courtesy, sometimes amounting to absolute rudeness, towards foreigners. The existence rudeness, towards foreigners. The existence of any anti-foreign sentiment is a source of great unensiness now that the country is on the eve of mixed residence. Japan herself has in vited foreigners to come and live in her midst The responsibility of treating them with polite ness rests with her. Individual sympathics or antipathies are, of course, inevitable, but racial prejudices are unworthy of educated men.

\* \* The Nippon writes at some length about affairs in Korea, but the purpose of the article is merely to demonstrate that the complications now reported from the peninsular empire are due, not to political intrigues supported by American influence, but to a reaction against the masterful proceedings of Russis. After disgraceful coup d'état which led to the murder of the Queen, Japan effaced her-nelf in the peninsula and the Russophiles had the field entirely to themselves. The had the field entirely to themselves. The Chinese party did not count for anything. It Chinese party did not count for anything. It then the traditional encaries, Russia and Engan not be denied that the pro-Russian poli-land seem on the point of stepping into the ticians utilized their strategical traditions. Will the parallel cease there? In 1879,

and that they were powerfully backed by the Russian Legation. But they passed the bounds of prudence. Kim Hongniuk, whose life was recently attempted by assassins, bad originally been a man of no position. He owed his promotion solely to his knowledge of the Russian language and his thorough-paced advocacy of Russian influence. In a memorial addressed by him to the Throne it was stated that, as Korea could not hope to stand without Russia's support, the latter's application with reference to a coaling station on Deet Island, to grants of land at Mokno and Chinnampo, and to the concession of certain whale-fishing privileges, ought at once to receive the favourable consideration of the Korean Government. It is not improbable that the attack upon Kim was the outcome of that memorial. At all events, the resolutions subsequently passed by the Independence Club are categorically opposed to the steps taken by the Russophiles. Nothing could he more uncompromising than the conflict be-tween the views expressed by the Club and the measures hitherto adopted at the instance of the pro-Russian party. It is plain that public opi-nion has turned against Russia. Such is the Nippon's view.

The Kokumin Shimban thinks that the policy or the tri-partite alliance is now gradually being It was not merely to keep out of Liaoung and Manchuria that Russia, Germany and France combined against her: they had selfish purposes of their own which are now in process of consummation. England stands opposed to them, not absolutely unyielding, but still contriving always in attain her ends. Japan alone in inactive. Her role seems to be solely one of self-effacement. she steps aside to leave the path free for others; in Korea she yields to whatever pressure is exerted against her. Has she then no part to play in the Far-Eastern field? The Kekumin does not want her to imitate the aggressive, self-aggrandizing example of Western Powers, Her unique objects should be the development of trade and the preservation of peace, and to accomplish those objects it is essential that the independence and integrity of the Chinese em pire should be preserved. Japan, then, should devote herself to urging a progressive policy on her neighbour. Unless China becomes progres sive she can not possibly remain independent. It is essential that she should adopt Western civilization; build railways, work mines, reform her laws and her administration, re organize her army and navy. Japan must help her. It is evident, of course, that a country which already finds itself in straits for capital to carry on its own commercial and industrial enterprises, can not come to the pecuniary assistance of its neighbour. Indeed, Japan alone can not hope to do much for China. But England has adopted precisely the same policy as Japan. England, too, seeks the expansion of commerce on equal terms for all, the preservation of China's integrity and the maintenance of the balance of power is the East. Other countries are of the same way of thinking. Japan ought to make it perfectly plain that she belongs to that school of politicians, and that she is ready to further their programme by every means at her disposal.

The Hochi Shimbun recalls Lord Beacons field's high-sounding words at the Guildhall Banquet on the eve of the Russo-Turkish war of 1877, and wonders whether any memory of that time recurs to the aged Premier of England to-day, who was then Beaconsfield's lieutenant and upon whom the mantle of the Conservative leader has fallen. The English nation has declared itself frankly in favour of stretching out armed hands to stay Russia's aggressive advance, but the English Cahinet has not conrage to obe; the people's mandate. This crisis of 1898 closely resembles that other crisis of 1877. Now as then we have heard loky language from the leaders of British officialdom. Now as

Russia declared war against Turkey in the face of British menaces, and Turkey accepted the challenge. The Constantinople Cabinet knew well that its forces must be beaten to their kness by Russia's legions. But it counted on Eng-land's aid. That aid never came. If China reckons on British assistance now, will it come? The probabilities are that England will leave China to her fate as she left Turkey. unfortunately the Chinese braves are not like Turkish soldiers, nor has the Peking Government the resources, resolution, and ability of the Sultan's Administration. It is for Japan to apply the deficiency. England is an Occidental Power. It is not atrange that she should hesitate to move ships and soldiers to the aid of an Oriental country where, after all, her interests are only commercial. But Japan is very close to China racially, as well as geographically. If neighbourly instincts do not forbid her m stand by placidly while the Middle Kingdom is dismembered, her own material interesta condema such indifference. Marquis Ito is in the position now that the Earl of Heaconsfield occupied in 1877. He has the nation at his back. The people would welcome with acelaim a resolute policy. It is for him in interfere on behalf of the Turkey of the Far East. If he shrinks from the enterprise, his own weakbe to blame.

. . There has been a good deal of journalistic complaint recently about the "voiceless foreign policy" of the present Cabinet, and the Chuo Shimbun writes in answer to the complainers. It says, in effect, that a policy of many deeds and few words is infinitely preferable to a policy of few deeds and many words, and it hints very plainly that the policy of the last Cabinet belonged to the latter category. British diplomacy, our contempory thinks, is the best model to take. In the recent crisis, for example, the German Emperor's declarations were almost theatrical in their magnifoquence, but the facts accomplished were comparatively trivial. England, on the contrary, said very little. The world scarcely knew that she was moving until it learned that an Anglo-Chinese convention had been concluded covering so much more ground and dealing with issues so much more important than the German convention had covered or deals with that the two could scarcely be mentioned in the same day. That is the kind of procedure to which the Chuo accords its applause. It bids ils countrymen possess their souls in patience, and not be disturbed because their diplomate give little evidence of loquacity. Deeds not words are the desideratum.

The Yamiuri Shimbun insists on the necessity of appointing harbour-masters, enacting harbour regulations, and providing proper harbour equipment. This subject has so often been discussed already that we need not reproduce our contemporary's arguments in detail; They are easily conceived.

In the Tokyo Asahi we find an article which, were it an expression of lay opinion, would be at once interesting and disquieting. But the nom de plume (Doshi) of the writer indicates a Buddhist priest; a fact which, se our readers will presently perceive, deprives the article of much of its force. The subject discussed in a petition presented to the Government by the faculty of the Doshisha in Kyoto, Students of the Upper Middle Schools as well as of private schools ranking in that category, are exempted from military service until the age of 28, the object of the exemption being mallow them time to complete their studies. The faculty of the Doshisha pray that the same privilege may be extended to the students of that institution. The Arabi discusses the question from a funda-mental point of view. In what light, it asks, does the State regard Christianity? Accord-ing to the Constitution "Japanese subjects shall, Withihilimits and prejudicial to peace and older butte not unterbinging to their daties an

subjects, enjoy freedom of religious belief." Now the Government has made due provision for the supervision and control of Buddhism and Shinte. It is true that Japan has no State religion, in the generally accepted sense. Poli-tics and religion are entirely distinct. But the limitations imposed by the Constitution on religious freedom require that some machinery shall exist to enforce them, and the necessary machinery is provided by the Bureau of Shrines and Temples in the Home Department. That Bureau, however, confines its duties to the Buddhist and Shinto fields; it makes no scration whatever into the affairs of Christian chur-One of two inferences is inevitable: either the Authorities do not consider that Christianity falls written the category of "re-ligions," or they shrink from meddling with it lest appleasant complications should result. If the former hypothesis be correct, nothing more need be said on the subject. If the latter, then the obvious conclusion is that unless Christianity defice all supervision—in which case it must be regarded as a dangerous element in the State-, the supineness of the Government towards it will have mease after the Revised Treaties go into operation. Hitherto the number of Christian congregations has been so small, and so many of them have their head quarters in the foreign settlements, that no inconvenient results have been brought about by the absence of official control. But when mixed residence is allowed, a very dilferent state of affairs will probably ensue, and it will be expedient to see that the "peace and it will be expensed to see that any order" contemplated by the Constitution are insured. Pending some provision of that kind, it does not appear advisable to entertain an application like that of the Doshisha. But there is also another and a more radical difficulty.

What are "the duties of a Japanese subject" referred to in the Constitution? To answer that question we must consider what is the polity of the Japanese empire, for obviously the first duty of a Japanese subject is to uphold and defend that polity. Briefly speaking, the principle underlying all patriotism, all nationalium, in Japan in summed up in the old appropri ism e wajusen kami wa kiuzen (the Sovereign is wholly virtuous). The Sovereign is, in fact, placed above the Gods. Through fire and water his orders must be obeyed. That is the first placed above the Goos. Infough the and water his orders must be obeyed. That is the first article of the Japanese creed. But the God of Christianity is called the "saviour and master of the world" (kuiseishu); the "lord of all things," He is over and above everything. A faith founded on that doctrine is inconsistent with the prime tenet of Japanese loyalty and patriotism, and a disciple of such a faith can not fulfil his duties as a Japanese subject. It may be arged that politics and religion are wholly distinct and must be kept so. Doubttess. But scutiment can not be banished from any sphere of human life. The creed of the politician insensibly influence his politics. It is certain that the creed of the Japanese has knit them together in bonds of loyalty and patriotism which constitute an immense factor of national atrength. If Christianity apreads, its influence will be felt, little by little, loosening those bonds. The efore before the Government thinks of granting a polition like that of the Doshisha, Japanese Christians must be required to modify their faith so that, like Budd-hism, it shall come into conformity with the fundamental principle of Japanese nationalism.

#### FAPANESE LORE OF THE SEA.

[WRITTEN FOR THE " JAPAN MAIL."]

"Sea Phantoms: or Legends and Supersti-tions of the Sea and of Sailors" is the title of a book, written by the late Lieut. F. S. Bassett, of Chicago. The author served for a while on a U.S. gunboat in Asiatic waters, spent con-siderable time off Kores, and visited Japan. He was Chairman of the Folk-Lore Congress during the World's Fair; was the founder, and for many years president of the Chicago Folk-

Association. He was thoroughly fitted to write into the water. He is fond of cucumbers, such a book, and did the work well. But our present purpose is not to review the book, but to collect therefrom all reference to Japanese legends and superstitions of the sea. In some cases these references are made jointly III Japanese and Chinese lore. It is possible, of course, that some errors have crept in, and it is quite likely that the quotations made are far from constituting a complete repertory of Japanese nautical folk-lore. We shall be pleased, therefore. In receive correction of mistakes and additional legends and superstitions. We quote the following :-

The Chinese believe that supernatural beings cause the tides, and Japanese legends of the

ruler of the tides " still exist.

Chinese and Japanese say that the phenomena of waters; outs are caused by dragons, and affirm that the latter have been seen going up and down in the water apouts. Drums and gongs are beaten to dissipate them. Japanese call them tatsumaki (spouting-dragons). [This is rather a free translation of the Japanese name, which means literally "dragon's spiral"].

So Abbuto, the Japanese wind-god, is depicted with a bag between his shoulders.
[Query: What in the distinction, or the rela-tion, between = Abbuto " and " Faten " ?]

The Japanese wind-god was Abbuto, who had steel claws and a tigerish countenance.

Futen, another Japanese storm-deity, who often figures in engravings and in temple statues, has the face and claws of a cat. Kama-Itachi, a kind of weasel, is represented as the whiri-

Riuto is the Japanese god of the bottom of the sea, and is shown as a dwarfish figure, bearing a lantern on his bead. He, as well as Midsumo Kami [Mizu-no Kami], a water-god, and Jebiau [Ebiau] a sea-god, is adored by fisher-Susanno-no Mikoto, brother of the sungod [goddess], is also god of the sea.

In [apanese legendary history, the gods of the sea and air assembled to assist a great queen [Jingu] against Korea. Kai-ku O, dragon-king of the sea, sent his messenger Isors, with jewels that controlled the tides.

A favorite maritime saint in Japan in Jakushi Niurai [Yakushi Nyorai], whose emblem was the cutile-fish, often seen cut on his statues in sea-side temples. In a great storm at sea, a buge fish attacked a junk, and the mast and rudder were broken. A priest on board prayed to the saint, who appeared and bade him throw overboard his image, which the priest possessed. He did so, and the storm ceased. The image was afterwards restored to the priest by a cuttle-fish. Japanese fishermen deem it an illomen to meet a bonze or priest on their way to their boats

A recent traveller in Japan says coins were thrown into the sea to obtain a breeze, and

again to propitiate the god of storms.
In the Japanese story, "The Lost Fish-

hook," a boy had his hook carried off by a large fish. To him appeared the "ruler of the tides," who set him affoat in a basket, in which he sank to the palace of the sea-dragon, saw and loved his daughter. The fishes were bidden to find the book, which was in the red-fish's mouth. (Urashima ?)

Japan is, however, the head-quarters of the coy maidens of the sea. Here an old Dutch navigator obtained the first "veritable" mernavigator obtained the first "veritable" mer-maid, and tifey may still [?] be procured of ingenious natives. Numbers have been shown in museums, etc., deftly made by uniting a child's head to a fish's body. At Battholomew Fair in 1825, there was exhibited a mermaid, obtained by a Dutch ship from Japan. A Japanese legend relates that a mermaid prophesied as saidemic

prophesied an epidemic.

The Japanese represented that a monatrous cod-fish stretched its length under all their islands. This fish, Fishin uwo, seven hundred miles long, was formerly thought to cause the tides, as well as convulsions of the land,

A sea-monster was the traditional ancestor of the emperors of Japan. Rappa is a monster, with a monkey's head and body, and tortoise's Lore Society, now the International Folk-Lore claws. He seizes children and drags them tent, but nothing more."

and these are often thrown into the water, to propitiate him when boys go in bathing. Griffis was warned not to bathe in a certain place in Fakui, as he would be dragged down by this monster. A woman was accidentally spilled out of a "jinrikisha" into a pond, and drowned. It was said that Kappa got her. People in Tokyo say they often see Kappa in the river, and one is said to have dragged a man down in the typhoon of July 6, 1874. Japanese have a tradition that fish are the embodiment of the souls of naval officers. Jingu, a Jupanese queen, fished for an auspicions omen on the first day of the fourth month, and caught a fish Ladies fish on that day.

Shoals of fish are said to have sided a Japan-

ese fleet (that of Jingu) in their progress to Kores, by pushing their ships ahead.

A certain island on the Japanese coast in traditionally haunted by the ghosts of Japanese slain in a naval battle. Griffis aays, " Even to-day the Choshin peasant fancies he sees the ghostly armies baling out the sea with bottomless dippers, condemned thus to cleanse the ocean of the slain of centuries ago," Mariners feared to anchor near, and thought the phosphorescent sea the forernmer of these ghosts.

Japanese legend asserts that the mirage is the breath of a clam, which lies at the bottom of the sea. The mirage is called Ainkire—"The vision of the palace of the god of the bottom of the sea."

Mendoza heard of such [traditions] in Japan, where there is still a legendary woman's island. [Query: where?]

Onogorojima, the island of the congented drop, was a fabled Japanese Paradise.

Folk-lore tales abound with tales of curious boats and ahips, and even the Japanese, New Zealanders and Fijians have their legends conceruing them. The former people say that on New Year's day, Takara bune, the treasure-ship, manned by the seven gods of luck, will enter every harbour, dispensing gifts and favours.

Japanese legends of Jingu record that that queen sacrificed to the sex-gods.

Early travellers in Japan tell us of offerings to the sea-gods. Japanese, saved from wreck cut off their short queues, " a Japanese seaman's ordinary vow." A traveller says, that in 1822, on the occasion of the detention of a junk by unfavourable winds, a barrel of sake, or untive wine, and many copper coins were thrown overhourd, to propitiate Kompira, a god of the elements, and to obtain favourable weather. Chinese and Japanese junk sailors think it a good omen to cross the bows of a foreign vessel, and frequently give great trouble in crowded channels, and incur considerable danger from this cause.

In Japanese story, a large tortoine carried a fisherman down to a city in the ses, and returned him thence, long after his friends were dead. [Urashima!].

In Japanese story, Hirako, who as the third child of the first god-man, was the Noah, had an ark of campher-wood, made by his parents in his third year.

The Japanese have a tradition that their ancestors came from the skies in a boat. Japan it is considered lucky to dream of sailing in a ship.

The above references to Japanese legends and superstitions of the sea are all rather brief. Some of them are evidently avere allusions to long stories such or "Urashima." "The Princess Fire flash and Fire-lade," etc., etc. We hope that the readers of this will cooperate with us in making a larger collection of Japanere legends and superstitions of the and of sailors.

Here is a fragrant flower of thetoric from New South Wales. Mr. G. H. Reid, the Premier, was recently asked by an hou, member if he had received any notice of grave disaffection among the Free Trade party. He replied. "I believe that occasionally there is a small ripple on the smiling surface of our full con-

### PARTIZION OR PRESERVATION.

A month ago the Russian press seemed to have made up its mind that Port Arthur was to be permanently occupied by Russia. The Novosti and the Novoye Vremya, which are regarded by the world as true exponents of Russian opinion and which, being subject to official censorship in common with all their contemporaries of the same nationality, are to be credited with a certain measure of official sauction, spoke in terms of the utmost explicitness on the subject. In the Far East, too, from the time when the Russian squadron began to use Port Arthur as a winter station, very few people entertained any doubt that its continued use through many winters, and many summer too, would be found convenient by the Great Northern Power. We are not surprised, therefore, at the outspoken language of the St. Petersburg journals, though it must be confessed that the morality of their utterances does provoke some astonishment. Self-aggrandisement is a very old habit; as old as humanity. The French are, perhaps, its frankest exponents, for their artistic instinct forbids them to supplement the sin of robbery with the vice of hypocrisy. When M. Jules Ferry declared, in 1883, that upon every State devolved the duty of transmitting to early near generation. ting to each new generation a wider patrimony than the old had enjoyed, he expounded a creed which had at least the merit of being ingenuous. It would be too much to expect similar frankness on the part of every Power engaging in the game of international brigandage, but certainly exceptional callousness of conscience must be attributed to a nation whose journalists find no word of condem-nation for such a device as the borrowing of a friendly Power's territory with the secret design of never giving it back again. The Novosti and the Novoye Vremya, however, either fail to detect any chicanery in acts of that kind, or, detecting it, do not find their complacency at all disturbed thereby. However, the Russian Government has more conscience than Russian journals seem to suspect, for instead of quietly extending its "temporary" privilege at Port Arthur until the fact acquired some respectibility from prescription, it has come forward boldly and asked for a lease of the place.

Fair-minded Englishmen have generally been obliged to admit that their country's practice in the past has not been consistent with the preaching of international jurists. by England's bitterest enemies that she tries hard to be correct in her conduct and just in her dealings. With the ex-ception of the United States of America, a Power which, happily for itself, is not yet required to practically illustrate any code of morals, England undoubtedly, in these days at all events, lives up to nineteenthcentury standards as conscientiously as any State in the world. As between Great Britain and Russia we think it may fairly be claimed that a very different value is attached by the nations to the declarations of the two Governments. No one doubts, for example, that English statesmen are presectly sincere when they disavow all idea of territorial aggrandisement in the Far East. No one doubts that if England's hand were not forced by the unscrupulous aggression of other Powers, she would not seek to extend her possessions in

China by so much as a square inch. But, the same misapprehension, especially speaking frankly, how many persons believe that Russia's declarations about making free ports in the Liaotung Penin-sula are sincere, or may be relied on? The memory of Batoum is indelible.

One of the contentions of the Russian journals is that "Great Britain is apparently trying to create another imbroglio in the Far East;" that "her diplomacy is always planning new acquisitions, new grabs, yet she is perversely unwilling to see her European neighbours follow her example." is quite true, that, from an outsider's point of view, England's policy must often seem very exasperating. But in this particular case she is merely defending her rights. Il she opposes Russian seizures of Chinese territory, it is because her traders would be excluded from every region annexed by Russia. England's free-trade example has not produced many imitators among the nations of the world. She can not help that. It is no part of her mission to force others to be economically wise. But she has an undeniable title to oppose the expansion of protective Powers at the expense of her own freedom of trade.

"China can not lorget England's hostile attitude toward her," says the Novoye Vremya, "during, as well as at the conclusion of the war with Japan. It was Russia, France and Germany which then stepped in and saved China from threatened loss of much of her continental That argument is most China should doubtless feel territory." convincing. very grateful to the Powers which inter-fered to drive the Japanese out of her territory, and then turned round and appropriated it themselves.

But perhaps the most interesting part of the writings in the St. Petersburg papers is their explicit advocacy of the partitioning of China. We quote two extracts :-

Since, by the mere logic of events, we have seen a perfectly penceable division of a great part of the glube—Africa—without the resort to arms, then why might not the inevitable redistribution on the Asiatic continent be accomanns, then why might not the inevitable redistribution on the Asiatic continent be accomplished under equally anapticious circumstances? All that is needed is a proper and opportunate agreement as to the delineation of the various agreement the delineation of the various agreement the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the various agreement as to the delineation of the va

Great Powers of Europe, acting in agreement preconcerted for the purpose, is a programme in which England will never figure as a partner.

Considering that even in this part of the world-where the prime sources of inprefectly sincere when they disavow all formation were close at hand—the egregi. but subsequently he lapsed into complete

since, in their case, the wish was father to the thought. The Yournal des Débats, writing in the middle of February, con-cluded that Great Britain was bent upon repeating in the Far East the experiment which had resulted so successfully in Egypt. Just as Beaconsfield's purchase of the Suez Canal's shares had ultimately planted England on the banks of the Nile, so a loan to China by Salisbury's machinations was to make Great Britain supreme in the Middle Kingdom. The French journal deemed it expedient to warn China against entering into financial operations, with Findland Action operations with England. As for the German press, it was still more vehe-ment. The Kölnische Zeitung wrote quite excitedly on the subject, declaring that if England "attempted to close out foreign competition by underhand means, she must expect very serious opposition," and actually had the delightful assurance to claim for Germany, as compared with England, a policy of fair field and no favour in commercial affairs. It is distinctly satisfactory, as we remarked on a previous occasion, that the British Government did not do broker's business for China, but the fact can not be too strongly emphasized that England never made any offer of a loan. What happened was that the Chinese Government asked for the British Government's help, and Her Majesty's Ministers returned a straight-forward answer, to the effect that help would be given on such and such conditions. China found the answer quite acceptable, but was soon made aware that if she consummated the transaction her relations with France and Russia would be impaired. She therefore went to work in a different way. The even handed justice of Russia and France was well illustrated in this matter, for they themselves had set the example of political financing by lending money to China in 1895, whereas they stormed against the idea of England's doing anything of the kind in 1898. As for the Suez-Canal shares, France might have bought them herself when the Khedive placed them on the market. In truth, France might have done various things in Egypt which she did not do, and her usually artistic instincts serve her ill when she raises a sour-grapes clamour at this time of day.

#### SOSHI IN TOKYO.

Quiet and orderly as everything appeared in Tokyo on the 15th instant despite of the general elections being in progress, the city was not altogether free from acts of violence. Three soshi attacked the well known Mr. Takanashi Tetsushiro with short swords, and though they happily failed to do him any serious injury, there seems to be no doubt that their intentions were murderous. Mr. Takanashi is a barrister. He has been returned by one of the election districts of Tokyo as a member of the Lower House ever since the Diet was first convened. In the early sessions he played a very conspicuous part and was counted one of the most eloquent speakers in the House,

#### DEER-ISLAND INCIDENT.

The despatches, memorials and so on, relating to the Deer-Island incident, have been published in the columns of the Soul Independent. From these documents we gather that the story runs thus:--In August last year, an area on Deer-Island was claimed for the purposes of a general foreign settlement by the Representatives of the United States, Great Britain and Germany, but the Representatives of Russia, France and Japan were not privy to the arrangement. The site had already been staked out by Mr. McLeavy Brown in 1895. Curiously enough, in the very same month of August, Mr. Waeber, the then Russian Chargé d'Affaires, applied to the Korean Foreign Office for a concession of eighty thousand square metres of the area thus set aside. The Foreign Minister made no immediate reply, and after the lapse of some months Mr. de Speyer, the new Russian Representative, repeated the application, asking, at the same time, for a speedy answer. With the excep-tion of the Vice-Minister, Min Jongmuk, all the officials of the Korean Foreign Office were opposed to making such an extensive grant to Russia, and the Minister invited the Foreign Representatives to meet for the purpose of discussing the affair. The meeting never came off, howbrought to bear, and the Minister became too sick to attend to his duties. On the afternoon of Saturday, February 26th, the Vice-Minister repaired to the Department, and finding there neither officials nor despatch paper, wrote a private note to the Russian Representative, in which he ex-pressed regret for the delay that had occurred in settling the question, and

I consider that the friendly relations between Korea and Russia are especially different from those of other countries, therefore I make the special concession in hopes that our relations may become yet closer. The conditions of the concession will be the same as those which we have stipulated with Japan concerning her coal godowns on that island.

At the same time the Vice-Minister wrote another private note to the Japanese Representative, as Doyen of the Corps Diplomatique, in which he explained that, inasmuch as the appropriation of a certain area on Deer Island for a foreign settlement had not been definitely made by means of an official document, the Korean Government considered that it retained the exclusive right to dispose of the land as it pleased. He said nothing, however, about conceding any part of it to Russia.

Now the Minister of Foreign Affairs had very properly laid the Russian application before the Councillors of State, but their discussion of the matter had been postponed owing to the Minister's illness. When, therefore, they learned that the Vice-Minister had made the concession on his own anthority, they addressed to the Throne a strong protest, declaring that neither in the Deer-Island affair nor in the matter of granting certain state privileges to the Russo-Korean Bank, had their opinion been taken, and that as they were thus

Russia, and reminding him that the land was not his to give. Thereafter the Minister and Vice-Minister of Foreign Thereafter the Affairs memorialized the Throne. The Minister said that the concession had been made irregularly, and that al-though the irregularity had occurred during his absence, he felt responsible and tendered his resignation. The Vice-Minister defended his action, on the ground that, when settling the Rose-Island questions two years previously, the Foreign Office had not consulted the Council of State. Nevertheless, he, too, tendered his resignation. The Emperor accepted both resignations: the Minister's, because of his sickness; the Vice-Minister's, because the Council had been ignored by him. But his Majesty forthwith appointed the ex-Vice-Minister to be Minister of the Department, a most emphatic vindication of his action and a distinct approval of the concession to Russia. A curious point is that, in his reply to the Independence Club, the new Minister claimed to have consulted the State Council, though in his memorial to the Emperor he admitted that he had failed to do so. For the rest, he justified his action solely on the ground that a similar concession for the purposes of a coaling station had been made on the same island to Japan.

Such proceedings as are here outlined could scarcely fail to arouse indignant feelings on the part of Korean officialdom and the Korean people. It appears that the Russian Representative had only two supporters in the matter—the Emperor and the Vice-Minister, Min Jongmuk. Their united strength sufficed to achieve the object immediately in view, but only at the cost of an ugly complication. If Russian diplomacy in Soul has to work with such a paucity of advocates, there need be no surprise that Mr. de Speyer finds a difficulty in achieving brilliant results.

If the Jiff's telegraphic information from Soul be correct, it indicates a very important change of front on Korea's part towards Russia. Of course, it is easy for the Korean Cabinet to decide that the services of the Russian military instructors and the Russian financial adviser are no longer required, but it may not be so easy by any means to arrange for those gentlemen's departure. It is true that the emoluments paid to them from the Korean Treasury are inconsiderable, and could probably be commuted without a great financial effort. But Russia will naturally exert all her influence to secure them in their posts, and we have not much faith in the potency of Korean resolution when opposed by Russian influence. puzzling feature of the complication is the diplomatic action which precipitated it. Why did Mr. de Speyer create this op-portunity for the Korean Cabinet to turn against him? We do not understand the question, and must leave it undiscussed.

Inexplicable as the trouble in Soul has seemed by the light of the scanty details hitherto published, there does not appear to be much more to learn about it. M. de Speyer's reasons for asking Korea to declare the state of her affections were simply what the public now knows, He ignored, they begged to tender their considered that the attempted assassina-resignations. At the same time the Inde-tion of Kim, the Russian interpreter, the pendence Club sent an indignant commemorial addressed to the Emperor of

ing why he had made such a concession to the Cabinet's protest against the course pursued by the Minister of Foreign Affairs in agreeing to lease a large tract of land on Deer Island to Russia without consulting his colleagues -- he considered that these things indicated the existence of estrangement on Korea's part, and he accordingly asked for an explicit announcement of her mood. It was a strange and rather hysterical procedure, so far as we can see. Had it alarmed the Koreans into making an emphatic denial of any desire to shake themselves free of Russia, M. de Speyer would have scored a success. But if it failed, he would be in the position of having created for them the very opportunity they were seek-It did fail. The Korean Cabinet ing. sent back a courteously worded but unequivocal reply that they were prepared to dispense with Russian instructors and advisers. One finds difficulty in imagining that Russia will move ships or troops against the Koreans because they say that they do not care to have their soldiers instructed and their finances managed by Russian experts. The probability is that the Government in St. Petersburg will not care to endorse M. de Speyer's procedure very vigorously.

> The Noveye Vremya of St. Petersburg, as translated for an American journal, writes

The Korean troops number only 6,000. The Korean troops number only 0,000. The former teachers of this little army were Americane and Japanese, who had no interest in raising its efficiency. They were satisfied to draw their pay, and glad that the Koreans did not ask them to de more. Since October last, however, Russian officers and non-commissioned officers have been appointed under Colonel Putjata, and a new spirit has come over the soldiers. When the first gyraappointed under Colonel Putjata, and a new spirit has come over the soldiers. When the first gyranastic apparatus was put up, the Minister of Warrefused to supply the necessary ropes. He leared that the Russians were about to tottine his men. The Koreans are not fond of exercise, and many left the army, despite the good pay offered them, when they were shown the use of the apparatus. Now, however, they begin to like their work. The Sin-ta-tai, the life-guards, are going through their athletic exercise as well as if they were Germany, and the Korean officers are so well satisfied that they threaten to leave if the Russians are dismissed. The soldiers are now well fed, and es, in the opinion of the Koreans, bravery is the result of a full stomach only, they are no longer afraid of the Japanese. The American advisers of the King will now soon lin sent out of the country, as they are no longer of service. The Japanese, of course, do not like this Russian influence; they lear that it will make their struggle for the posseslear that it will make their struggle for the possession of Korea difficult.

A Russian school has been opened in Soul, where instruction is given free. The pupils are boarded free, too. There are twenty-nine of them, between the ages of thirteen and thirty-five. Like all Koreans, these pupils take a lively interest in politics. Whenever Russia shows energy, the tudy of Russian is pursued more actively; if Russias seems to lose her influence, the Russian language is neglected. The English school is very much frequented, for English is necessary, as yet, in the postal and telegraph services, in the custom-house, and in trade. Russian is learned by the Koreans in view of cuming events. Russia's renemies in Korea, the Americans and the Japanese, enemies in Korea, the Americans and the Japanese, have command of much money, and it could be wished that Russia would take care in axiont systematically the work begun in her interest.

The Russian journal supposes Japan to be "struggling for the possession of Korsa." It The is an idle supposition, in our opinion. Japanese are a kind ill bugbear to some folks at present, and perhaps it is in their interest that they should bear that character, but there is good reason to doubt whether they have rises quite to the heights of ambition on which the imagination of their critics place them.

#### LIAOTUNG.

It will readily be supposed that Russia's action with regard to Port Arthur and Talien evokes very severe comments from the vernacular press. Germany, though she had a pretext, such as it was, for demanding a lease of Kiao chau, was declared to have behaved in a manner contrary to all the dictates of civilized intercourse, but Russia has not the shadow of a pretext for her demand of Port Arthur and Talien, so that it is difficult to find any terms appropriately describing her conduct. That is what the Jiji Shimpo and other leading Tokyo journals say, in effect.
They also discuss, with much interest,
England's probable action, and seem disposed to arrive at the conclusion that China's integrity, which the British Parliament has declared it necessary to protect, will become illusory if she has to yield to such pressure as Russia is now bringing to bear on her, and that England's interference consequently becomes in-evitable. We should have expected to find more emphatic references to the position in which Japan finds herself placed. Japan had acquired possession of Liaotung under the strongest right that the world recognises, the right of conquest. Russia turned her out, alleging that the tenure of the peninsula by a foreign Power would be a menace to the Chinese capital. There is not the smallest doubt that Russia thus incurred, vis-à-vis Japan, the responsibility of not occupying Liaotung herself. Her presence there would be at least as great a menace to Peking as the presence of Japan. The Japanese Government is therefore entitled to protest in the most emphatic terms against the course now attributed to Russia. That is a point which we should have expected to see strongly insisted on by vernacular journals.

Her Majesty's Representative in Peking is alleged to have informed the Chinese Government that if it yielded to the demand of Russia, Great Britain would be obliged to seek corresponding concessions in order to preserve the balance of power. We doubt the correctness of that statement. The telegrams from London show plainly that at the time when Sir Claude Macdonald is supposed to have thus addressed the Tsung-li Yamen, he could not have been in receipt of definite instructions from London. In fact, it seems evident that Her Majesty's Government is addressing itself direct to St. Petersburg, and as China has ordered her Representative in Europe to proceed to the Russian capital for the purpose of negotiating there, we conclude that the seat of the discussion has been removed from Peking to St. Petersburg. Hence Sir Claude Macdonald's action in Peking must have been guided by his general instructions, which are understood to be that Great Britain will not consent to the granting of exclusive privileges to any Power by China, and that all concessions must be equally enjoyable to all. Very likely he reminded the Chinese Govern-ment of that fact in connection with Russia's demands, but we do not imagine that he went any further.

Digitized by GOOGLE

British Government for pecuniary assistance did not bear any direct fruit, there is no denying the fact that England won a victory in the loan affair. That may have been the proximate cause of Russia's very arbitrary procedure with regard to Port Arthur and Talien, but perhaps we shall be nearer the full truth if we say that, on reviewing the outcome of the recent complications, she found that she had been somewhat "left." England reaped a considerable harvest-though no part of it was exclusive—and Germany gleaned something, but Russia emerged from the scramble with nothing more substantial than permission to use Port Arthur as a winter station for her squadron; a privilege which had virtually no value, for since China is debarred by treaty from placing any one of the Western Powers in a more favourable position than the others, Port Arthur became, de facto, accessible to British ships from the moment that Russian men-of-war obtained the right of entry. It is not altogether wonderful that Russia should have chafed under such circumstances, nor would any one have been surprised to learn that she was negotiating quietly for a lease of Port Arthur. The inexplicable part of the affair is her peremptory and defiant method.

The telegraph says that French ships are about to carry Russian troops to the Far East, Russia not having sufficient vessels of her on for the purpose. means, we presume-if it be credible at all-that Russia intends to charter French steamers. She could charter British steamers, if she wanted them, and very likely she would.

#### AMERICA AND SPAIN.

There has been no sort of confirmation of the rumour circulated vid Hongkong to the effect that the United States Government had organized a naval demonstrations in Cuban waters. Neither is it conceivable that any necessity should exist at present for such a step. Spain persisted in her recent demands the case would be different. But she did not persist, and since, further, it is pretty plain that the destruction of the Maine has not led to any complications, we may fairly assume that things are quiet for the moment. But it is impossible to feel any confidence that the Cuban question can be settled without trouble. Spain seems to be as far as ever that so little cooperation should have from dealing effectually with the insur- hitherto existed between the Japanese and rection. Her autonomy scheme has evi- Foreign Chambers at the open ports and dently failed, and her military capacities in the three cities. The advan-Il America goes to work in earnest to tage of an entente between such a body provide herself with a navy, she will "get and the Foreign Chamber in Yoko-there." She seems to be in a hurry, too, hama can scarcely be doubted. It is

#### FOREIGN SHAREHOLDERS IN TAPANESE COMPANIES.

There has been a great deal of talk lately about the desirability of inducing foreigners to invest capital in the shares of Japanese enterprises, that being the simplest and quickest way of replenishing the people's coffers. We are a little surprised, therefore, to find the Tayyo raising a note of alarm because that desideratum seems to have been partially achieved in the case of the Hokkaido Tanko Railway Company. It appears from the Company's register, as compiled last December, that a certain Mr. Kanakami, clerk in a stock-broker's office, was entered as holding 18,000 shares, which put him second on the list, the Imperial Household Department standing first. Mr. Kanakami is not, it would seem, a man of substance. He is supposed to have merely lent his name to a foreigner. Moreover, during the present year the same person is reported to have made additional purchases aggregating 20,000 shares, thus becoming the biggest share-holder in the Company. The Taiyo's comment is:-"If foreign capitalists take to buying shares in Japanese enterprises, they will obtain control of the foundations of our business. That is a matter demand-ing reflection. It will be well not to create sources of inevitable regret hereafter by allowing foreigners to become shareholders in our industries merely for the sake of causing the shares to appreciate." The comment stops just short of being intelligible. Will not the Taiyo explain what disadvantageous results it apprehends from foreigners becoming shareholders on a large scale? Is there any fear, for example, that half a dozen Mr. "Kanakamis" would carry off the Tanko Railway and the mines served by it? Nothing more senseless can be imagined than apprehensions like those of the Taiyo. They are childish and unreasoning.

#### YOKOHAMA AND TOKYO CHAMBERS OF COMMERCE.

It is pleasant to learn from Mr. W. B. Walter's letter, published elsewhere, that the Tokyo Chamber of Commerce has approached the Yokohama Foreign Chamber with the object of establishing close relations between the two bodies. There is certainly something singular in the fact must be pretty nearly, if not altogether, the dawn of a more wholesome state of exhausted. The United States will inevitably have to interfere in the end, welcome the move now made by the in that sense that the Government in the well-known banker, who held the port-Washington has made an appropriation folio of Finance in 1873, is President of ten millions sterling—fifty million dol-the Tokyo Chamber, and it includes among lars—for purposes of naval expansion. not believe in the practical possibility of the chief object contemplated by the promoters of the enterprise-namely, the abolition of the custom of entrusting parcels of silk to foreign merchants for inspection preliminary to purchase—, and they did believe that the real purpose of the scheme was to organize a big monopoly in the hands and interests of a few Japanese middle-men. The contest that ensued was very sharp, and Messrs. Shibusawa and Masuda were finally invited by their nationals in Yokohama to act as mediators. Their experiences on that occasion were understood to have impressed them very unpleasantly-so much so, indeed, that their friends foretold their permanent abstention from all connexion with Yokohama affairs thence-The Yokohama Chamber of course treat the proposition of the Tokyo institution with all courtesy. If the two Chambers could come to some agreement for organizing a kind of judicial committee to settle all disputes between foreign and Japanese merchants, without recourse to the law courts, a notable step of progress would have been made.

#### AN ACCIDENT.

A rather lamentable accident occurred some time ago at the Milke prison, which is one of the five "central jails" of Japan. When we speak of a "central jail" (Shuji Kan) it will be understood that we refer to a prison supported in the main by funds from the Treasury in Tokyo and controlled completely by the central Government. A foreign tourist, connected with an Australian journal, who happened to find himself in Milke, one summer's day, thought that he might obtain some interesting copy by visiting the jail and subsequently embodying his experiences in an essay. He therefore repaired to the place and asked for admission. Jails are not usually thrown open at a moment's notice for inspection by any chance visitor. Hence the tourist was not greatly surprised when a delay of three hours occurred before he obtained access to the prison, but, as will presently be seen, his failure to attach due significance to that fact entailed very deplorable results. Being shown over the prison with all courtesy and patience, he found "everything in apple-pie order and the whole place a great deal more comfortable as quarters than many places in which he had had to roost during his trip." use his own words in order that our readers may have a clear perception of the sad accident which ensued. His description of the jail appeared in print in due time, and was so eulogistic that the editor of the journal for which he wrote "hauled him over the coals for being infected with the Japan mania." Still, "as a sober matter of fact, the tourist had made no drafts on the imagination, but had merely put on paper what he had seen with his own eyes." These things happened in 1888. Just ten years later, that is to say, in this present year, the same tourist being again in Japan, found himself writing over the pseudonym of "Scotus," for a Kobe journal whose editor was engaged

they were based, not on anything so deceptive as his own personal observation, but on the statements of a Japanese who was much incensed against the prison authorities. "Scotus" might thus have been placed in a cruel dilemma, for whereas his private sympathies as well as the popularity of any attack upon Japanese systems urged him strongly to throw in his lot with the editor, his publicly recorded testimony as to the excellence of the Milke prison forbade such a volte face. But fortunately—and this is the only redeeming feature of the regrettable affair— "Scotus" had already discovered the accident that occurred to him at Milke, and was aware that a very gross deception had been practised on him by the prison officials. In short, to use his own words, "It had dawned upon him that, thanks to the three hours' delay, he had been had in Milke very badly." For during those three hours the prison authorities had altered the dimensions of the cells; had swept and garnished the prison; had provided new clothes for the ipmates; provided new clothes for the ipmates; had fattened up the prisoners so that they looked sleek and happy; had changed the doors and partitions so as to exclude draughts and provide proper shelter; had laid down fresh mats; and had altogether metamorphosized the conditions usually existing and the system generally pursued. It was because of his pardonable failure to see through this very shameful piece of chicanery that "Scotus" was accidentally betrayed into becoming an eulogist of Japanese jails whereas he should have been a scathing critic. His discovery of the trick may almost be called providential, for it was entirely due to "a very meaning smile by a Japanese friend who had himself been in jail." Possibly our readers may be surprised at the celerity shown by the Milke Prison officials, but that is easily explained; it was a merc matter of practice. From information conveyed by the friend who had been in jail, "Scotus" learned that such swift changes are habitually contrived at Japanese prisons when a foreign visitor is about to be admitted. We can not sufficiently express our satisfaction that the deception has been shown up, and when we reflect that the labyrinth of falsehood was explored by the aid of such a slender clew as "a meaning smile," we feel a renewed access of exulting confidence in the grand old aphorism magna est veritas et prevalebit.

#### NAVAL CONTRIBUTIONS ORDINANCE.

On the 12th instant the Emperor issued an Ordinance authorizing the revocation of Ordinance No. 5 of the twenty-sixth year of Meiji (1893). The latter was the Ordinance directing that civil and military officials should contribute ten per cent, annually of their salaries for ship building purposes, the Emperor himself contributing a similar proportion—three hundred thousand yen—from the Privy Purse. In accordance with His Majesty's authorization the Ordinance of 1893 will cease to be operative from the 31st of this month. Our readers may remember that the House of Representain a vehement crusade against the abuses tives, in its session of 1895-6, presented

might be dispensed with. An interesting situation was this created, for the con-tributions had been ordered originally by the Sovereign in consequence of the refusal of the House of Representatives to grant funds for ship-building unless the pay of officials was reduced. Hence when the House, two years later, suggested the desirability of dispensing with the contributions, it wirtually made an amende for its previous obstinacy. The Emperor. however, did not fully adopt the suggestion. He dispensed with further contributions in the case of officials of low rank, upon whom the payment had pressed very heavily, but he left the Ordinance in operation as regards higher officials. In their case payment has been required during five full years, which was the time fixed by the Ordinance—No. 5—of 1893. The Ordinance just issued has, in fact, no connexion with the Address presented by the Lower House two years ago.

#### COUNT ITAGAKI ON JAPAN'S FOREIGN POLICY.

The Chuo Shimbun gives a statement said to emanate from Count Itagaki with reference to the course that Japan should adopt in foreign affairs at the present juncture. After noting that Japan became an object of wide scrutiny after the war with China, and that peace is now-a-days a question of being prepared for war, the Liberal leader said that, although it was of course impossible to speak plainly on such a subject, he did not think there could be much room for doubt as 55 Japan's proper procedure. Relations of close and lasting amity between States were based not on political considerations so much as on tradal interests, religion and education. Germany's action in seizing Kiao-chow had suddenly changed the whole complexion of Far-Eastern affairs, and Russia had followed suit by a display of forceful aggression. But if China, which was one of Great Britain's most promising markets, were obliged to yield to Russia's demands, English interests would be so seriously affected that a conflict between Russia and Great Britain could scarcely be avoided. In that event, though neighbourly feeling might incline Japan toward Russia, the wrong-doing of the latter would leave the Japanese no choice but to throw in their lot with England. Such an alliance would signify a naval and military strength more than competent to deal with Russia, Germany and France in cooperation in the Far East. Moreover, Russia was about as little ready to fight as China. For example, on the occasion of the Triple Alliance in 1895, when Russia thought of sending out a force of cavalry, the necessary equipment was found to have decayed in store and become useless. The spirit of her troops, too, was not such as could be called one of readiness. An alliance with England was, therefore, the aim to which the nation's attention should be directed, for if further aggression were practised at China's expense, her resentment against foreigners would be aggravated to such an extent that the peace of the Far East could not be long preserved.

An extraordinary price has been given for an uncut first edition copy of Burns's works, in a vehement crusade against the abuses and defects of the Japanese prison system.

There could be no question about the correctness of the editor's views, because tives, in its session of 1895-6, presented at 50 guineas, and ended at 545 guineas. This is nearly three times as much for one copy as was realised for the whole of naval increment, the official centributions

#### A DISPOSITION TO KEEP THE PEACE.

A telegram received yesterday by the Mitsui Firm in Tokyo says that the tone of the European press with regard to the Far-Eastern situation is decidedly pacific, and that there is an evident disposition on all sides to avert war. That is more or less re-assuring. But the situation must continue to be fraught with anxiety until the outcome of the negotiations in St. Petersburg is published. We now know that Russia's application for the lease of Port Arthur and Talien was not accompanied by any direct menace, as rumour originally said. But we have had no contradiction of the statement that it was accompanied by a limit of time for China to make reply, and the fixing of a period in such cases partakes very closely of the character of a and the armament, four 10-in., ten 4.7 threat. At all events, there stands the application. Supposing that China rejects it, what then? Will Russia seize Port Arthur British vessels are not quite so heavily and Talian as Garmany seized Kisoschou? and Talien as Germany seized Kiao-chou? We do not believe that she intends to proceed to any such extremity. granting that she possessed the disposition-which we doubt-she would be confronted by the difficulty of her promise to England. She has given a pledge to Great Britain that she will open to general trade any port acquired by her in China, and it is plain that she can not throw open to general trade a Chinese port, occupied by force and held in defiance of its owner's protests. It is not absolutely inconceivable that, reckoning on China's well-proved disposition to fold her hands in presence of an accomplished fact, Russia may seize the coveted places and trust to obtaining endorsement of her action subsequently. But the situation seems already too strained to admit of such heroic methods. England is in the field as well as China. The English Government and the English people have declared that the integrity of the Chinese empire must be respected, and of course if Russia were to help herself to the Liaotung Peninsula by force of arms, there would no longer be the slightest pretence of respecting China's in-tegrity. On the other hand, Russia can not retire from the field empty handed. Granted that she is playing a game of bluff, she must nevertheless be expected to take something out of the pool. Doubt-less there will be a diplomatic compromise. China may agree to lease Port Arthur and Talien, witholding permission forthe Manchurian railway, and stipulating that neither If that be the soluport shall be fortified. tion accepted, Great Britain will, of course, require a naval station in the north, and we do not see what is left for her except Wei-hai-wei, supposing that Japan vacates it. There would not then remain to China a solitary place suitable for a naval station in her Northern waters.

#### RUSSIAN AND BRITISH NAVAL ACTIVITY.

The Rossia and the Rurik are not the only additions to the Russian Squadron in the Far East. Very soon the Navarin and the Sissoi Veliky will be in these waters—if, indeed they have not already with "James Allan," in whom he finds not closer inspection throws doubt on the waters—if, indeed they have not already arrived, for they were to leave Penang only a liar but also a plagiarist. Mr. on the 23rd of February, proceeding Cowan may be presumed to know what thence direct to Hongkong without calling he is talking about.

Digitized by Google

at Singapore. The Navarin is an armed ship, launched in 1891. Her displacement is 9,476 metric tons; her horse power, 9,000; her speed, 16 knots; and armament, four 12:in., 52-ton guns, eight 6-in., fourteen Q.F. 41., 6 torpedo tubes. The Sissoi Veliky, which, like the Navarin, was built in St. Petersburg, is also an armour-clad, and was launched in 1894. Her displacement is 2,880 metric tons; her horse power, 8,500; her speed, 16 knots, and her armament, four 12-in. 52-ton guns, six 6-in., twelve 1.8 in., four 1.4 in., two M. and six torpedo tubes. The British ship Barfleur, which is said to be coming eastward, is somewhat similar to the above. She is a sister ship to the Centurion, and was launched in 1894, the Centurion's date being 1893. The disis somewhat similar to the placement of each vessel is 10,500 tons; armoured as the Russian, and their armament is a little lighter, but their speed is For, even greater, and altogether they are more he disposi-powerful ships. We may note, en passant, that whereas the Barfleur (10,500 tons that whereas the Barfieur (10,500 tons and 18½ knots) cost £599,089, the Navarin (9,476 tons and 16 knots) cost £772,995. The St. George, which is also said to be coming out, is a first-class cruiser of 7,770 tons displacement with a speed of 19.0 knots and an armament of two 9.2 19.0 knots and an armament of two 9.2 in. guns, ten 6-in. Q.F., twelve 6-pr., five 3-pr., 7 M., 2 L., and four torpedo tubes. The Victorious, of course, will be more powerful than any Russian vessel out here, though her heaviest guns are of the same calibre (12-in.) as those of the Navarin and the Sissoi Veliky. In fact, these two last ships will prove a formidthese two last ships will prove a formidable addition to the Russian Squadron.

From telegrams received in Tokyo we learn that the Russian Government has placed orders for ships in the United States. Russia's building capacities are very limited, and the only countries to which she can apply for assistance in this respect are France and the United States, of America.

#### "UNDER THE DRAGON FLAG."

The London and China Express has taken as serious truth the long tissues of falsehoods which the author of "Under the Dragon Flag" has concocted for the purpose of deceiving the ignorant section of the public. That just bears out what we anticipated. Plenty of hardihood and a minimum of conscience are the only qualifications required by a romancer. Precisely in proportion as his possession of the former attribute and his deficiency in the latter are above the average will the number of his credulous audience be greater. It is not by any means easy for an ordinary reader to detect the deceptions of a writer dealing with novel in-cidents and wholly unfamiliar scenes. Mr. # James Allan " is # magnificent liar, and has done wisely in adopting a nom-de-plume. Mr. T. Cowan, The Times' correspondent in Liaotung and ShanWHY

Two questions propounded in many quarters at present are, why did Russia oppose opening Talien to trade, and why did England withdraw her proposal for its opening? As to the latter query, there has been much talk in Europe and some also in the Far East. French, German and Russian journalists find pleasure, not unnatural, in asserting that Great Britain received a severe rebuff and that Russian diplomacy scored a signal triumph. They labour under the disadvantage of not being acquainted with the facts of the England never proposed the opening of Talien as an independent demand prompted by her own view of the situa-tion. What happened was that the Chinese asked whether the British Government would guarantee a three-per-cent. loan, and the British Government replied in the affirmative on three conditions-first, that three new ports should be opened to trade, namely, Talien, Shanyin, and Manning; secondly, that no portion of the Yangtsze Valley should ever be ceded to a foreign Power, and thirdly, that the extension of the Burmah Railway through China was Yunnan should be permitted. willing, apparently, to accept these terms, but when she found that to rely upon the British Government's assistance in the matter of the loan would impair her relations with France and Russia, she resolved to abandon the project and to proceed by a different route. Of course her change of plan involved the disappearance of the British proposals. She had asked England to do her a cer-tain service; England had returned a conditional reply; China had resolved not to continue the negotiation, and the English conditions had naturally ceased to be matter for discussion. That is how the Talien question passed out of the field, as we understand the situation. The opening of the place was not a demand pre-ferred by England, but was merely one of the concessions which she formulated in the event of her being required to bestow a certain favour on China. The latter concluded that she would not avail herself of the favour, and therefore the contingent concessions ceased to be on the

As to Russia's alleged action in oppos-ing the opening of Talien, it appears that what she opposed, in conjunction with France, was not the opening of Talien in particular, but the whole transaction of which that concession formed a part. Having in view her subsequent application for a lease of the two Liaotung ports, many people will be disposed to conclude that the Talien item constituted one of her chief objections to the loan scheme, and will be led to deduce a disagreeable hypothesis which may be thus stated: - Russia has de-clared her intention of opening Talien and Port Arthur to foreign trade in the event of the two places being leased to her. If that declaration is bond fide, she ought not to have entertained any insuperable objection to the opening of the port at Great Britain's instance. Hence the fact that she did entertain such to closer inspection throws doubt on the justice of the epithet. Russia may be to quite sincere in her intention of opening the two places to trade, and may never-Original from

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

theless desire to have a lease of them in view of her railway-development programme. If it is her purpose to make the Liaotung peninsula the southern terminus of her Trans-Asian Railway, there is every reason why she should desire to have some control of the ports at which the line will debouch. That would not be at all inconsistent with opening them to trade and keeping them open. It seems most desirable at the present juncture not to confound issues which are really distinct. If we fall into the error of supposing that England demanded the open-ing of Talien as an independent ing of Talien as an independent necessity, we shall be betrayed into the further error of imagining that she is irrevocably pledged to oppose the leasing of the place to Russia; and if we assume that Russia opposed the opening of Tailen when demanded by the British Government merely because she entertained the design of getting it into her own possession, we may find ourselves forced to the inference that she intends to follow the Batoum precedent. The situation is certainly not quite so bad as all that.

In connexion with this subject, we desire to point out to certain Japanese journalists that the guarantee demanded and obtained by England with reference to the Yangtsze Valley is not by any means to be interpreted in the sense of an aggressive declaration that the vast district watered by the Yangtsze falls within the sphere of Great Britain's exclusive in-fluence. The Yangtsze is the great waterway of China. Its sources lie near the confines of India; numerous flourishing marts and big cities stand upon its banks; it is the avenue to Shanghai, and withits various tributaries it constitutes a magnificent system of communications with the richest provinces of China. Not merely development but even the very existence of England's trade with Chinadepends upon keeping open this splendid highway. Hence it is that Her Majesty's Government is deter-mined guard the Yangtsze Valley against the incursions of hostile States. During the incursions of hostile States. During the China-Japan war the neutrality of the river was secured by a British fleet, and nothing is more certain than it will continue to be secured. But there is a wide difference between keeping a road open for general traffic and assuming sovereign rights over the districts through which it passes,

# THE SOUDAN.

Sir Herbert Kitchener has decided that no newspaper correspondents shall accompany the troops in the Soudan. His alleged reason is difficulties of transport. He allows an agent of Reuter's to go forward, so that the public may not be with-out news, but, for the rest, he does not intend to fight under observation. It is a courageous step, for, of course, it alienates the sympathies of the press, and will provoke much hostile criticism. The English papers seem to have found a good deal to say about it, but among a number of extracts we can discover only one that is thoroughly opposed to the Sirdar's decision, and the objector is the Daily Telegraph, which treats the question on clap-trap lines. There can not be the smallest doubt that the fourth estate wants a few drastic lessons, but we suspect that Sir Herbert Kitchener will be the chief sufferer in this instance. Digitized by Google

#### AN ARITHMETICAL ERROR.

In the February number of the Nine-teenth Century Mr. A. C. Moreing publishes a short essay on the question of a British loan to China. He assumes, as the basis of his argument, that Her Ma-jesty's Government have decided to guarantee a three-per-cent. loan for China, but although it was true, at the moment when he wrote, that, in response to a re-quest from the Peking Government, the English Ministry did agree to assist China, it is also true that the latter, in deference to the opposition evoked by her scheme in other quarters, abandoned the inter-State method of procedure and had recourse to private capitalists. Hence Mr. Moreing's paper possesses now very little interest. There is, however, one point calling for correction. He sets forth a list of the public indebtedness of the various countries per head of the population, and he puts the figure for Japan at £1.18s. 7d., and the figure for China at 2s. We do not understand how Mr. Moreing has been so greatly misled. Had Japan floated the Public Undertakings and Railway Loans contemplated in the post-bellum programme her debt would now be 21s. per head, in round numbers, but, as a matter of fact, it is only a little over 19s. Probably Mr. Moreing has confounded the yen and the American gold dollar. His figure for Japan is just about the double of what it ought to be.

#### FUNERAL OF THE REV. DR. VERBECK.

The funeral service in memory of the late Dr. Verbeck was performed at the Shiba Japanese Presbyterian Church, in Tokyo, on Saturday the 12th instant at half-past one o'clock, and the remains were subsequently interred in the Aoyama Cemetery. A very large number of Japanese and foreigners, representatives of all classes, assembled to pay the last tribute of respect to a man whose deeds and life will always occupy an honoured place in Japan's modern history. The service, being conducted in the language of both Japan and England, occupied a long time. It opened with the reading of the usual lesson by the Rev. Mr. H. Wada, prayers by Dr. Thompson and the singing of a hymn; after which eloquent and NEWSPAPER CORRESPONDENTS IN detailed in-memorium addresses were delivered by the Rev. Mr. Ibuka and the Rev. Mr. T. Ballagh. Then followed a prayer by the Rev. Mr. Okuno and a hymn. At the grave the service was per-formed by the Rev. E. S. Booth, the Rev. E. R. Miller and the Rev. Mr. Waddell. It is not too much to say that the obsequies of a foreigner in Tokyo were never before attended by such a great concourse of

> We are asked by Miss Verbeck to express on behalf of herself and the absent members of her family her sincere thanks for all the kindness and sympathy shown by numerous friends and acquaintances in connexion with her sudden bereavement. It will doubtless interest our readers to know that His Imperial Majesty the Emperor conveyed his condolences through Baron Sannomiya, and, in accordance with Japanese custom, sent a sum of 500 year towards the funeral expenses.

#### THE GENERAL ELECTIONS.

An idea appears to be entertained in some quarters that the results of the general elections which took place on the 5th instant will be known immediately but the fact is that four or five days will elapse before a clear idea can be entertained. In the three cities, Tokyo, Osaka and Kyoto, and in a few other districts where there is only one voting place, the ballot boxes are opened on the day after the elections, but in other parts of the country where the extent of the districts necessitates a number of booths, the figures are not ascertained till the second or even the third day after ballots have been cast. We can not expect to be fully informed before the 20th, perhaps. Meanwhile there are, of course, many conjectures. It is stated that, according to calculations made by the police, the Progressists will probably carry 115 seats, the Liberals 100, the National Unionists 25, and the Business Men and other fac-We find two estimates in tions, fo. vernacular newspapers, one in the Yomsuri and one in the Kokumin :-

E	<i>Yomluri's</i> Estimate.	Kohumin's Estimate.
Progressists	110	f10
Liberals	90	102
National Unionists	20	27
Doshit-Kai	10	Not stated
Tohoku Domei-hai	4	20
Kagoshima Seiga-ka	i 7	
Business Men	59	

It is impossible at present to say who will be found supporting the Government and who in the Opposition. Assuming that the Liberals and the National Unionists are on the Cabinet's side, the main body of the Ministerialists varies, in the above estimates, from 110 to 127, and the main body of the Opposition from 110 to 115. But as to the wings, which consist of the Business Men and minor factions, their political proclivities seem to be entirely a matter of conjecture, thus far at any rate.

Up to Wednesday evening, the following election returns were published (the first of the successful candidate in each district) :-

Tokyo City.
District 1- Votes. Party.

#### HYOGO PREFECTURE.

District r-- fir. Manjo Yasujiro ...........247... Progressist ... New mem Mr. Yamamoto Kameta o ... 193 Business man. New cand d

This return shows that out of eleven members 7 are Progressiate, 2 Liberale, and 2 Indepen-

It seems scarcely worth while to purplex our readers with partial returns of the general elections. We shall therefore postpone the publication of any detailed list until the full results are known. It may be interesting, however, to state here that a forecast, probably pretty accurate, Original from

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

has been formed with reference to the results of the polling in 265 constituencies out of the total 300. The forecast stands

111	+ 4 4		***		98
ista	***		***		30
	***				84
***	***			444	23
***		***		***	7
**	144			4+9	3
	***			105	3
Kai	***	***	***		2
***		***	***	111	2
***	411		***	***	13
	  Rai	ists	Kai	ists	ists

Omitting the petty coteries, we may assume that fully 10 of the Business Men and 12 of the Independents would vote with the Cabinet. Hence, if the Liberals and National Unionists be on the latter's side, the above estimate gives the Government 150 supporters out of 265 members. But it is only an estimate.

#### TAPANESE PRISONS

We do not know whether the Kobe Chronicle intends to be taken seriously when it regards the writings of "Yamato Chuyo" as authoritative expressions of the Japanese Government's opinion. short time ago, our contemporary suggested that the editor of the Japon Mail must have been among the number of those that maltreated Japanese coolies and servants in the old days, since he seemed to know so much about their sufferings, and further, in very solemn terms, accused him of advocating recurrence to such maltreatment since he had brought the subject again upon the tapis. We referred, with some amusement, to these diverting charges, and the Kobe Chronicle's reply was that we are not gifted with the sense of humour. Perhaps, then, our contemporary's treat-ment of the "Yamato-Chuyo" incident is also intended to be humourous. Our readers can judge for themselves. Here is the paragraph:-

We direct the attention of readers to the article appearing on the second page dealing with the remarks by the editor of the Fapan Times attenuously opposing any discrimination being made in the treatment of foreigness who may be incarrectable treatment. the treatment of foreigners who may be incarce al-ed in Japanese prisons either before or after con-viction. What makes the matter so important is that the Japan Times is a strong supporter of the present Ministry and has intimate relations with certain members of the premier's enfourage. It may therefore justly be inferred that the Iliniatry has determined to make no distinction in the treat-ment of functioner, who may be interioused in ment of foreigners who may be imprisoned in Japanese jails, and that, so far as the Japanese Government is concerned, foreigners accused, not Government is concerned, foreigners accused, not necessarily guilty, of any offence will be subjected to treatment likely in many cases to prove a sentence of death. We are striking off a sufficient number of copies to send to the principal European and American papers, in order that our contemporaries and the people of our respective countries may be induced to realise the dangers to which foreigners will be exposed when the new Treaties come into operation.

It will be observed that the Kobe Chro-nicle speaks of "the remarks made by the editor of the Japan Times," and then proceeds to infer that because the Japan Times has intimate relations with the entourage of the Prime Minister, its editorial views of the present Ministry. Well, but there were no editorial utterances. The different forms, fabrics for clothing and material editors of the Trans. Time that the forms of the Trans. chitor of the Japan Times did not write as editor. He did not even write in the editorial columns. He simply appeared as a paragraphist signing himself "Yamato-Chuyo,"—thus explicitly differentiating his personal views from those of the journal. It must, of course, be a jest on the part of the Kobe Chronicle to make a pre-

tence of taking "Yamato-Chuyo" as the Japanese Government's mouth-piece, and no doubt the striking off of "a sufficient number of copies to send to the principal American and Eurepean papers" in order to rouse them to a sense of the perils awaiting foreigners, is also a practical joke. This is new style of journalism. We trust that it will find appreciation among folks less devoid of the sense of humour than we are ourselves.

#### " THE SHEPHERD'S VOICE."

Our very excellent contemporary The Shepherd's Voice pours out the phials of its wrath upon our unhappy head in its latest issue. We do not agree with the general editor's views about the social evil and do not endorse the Biblical editor's refusal to comply with the laws of his country, and it consequently follows, according to The Shepherd's Voice, that we are bad, radically bad; that there is no sound place in us from the sole of the foot to the crown of the head, and that "there exists just as wide a chasm between our aims and objects and those of the missionaries" as between their aims and objects and those of the Yokohama journal which loses no opportunity of abusing them. The odium theologicum is a fine, old-fashioned institution. too venerable to be laughed at; too human to be resented. For the rest, we have had so much abuse in our time that a little more or a little less does n't matter. If we have hurt the The Shepherd's Voice, we don't object to a little retaliatory hammering.

#### SILK FROM COTTON.

"It is a classic joke," says the Chronique Industrielle, as quoted in Cosmos (January 2: "to say, in speaking of silk of poor quality, that it is 'half silk and all cotton'; but this, it appears, is in a fair way to be actually realized, as a cotton fibre can be changed into a silky thread that has exactly the same durable bril-liancy as a thread of real silk. The operation that the cotton undergoes to bring about this result is called 'mercerization' under tension. This odd word is derived from the name of the inventor of the process in its primitive form. About fifty years ago a French chemist named Mercer showed that cotton, when subjected to the action of concentrated acids or alkalies, contracts and has a greater affinity for mordants and dyes; but it is only recently that it has been known that this 'mercerization' gives also a gives also a brilliant lustre to the cotton that undergoes it. The process was then improved; the cotton was atterched violently during the mercerization, and when an energetic rubbing was added to the tension the tissue received a permanent lustre. It thus can replace silk.

Indications are that the fibre of the pineapple leaf will eventually take prominent place among the constituents of textile fabrics. which, when spun, surpasses in strength, fineness, and lustre those obtained from flax; can be employed m a substitute for silk, and as a material for mixing with wool or cotton. Usedivided a specimen of this fibre to one tenthousandth of an inch. As to the value of the fibre, a London quotation for a lot of wellcleaned from an Asiatic source was \$150 per ton. There is no doubt that if the fibre could be produced in quantity at an economical cost, manufacturers would soon find a use for it and would know what price they could afford to pay for it. The market price would then be fixed by the demand and supply. The machine question enters largely into the problem, however, and as the leaves are small, a quantity would need to be cleaned at one feeding of the machine to make it pay. Estimating ten leaves to the pound, there would be over 22,000 leaves to the ton, which, as we have seen, would pro-duce from 50 to 60 pounds of fibre.

#### WEDNESDAY EVENING AT THE PUBLIC HALL.

The Public Hall was filled with a large andience on Wednesday evening when an entertainment in aid of the funds of the Ladies' International Reading Room took place. The first half of the programme was devoted to a one-act comedy by Jerome K. Jerome entitled "Bar-bara;" the second being diversified with vocal and instrumental selections. We must own to a scuse of disappointment with the play. "Barbara" is a sentimental custain-raiser that taxes, in a peculiar way, the emotional abilities of the principal character. All the interest centres in her, the other three players being mere lookers on, quite unconscious of the passion of the drama passing before them. It is perhaps the ever present sense of this overpowering paties that robs the dialogue of the sparkle usually associated with Mr. Jerome; for, candidly speaking, the little play is deadly dull and ever bordering on the simply mandlin. To put the matter briefly, the selection of the piece was unfortunate, for all who took part in it are capable of producing work of a much higher calibre; The honours work of a trace inguer carrier. The namen's of the play fell to Mrs. McWilliams as Barbara. It was apparent as the tate slow-ly unfolded itself that she would be called upon to make a great sacrifice, and quietly and effectually, as only a thorough actress can and effectually, as only a thorough actress can do, Mrs. McWilliams slowly built up the fabric of her character and in the last phase of all, when she nobly renounces her own newly discovered identity and all that it means and implies in order that Litts (Miss Wheeler) and Carl (Mrs. Danis) was achieve in appropriet Cecil (Mr. Davis) may achieve happiness, she completely won over a lukewarm house by sheer force of natural impersonation. Little and Cecit were pleasantly played and Mr. Eddison III Dr. Finnicum was acceptable. Bouquets of flowers were handed to the ladies before they were allowed to leave the stage.

The comedy was followed by a pretty dance and chorus from Wang—" Baby, baby"—in which the Misses Chimmo, Merriman (2), Burns, Grösser, Brockelbank, Hilaté Moss, Lee. Salabelle, and McWilliams, with Messis, Plummer and Morse on first chop Chinamen, took part. This had to be replated twice. The second part. It is had to be replated twice. The second part was as follows:—Trio, for Violin, Cello, and Piano (Rubenstein) Messrs. Poole, Schmid and Mason; Song "The King's Minstrel" (Ciro Pinssti), Mr. A. C. kead; Cello Solo, "Tarantelle" (D. Popper), Mr. E. C. Davis; "The Possibilities of Mrs. Henry Hawkins," Mr. M. Ellis; Song "Amorita" (Guy d'Hardelot), Mrs. James Walter. Mr. Ellis was recalled, and Mrs. Walter was enthusiastically anolanded. Mrs. Walter was enthusiastically applauded. Mrs. A. C. Read accompanied Mr. Read's and Mrs. Walter's songs, Mr. Davis' 'cello solo, and the dance from Wang.

#### RUSSIA IN KOREA.

T was at first very difficult to credit the telegraphic news with reference to Mr. DE SPEVER'S alleged despatch time to time during the past few months we have had occasion to note that signs of a re-action against Russian influence were beginning to manifest themselves in Korea, and that, so far as it there was little probability that they would it provoked much opposition. No wonder, Japan's policy, as directed by Count among the people also. That is, perhaps INOUYE, was animated by the utmost the most interesting feature of the reacconsideration for Korean susceptibilities. tion now making itself apparent. Public been involved directly or indirectly in the no longer be left to the undisturbed condoubt that the Japanese would soon bave had to choose between, on the one hand, other, overtaxing popular patience by trying to lead her, with some semblance of celerity, into the path of prohearts of the Koreans m record of violence and masterfulness as the Japanese shall continue, and accompanies'the sumintercourse with Korea from the conclusion of the KURODA Treaty of 1873, the The Russians did not bring that disqualification to the undertaking, and the situation was correspondingly easier for them. Still the prestige of her victory over China scored as a compensatory factor in Japan's case, so that, on the whole, she may be said to have been as well equipped for the enterprise as Russia. Possibly she might have succeeded better. We can not tell. She never had a fair trial. In no arena of foreign politics or foreign enterprise is it yet possible for Japan to have a fair trial. criticism of every amateur observer or minds by an assumption that she must of the Liaotung affair. From the moment

that she had to bow to the dictation of Russia, Germany, and France, and withdraw from the banks of the Yalu and the Peninsula of the Regent's Sword, Japanese chances of success in Korea became a to the Government in Soul. From vanishing quantity. The glamour of her armed prowess disappeared. The Koreans saw her humbled in the hour of victory, and the admiration they had conceived for her became tinged with a hue of contempt. We can not say, therefore, was possible to judge, the shadow of the what might have been the issue of her great northern Power had been cast too doings in Korea had not these special deeply over the peninsula. Let the obstacles lain in her path. But we can Koreans be ever so deficient in patriotism, say that, tentative as was her procedure, tamely submit to such a manifest drawing therefore, that Russia's more daring and of their country under the Eagle's wing, vigorous methods have incurred even Whatever may have been written to the greater unpopularity. Not merely unpopu-contrary by some critics, it is certain that larity in official circles, but unpopularity Nevertheless the Koreaus chafed against opinion seems to have been born in the it. Even though Viscount MIURA had not little empire, and national affairs will sanguinary affair which so terribly dis-trol of a few politicians. Probably the credited his country, there can be no influence of the change will not be very apparent at first, but it is in the nature of such a change to develop rather than to allowing Korea to drift back into the dwindle. Russia has forced the pace too old slough of stagnation, and, on the much, and the Koreans decline to keep up with her. Under such circumstances it does not seem particularly tactful on Mr. DE SPEYER'S part to have applied to them gress. Russia, in one respect, approach- the spur of an ultimatum. Things must ed the task under more favourable have reached a rather desperate pass beconditions than Japan. Her people had tween two friends when one summons not laid up against themselves in the the other to declare, within a given number of hours, whether the friendship had done-for it is beyond question that mons with a threat of unfriendly coercion throughout the whole period of their in the event of a negative reply. Such action might have been reasonably provoked by some distinctly hostile act on Japanese residents in the peninsula Korea's part, but, so far as we can see, behaved in a manuer which could not fail there has been no such act. Mr. DE to alienate the sympathies of the natives. Sprygg's protest is against a general want of cordiality, and although its vagueness will help Korea to frame a non-committal answer, if she he so disposed, it also displays a fretful nervousness and impatience which cannot tend to enhance the charms of Russian friendship. We shall not be surprised to hear that the Government in St. Petersburg declines to endorse Mr. DE SPEYER'S procedure. The Government in St. Petersburg knows how to have skilful recourse to the time-honoured device of having free commercial access to almost disavowing an over-zealous representative's action and punishing him by trans-She has no prestige to shield her from the lating him to a higher post. Its chief interest consists Apart from that general disadvantage, in the evidence it furnishes of Korea's however, there was the specific handicap growing restlessness under Russia's hand, the resources and potentialities of the

#### THE FAR-EASTERN SITUATION.

DECENT telegrams received in Tokyo support the views expressed in these columns when the news of Russia's sudden activity first reached us. We said :--- While there appears to be no room for doubting that Russia has applied for a lease of Port Arthur and Talien, and has asked for an answer in five days, there is much room to doubt whether any threat of armed coercion accompanied the application, or whether Russia contemplates recourse to force in the event of China's refusal," The intelligence now received is to the effect that M. MURAVIEFF has informed HER MAJESTY'S Representative in St. Petersburg that Russia is negotiating for the lease of Port Arthur and Talien for a certain number of years, as well as for a railway across Manchuria, but she has not demanded sovereign rights or threatened to send troops, and that if the ports are leased, they will be opened to foreign trade. That statement imparts to the conjuncture an aspect very different from the appearance it bore when first presented to the public. Instead of blustering and threatening, instead of preferring a species of stand-and-deliver demand for a large part of China's territory, Russia is simply "negotiating" for a lease of two ports in the Liaotung Peninsula, and for permission to connect them with her East-Asian system of railways. We are without absolute warrant, indeed, for assuming that the "railway across Manchuria," spoken of by M. MURAVIEFF, is to have its southern terminus at Port Arthur; but that seems to be a reasonable inference. There can, of course, be no question that in preferring proposals of such a nature to the Tsung-li Yamen, Russia is acting strictly within her rights. Great Britain did not hesitate to apply for a lease of Kowloon, and were she to submit to the Peking Government a project for extending the Burmah Railway into Yunnan or even to the banks of the Yangtsze, no one would pretend that she was violating international usage or taking undue advantage of her superior strength. We cannot claim for England liberty of action which we deny to Russia. The only point is that the situations of the two Powers are radically different; for whereas England, already every sea on the face of the globe, would be merely making a small addition to her tradal or maritime facilities by building a railway in China or obtaining a lease of Chinese territory, Russia's project in Manchuria brings her at length within sight of the practical achievement of her traditional ambition, access to an ice-free port; an object the consummation of which signifies an immense development of Russian empire. It is a striking difference

Digitized by Google

kind. What is likely to be the attitude it with whatever energy and patriotism of Great Britain under the circumstances? she possesses. England, however, need Can she justly offer any resolute resistance not adopt the same attitude of opposition. to Russia's proposals? The tone of the English press coupled with the recent may seek from the Chinese Government declaration of the House of Commons concessions such as would compensate makes it quite plain that if Russia had some of the disadvantages created for her demanded the cession of Talien and Port by Russia's policy. Scarcely anything Arthur, accompanying her demand by a threat of military coercion, she would have ask for, would restore the equilibrium, but found her path barred by Great Britain. But Mr. BALFOUR has publicly declared demand. It is conceivable that she that no objection exists to Russia's acquiring an ice-free port in the Far East, provided that she opens it to the trade of the world. That is exactly what she proposes to do. She wants to carry her Siberian Railway to a southern terminus in the Liaotung Peninsula, and she promises that all mations shall be free to share in the commerce thus developed. She does not ask for the right of levying laxes on the transit of goods through Manchuria or imposing tariff dues on their export and import at Talien and Port Arthur. The ness. The most peaceful and least selffiscal control of the trade would remain assertive people in the world, if brought in China's hauds, but Russia would be the within reach of the opportunities which landlord of the foreign settlements established at the new ports. It will not be easy for England to oppose that programme on commercial grounds. Yet its and her destiny could not be mistaken were consummation would completely upset the she once planted in Manchuria. That is balance of power in the Far East. A Russian railway connecting Port Arthur and Talien with Mukden, Vladivostock, and the Caspian regions, would practically convert Manchuria into a Rus- in the second sian province. There can not be the smallest doubt about that. Russia would then be in a position to mass a force of any desired dimensions within easy striking distance of Peking. The Chinese empire would lie at her mercy. She would become the indisputable mistress of Far Eastern Asia. No Western Power could interfere with her continental designs. At present her access to Manchuria is maritime only, and exists on England could at any moment cut her off from all these regions. But let Manchuria be once brought within the sphere of Russia's railways, and she will become in the Far East what she is already in Europe, a military colossus. She will also be able to collect stores and ships at the very place chosen by England for a basis of operations in the campaign of 1861 against Peking; will have command of the entrance to the Gulf of Petchili and the maritime traderoutes to northern China, and will be within a few hours' steaming of the mouth of the Yangtsze. Thus while in principle Russia's programme may not be open to not be over-rated. Its achievement would of preparing people to hear nothing that remark seriously, and exclaimed:—"Ah, render the maintenance of Chinese in-they have not already heard. "Julia," Pollock, it's my firm belief that no person dependence quite illusory, and would indeed, does not always act up to her connected with a newspaper will ever enter wholly disturb the balance of power in character. She makes in this last letter the Kingdom of Heaven!

An alternative offers in her case. She that she could obtain, or conscientiously something she would be compelled to will adopt that alternative, though it would mean the practical assertion of a principle placing China at the mercy of every Western Power solicitous about prestige or position in the Far East. For Chiua the crisis is vital. If she accede to Russia's proposals, she surrenders Manchuria and a great deal more than Manchuria. We do not think of preferring against Russia any sinister designs or any vast schemes of territorial expansion. But been with you to teach, to console, and to there is one thing that a great Power can not check: the growth of its own greatthan the tide can resist the attraction of the moon. Russia has to fulfill her destiny, what we mean when we refer to the immense significance of Russia's proposal, from a Chinese point of view, in the first place, and from the point of view of all States having interests in the Far East

#### BEYOND THE BORDER.

Mr. W. T. Stead is certainly the "boss" sensationalist of the century. Whether he is miraculously sincere or a magnificent imposter, who shall say? But from "The Modern Babylon" and "Should Christ come to Chicago," to "Borderland," he has always succeeded in raising public interest to concert pitch and keeping it there. The publication of "Borderland" has been suspended in obedience to a communication from the invisible world bearing the signature of "Julia." This ghostly lady sent to Mr. Stead three letters, which he publishes in full in the closing number of the periodical. "Julia" confesses that her "heart is somewhat sad within her at the thought that this may be the last time for some months that she shall have the much prized opportunity of communicating with her friends," from which we infer that the shadows living beyond the border are not of much account any how since they can not make known their gospel to folks on this side without the aid of a Stead and a magazine. Moreover, "Julia" admits in her last epistle that she "does not think that you will find that what we have to tell you differs from what more intelligent and spiritual believers have arrived at or have received by inspiration," not be over-rated. Its achievement would which is, of course, a very prudent method

but a difference of degree only, not of the Far East. China is bound to oppose the notable mistake of arguing about her own supernatural existence and capacities.
"These messages," she says " which you have received at all times and seasons, of which possibly a hundredth part has been published, may, you auggest, have been due solely to your sub-consciousness, your other self. Your hand which has written things unknown to you which have occurred in the past, and which has written things as yet unknown to any one which have been fulfilled in the future, is moved not by me, but by some hitherto unknown segment of your soul. Well, you can take it so if you please. But you know, best of all, whether these communications, many of which ran directly counter to your own views, and all of which form a consistent whole with a distinct character and individuality of their own, did or did not, emanate from your own mind. They certainly did not emanate from your conscious mind; and if you know nothing of their contents you know nothing of their origin. I, who know both, have always told you the same thing. I am your old friend on earth life who passed away some five years ago, and who has ever assist you in direction.

That kind of dissertion is very unspiritlike, but Mr. Stead remains fixed in his faith. He has now retired into a darkened room, in obedience to "Julia's" orders, where he is to engage in the task of "building a bridge between this world and the world of spirits" and when the structure has been thrown over the abyss, he promises to emerge and enlighten those who are qualified to be thus favoured. We must confess that, ever since we read "The Modern Babylon," we have expected to hear of Mr. Stead's retirement to a darkened room of some kind. However, he has played many fantastic tunes on the highly strung nerves of his world, and this declaration on the eve of his retirement is interesting :-

"The more we know of the mysterious realm that "The more we know of the mysterious ream that surrounds us the less ready are we to dogmatize. So marvellons are the things which we know to be true, so utterly at variance are they with everything that is ordinarily accepted as true by the ordinary world, that there is hardly anything that can be regarded as antecedently impossible. Hence, more than ever do I feel it necessary to held the indoment in suscence and, while adhold the judgment in suspense, and, while admitting all things to be possible, recognize that very few things are certain, and that even those which seem to be most certainly true may be proved to be mistaken by a little more light and a little more experience. Of one thing only I am more absolutely convinced than ever, and that is that the ordinary limited materialistic view of man and of the world on which he lives are absolutely inadequate to account for what we know to be happening all the time. Whatever else may be true, the faith in which the majority of people live and die, which is based upon the assumption that hold the judgment in suspense, and, while true, the raith in which the majority of people live and die, which is based upon the assumption that there is nothing but matter, is absolutely and de-monstrably faise."

An amusing story used to be told in Bar circles respecting a meeting of the late Baron Pollock and the late Lord Denman. The atter had the night before delivered one of his unutterably prosy speeches in the House of Lords which in the customary manner was disposed of in the London dailies thus:—'After a few words from Lord Denman," &c. Baron Pollock overtook his learned colleague in the park, and found him fuming over this latest Pollock, in a mildly ournalistic indignity. ironical fashion, condoled with his friend, and expressed regret that so magnificent an oration was not reported. Lord Denman took the remark seriously, and exclaimed :-- "Ah,

#### MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

A writer signing himself Chikuhô contributes to the Fukuin Shimpo a review of the history of religion in Japan during the past thirty years, which contains a number of interesting facts that have not, as far as we are aware, ever been grouped together in the same way before. We reproduce the gist of such of Mr. Chikuhô's articles as have appeared, for they are not yet concluded.

The first period of which Mr. Chikuhō gives a history he designates the "Era of progress and reform," and the following is what he has to say on this subject :—At the beginning of the Majji era, Shinto was the established religion of Japan, Buddhism received no govern-ment assistance whatever, and the Anti-Christian edicts still remained in force. But in the neighbourhood of Nagasaki there were numerous professors of Christianity, descendants of the Roman Catholic converts of Hideyoshi's time. In the year 1868 some 4,000 of these adherents were arrested and various attempts were made to induce them to recant. Very extreme measures would no doubt have been resorted to had not foreign ministers interceded, and had not the Government stood in awe of French retribution. Six hundred of the prisoners were released, but the remainder were kept in prison till 1873, the year in which the public notices forbidding Christianity were removed. The removal of these notices is not to be regarded as an indication that the Government of that time was favourably disposed towards Christianity. The step was taken as a concession to foreign sentiment on the question and to facilitate Treaty Revision, which, as was represented by Ito and others, was rendered quite impossible by such edicts. While the Roman Catholic Christians were in prison there arrived in Japan those pioneers of Christian work in this country Messrs, Williams, Verbeck, Ballagh, Brown, Hepburn, Thompson, and one or two others. These missionaries began by teaching English or science or by opening dispensaries, and thus gradually gained an access for their Gospel message. It was during this period, too, that Mr. and Mrs. Green arrived and founded the Kumini Church, translation of the Bible was commenced by the Protestants in 1872, and in the same year the Yokohama Church known as the Kaigan Kyökni, consisting of eleven members, was founded. Turning to Shinto and Buddhism and their connection with the Government. many changes of policy took place during the first four or five years of the Meiji era. In 1868 the Buddhists, who from aucient times constantly dabbled in politics, took umbrage at the favour shown to Shinto by the Government and, Oshu especially, stirred up sedition to such an extent that the Government repented of its hostility to the sect and publicly denied that it intended to suppress Buddhism. But this did not satisfy the Buddhists. They naturally felt jealous of the high posi-the 太政官 Dajokwan, or Council of State, so that when in 1870 an Imperial Edict was issued proclaiming the oneness of Shinto and the State (政祭一致 Seisal-itchi) and constituting Shinto priests 宜數值(Senkyozhi), the Buddhints made a great sur throughout the country. Partly influenced by this and partly by the rapid progress of Christianity, which they regarded with jealous eyes, in 1873 the Government abolished the Yingi-kwan and created the 数部海, Kyöbushö, (Department of Religion), which asnamed the control of Buddhism as well as Shinto In order to further conciliate the members of the former sect, some of the leading Abbots were raised to the pecrage. But at the same time, Shintō priestastill occupied a higher

sects at this time, as was evidenced by the burning of the Daikyōin (大數院) and the attempt to set fire to the Asakusa Hongwanji.

No history of the progress of thought at this time would be complete without referring in that select society of thinkers known as the 明六社 (Meirokusha), of which Messrs. Mori Arinori, Nishimura Shigeki, Tsuda Shindō, Nishi Shū, Nakamura Masanao, Fukuzawa Yukichi, Katō Hiroyuki, Kanda Kôhei, Sugi Kōji, Mitsu-Ringho, and Miteukuri Shuhei the chief members. The meetings of the society were held at the Mikawa-tei, Kanda, Tökyö, once a month, the first of which took place in July, 1873. Though the members of this club, with the single exception of Mr. Nakamura Masanao, were not professing Christians and were not altogether in favour of Christianity spreading in Japan, their discussions, which were published in the Society's organ, the Meiroku Shinshi, helped forward Christianity in various ways. The ideas of these scholars on numerous topics were ahead of the times, as may be seen by a perusal of their writings. Mr. Mori urged the abolition of concubinage and polygamy. Mr. Nishi Shū discussed the subject of mixed residence, and nsisted on the necessity of a change of the attiinde assumed by the Government to Christianity. Mr. Fukusawa discussed mean the improvement of the Japanese race. Mr. Fukusawa discussed measures for

The leading educational establishments of the capital in early days, all of which exercised t wide influence in preparing men's minds for the reception of new ideas on all subjects, were the Kaisei-rakko, established by the Bakufu. out of which the present University grew; the Keiôgijuku, founded by Mr. Fukuzawa; and the Doninsha, eriginated by Mr. Nakamura Massuao. The principal teachers at the Kaisei-gakko were Messrs. Kato, Kanda, Mitsukuri, and Nishi. In the provinces three schools turned out some of the ablest Christ-ian teachers to be found in the Japanese Church. From the school in which Mr. James taught in Kumamoto came Messrs. Kosaki, ways, the transmotor came Messes, the season, Yebina, and others. From Mr. Brown's school in Yokohama came Messes, Osbikawa, Uemura, and Ibuka; and a little later Mr. Clark's work in the Agricultural College at Sapporo gave such men as Messrs. Saio, Uchi-mura, and Watase to the Christian Church. It was in 1875 that Mr. Niijima utilised the ability of the graduates of the Kumamoto school in the new Christian establishment known as the

In the mean time the policy of the Government was changing in the direction of allowing greater freedom of belief. In April, 1875, the Krōbushō ahared the same fate. The separation of politics and religion began to show itself as a distinct tendency and only waited for a favourable opportunity to enable it to be put into practice. One great change was essential to the spread of Christianity, and that was the realization on the part of the people of their right to freedom of thought on all matters They had lived for centuries as slaves to the Government, had waited to have their thoughts dictated to them by their superiors before they ventured to call them their own. To remove the shackles that bound the minds of men was the ambition of a score of earnest minds. Mill's work on "Liberty" and the writings of Bentham and Spencer and a history of the French Revolution were all trans lated, and the result was that in a short time public opinion underwent such a change that members of great political parties like the First to and Kaishin-to were able to discuss freely and fully the steps in be taken to secure for every person in the empire that liberty of choice which is so essential to true progress and development of thought.

Abbots were raised to the peerage. But at the same time, Shinto priests still occupied a higher rank than their Buddhist confrience, they slone holding the position of Kyōdōnhośu, official teachers of religion. The feeling of autinitial to each other state of the s

Fukuchi Gen-ichitô, and others founded a party known as the (帝政黨) Zeisei-to, whose chief principles were of a decidedly conservative type. Confucianism was revived. Even Mr. Katô Hiroyuki medified many of the views he had previously championed. This reaction was specially noticeable in 1881 and 1882. Christianity felt the effect of this movement very keenly. The anti-foreign sentiment was in most cases also anti-Christian. Then doubts as to the intentions of Russia prevailed. It was said that she had designs on the Hokkaido and that the Greek Church missionaries had been sent to Japan for political purposes. Buddhism commenced vigorous attack on its great rival. The enemies Christianity, in order to check its progress, translated the works of the leading aceptics of the West, Bentham, Mill, Spencer, Rousseau, Huxley, Ingersoil, Comte, and others. Various professors in the Univeristy, such as Mesers. Morse, Toyams, Katō, and Yatabe made use of Herbert Spencer's doctrine of evolution against Christianity and Mr. Fukuzawa utilised Buckle's views m expressed in his History of Civilisation, combined with the opinions of advanced materialists for the same purpose. Mr. Naka-mura, though a professing Christian, did little to stem the tide of anti-Christian sentiment. The narrative will be continued in our next Summary.

The Seilero Shimpo (Greek Church) protests against the unfair methods of controversy adopted by the Nippon Shugt and other conser-vative organs. Christianity is said to be the cause of numerous evils and abuses with which it is in no way connected. It is supposed by some to be part and parcel of Occidental civilisation, and hence it is argued that it is one of the causes of the contempt in which old moral standards are held by the rising generation. But the fact is that Christianity is by no means to be identified with Occidental civilization, although in the opinion of the writer it lies at root of all that is best in that civilination, thing is certain that the part of Western civilisation which has been adopted by Japan is its material, and not its spiritual, part, and hence to argue that the part which the nation as a whole has not received is the cause of existing looseness of morals shows singular carelessness or perversity.

In the Kirisutedyo Shimbus and in one other magazine we find a report of an address delivered by Mr. Shimada Saburd entitled Tenshoku to Tenshaku, in which the speaker traces the connection between the gifts conferred by Heaven and the duties which such gifts involve Mankind, says Mr. Shimada, may be divided into three classes (1) Those whose death is to be desired (confirmed criminals). (2) Those whose existence or non-existence is of little consequence to the world at large-a very large class. (3) Those whom the world is agreed in wishing continued health and long life-the great benefactors of mankind. It is true that no one perishes without being mourned by somebody. But there are crowds of people who are missed by their own families only, and not by the world at large. The men and women who are most widely missed are those who, in return for the rank conferred on them by Heaven (天衛 Tenshaku) in the form of superior moral and intellectual gifts, realise that these gifts render obligatory to them certain duties to their fellow-men. With their *Tenshaku* there is ever a 天職 *Tenshoku* to be performed which demands the utmost exertion and perseverance. The men who do the most good in the world are those who realise most their responsibilities. They are humble men, because they have ideals which they are conscious of not reaching and because they know how limited in this complicated world of ours is the influence of any one individual, however gifted. They are men who feel that they have their duties to the past, the present and the future. There is to be ranked as Heaven's noblemen unless they figure as the benefactors of their fellow-men.

We have often referred in these Summaries to the difficulty we have encounted in obtaining information as to the work carried on by the Roman Catholics in this country. Their one organ, the Koye, is altogether inadequate, and we should say is in no way considered to be a representative organ by the learned missionaries attached to the Roman Catholic Church: The Fukuin Shimpo confirms the statements we have repeatedly made on this subject when drawing attention to the translation into Japanese of at excellent little work, the Japanese title of which is Nihon Shugi to Schai Shugi. The name of the author of the French work is given in kana as Rigioru, which we can only conjecture may be intended for L'Abbé François Ligneul. The Fukuin Shimpo says that the newly published treatise is full of sound common sense and constitutes wholesome reading for those narrowminded Japanese who imagine that patriotism is confined to these shores. It is pointed out by M. Ligneul, if we are right in ascribing the authorship to him, that all the fuse that has been made by the "Nippon Shugi" party displays no small amount of ignorance and a calculated to do mischief, since to insist on Japanese rights irrespective of the rights of other nations in the way that has been habitually done by writers of this school is to sow the seeds of fanaticism, and in the minds of uneducated readers may act as an incentive to violence. It is quite may act as an incentive to violence. It is quite plain, it is argued in the book under consideration, that "Nipponism" unqualified by Cosmopolitanism can only do harm. The Japanese cannot assume a rank above other nations. As there is no real superiority, it is a mistake to make it appear as though there were. The "Nippon Shugi" patriorism is of a spurious type and out of harmony with the enlightened spirit of modern times. As the " Nippon Shugi ' movement is undoubtedly wide-spread, the cir-culation of such treatises as the Nihon Shugi to Sekai Shugi should be encouraged by all who feel sorry when any section of the Japan-ese nation makes itself look ridiculous in the eyes of the great outside world.

No. 9 of the Shakai Zasshi discusses in a lengthy article the tendency of thought in the religious world during the past year in a liberal and enlightened spirit. After condemning the narrowness of view of the "Nippon Shugi" party, it takes up the subject of mixed residence and denounces the measures being taken by Buddhists and Shintoists as savouring of the exclusiveness of the Tokugawa ers. There is too much of the narrow island spirit abroad nowadays, says the Shakai Zasshi. The Nippon Shugi represents one class of conservatives. The Jogu kyökai, whose new organ is named Mikuni-no Hikari, represents another. But wide spread as are these movements, they cannot stem the tide of progress, and are regarded with indifference by the great majority of thinking men. In the meantime Christians are showing considerable activity. The Yushi-dendôkai and the Fukuin-domei-kai are both carrying on evangelistic work in an energetic manner and have lately started an organ of their own called the 新世紀 Shinseiki (The New Century.) Among Buddhists great literary activity has been shown both as regards the issue of new magazines and new books. The same cannot he said of Christians. Among them the trans-lation of the Bible by the Roman Catholics is perhaps the most notable literary effort of the year. In the whole of the religious world there is a marked improvement in the interest taken in social questions, many of the magazines devoting considerable space to the discussion The article concludes with reof these topics. marking that, notwithstanding certain encouraging features, neither Buddhiam nor Christianity made any remarkable progress during the year that m past. With learned Buddhists there is little real faith in the creed. With Christians there is much pettiness, party-apirit, and jealousy. The Kirisulokya Shiphynizing hyricle in

the Desire for Vengeance in Japan, expresses the opinion that among large classes of people there is still a feeling of admiration for the men who bring to a successful issue schemes of revonge. The graves of the men who killed Okubo and Mori are visited by hundreds of devout people and well supplied with incense and flowers, and vendetta tales and plays are very popular. People's habits of thought on such matters do not change in a day and the Christian doctrine of loving one's enemies is still far from being accepted in this country.

An interesting series of articles on the condition of the poorer classes in Tôkyō, entitled Himmin Kuisu, has been appearing in the Hochi Shimbun, from which we have culled a few particulars bearing on the religion of the lowest classes. The majority of poor people are Buddhists and belong to the Nichiren, Shin, Sō ō, Shingon, Jōdo and Tendai Secta; among which the first has by far the largest share of patronage. The observance of rites and ceremonies connected with the spirits of ancestors in the houses of the poor is very strict, the family alter being regularly supplied with in-cease and flowers. The substitutes for regular alters are often extremely primitive, orange and persimmon boxes being frequently utilised for this purpose. Among all the expenses that are forced on the poor by the usages of society burial rites are the must onerous. These in late years have been heavier than they used to be, owing to cemeteries being situated far away from the centre of the city and to the numerous regulations enforced by boards of health relative to enterment. In olden times poor people paid to a temple a small sum usually about one bu, and handed over the corpse to the priests, who dug a huge grave which served for a number of coffins. prayers for the dead were combined, thus saving the priests a good deal of repetition.
This mode of burial was called Nage-Komi. It is still practised in some parts of the city among paupers, more especially in the suburbs.

In the Tōyōtetsugaku appears a report of Professor Toyama's speech at the Confucius memorial meeting held a few months ago on "Authority" in things religious and moral, of which we give a brief epitome :- Though a certain amount of authority is absolutely necessury for the atrengthening of faith and for the reformation of society in the religious world, authority has on the whole done more harm than good. Even in politics and science authority which is incapable of reluxation hinders the progress of inquiry and hence be comes an enemy to progress. In the West both Roman Catholiciam and Protestantism, have suffered much from the exercise of authority; and in the East, China's position to-day may to a large extent be traced to the servile deference to authority which for ages has been common in that country. The rule of Buddhism and Confuciantsm in China rests upon authority rather than on conviction. Although the teach ing of Confucius, if practiced, would doubtless in some respects prove beneficial to mankind, yet Confucianism as a creed lacks the ardour and full-blooded life necessary for stimulating men to great deeds of virtue. It is decidedly fatalistic in character. By this we do not mean to say that in the mind of Confucius his great respect for the unalterable laws of Heaven rendered him careless as to his own actions. He was no fatalist in the modern sense of that word. But nevertheless the general result of his teaching on the Chinese mind has been to make it regard the existing state of things as unalterable. In a word that teaching has paralysed effort in the direction of reform by making the Chinese feel satisfied with low ideals.

The new Christian magazine mentioned above, the Shinsdill, is very strongly supported and promises to be a first-class organ. It sime at being quite unsectarian, as is evidenced by the Amelof its chief supporters, Messrs Ko-

saki Hiromichi, Honda Yöichi, Ibuka Kajinosuke, Uemura Masahisa, Hiraiwa Kempo, Motoda Sakunoshin, Tsunashima Kakichi, Niwa Sejjirō and others. It is proposed to discuss politics, science and other subjects from a Christian standpoint, as well as religion. The first number covers over 80 pages and contains a partety of carefully prepared matter.

a variety of carefully prepared matter.

An atticle entitled, "The position occupied by Christianity in Japan III the present time," gives a detailed account of the various phases of development which the Church of Christ in Japan has undergone. Messus. Honda, Shimada Saburō. Uemura, Kosaki and other well-known writers have contributed articles III the opening number. Altogether the new organ promises well, as there is certainly room for a magazine, in which popular writers can ventilate their opinions on neutral ground. Pursly sectarian organs abound, but these do not answer all purposes.

The new magazine noticed in the last Literary Summary, the Tenchijin, edited by Mr. Takuhashi Gotō, pours no small amount of scorn on the discussion of Messrs. Snodgrass and Takahashi on the subject of Christianity. These self-constituted champions are pronounced by the Tenchijin to be unworthy of the causes they espoused. It is reported, says this organ, that the two gentlemen have been asked to give another performance in Yokohama, that they have been offered 50 yen each per night and that tickets will be sold at 1 yen each. We

have not yet heard, says the Zenchijin, whether the two gentlemen have agreed to the proposal. Anyhow the affair is the Chaban Kyōgen

(grotesque parade) of the day,

The Tenchijin gives extracts from other
publications on the Ethical Standard of the
"Hundred Essays" published by Mr. Fukuzawa, a topic which has been discussed in several magazines and in certain newspapers from time to time. The fullest criticism of Mr. Fukazawa's ethics that we have seen, says the Zenchifin, is that of Mr. Yamada Ichiro, published in the *Pomiuri Shimbun*, according to which the Mita Sage has never pretended to rest his teaching upon any definite philosophical basis. Mr. Fukuzawa's othics are of an essentially practical type. In a sense he is an evolutionist; but by no means a consistent one. The logic on which his teaching rests reminds one of the dragon with two heads; when one is attacked the other comes to the rescue. The way in which Mr. Fukuzawa and his numerous followers apply their ethical principles to the things of every day life is certainly very clever and quite unique in this country. It is the facility with which their ethical creed is made to III the exigencies of the ever shifting scenes of life that makes the Mita teaching so popular. Where Mr. Fukuzawa attempta, as in the essay entitled "Anshinron," to base his teaching on philosophy, he fails. He who studies these essays must cease to expect logical precision in the system of ethics advocated. The teaching is more of the nature of a series of insuitions which have impressed an eminently practical mind, and as such are very valuable.

In the editorial pages of the Seikyō Shimpō it is announced that this magazine will no cidedly do not not consider that the magazine will no confluctus announced that this magazine will no confluctus the second of the Greek Church and will not confine itself in the discussion of religious subjects only. Whether this scheme of expansion can be carried out seems doubtful, if one can judge from the first number of the new series. Among other articles is a lengthy one entitled, "Kiritulekyō to Shakai opobi Kojšn Shagi" in which the writer argues that Christianity does not teach individualism to the extent of excluding the State to which individual believers belong, and that its doctrine of altruism is not to be pushed to the length of indifference to the welfare of one's country. Objectious to Christianity on the score of its opposition to patriotism are founded emirely on a misconception of the real import of its teaching.

at being quite unsectarian, as is evidenced by Original from Original from the supporters, Messas Ko. No. 24 of the American a short history

URBANA-CHAMPAIGN

of Buddhism in 1897, from which we extract the following observations. A great deal of fruitless energy has been expended on the discussion of mixed residence, the reform of ecclesiastical laws, the better preservation of old temples. The long controversy concerning the Otani and their system M government yielded no satisfactory result beyond showing that in Buddhist ranks there is an earnest desire for progress and for the eradication of acknowledged existing The Nichiren commotion ended in a crushing defeat for the leaders of that sect who figured in the controversy. What should figured in the controversy. What should be the connection between Buddhism and the Government has been earnestly discussed in various magazines, the greatest variety of opinion being expressed on the subject. While other organs have advocated. Government control of the sect, the Dento and the Hansel Zasshi have consistently argued in favour of an entire separation from the State. The abolition of the celibacy of the priests and of the custom of abstinence from meat has been strongly advocated by the Shin-shu magazines, and as strongly opposed by the Nichiren organs. What has been very noticeable during the past year has been the distinctness with which the two great schools, the new and the old Buddhists, have figured. Their hostility in each other has been most marked of late and will no doubt lead to fresh developments. It cannot be said that either of the three great causes of recent dissension among Buddhists, the Köys-san, the Hongwanji and the Sötöshü affair has been finally disposed of. They still cloud the horizon in a certain extent. The following magazines have come into existence during the year. The 宗製 Shuhō (Sôlō); the during the year. Ino 宗教 Shino (Solo); the 宗教 Shūsui (Jōdo); the 和 融 Wayūshi (Sōlō); the 歌海一瀾 Kyōkai-ichiran (Shin); the Shūnhū Shūnpō (Otaul-ha anti-reform party organ); the Shūnhō sekai, the Kyōgaku (歌亭) Hōchi, the 菩提 Bodai, 東光 Tōkō, the 常堂 Tokiua (Shin-shū, Otani-ha) and the Hantel-no-Kagemi, a woman's magazine.

The subjoined items of information have been culled from various sources. The centres of the Roman Catholic Missions are Tokyo, Osaka, Nagasaki, and Hakodate. Each of the districts connected with these centres has about thirty Churches, presided over by some 30 odd priests. Each priest has several evangelists under him. The total number of Roman Catholic converts in Japan is stated to be 50,000. Among the hundred odd priests attached to the Mission 30 are Japanese. The progress of the work has been so encouraging in recent years that never a year passes but new Missionaries arrive from Europe.

The Hansel Zasski, is facile princeps among Buddhist magazines and is constantly under-going improvement. The January number surpasses anything issued by the Hansei-kai. In addition to the usual amount of matter there ii an appendix over 60 pages in length.

The following is a concise table of statistics designed to show the amount of work carried on by Christians in addition to ordinary evan-

During 1897 numerous were surance Companies started by Buddhists. The Shin, Zen, Nichiren, Meikyd, and Soio sects all figured in this line. One of the chief reasons for this new form of activity is the desire to obtain a fresh hold on Buddhist believers prior to mixed residence, by offering them worldly as well as spiritual advantages, and thus making them less inclined to accept Christianity. It is said that some preachers of the Buddhist faith spice their doctrines with Life Insurance condiment in order to make them more paletabligitized by

Tôkyô Kankwa-in (Reformatory), The ounded in 1885, for the first few years of existence was not very successful, owing partly to the lack of method and organisation, but has since shown marked progress. The total num ber of persons who have entered the institution Of these 55 are still inmates; 40 have left the Reformatory without having any special occupation in view; 211 have given evidences of being reformed. Out of these 133 have found situations in the following manner:— 18 have become Government officials; 47 have gone into business, 34 have become students, s, school-teachers, 1, a newspaper writer and 31 have followed miscellaneous call-Taking the total of those who have passed through the Reformatory, the number of the reformed is stated to be 63 per cent.

The Shidyo says that the Unitarians are more

anxious to establish the principle of liberty then to gain adherents to their sect; that they are equally pleased when they find the champions of the spirit of Christian liberty and free inquiry belonging to other sects, m they frequently do. They are not particular whether those who have joined have or have not been baptized, placing more value on actual attainments than on profession and outward badges.

The Kumiai Churches have separated them-selves from the Dösbisha and have started a new school in Kyôto, called the Fukuin Gakkwan which has already commenced work.

Mr. Onishi Shuku, whose labours in connection with the Senshin Gaku-in and whose vigorous writing are so well-known, has been ordered by the Government to proceed in Germany tu continue his studies.

No. 67 of the Shūkyō comments in some length on the Takahashi-Snodgrass discussion, drawing attention to the slipshod character of the arguments deduced by Mr. Snodgrass in support of the doctrine of the Trinity. The Shukyo says that the majority of those present at the discussion came to increase their knowledge of English rather than from interest in the subjects discussed.

#### KLECTRICITY INSTEAD OF GUN-POWDER AND BALLS.

The electric current possesses such instantaneously deadly power when its contact is established with an animate being that its substitution for artillery as an agent of destruction in war has often been suggested. But the manipulation of such an agent being, apparently, an dangerous m its attack, no one seemed greatly disposed to experiment with it for the proposed purpose. There is a certain Mr. I. H. Hartman of Bridgeport, in Connecticut, who claims to have discovered a means of pouring an electric current upon a distant object just us a ship throws the rays of a searchlight upon a place to be illumined. Indeed, waves of light are to be the conductors of the current. They possess, says the inventor, the property of carrying it, under certain conditions, which, however, he does not explain. Mr. Hartman is thus quoted :-

Hartman is thus quoted:—
The gunt will stand on a tripod and can swing in any direction. A button pushed sets it in operation. The current I expect to use will be the highest alternating current obtainable; the higher the more deadly and the Inther it will carry. A man operating this gun can awing it to the right or left and everything it strikes will go down. It can be focussed and sighted the same as any gun. Its use, of course, will be limited, as it has to be connected with powerful dynamos. But when thus connected it can not be compared with anything now in use. A stream of water with anything now in use. A stream of water will carry a current of electricity, but you can not shoot it far enough to make it effective. The light rays will carry it an immense distance.

The idea is magnificent. Could it be realized, either war would have III be abandoned or some system of insulating armour would have to be invented.

We learn that all the P.M. and O. & O.

#### THE JAPANESE TEA TRADE.

The Central Ten Dealers' Council is reported by the Nippon to have presented the following answers to the questions put by the Agricultural and Commercial Department:-

Question No. 1.—Is there any necessity for revising the Regulations for the Tea Dealers' Corporation? If so, in what way?

Ans.—The Regulations in question require amendment to a certain extent, but II no serious inconveniences have been experienced with regard to them for many years past, there is no urgent need of revision for the present.

Question No. 2.—In Kobe there are offices established by the allied dealers for the inspection of teas from various parts of the empire. Is there no necessity for a similar institution in Yokobama? If there is, what would be the advantages and disadvantages of such an institution as well as the legitimate process of organization?

Answer-Offices for the inspection of tea ought to be established in every open port.
The institution in Kobe has doubtless been beneficial to the dealers, but as it was optional in principle—in other words, an the combina-tion was left to the choice of a corporation uniformity in the methods of manufacture could not be secured.

Inspection is absolutely indispensable, in as-much as the prosperity of the export trade, especilly in tea, depends upon the rigour with which inferior or spurious manufactures are rejected, so that a fixed standard of quality may be secured throughout the Empire. There can be no better acheme for the attainment of this end than to organise an inspecting station under the direct supervision of the Central Tea Dealers' Council. The Central Council therefore disposed to urge that the following provisions should be made for the inspection of teas containing dust :--

One in every 20 chests of tea shall be inspected, (the limit of inspection to be exceeded if the occasion requires). The removal of dust sha!! be undertaken first by No. 8 seives and then by No. 20 seives (of Chinese model), and the percentage of dust shall be strictly limited, in accordance with the following:—
Value of tea per picul.

Limit of dust

catties. Above 20 ven ...... Below 20 yes .....

If any, what i ventive measures be taken?

Ans.—The best plan will be to organise a warehousing company or companies in con-venient places throught the empire.

#### YAPANESE FACIS AND COMMENTS.

The Official Gazette announces the issue by the Finance Department, on the 12th instant, of war bonds in the amount of 1,200,000 year of 100 yen face value. They will be put on the market at 91.32 yen, but have doubtless been already disposed of.

Rice cultivators and dealers in Shiga prefecture --- 60,000 in number --- recently formed themselves into a corporation with the special sanction of the Agricultural and Commercial Department. This is the first instance, remarks the Skogye, of a rice corporation having official sanction.

Unless the extraordinary happens, asserts the Perosu, the result of the forthcoming general reposts, the result of the little between the littl not belong to any party, and the balance of power depends upon their attitude.

On the afternoon of the 13th instant there trines with aleamors—with the exception of the chartered was some excitement at the Yasuda Ginko's a loan, the policy out and home.

On the atternoon of the 1st instant there was some excitement at the Yasuda Ginko's a loan, the policy out and home.

On the atternoon of the 1st instant there was some excitement at the Yasuda Ginko's a loan, the policy out and home. and on being requested to give security he produced—a loaded revolver. The bank officials ran for dear life, but a crowd quickly collected and the robber, before he could help himself to booty, was arrested.

The Nichi Nichi reports the discovery of a valuable gold mine in the neighbourhood of Tokawatsu village, in Iwate prefecture. mine is said to be the same as that which was worked in olden time by the famous warrior Fujiwara Hidesato. Application for trial borings was lately granted, and the work is shortly to be

The fees for primary schools in Tokyo are three times as much on the average as those in other cities and prefectures, and eleven times as large as the lowest rate in the empire. has the effect of preventing a large number of children of school age from receiving common instruction. Only 57 per cent, of Tokyo children attend school—against 92.7 in the case of Okayama, and 87 per cent, in Osaka. The Ozaka Asahi comments on this state of affairs.

The Joint Stock Oriental Steamship Company ordered three vessels in England for pany ordered three vessels in England for the new line between Hongkong, Japan, and San Francisco. One of these ships, to be called the America Maru, has a gross ton-nage of 6,000, and was launched at Newcastle on the 9th instant. She will shortly be finished and sent to Japan. The other two vessels, the Nippon Maru and Hongkong Maru, now building It James Llang's Dockyard, are also expected, says the Mainichi, to be completed immediately after the America Maru.

According to statistics compiled by the Agricultural and Commercial Department and published in the Shogro, the amount of rice produced during 1897, with the exception of Okinawa, did not exceed 33 million koku, showing a decrease of 8.8 per cent as compared with the previous year (in which the figures reached 36,200,000 koku) and a decrease of 16.8 per cent as compared with the average of ordinary years. The original estimates of the Department, placed the diminution at 9.6 per cent. of the average, but the reduction seems to have been in reality nearly double that anticipated.

On the 9th ultimo the Bank of Japan raised the rate of interest by one rin. We observed at the time, says the Yorosu, that such an inaignificant increase would be utterly ineffectual, and it has since appeared that the officials of the Finance Department concerned in the matter were also convinced of this fact ; but taking into consideration the bad results that might arise from a sudden change they resolved to undertake the increase by degrees. An immediate necessity again exists for raising the rate, and the Directors of the Nippon Ginko are reported to have recently held a conference with a view to this step.

Sales of foreign rice continue brisk, and the amount of import increases day by day, Prices are steadily rising. On the 14th instant telegrams were received by two or three firms in Yokohama to the effect that a union was organised with the view of "rigging" the rice market to the amount of 250,000 tons (2,500 000 bags) with a capital of twenty million ren. The Shopyo, however, throws doubt on this statement, though it says the Yokohama dealers appear to have resolved not to sell their stock even at a higher rate than that at present prevailing.

Count Inouye, Minister of Finance, has now determined on his policy in regard to financial adjustment, and the annual allowances for the various Government Departments are to be considerably curtailed. On the gross estimates for siderably curtailed. On the gross estimates for the 31st fiscal year there will be a reduction of about forty million yen. These estimates, to gether with a supplementary budget compiled in conformity with the Minister's new programme, are shortly to be submitted to the Cabinet for approval.

Cabinet for approval.

The Nippon discusses the turner policy of the Cabinet, District and the Community of the Cabinet, District and the Cabinet, D

uye is only required to hold his portfolio until the completion of the general elections, after which he will be replaced by another Mini-ster of high qualifications. Baron Ito, Minister of high qualifications. Baron 110, minister of Agriculture and Commerce, will probably be the new Foreign Minister in succession to Baron Nishi, Mr. Hoshi being nominated to succeed Baron 110. Marquis Ito seems to have been embarrased by liagaki's claims, and has found it expedient to appoint Mr. Hoshi is propitize the Liberals. These changes are to be carried out soon after the general elections.

Foreign rice, remarks the Jiji, is now popular throughout the empire. Farmers have sold their own production and bought foreign cereals for their dist, the latter being much cheaper. Formerly the middle as well as the lowest classes Tokyo were ashamed = eat imported οŧ grain, as is clearly proved by the fact that despite the brisk demand secured for it from the interior in the 23rd year of Meiji, not a bag was sold in the capital. This year the reverse is the case. Wherever we go we find a notice put ap proclaiming the cheapness as well the economical quality of foreign rice. domestic rice, now quoted at 57 sho per ren, is not adulterated, but grain below that quotation contains more or less imported rice. Ten to fifteen per cent. of for-eign cereals are, under present circumstances, eaton either consciously or unconsciously by the citizens of the intermediate class, the poorer classes preferring the pure imported grain. I is estimated that the amount of rice imported last year did not fall short of 27 million yes in value. The aggregate total of imports by the fall of this year is expected to exceed forty million yen.

The Nippon Yusen Kaisha after the war with China, increased its capital to 22 million yen, out of which 1,320,000 yen were appropriated for the construction of new vessels to be placed on the American, European, and Australian lines. Owing to the great rise in prices, however, the construction of new ships for the American line has had to be postponed, 12 new vessels being built for the European, and 3 for the Australian service. Nine of these vessels were completed last winter, while one now in course of construction in Nagasaki is shortly to be launched, the rest coming from England. The Company reaps considerable profits on the Australian and Bombay lines, but as regards the European route it has to incur serious losses on account of the insufficiency, of cargo and passengers and the heavy dues of 5 000 rem per vessel for passing up and down the Suez Canal. Such losses during the latter half of last year amounted to 400,000 yen, and were liquidfied by the profits of coast navigation. After the completion of the fifteen new vessels the appropriations from the Navigation Encouragement Fund and the special aubsidies will aggregate three million yen, and then the annual distribution of dividends will become a matter of certainty.

If may be worth while to note, says the Shogyo, the classification at well as the deatingtion of Formosan staples of export. The exports and imports for the island during 1896 amounted to 11.402.226 yen and 8,631,000 ven in value respectively, making a total of 20,033.227 yen. The excess of exports was 2,771.224 yen, and the figures for each port were as follow:—Tamsui, 7.821.419 yen; Anpling, 2,315,619 yen; Sakan, 860.504 yen; Anpling, 2,315,619 1:28; Sakan, 860,504 yes. Takow, 251,643; Keeling, 16,681; Kyukan, 136,358. The chief markets for Formonan exports are China (especially Amoy) and Hong-kong, as the following figures will shows:— Exports to China, 8 675 575 yen; Hongkong, 2 454,168 yen; the United States, 265 121 yen; other countries, 814,155 yen; Among the staple exports those that bring in more than 100 000 yen annually are :-- tea, 5 860.637 yen ; camphor, 2,247,930 yen; augar, 1,529,460 yen;

cultural products constitute the largest item of exports, while the majority of imports are of manufactured goods. Formosa is no exception to this rule. Analysed, the Formosan staples of export consist of tea, camphor, sugar, and rice, by which a sum of 10,551.319 yes is realized annually conventing almost to 2. realized annually, representing almost 92.5 per cent of the whole export trade. Commerce in Formosa, therefore, depends almost entirely upon the production of the four commodities referred to.

#### DRAWING CLOSER THE LINKS BETWEEN FOREIGN AND FAPANESE MERCHANTS.

The following letter has been placed at our disposal for publication:—

TO THE CHAIRMAN AND COMMITTEE, YOROHAMA GENERAL CHAMBER OF COMMERCE.

Dark Strs,—When in Tokyo a few days ago, I learnt that there was a desire on the part of some of the most influential Japanese gentlementhere, for the establishment of friendly relationship between themselves and the foreign community of the stable of th nity at Yokohama, and to afford opportunities los

nity at Yokohama, and to afford opportunities for an exchange of views regarding matters in mutual political and commercial interest.

It has therefore been suggested that the com-mittees of the Tokyo Chamber of Commerce, and the Yokohama General Chamber of Commerce, might form the nucleus of an association which would eventually contain amongst its members a would eventually contain amongs, is members a much larger number of gentlemen willing in com-bine for the above objects, and that probably a monthly meeting might be held alternately at Tokyo and Yokohama.

Tokyo and Yokohama.

I regret that owing to my early departure for Europe, it is will im impossible for me to go further into a plan which appears likely to give favourable results and to lead in a good understanding between Japanese and loteigners resident in Japan; but I would commend it to your kind attention at an early date, and would suggest that an intercliange of views in the first instance be made with Mr. Eilehr Shibusawa, Chairman, Tokyo Chamber of Commerce, and President First National Bank.

I remain Dear size, Young faithfuller

I remain, Dear sits, Yours faithfully,

W. B. WALTER

#### NEWS OF THE WEEK.

Messrs. L. G. C. Graham, Phillips, J. T. Pratt, W. P. M. Russell, W. P. Thomas, and R. T. Tebbitt have been appointed Student Interpreters in the Consular Service of China, Japan, and Siam.

The Iriz tells a story of a performance of the Chicese play The Cat and the Cherub at Oxford. During the play one of the actors Oxford. During the play one of the actors prays before his joss-sticks, and while this ceremony was proceeding a voice in the gallery was heard to exclaim, "Now we shan't be long." The actor, his prayer over them long." The actor, his prayer over, then rose, saying, in a tone of deep melancholy, "The gods are silent." But how he must have longed to vary that speech!

By the courtesy of Admiral the Hon. Sir E. R. Fremantle, K.C B., C.M.G., Naval Commander in Chief at Devonport, Lieutenant Takarabe, of the Imperial Japanese Navy, was shown over Devonport Dockyard and Keyham Factory on 9th Feb. It is understood that Lieutenant Takarabe has been justructed by the Japanese Government to obtain information respecting the character of British naval ship construction,

Captain R. A. J. Montgomeria, C.B., who is in command of H.M.S, Bonaventure, now on her way out to the China Station, has a splendid record of Egyptian service, and was specially mentioned in the dispatches of Lord Wolseley. He was in charge of all armed steamers and camphor, 2,247,930 yen; sugat, a.529,400 yen; hemp, superintendent of River Transport on the Nile. rice, 913,291 yen; fruits, 269 310 yen; hemp. Superintendent of River Transport on the Nile. 222,936 yen. In any country whose finen-Tier Hymnychior will replace the craiser Rain-tier resources are now unsecondclass cruisers, the naval strength of the station will be considerably increased by the exchange, for the Rainbow has only a displacement of 3,600 ions, an armament of 17 guns, and a com-plement of 273 men, while the Bonaventure has a displacement of 4,360 tone, a crew of 318, and is armed with 20 quick firers.

The Grante, a Cambridge undergraduates paper, publishes the following curiosities of spelling and orthography. For the benefit of those who do not know, it may be stated that Pembroke is usually known to Cambridge men as "Pemmer" and that Geogeghan is promounced "Gaygan":-

There once was a scholar of Pembroke Who found himself in a dilembroke, For he sent to the Dean What he didn't quite mean, A letter beginning " Dear Embroke," There once was a freshman named Geogeghan Who refused to keep chapels, the Peogeghan! When hauled by his dean He became quite obscene, And declared he'd as soon worship Deogeghan

Thursday, the 17th March, was St. Patrick's Day, but so far as Yokohama was concerned the sons of Erin celebrated the occasion very quietly. We hear that there has been some private discounion as to the celebration of St. George's Day in Yokohama. The chief difficulty in the way of a ball—the usual form of celebration is that the population of the place has outgrown the accommodation provided by the Public Hall as a ball toom. A good suggestion has been made in Kobe, which is, that the ball to be given there on the 22nd April, the birthday of Shakespeare, be made a Shakespearean Fancy Dress affair.

The Lee-Metford rifle appears in have a drawback which may disqualify it for use in Arctic climates. It is stated that with a temperature below zero the bolt action becomes in-The breech will not open, the operative. cartridges will not work out of the magazine, and the trigger will not move. This was the experience of a Halifax sportsman who found himself with a Lee Metford sporting rifle within good range of a fine moose, but unable to fire; and as it was of no use to throw the rifle ifself at the animal, he had eventually to go away without doing anything. Afterwards, in the warmth of his hut, the rifle thawed and worked perfectly. The contraction of the metal in the low temperature is supposed to have been the cause of the trouble.

The Chinese Eastern Railway, says an ax-change, will be connected by two lines with the Russian Railway system. The first runs from the Onon station on the Trans-Baikel Railway, a distance of 440 versus (275 miles), and the second from the station of Nikolskoe, on the Ussuri Railway, 95 versts (60 miles) distant, to the mastern frontier of Manchuria. The Ministry of Ways and Communications has decided to furnish both railways with the following rolling stock :- The Trans-Baikal line, forty-four 8-wheeled locomotives, forty passenger carriages, 458 goods waggons, and 453 open platform waggons; the Ussuri line, ten locomotives, eighteen passenger carriages, 140 goods waggons, and fifty open platform waggons. All the goods waggons will be constructed in such a way as to be capable of use for military purposes. If one may judge by these preparations, the lines are destined to serve principally strategic ends.

A valuable addition has been made to the collection of models of modern warships in the Museum at the Royal United Service Institu-Museum at the Royal United Service Institu-tion, by a very fine one of the Japanese first-class battleship Shikishima, which has been lent by the Thames Iron Works and Shipbuild-ing Company, who are building the vessel. The Shikishima is an Improved Majestic, being The Shikishina is an improved Mafestic, being 10 ft. longer than that class of ship, and instead of the armour belt extending only for two-thirds of the length of the ship, as in the Majestic and has never been out of London. He tells his has never been out of London. He tells his has never been out of London. He tells his has never been out of London to London that they are for the length of the ship, as in the Majestic and that will probably carry conviction with the generality of readers and therefore we feel it round the ship. She carries four 14-in. guns in cessary to state in the strongest manner position with the said, destroy all the suburbs of your capital

firing guns in casemates, as against twelve of the Majistic, the two additional guns being carried in casemates amidships on the upper deck. Her engines are also more powerful, developing 14 500 indicated horse-power, instead of 12,000 in the Majestic. Altogether, when com-pleted the Shikishima will be the most formidable battleship afloat.

Miss Frances E. Willard, President of the the W.C.T.U., died at Hotel Empire, New York, shortly after midnight of February 18th, Her physician announces that "Miss Willard suffered for some years from profound anemia, and on several occasions had been given up to die. Last summer slie seemed to take on a new lease of life, and gained in weight and strength, so that she went through her convention work III Toronto and Buffalo, which was most arduoue, and came out much better than was expected, but on her arrival at New York five weeks ago, she was much prostrated and readily took the grippe, which attacked the stomach, liver, intestines, and later the nervous system. The disease progressed favorably, and in many respects she had considerably improved when the fatal issue came and overwhelmed the nerve centres. There was no cancerous degradation of any organ, as has been stated."

An amusing case was heard in a London County Court the other day. An action was brought by the chief of a brass band against the secretary of the "Good Intent" Lodge of the Grand Oriental Order of Total Abstinence Sons of the Phoenix for money due for playing in a certain procession. The defence was that the Band began by being late, and subsequently insisted upon stopping the demonstration in order to obtain alcoholic refreahment. In the course of the proceedings, it was shown that the Bandmaster had displayed considerable delicacy. He had represented at the outset that his performers were not tectotallers, and had suggested that, in order to save the feelings of the Sons of the Phoenix, and possibly the paternal Phoenix himself, the marshal of the procession should a shout three o'clock connive with the Band for a strategic retreat to a side street for the purposes of allaying thirst.

This was charmingly tactful. But, instead, the maralial stopped the procession while the band was opposite an exceedingly public house, with the result that scandal ensued.

An interesting paper by Dr. William C. Deming, in the New York Medical Record, shows the diminution which has taken place in the prevalence of infectious diseases during re cent years. Whether we take phthisis, typhoid fever, or scarlet fever, and whether we trace their course in Massachusetts, in England, in Glangow, in Paria, or in New York, we find a diminution in their mortality compared with what they caused about 30 years ago. The interesting question is how far we shall be right in attributing this to the spread of sanitary knowledge and to the largely increased expenditure on sanitary objects, which have been so marked a feature of the past quarter of a century; or, on the other hand, how far the improvement is due to some unknown influence, in accordance with which these diseases tend to run in long cycles of 20 or 30 years. however, a good deal to show that, taking sanitation in its large sense an covering all that improves the conditions of life, sanitary improvement has had a great deal in do with the prevention of death from infectious diseases.

Here is part of the Hongkong Telegraph's criticism of the work "Under the Dragon Flag " which purports to be the experiences of a Mr. James Allan:—After careful perusat we are perfectly convinced that Mr. James Allan was never anywhere near the war and probably in fact, a huge perversion of facts from be-ginning to end. If it is rather hard on Mr. Allan that his book should be reviewed by a writer who did go through the war and witness the scenes which Mr. Allan misrepresents; it is also rough on a war correspondent who had a hard time and did hard work to see his own work stolen, parodied, distorted, and mutilated as hadly as any corpse in Port Atthur. Whatever there is of truth in the book is taken, in some cases word for word, from the reports of the Times' correspondent, and on this substratum of fact Mr. Allan has erected a huge superstructure of fiction which he has the effrontery to palm off as truth.

In the letter to The Times on the subject of India's purchases of silver Mr. Ottomar Haupt -" How is it that the Indian Government, which apparently does its utmost to favour the introduction of a gold standard in the great dependency, does not put a stop to these enorinconsiderate purchases of silver mous and made by the population for hearding purposes, in spite of the deplorable aimation the white metal has been involved in since the closing of the Indian mints? It is really as if in India all that is going on in this respect inside and outside of the country were ignored on purpose. In 1893 war is declared on the metal by the Indian Government itself, the price of it falls from the so called mint price of 106.75 rapees per 100 tolas fine-about 10 per cent, in the bazaar-and India buys all the same heavy amounts of silver after the event. Later on the Russian Government throws silver roubles out of her monetary system altogether, degrades them to token money, say, actually puts a lower price for the acceptance for Customs dues on them than has been established for paper and even for copper money-and India buys ailver, Afterwards the Indian Government gives a port or warning in its turn to the ignorant popular by levying a tax of 5 per cent, on the import-ation of barr—and India, unheeding a hint too beadquarters, buys silver. Then, what I call the greatest monetary event of the time—the introduction of the gold standard in Japan-takes place, and gives the finishing stroke to the white metal in the Far East-and India buya silver. A host of other countries follow the example given by Japan—and still India buys silver. How will this all end, and in what way will at a given moment sales of silver by the population of the country itself be met? Why, since the closing of the mints, or, to be more correct, from 1894 to 1897, India has taken from London alone £19.300,000 of the more and more depreciating stuff, while the net imports from the fiscal year, 1893-94 to 1896-97, came to 234 million rupees. perfectly well that part of the motal had been destined for the coinage of British trade dollars for the Straits Settlements in the Bombay Mint. butthis fact matters little in presence of the big figures at stake. In reality, in 1895-96 only 3.316,063, and in 1896-97, 6,135,617 dollars had been struck."

#### CORRESPONDENCE.

#### RUSSIA IN CHINA.

TO THE EDITOR OF THE " JAPAN MAIL."

Sen,-Russin's intentions have been quite un-Sam, Russian a intentions have been quite the veiled for years past. The after dinner chat of the Russian Legation in Peking has for a long time turned on what they were going to do when they were in the Palace, pointing in its direction. I have heard this from folks in the Chinese Customs Service, and my last informant was a lady who passed a few hours recently at Kamakura and who. with her husband, was pretty constantly at Count Cassini's table in P-king, during a visit paid last Spring to China. She told me the Russians made no secret about their intentions in North China

and "move your Queen Bee to Nanking, where she ought to be." These were Gordon's own words to me at the Astor House in Shanghai, where I tiffined and dined at his table daily for a week,

as I was then living at the Astor House Hotel.

Now assuming that China is invaded by Russia and that she seizes within a month all she wants, where are the British troops to oppose her? We may scour the high seas, but we can't prevent Russia's action on land unless Japan's legions are in the game with us. Are they? I have urged an alliance for over 12 months past in every letter hours. an alliance for over 12 months past in every server home. The Novoe Vremya recently gave us our ultimatum, i.a., that we must either ally with Japan, or both by word and deed participate in the demolition of China. England hasn't moved a soldier Eastwards lately. Then how can she prevent a Russian invasion of Manchuria except with Japan's and yourse.

March 14th, 1898.

#### THE KABUKI-ZA PLAY.

#### EXPERIENCES AND IMPRESSIONS OF A GRIFFIN.

(WRITTEN FOR THE "JAPAN MAIL.")

My last glimpse of the English Theatre was taken at Her Majesty's, the Haymarket, which is probably the finest, as it is the newest, of the West End Houses. The best dramatic talent of England was on the stage; the velvet-covered lantenils of the dress circle were as comfortable. as one could wish; the scenery was splendid; there were luxinious lounges for a quiet smoke between the acts; everthing was as good as it could be made. And yet—such is the perversity of man—at the end of the first act I was frankly bored, and by the middle of the second I had made up my mend that the time would be much more satisfactority spent in bed. I obtained my first gitingse of the Japanese stage at the Kabuki-za, Kobikicho, Tokyu--which I am told is one of the largest and most fashionable houses of the Japanese capital. The circumstances were much as computable and most fashionable houses of the Japanese capital. The circumstances were not so comfortable—at least to my barbarian mind. I had to squat on a cushion for a length of time sufficient to make me lose all sense of proprietorship in, or common feeling with, my legs; I was asphysiated by the fumes of countless hibachi; and I understood not one single solitary word of the performance. But for all that I was not bored. Whatever its faults, the Japanese stage is interesting—to a foreigner.

the performance. Dut for an tous a was now bored. Whatever its faults, the Japanese stage is interesting—to a foreigner.

Everything was, of course, exactly in opposition to European ideas. Take the manager, for example. Up to that time I had never been able to picture a theatre manager without the glossiest of tall hats, the nattiest of evening suits, the operacloak flung in picturesque carelessness over his shoulder, the choicest of Havanas, the equally choice repertoire of smoke-room stories. I had always accepted that as part and parcel of the profession. I should have been as shocked to see Archbishop Temple taking the service at Westminster Abbey in a tweed suit as to see a theatrical manager in any other garb. But the manager of the Kabukt-za con trives to face the difficulties of life in a kinone and slippers; and, as fac as I can see, he manages as well as if the cyroning workmen of Lincoln and as well as if the equipment workmen of Lincoln and Bennett and all the tailors of Bond Street had lahoused to make him as the lilies of the field.

We were rather a queer house-to English ideas at least. Many of us came in at eleven in the mornat least. Many of us came in at eleven in the morning and sat the whole day through till eight in the evening—and thought what a roming time we were having. People say of the English that they take their pleasure sadly—but what of a people who can last out nine mortal hours of acting, even the best acting in the world? It speaks volumes for the tenacity of the Japanese character. I have always admired the dogged pertinacity with which a coolie will drag a forthing from morn till dewy eve, never allowing himself to feel tired, and always ready to take—and take in—a new face. Next to that Leavenese. and take in-a new face. Next to that I-everence the heroism that can face an all-day sitting-or

Of the play I cannot speak with any degree of certainty. From beginning to end I could comprehend no single word of it, and whether it was the sublimest tragedy or the most laughable burlesque I haven't the ghost of anidea. When the curtain went up there was revealed a Japanese lady sitting on a mat, and beside her were two children, also on mats. The lady spoke to the children in a lauguage which was not English, and which was certainly not Japanese; it was like nothing ever heard on land or sea outside a Japanese theate. I suppose it would be bad art for a Japanese actor to speak like a human being; at any rate I noticed that the gentlemen who took the chief rôles had the stage lisp most strongly, and the nearest approaches to an erdinary dialect were on the part of quite inferior and insignificant supers. The stage voice struck me as altogether about and unnatural, but the actions and attitudes of the actors were quite admirable. The fidelity with which the dainty gait, the winning manners, and the graceful novements of a Japanese lady are imitated on the stage to most a lapanese lady are imitated on the stage to most animal manual contents of a Japanese lady are imitated on the stage to most animal manual contents of a Japanese lady are imitated on the stage to make the manual contents of a Japanese lady are imitated on the stage to make the manual contents of a Japanese lady are imitated on the stage to make the part of the stage to the part of the actors and attitudes of the actors are the part of t Of the play I cannot speak with any degree of ful movements of a Japanese lady are imitated on the stage by men is simply marvellous—no weaker adjective can be used.

adjective can be used.

It was not very exciting—the first act. The lady taked and talked in that strange stage voice; the children answered in an unnatural treble that took my mind back to the "infant prodigy" of small provincial theatres at home. I didn't know what those children were saying; but it brought back to my mind that dreadful affliction, the stage innocent who used to say, "Why oo so sad, man-ma! Why oo not sin' and play as oo used to do? Is it cause wicked men come and take poo Papa away to naughty prizzen! Don't weep, mam-ma! I'se so sad to hear oo weep!" At the end of which the heroine clasps the dear child passionately to her maternal bosom, and weeps passionately to her maternal bosom, and weeps some gallous of sentimental tears for the behood

of the gallery, who admire virtue—on the stage.

On the whole I am inclined to believe, after all, that the piece was a tragedy. It sounded too doleful even for a faccical comedy. The mother grew more low-spirited every moment, and the children's treble became thinner and thinner. At last they became so doleful that two gentlemen in a box above the stage, half way between the floor and the ceiling, could contain their feelings or longer. I believe these gentlemen act the part of the chorus in a Greek tragedy. They bust out at times into dismal music, and apparently explain the situation to the andience in song. I have no doubt their performance was excellent and classical in the extreme. Probably it was as good in its way as a blend of Paderewski and Sims Reeves in his patiny days. But to an outsider it seemed as if the singers were afficted with a kind of musical stomach ache; they sang as if some houtible spasmodic pain were grasping at their vitals. I really felt sorry for them; their angush appeared to be dreadful, and seemed to call for prompt medical treatment. Every two or three bars ended with a heart tending, "Yosho! Yosho! Yosho!" till it sounded like an amputation without chloroform. of the gallery, who admire virtue—on the stage.

On the whole I am inclined to believe, after all dreadth, and seemed to call for prompt medical treatment. Every two of three bars ended with a heart rending, "Yo-ho! Yo-ho! Yo-ho! Yo-ho!" fill it sounded like an amputation without chloroform. It would almost have seemed as if indigestion really were at the bottom of the matter, for when the lady began to brewtee and hand round rice with quaintrand pretty ceremony the musical stomach-ache increased in violence, and a terrific = Oh! Yo! oh! oh! oh! "appeared to indicate intolerable torture. A quaint little dance by one of the children set the choice men off again and I was honestly relieved to find there was nothing the matter with them when I noticed one of them just afferwards emptying a large glass of sake—I cannot swear it was sake—with a good healthy thirst. He was as other men after all. I ecognised in him, despite his kimono, that Japanese fiddler, a man and a brother. It was refeashing to find him as mortal as those lofty beroines of low-down melodrama who, after five whole acts of low-down metodrama who, after five whole acts of afflicted innocence, find substantial solace in samages and mashed potatoes, and mashficiency of Guinness's stout.

of Guinness's stout.

Then there was a dog—an artificial, frankly artificial, dog—which came on and wagged its tait in a most wooden manner. That was the whole of its part apparently; and why it was introduced I don't know. Apparently it supplied the comedy of the piece, for every one langhed: and therefore I suppose the Manager was right in himming it on. Then there entered—him against and himself to mea new face. Next to that freverence the heroism that can face an all-day sitting—of rather squatting—at a Japanese theatre.

We ate and drank as pertinacionsly as we watched the stage. When we were not drinking hot sake we were dinking tea; when we let either the tea pot or the sake bottle lave a rest we munched all kinds of fishly Japanese loods and sweetmeats. When we did neither we smoked. This reminded me very much of a Saturday night at the Britannia or the Middlesex Music Hall—a Saturday night at the Britannia or the Middlesex Music Hall—a Saturday night performance when 'Arry, in the fullness of his heart and the comparative plentitide of his breeches pocket, "stands" the fair 'Arriet countless pennorths of whelks and bottles of beer.

I don't know. Apparently it supplies and the picker, for every one laughed: and therefore a displaced and therefore I suppose the Manager was right in bringing it on. Then there entered—by a gangway ritioning right through the authority manufacture—a notification of the last meeting and a distinguished-looking, grey-headed man. I believe he was a daimio—the piece evidently deal with the days of old—and he acted with much dignity. I recognized in little and a distinguished-looking, grey-headed man. I believe he was a daimio—the piece evidently deal with the days of old—and he acted with much dignity. I recognized in the minuted type; the pickes have a daimio—the piece evidently deal with the days of old—and he acted with much dignity. I recognized in the minuted type; the pickes have a daimio—the piece evidently deal with the days of old—and he acted with much dignity. I recognized in the comparative piecities of his breat and shifted the accounts, remarking that the Committee had arranged to wears a dress coattand a snowy wig, who plays the piece.

Original from

and unbending till late in the third act, when his thawing brings about the curtain; and without whom no drama is genuing.

To him one of the ladies, kneeling, pres cake. The said cake is evidently more deadly than the ordinary cake of the amateur cook-in fact one can see at a glance that the dramatist means it to be a pulsoned cake. But for whom it is poisoned, by whom, and for what purpose, the wit of the Occidental knoweth not. The cake is received with thanks (unlike the contributions of the annatem poetly, but every one on the stage is sagacious enough to leave it alone. Suddenly there rushes on a boy, the son of the daimio apparently—one of the children who had been there at the rising of the curtain, but had gone out meanwhile. He grabs the cake with a greediness which would have done discredit to Jackie Horner, eats it, and falls-whether at surprise at finding a currant in it, or from the deadly effects of the poicurrant in it, or from the deadly effects of the poison, does not appear. The excitement of the chous men at this time again becomes painful; they yell lugubrious words at the top of their voices; and some of the more susceptible of the audience join in. The lady who presented the cake step forward, seizes the boy, draws a long knife and stabs hime-quite unnecessarily one would think at first, for he appears to be already ready for an inquest. But this boy takes a long time in the killing. Ten seconds after the first stab he gives a shriek; then the lady stabs again, and after half a minute he gives another shriek. Altogether she gives him half a dozen stabs before he is satisfactorily and completely dead from a stage—including the presumed father—look on as if the killing of a child by a well dressed and apparently respectable lady were the most ordinary incident, and one to be witnessed with philosophic calm. The chorus men, however, are excited enough; long groans ending in a wild.

look on as if the killing of a child by a well dressed and apparently respectable lady were the most ordinary incident, and one to be witnessed with philosophic calm. The chorus men, however, are excited enough; long groans ending in a wild "Ye ye-ye-yuppp!" come from their box as they sing the rythmic explanation of a deed that certainly does need more light on it.

After a little of this the whole party get up in a stately manner and march magnificently off the stage, leaving the dead child lying there. The mother, who has not seen the muder, contestin, sees the child, and mourns over it. I shall not speak lightly of this scene; it was pathetic in itself and well done, and the antipet deserves respect. The acting had a great effect on the audience; the teats of the women fell fast; and the men showed some entotion. Eyidently Japanese theatregoers are not so stolid as the Anglo-Saxon, who does not as a rule like "wet" scenes, and never cares to admit that they move him.

I should very much like to know all about this wicked lady with the cake and the knife; I should like to know whether she was sentenced to death or only imprisoned during His Majesty's pleasure; I should like to know, above all, why the relatives took it all as a matter of course, and appeared mit in the least annuyed over the matter. But all these are mysteries to me. I can only say that I was, if puzzled, interested by this random peep mor Japanese demantic art; and I would advise all globe-trotters and residents of Japan, if they want a curious and interesting spectacle of native life and manners, to take an opportunity of paying a visit to the Kabukiza Theatre. If they do not, they miss seeing a very instructive and entertaining phase of Oriental life.

#### YOKOHAMA CHAMBER OF COMMERCE.

The annual meeting of the Yokohama Chamber of Commerce was held on Thesday afternoon at Keil's Brilding, Main Street. Mr. W. B. Walter was in the chair, and there were also present, Messis. H. Halm, C. J. Strome, R. Abendeim, H. Bent, P. S. Bent, W. Ross, E. Frint Kilby, W. F. Mitchell, J. P. Mollison and R. D. Robison.

last general meeting, and they considered Mr. Keil was fully entitled to receive an advance of salary.—(Hear, hear).
Mr. Mollison (J. P. Mollison & Co.) proposed that the accounts be adopted; Mr. Roalon (Robison & Co.) seconded, and it was carried.
The accounts were as follows:

£. & O. E. 5,469.35 O. Kall, Secretary. Examined and found correct, 18th March, 1898.

A. S. GARFIT, Auditor. Yokohama, 11th March, 28st.

The CHAIRMAN then read-

#### THE REPORT.

According to the Customs returns the total Import and Export foreign trade of Japan for the past year amounts to no less than year 382,435.800, or about 383 million pounds sterling, and shows an increase as compared with 1896 of year 92,918,600,

An increase in Imports of was 47,626,300

The larger receipts of Railway material, Raw Cotton, Kernsene, Sugar, and Rice probably account for most of the increased lapports; while, as regards Exports, Raw Silk, and Silk Piece Goods, make between them an increased value of version of the contract of the increased value of version of the contract of the contra yes 30,000,000.

yes 30,000,000.

While the growth of the Export trade may be considered wholly satisfactory, the increased Import trade of the year has resulted in the accumulation of heavy stocks of staple goods at the principal ports, a considerable portion of which, though sold to arrive, had not been taken delivery of at due dates.

In consequence of this greater volume of Imports, the Customs ground became for some time so blocked with goods of all kinds that there was no space on which further landings could be made; while it became also most difficult for consignees to find and take delivery of what

could be made: while it became also most difficult for consignees to find and take delivery of what had been landed, and it was only by the great exertion of Mr. N. Okoshi, the able Commissioner of Customs at this port, and the special arrangements made by him for landing Cotton, Rice, etc., slaewhere than at the Hatoba, that the Customs ground was eventually cleared of accumulations of Impacts.

of Imports.

Mr. Okoshi has now been transferred to the Department of Communications at Tokyo and, Department of Communications at a usys and, while congratulating him on the promotion, the Committee of this Chamber desire to express their appreciation of his courtesy, energy and unfailing attention to the interests of the trade of this port

attention to the interests of the trade of this port and their great regret at his departure.

The need of a considerable extension to the Customs area has had the attention of your Committee and some correspondence has ensued with the Commissioner of Customs and the Japanese Chamber of Considered at Yokohama. It is hoped that the Customs ground may eventually be enlarged by the inclusion of the ground at present occupied by the adjoining Engine Works.

A most important feature of the year 1807 has been the establishment in Japan from the 1st October last of a gold standard on the basis of about 2/0} sterling per yen, which has been of considerable benefit to importers by preventing the difficulties which would have occurred through the further fall of silver, amounting to 7 per cent, that has since taken place; and which does not appear to have any iff effect, so far, on Japan's staple silk to have any ift effect, so far, on Japan's staple silk

On the other hand, the Imports of this country were last year yen 56,000,000 in excess of the Exreally neater yen 80,000,000 in excess of Exports, as the Customs values are only those of the country of origin. The difference has to be made up by

gold export while large quantities of silver yen have (as silver declined in value) come up from China and the Straits Settlements to be also ex-

China and the Straits Settlements to be also exchanged for gold, which passes out of the country. Whatever may be the difference of opinion as to the need of a gold standard for Japan, there can be no doubt that now the new system has been entered upon, every effort should be made on the part of the Imperial Japanese Government to fully maintain the value of its currency which has now partity of table with that of the invision contracts. a parity of value with that of the principal countries of the West,

By the exercise of the greatest economy oy the exercise of the greatest economy of public expenditure in Japan, and by the gradual decrease in the supply of silver yes from almosal, the gold export may before long be considerably reduced; while the issue of a moderate Foreign lean would probably fill the void for a while and allow time for the further growth of the Exports on while the country has a decader a section. which this country has to depend so greatly for its continued prosperity.

The Government will shortly be further aided by the higher scale of Customs Duties which seems likely to come into operation towards the end of

this year.

In connection with these Duties I would ask your attention to the Table, based on the British Tariff, which our Secretary has prepared and which is attached to the report showing the differences between the old and new duties on the instant angle impacted. incipal goods imported.
This Table is subject to some slight alteration

later, owing to a few acticles having been since charged at slightly lower rates to meet the request of Powers lately entering into new treaties with lapan.

EXPORTS.

EXPORTS.

RAW Size.—The shipments for the first half of the year, 1897 amounted to 26,980 belos and were about equally divided between Europe and the United States, while the second half of the year took no less than 41,688 belos, of which nearly two-thirds went to the United States.

This results about the second half of the year took no less than 41,688 belos, of which nearly two-thirds went to the United States.

thirds went to the United States.

This considerable increase in the shipments of Japan Silk to America has been largely due to the more settled condition and greater prosperity of business there as well as to the shortage in the

business thate as well as to the shortage in the Europeau and China crops of this year.

During February and March there was an active and advancing marker, the demand more especially being for silkes situable for America.

Prices by the end of March showed an advance of year 80 per picul upon those of February.

During April and May but little business was

owing to the political complications in Europe.

Europe.

Reports in June of a poor out-time for the European crops led to a good demand at rising prices, but until July purchasers were restricted by the scanty stock available.

The Japan crop of 1897 proved to be a good average one and first arrivals were keenly competed for; prices advanced some year 30 per picul during August and again year 40 to 50 in September, remaining quiet but firm in October. During November, however, there was a sharp decline, but an active demand in December again raised prices to October level and the year closed with a firm.

an active demand in proceedings again caused prices to October level and the year closed with a firm market and very small stocks.

Taken as a whole, the quality of this season's Silk cannot be said to show any improvement on former years though Cocnous were generally better than in the previous season. Spinners appear to have taken no trouble to improve the recling. The making up and selections of Oshu Kakedas were very defective, and even in good Filature silks there has been a greater variation in size than is

The business of the year must have been eminently satisfactory to the silk producer financially weak, has, by reason of the good and persistent demand from Europe and America, been able to obtain full prices in spite of his eager-

been able to obtain full prices in spite of his eagerness to sell, which has been in marked contrast with the tactics of previous years.

The Bill that passed the Imperial Diet on the 24th March, 1897, granting bounties to the direct exporters of silk to Europe and America, if Japanese, and discriminating against foreigners, has not been carried into effect and in all probability will be repealed at the next meeting of the Diet.

WASTE SILK.—The luminess in this staple during the year 1897 has been of a monotonous character without any appreciable changes in prices and a ready supply af all demand.

The year commenced with a stock of about 13,000 piculs, which figure has never been surpassed, and closed with about 8,000 piculs still on hand.

The following prices may perhaps be considered the basis which has ruled throughout the year:— 

The Export for the year amounts to round numhere 36,000 piculs, or whout 750 piculs more than in

SILK HANDKERCHIEVS AND SILK PIECE GOODS.—The export of silk piece goods for the year 1897 was greatly stimulated by the passage of the Dingley tauff bill in the United States whereby the duty on p'ain goods was raised from whereby the duty on plain goods was caised from 45 % to \$350 per the or approximately 75 % advancem. The first six months showed heavy shipments to the U.S. on this account. A revival in the trade for fancy Kaiki silk seems also to have taken place and the weavers in Kicin and Ashikaga are in full work on orders for this class of goods at better prices than ever received before. The output of these goods on the whole is fairly satisfactory in quality.

The export of handkerchiefs again shows a heavy dectine, both Europe and the United States seem to be taking less and less of these goods year by year, the falling off in demand from the latter being especially marked.

Tea.—The market for New Teas was opened early in May under a Daty excitement, and prices culed very high throughout the month, but early

early in analy index a Day excitement, and prices called very high throughout the month, but early in June it was decided not to impose any duty on teas entering the United States, and prices consequently declined rapidly.

During the early part of the season prices ruled from yest \$5.00 17 per picul higher than at the corresponding date of the previous season, and the average for the year is about yest 5 per picul shous \$405. above 1896.

above 1890.
The quality of the crop was decidedly inferior to that of 1896 as regards the make of the leaf, the cup quality, however, was fairly good. The leaf was very coarse, badly solled and showed signs of careless and hurried preparation, owing probably to the desire on the part of the producers to hurry their Tens to market while the dury excitement lasted.

In spite of all that has been written urging the In spite of all find has been written in ging the Japanese in pay more attention to the improvement of their less, they appear to be doing very little good in that way. In the meantime Ceylon and Indian Teas are rapidly gaining favour in the United States and Canada.

United States and Canada, The restriction act in America requiring the quality of Teas to be up to a certain standard has been strictly enforced during the past season and has undenbtedly done a good deal towards improving the quality of both China and Japan Teas shipped to the United States.

On the whole the past season has been fairly remunerative to the Exporter and the amount exported in just about on a nat with that of 2806.

ported is just about on a par with that of 1896. The cost of Firing Teas has again greatly increased owing to the advance which has taken place in the price of labour, charcual and boxes, etc., being fully 20 per cent, higher than this time

st year. The attempts to introduce Japan Teas into Russia do not appear to have met with much success

Corper.-The year 1897 commenced with a considerable portion of its copper production already contracted for, and prices continued firm, showing an advance of about four yet cent, during the course of the year, with a fair lustiness during, The output of the largest mines, those of Furu-

Digitized by Google

kaws at Ashiwo, was, however, reduced owing to the necessity of carrying out works to prevent damage in future to the farming districts in the

damage in future to the farming districts in the neighbourhood through the contamination of the water coming from these mines.

The Export from Yokohama which had been 7,211 tons in 1896 declined to 6,760 tons in 1897. Quotations closed at yess 26\(^2\) per picul for Slabs and yess 27\(^3\) to 28 for Ingots and Tites.

FISH OLL.—The year under review opened very quiet with heavy stocks which depressed the market. Nothing was done until April when a larger transaction took place on the basis of yess 4,50 for ordinary quality. Prices advanced somelarger transaction took place on the basis of yan 4,50 for ordinary quality. Prices advanced somewhat in consequence but fell again, and at the end of May reached as low as yen 4,30 per picul, at which a few hundred tons changed hands. In September stocks became very small and prices rose to yen 4,70 for common dark and yen 4,90 for light quality.

The market closed very firm as the Sardine architected or the second test and the sardine architected or the second test and the sardine architected or the second test and the sardine architected or the second test and the sardine architected or the second test and the sardine architected or the second test architected or the sec

catch turned out a complete failure and the new year opens with almost no stocks.

year opens with almost no stocks.

RICE.—The Export of Rice for all Japan for the season ending 31st October, 1897, was in round figures 89,000 tons against an Import from abroad of about 310,000 tons, including Korenn.

The Japanese crop harvested in November, 1897. In a japanese crop narvesieu in tovenner, 109, is estimated at 15 per cent, below the average of 40,000 koku, or a shortage of 822,321 tons (estimating the kohit at an average of 307bb.). Owing to the increased properity of the country and growth of population there is little doubt but

that the consumption is on the increase and the result is that even with an average crop there is some demand for foreign rice which, though of lower quality, is cheaper than Japanese grain

The importation of rice to Japan during 1898 will probably be on a larger scale than ever before.

Good exportable grain was quoted on Decem ber 31-4 at yen 5.75 to yen 5.80 per picul, say 10/per cwt, f, o. b.
ToBacco.—The export of this staple has de-

creased by 15 per cent. against the preceding year, heing 6,004 piculs in 1897 and 7.052 piculs in 1896. This is doubtless owing principally to large purchases made for home consumption, in acticipation of the Monopoly which came into force on

January 1st, 1898.

Flus Monopoly is expected to work beneficially for the export trade, as the Law requires that the leaf be properly assorted before being handed into the Government warehouses, whereby the tedious and vezations examining, sorting, and ejecting in private godowns may to some extent be done away

IMPORTS.

YARNS AND GREY SHIRTINGS.—It is no longer possible to give detailed information as to counts of yarns and weights of shirtings, as the names of importers from whom details could be obtained are

importers from whom details comimporters from whom details comnot now published.

From such information as is now obtainable it
would appear that the Import of all Yarns for 1897,
has falled off considerably as compared with 1896,
though still greatly in excess of 1895, the respective figures being as follows:

1897.

1896.

1895.

71,293 piculs.

Regarding the course of the Yarn hade during 1897, in the absence of actual detailed figures a 1897, in the absence of actual detailed figures a general knowledge of the business done has to be depended on, and this points to a continual and increasing demand for Gassed Yarns, with perhaps Fine Plain sorts, rather less in evidence, 2/42s. have again been largely dealt in, and 2/32s. and 16/24s. have also met with more enquiry than in 1896, but 28/32s, show a distinct recognate movement, because of the improvement in Japanese spinnings of this count. Consumption of 38/42s, seems to remain about normal.

GREY SHIRTINGS have followed the same lines.

GREY SHIRTINGS have followed the same lines as Yarns in regard to the amount of business done, the record for 1897 being less than 1896, but greater than 1895. Actual figures are as tallowed.

1897. 1896.

1897. 1896. 1895.
700,300 pcs. ...... 804,900 pcs. ...... 604,295 pcs.
T. Cloths again exhibit a marked decrease, imports only teaching 34,825 pieces in 1897 against 58,600 pieces in 1896, and it looks as if a few more years would see the Lancashire product practically superseded by the native made class. cloth

After the depressed condition of affairs that After the depressed condition of affairs that prevailed at the end of 1896 and beginning of 1897, the prospects for fresh business in the apring and early summer of the latter year seemed to promise fairly well, but a constantly drooping Raw Cetton Market throughout the autumn months upset calculations, and whilst, in Poreign Importers, results on the whole can hardly have been very profitable, there is no adoubt that Japanese dealers found themselves that alargely grown applies have been excessive

face to face with many heavily losing contracts. In contradistinction, however, to former experience, it is pleasant to record that with the exception of a few irresponsible speculaturs in Gey Shirtings, who ought never to have been en-couraged, buyers have "stood to their guns," and that everything considered clearances of contact Yains and Grey Goods have been fairly satis-

INDIGO SHIRTINGS, DYED SHIRTINGS AND INDIGO SHIRTINGS, DYED SHIRTINGS AND TWILLS, PRINTS, COTTON ITALIANS AND SAT ARMS.—Figures show a falling off all round and business in these acticles generally has been anything but satisfactory. Cotton Italians in particular have given tise to many and heavy claims, avowedly on account of quality.

THEREY REPS.—Rather against expectation

TURKET REDS.—Rather against expectation the trade in imported cloth has increased again, No doubt this primarily may be gut down to consumers having found that these goods are fully worth the extra price as compared with

Inlly worth the extra price as compared with mative dyed stoff.

BLACK VELVETS.—As might well be supposed from last year's report, which showed a stock sufficient for about I months' consumption, fresh sufficient for about I months' consumption, fresh imports during the year have been only about half the quantity of 1896. The outlook for the corrent year is more encouraging.

VICTORIA LAWES are evidently destined to become of lesser importance from year to year.

SILK-FACED SATINS have continued to be imported in limited quantities, almost exclusively of

the better grades.

FLANNELS,-The year under review has not been a satisfactory one for this article. Stocks at the close were, however, within reasonable limits and lower qualities particularly bid fair for the Current year

ITALIAN CLOTH .- Deliveries fall short of those for the previous year by something like 30 per cent. In spite of considerably smaller impurts stocks at the close of 1897 was a rather beavy; and on the basis of last year's consumption would suffice for 8 months.

MOUSSELINES show smaller quantities for

Moussatinas show smaller quantities for both imports and deliveries, and are likely to further love ground, as the native spinning and weaving establishments, now in course of erection, get into working order.

get into working order.

WOOLLEN CLOTHS.—With very heavy stocks carried over from last year, business has been difficult and the demand poor, considerable concessions being made to clear old stocks; while new business has been confined to such qualities and assortatents as could not be bought locally.

\*\*Manuary — Dealers membased were freely

METALS.—Dealers purchased very freely during 1897, and the result is seen in a facther advance upon the figures for 1896.

Prices rose gradually in sympathy with increased cost until about October: since then a considerable decline has taken place and the immediate processors. immediate prospects are by no means bright,

Pig Iron.—As anticipated in last year's reporting steady growth in general demand is shown by an increase of some 2,000 tons compared with the previous year. Hitherto the trade had been mon-fined entirely to English make, but this year several lots of Alabama pig iron, aggregating prob-

ably 4,000 tous, have arrived.

Bar Iron.—Imports amounted to nearly 30,000 tons, an increase of six per cent. This quantity is, however, in excess of actual requirements, and present indications point to a diminished trade in

PLATE AND SHEET IRON.—The large imports noted in the report of 1896 have been followed by n traction, the imputts being 144,600 piculs

GALVANIZED IRON .- The growth of this trade is remarkable,

Besides the Government requirements noted in last report the demand for roofing purposes has

increased considerably owing to the continued rise in the price of lumber throughout the country.

On the whole the trade is hardly satisfactory as the small margin of profit is greatly interfered with by the heavy claims made by buyers for the corrosion that seems a necessary feature of this article, probably caused by damp or sweat on the voyage.
Wirk Nails shows a decrease of about 10 per

WIRE NAILS shows a decrease of about 10 per cent. The American makers had control of the market, very little coming from Germany.

During the year machinery has been imported from the United States for a factory in Tokyo, but it does not seem likely that this project will immediately interfere with the trade to any extent.

The Plates increased from 25.727 boxes in 1896 to 59,008 boxes in 1897. While the demand

and prices remained at an unremunerative level

r the greater part of the year. Hoop Iron.—The imports continue to decline, old cotton hale hoops have been found equally useful for most purposes and considerably cheaper.

KEROSENE.—The volume of business during 1897 shows a considerable increase over the rogy shows a considerable increase over the preceding year, deliveries being 443,518 cases American and 130,599 cases Russian over those of 1896, while Langkat Oil has again made its appearance here, the total delivered being 48,862

lapanese production is estimated at 500,000

Japanese production is estimated at 500,000 cases annually.

The stocks at the end of the year are sightly larger than at the end of 1896.

At the beginning of 1897 the very small visible supply kept prices up; but by the end of April a decidedly weaker tone showed itself and prices gradually receded to to 15 sm. During the summer the market was quiet, and prices did not fluctuate to any extent. In September the improvement which is usual at that time of year hegan to manifest itself, but interruption to rail transport throughout the country interfered with business until the close of the year. The net result of the year's working shows a decline in the spot value of 10 to 15 sen.

all large steamers which, if included, would enorall large stramers which, it included, would enormously increase the published figures. Besides this, in 1896 a number of foreign vessels were under charter III Japanese and employed in the Coast trade, so swelling the figures for that year whilst 1897 has but very few additions on this

RAILWAYS.—The extension of the Japanese Railway system steadily continues and there are at present 1,594 miles of new line under construction of which 612 miles are Government and 982

miles private undertakings.
The doubling of the Tokaido Railway has now been carnestly taken in hand but, owing to the The doubling of the Tokaido Railway has now been carneally taken in hard but, owing to the great number of tunnels and long bridges to be built, will take a good while yet before heing completed, the only sections with double track now working being Tokyo-Yokohama and Ovama-Numadzu on the eastern and Kobe-O-aka, Suita-Kyoto and Kyoto-Otani on the western section.

YOKOHAMA DOCK Co.—The first of the Three Dry Docks eventually to he built was opened on April 26th, 1897, and received up to the end of the year 31 steamers and 4 sailing vessels, of which two steamers and one sailing vessels, of which

the year of recomers and 4 senting vessels, or which two steamers and one sailing vessels were foreign. This duck can take in vessels up to 4,000 tens te-

Digitized by Google

gister, and should prove of great benefit to ships requiring docking here as the Yokosuka Ducks are no longer available to merchant shipping. The work on the second basis is being rapidly pushed forward and this will probably be completed before

the end of this year.

Labour.—Alt cost of labour has gone up greatly during the year, and charges for landing, storing and handling goods generally are on a far higher scale than formerly.

AUCTION SALES.—The Chamber of Commerce

AUCTION SALES.—The Chamber of Commerce has had a complaint from one of its members as to the impossibility now of getting a fair competition at anction for any goods brought to the hammer owing to these sales being invasiably controlled by a ring of all the dealers interested in the special article said, who boycut any other buyer; and this Chamber is in communication with the Yokohama Chamber of Commerce on the subject.

THE ANNUAL ACCOUNTS HE submitted bere-

THE ANNUAL ACCOUNTS are submitted here-THE ANNUL ACCOUNTS are submitted herewith. These show a slight increase in the income which has been made use of so grant an advance in salary to the Secretary. The balance of funds in hand on December 31st is yes 344.72. Thanks are due to Mesers. A. S. Garitt and P. C. Potts for

auditing these accounts.

auditing these accounts.

MEMBERSHIP.—Besides the addition of It members in the beginning of the year, as already mentioned in the last annual report, two more firms joined the Chamber during 1897 bringing the number of members on December 3234 up to 77. Since then two members have resigned upon-leaving Japan, so that at date the number of mem-bers remains, as a year ago, at 75.

This Chamber has deeply ill regret the loss it has sustained through the death of two most valued members of Committee, Messia, M. T. B. Mac-

pherson, and C. G. Buchanan Duntop.

W. B. WALTER, Chairman,

The report was adopted without discussion on the motion of Mr. ABREHER (Bould Fières), seconded by Mr. Robison.

THE NEED OF HARBOUR REGULATIONS.

In introducing the next item, the election of Committee, the CHAIRMAN said it had become the custom to have nine members of the Committee, who made their own arrangements in regard to the choice of a Chairman. They had, as the report mentioned, unfortunately lost two members —Messes. Macpherson and Dunlop—by death.

Mr. II. FLINT KILBY (Flint Kilby and Co.) said he thought there should be a representative shipping man on the Committee. The shipping interest in Yokohama was so large that it would be advisable to introduce some gentleman connected with that interest—Mr. Woolley, for example—on that Committee. In the case that was now being heard before the Consul II had been mentioned that there were no proper harbour regulations. It was an anomaly that in a port of the size of Yokuhama there should be no barbour regulations in force, and be thought that if that Chamber took the question up it would have the support of the whole shinping community.—(Hear, hear). The Chairman said it was no doubt very desi-

able that harbour regulations should be adopted by the Japaness Government. They had seen within the last few weeks owing to the want of re-gulations and of a harbour master, that a very lamentable collision had occurred, and such a collision might occur again. In fact they might easily have the entrance in the harbour completely stopped by a large steamer coming to grief at the breakwater entrance. The Chamber during the year, through its correspondence with the Japan-ess Chamber and also with the Commissioner of ess Chamber and also with the Commissioner of Customs, had afready drawn attention to the need of a harbour master and harbour, regulations. He would suggest that while electing a member on the Committee In represent the shipping interest it would also be well to get a gentleman representions arising when his advice would be very valuable. He might mention, to simplify matters, that he should not be a candidate for the Committee as he should he beaut from Viscolance mittee as he should he absent from Yokohama during this year.

#### THE COMMITTEE.

The ballot for the Committee resulted as follows:—Mr. W. F. Mitchell, Mr. J. Stiven, Mr. E. Flint Kilby, Mr. H. Holon, Mr. R. D. Robison, Mr. Alfred Wootley, Mr. Geo, Middleton, Mr. J. D. Hutchison, and Mr. J. P. Mollison.

THE NEW CATTY.

Mr. MOLLISON said he wished to being a matter forward. It might some a small matter, but he thought it dosesved the attention of the Committee. thought it desired the attention of the Committee. by I think I have heard that when Mr. Mollison the new Tariff regulations it was stated that when took some touble to call the the catty mentioned in the new regulations was "the Japanese weight of 600 grammes of the which has occurred in this manner, and I hope which has occurred in this manner, and I hope by Trench metric system or 33,227 ba." This was that his representation may have borne fruit, and carried to was 112; there were five officers UNIVERSITY OF ILLINOIS AT

Fper cent less than the catty that had been in ise from time immemorial, which was 1 3333 lbs. use from time immemorial, which was r.3333 lbs. He believe this original catty measure was imported toon China; it was a measure that had always been used; and the alteration was likely to lead to friction. He thought they would all prafer that the old catty should be preserved. It might has a difficult question, now it had been settled, to reopen, but he thought it was worth the attention of the Chamber of Commerce, and that II should in taken up by the incoming Committee.

The CHAIRMAN said they were all indebted to Mr. Mollison for Bringing forward so important a point, and a point which hitherto they had overlooked or which had not been brought before them. looked or which had not been brought before them. The present picul was 133,33 lbs., and presented no difficulty in calculation. A picul of 132.27 as proposed would upset their calculations more or less and appeared to him likely to lead to much inconvenience. What the object of the alteration was he could hardly divine, and as far as he knew they would all segret a change in the weights which had been so convenient both to Japanese and foreigners. He hoped this matter would have the early attention of the incoming Committee.

Mr. HOLM (Illies & Co.) said the matter was not a new one, and the attention of the authorities

not a new one, and the attention of the authorities in Tokyo had been drawn to it.

Mr. Mollison said he had some communica-

Mr. Morrison said he had some communica-tion with Mr. Keil and also with Sir E. Satow on the matter. The latter regretted that the question had not been brought up before, as it would be very difficult to get the standard altered now. His suggestion was that they should place themselves in communication with the Japanese Chamber of Commerce, and also that the Kobe Chamber should place itself in communication with the Japanese Chamber in that port, with a view to petitioning ministers that the old picul should be retained. The new standard had ap-parently been settled by international agreement, parently been settled by international agreement, and he presumed that it would have to be altered, if at all, in the same why. It would be rather a cumbious proceeding, but he thought they ought

to take it up,

The CHAIRMAN: As I understand it this is
the weight to be adopted for the calculation of

Mr. Mollison: I don't understand so at all. I understand it is the weight for commerce

understand it is the weight for commerce generally.

MR. FLINT KILBY: Yes, I think it is the new standard weight. It is based on the metric system, and equal to 600 grammes.

The CHAIRMAN: It is a question which should have the ramest attention of the Committee, and I have no doubt that a little discussion with the Japanese Chamber on the subject will lead to a very much clearer understanding. The Japanese Chamber has shown itself of late well disposed and desirous of entering into friendly relation's wish desirous of entering into friendly relation's wish the Vokultama Chamber, and I hope the incoming Committee will see its way to extending these relations, which will be likely to lead to a still more cordial feeling between the two bodies,— (Hear, hear).

THE CANADIAN MAIL.

Mr. MOLLISON introduced a short discussion on the subject of the Vancouver mails. He said he noticed that the Kobe postmaster had notified that the mails for Eugland should be made up "via Vancouver and New York" instead of "Vancouver and Halifax," and that letters thus marked would be delivered six days quicker in England. Ha had asked Mr. Payne and had communicated with the Post Master on the subject; and he was told that there was something in the Postal Guide, published in Japanese, with reference to the matter. He wondered II any gentleman had received any positive information on the subject. He believed the system was to have come in force from January of this year, according to the notification of the Kobe postmaster. The Chambar las received. THE CANADIAN MAIL

The Chairman: The Chamber has received, as far as I know, no intimation. I may be mistaken; I cannot say exactly, as the Secretary is not here. There was a notice which appeared in one of the Yokohama papers to the effect that the change had been made. There is no doubt that the transparents of made. effect that the change had been made. There is no doubt that the transmission of mails by way of Montreal only instead of proceeding from Montreal in New York and taking the steamers from there (which are so very much quicker than the Canadian beats)—I say this system of tolding back the mails at Montreal has caused very considerable delay; and it is very much to be desired that the change, if it has not been already made, should be made very promptly. I think I have heard that when Mr. Mollison was in England he took some trouble to call the attention of the British Government to the delay which has occurred in this manner, and I hope

that the mails may no longer suffer this loss of time. Members ill this Chamber have been ac-customed, in order to ensure the prompt arrival customed, in order to ensure the grompt arrival of letters, to send their correspondence to their agents in New York to be reposted there; and these letters have arrived sometimes four, sometimes six days in front of the mails delayed at Montreal.

mails delayed at Montreal.

Mr. Mollison said it was true that when he was in England he wrote a letter to the Manchester Guardian on the subject and sook other steps. Sir E. Satow saw this letter, and made it the subject of a despatch to Lord Salisbury; and the latest despitch stated that it had been arranged. Sir E. Satow, however, had had no official intima-tion from the Post Office. He thought that the Chamber should approach the Post Office direct. The Chatrian: No doubt it will have the early

attention of the gentlemen forming the new Com

VOTE OF THANKS.

The meeting closed with a vote of thanks to the Chairman for his services during the year, on the proposition of Mr. Robison.

#### THE "BORNEO" COLLISION.

COURT OF INQUIRY.

A Court of Inquiry into the collision between the P. & O. steamer Bornes and the Japanese steamer Wayo Maru, of Kobe, was opened on Monday morning at H.B.M.'s Consulate, Yokohama, before James Troup, Esq., Consul-General and the following three assessors:—Captain Parsons, of the British ship Course, Captain Porter, of the British ship Benalder, and Captain Scott, of the Pakhof.

Mr. J. F. Lowder appeared on behalf ill the master, first and second mates, and the crew ill the Borneo. Mr. A. B. Walford represented the owners of the Wayo Maru.

Capt Lyons, of the Borneo, stated that while in Yokolama Hubour his vessel was lying at the

Pier. They left the Pier on the outward journey at 6.24 2.m. on the marning of the 20th February. Pier. They left the Pier on the outward journey at 6.24 a.m. on the morning of the 200t February. The hands were turned out at 6.15, and witness went on the bridge and the ship was got clear of the Rosetta, which was lying close by. When clear of the Rosetta he gave the order to go ahead slowly, and manceuvred the ship to get clear of shipping and buoys, and also to get in position to pass out of the harbour. They salely passed the buoys and some of the shipping, and were heading towards the entrance when from the bridge witness saw the Wāyō Harts and also the Argyle. The Argyle was at anchor; the Wayō Maru was about three points before the starboard beam. Witness at first supposed that the latter was at anchor, as he did not think it possible for a minute that any ship would attempt to come into the harbour as he was coming out; but the chief officer informed him she was under way. Witness immediately ordered the siren to be blown a prolonged blast to attract her attention. Seeing then that she was still coming the avery high rate of speed he ordered a short blast to be blown on the steam whistle to indicate that he was directing his course to starboard. Being close to the Carracter her as the clear of the firer, who speed he ordered a short blast to be blown on the steam whistle to indicate that he was directing his course to starboard. Being close to the Caermartheashire—so close that the chief officer, who was on the bridge at the time, told him of the fact—he could not of course gy astern or drop anchor. The engines were going dead slow the whole time—just enough to give steerage way. It was blowing hard from the north-north-west; the ship was very light—in ballast in fact, and very high out of the water, and consequently the wind had a grant effect on her. Still noticing the Ways Blazu coming in at a high rate of speed he blew another short blast, but, seeing the angle at which she was, he still did not think she would actually attempt to enter. Witness could not round the end of the breakwater; he was too close. When he saw a collision was inevitable, and it was impossible to get out the Wayo's way, he rang the engine room telegraph "full spead ahead" two or three times (so that the engineer should know it was of great importance) with the object of gathering speed in order that she should quickly answer her helm, the then put the helm to starboard—for two reasons: in the first place to round the north of the breakwater and in the second tar receive the blow on the quarter in a less vital part. The Wayo Marx struck the Berneo with great force, and, rebounding, struck her a second time. He thought they must be sinking, and therefore headed towards the beach, but, the chief officer reporting that they had made no water, he cast anchor outside the breakwater.

By Mr. Lowder—The number of the Borneo'

the carpenter, and boatswain, six able seamen, and 24 Lascars; the rest in the engine room and steward's department. At the time of the collision the Chief Officer was on the bridge with witness; the second officer at the stern at his station to see the propeller kept clear; supernumerary second officer on the forecastle head; the third officer is the case the station of the state of the stat numerary second officer on the forecastle head; the third officer at the gangway on the hurricane deck on the port side; the fourth officer at the telegraph on the bridge; the carpenter attending the windless; and the boatswain under the supernumerary second officer on the forecastle head. One A.B. was on the look out; one on the chains; one at the bridge; one on the after part of the hurricane deck to pass the word; and one on the poop under the second officer. He had prepared a sketch of the Borneo's course from a Japanese chart corrected to 1897; the sketch showed the positions of ships and buoys in the harbour. It also gave the course of the Wayo Marts. When he first blew the siren the Borneo was abreast of the Caerthe siren the Borneo was abreast of the Caermarthenshire. Up to that time he had been on the port helm practically the whole time making toward the entrance. He did not starboard the helm until the Wayo was almost into the Borneo. The actual distance between the two light houses of the breakwater was 800 feet. The width of the practicable channel under the resource transport to the practicable channel. under the circumstances that morning would be at the very outside 500 feet, in view of the wind that was blowing and the light condition of the Bornes. His original object was to pass the break-Borneo. His original object was to pass the breakwater as near as possible to the southern lighthouse. If he had gone more to starboard instead
of to port he would have crossed the Wayo's bow;
if he had put the helm hard aport he would have
fouled the breakwater; if he had stopped he would
have "sagged" down on the shipping; if he had
gone astern he would have run into the Caermarthenshire and a German ship. He did not think
any manucurre could have been made on the part
of the Borneo, to avoid the collision or lessen its
force, more than was actually done.

By Mr. Walford: The distances in his sketch
were approximate: they were guessed as nearly

By Mr. Walterd: The distances in his sketch were approximate; they were guessed as nearly as possible. He did not see the Wayo till they were abreast of the Caermarthenshire; his sketch of the course of the Wayo was approximate. The only signal he heard from the Wayo was just before she struck; he then heard one faint whistle. He did not hear her signal that she was action states. He have the near signal that she was whiste. He did not hear her signal that she was going at quite eight knots when she was making for the break-water entrance. She had not stopped when she struck the Borneo. The Borneo had just gathered speed enough to answer her helm. When he first sounded the whistle he never dreamed for a moment

sounded the whistle he never dreamed for a moment that the Wayo was going to enter the brakwater as the Borneo was coming out. He could not pass her on her stern on account of the breakwater.

By Mr. Lowder—He could have done nothing in the harbour with shipping on all sides. The Argyle was heaving up her anchor to enter at the time witness was about to leave, but on seeing the position she let her anchor go again. The bow of the Wayo after the collision was much twisted round towards the starboard side. Witness gathered that she was going at eight knots an hour from the terrible blow she hit the Borneo; the highry to her bows showed that she struck injury to her bows showed that she struck

will great force.

By the Court: When he blew the first short blast he estimated the distance of the Ware Mars. at three quarters of a mile.

at three quarters of a mile.

The Court then adjourned for tiffin.

On resuming the log of the Borneo was put in.
John Ferguson, first officer of the Borneo, was called. He said he had been at sea 22 years, and had held a master's certificate since 1894. The log of the Borneo was in his writing. He had been in Japanese waters off and on ever since he had been at sea. He had never known two vessels try to pass the harbour mouth at the same time: it would be dangerous. If he were entering a harbour and saw a ship teaving it he should either ease down or stop. The sketches which had been put into court represented the actual positions as meanly as could be. When he first sighted the Wayo she was about three quarters of a mile away. She was coming at such speed that it was necessary to blow the siren, although that signal was not ordered by the regulations. This blast sary to blow the siren, although that signal was not ordered by the regulations. This blast could not mistaken for a short blast. The Wayo did not reduce her speed, and a short blast. The Holast was sounded. The Borneo was then between the Caermarthenshire and the German between the Caermarthenshire and the German between these two vessels. Just afterwards he saw the Wayo passing under the stern of the saw the Wayo passing under the stern of the saw the Wayo passing under the stern of the law the westward afterwards the Wayo might to the westward afterwards the Wayo might have avoided the cullision, but she changed her course just before the collision. If the gave the times of the different orders on the mosu-

Borneo had stopped at this time she would have drifted on to the Caermarthenshire; the same consequence would have followed if she had drifted on to the Caemarthenkirs; the same consequence would have followed if she had gone astein; if she had gone to starboard she would have collided with the Ways: and if hard to poit she would have fouled the Erato and the heakwater. There was no other mancouve, beyond what was done, to avoid the collision or lessen its force. Everything possible was done. Witness should judge, by the wash at the Wayo's hows, that she was going at least eight or nine knots an hour prior to the collision; at the actual time of striking she was going at six to eight knots. She strick the Borneo and rebounded, and then humped her a third time. Witness saw her strike twice. The Borneo was strick in the strongest part of the slip, and in his opition the damage done could not have been effected if the Wayo had been going at two of three knots an hour. It was quite impossible that the Wayo had stopped and reversed before the condition. He concluded that from the condition of the Wayo's hows. There was no painted rule. of the Wayo's hows. There was no printed rule on the matter, but it was generally understood that in case of a vessel leaving and a vessel entering a tarbour the yessel entering should give way to the other

the other.

By Mr. Walford: The course of the Wayo in the chart was drawn by the commander from what the officers of the Borneo saw; it was merely an approximate sketch of the course. The Wayo Mars must have changed her course after the Borneo's second signal: but witness did not himself see her change it. The position in which she was at the time she struck the Borneo could not have been produced by the Wayo stopping and going astern.

have been produced by the Wayo stopping and going astern.

By the Comit: It was seven minutes between the time of the collision. He thought he heard fainful one signal from the Wayo. It might have been one, two, or these blasts—he could not say. He saw the steam from the whistle. That was about a minute and a half before the collision, and the Wayo might have been then about a ship's length and a half from them.

and a half from them.
The Captain of the Bornes, recalled, said be

The Capitais of the Borneo, recalled, said be ordered the two short blasts given just before the collision: but, being in a hurry and standing near at hand, he placed his hand on the gear and put the whistle in operation himself.

James Sims, able seaman, said he was steering on the morning of the collision. The Wayo was about two ships' lengths away when the last two blasts were given; and then the Capitain called out to the other steamer to go astern and called out to witness to go hard a starboard. He did so and continued so until they were struck. He heard no signal from the other steamer.

Red Gambier, alle seamans, said he was on the

heard no signal from the other steamer.

Red Gambier, able seaman, said he was on the bridge at the time of the collision. He remembered the Captain's were on the instrument at the same time. The collision took place almost immediately afterwards. He estimated the speed of the Wayo at the time of striking at nothing under five knots. Herry Byron, second officer of the Bornes, said he was stationed on the poop when the collision took place. He first sighted the Wayo as they were rounding the Caermarthanthire. He put her speed then at seven or eight knots and she appeared to maintain that speed up to the time of the collision. He generally coroborated the

of the collision. He generally corroborated the other two officers evidence as to the signals given by the Borneo, but added that immediately before the collision be heard three blasts, very faint, from the Ware.

the wayo.

Chicton Edward Dormer Trelawney, supernumerary secund officer of the Borneo, said
he was stationed on the forecaste head. He
thought the Wayo slowed down a little
just before the collision, but nothing very
perceptible. He heard the Wayo give one short
least on the subjuste year triaths, and there perceptible. He heard the Wayo give one short blast on her whistle very taintly, and three other thats, also very faint, just before she collided. The first short blast was after the second signal of afthe Borneo. He had seen the bows of the Wayo since the collision and they twisted decidedly to stanboard; that might be an indication that the Wayo was on her stanboard helm in the time.

By the Court: At the time of the collision the Ropping was an hear as notable ables and the nor-

ing of the callision showing the ships struck at 6.48. He heard one short blast from the Ways and afterwards three short blasts; but unless he had seen the steam from the whistle he should not have noticed them. The second three blasts were less than a minute before the collision. He did not notice any alteration in the course of the Wayo, and very little in her speed. He should judge her speed to be not under seven knots, and her course to be north and west. The Barnes was very close to the

morthern breakwater.
Thomas Edward Legg, second engineer on the Borneo, produced a record of the times at which the different orders were received in the engine

At the conclusion of his evidence the Court adjourned till 9.30 this morning.

The Court reassembled at the British Con-

Walter Kemble Tresize, examined by Mr. Low-sulate at 9,30 on Tuesday more sing.

Walter Kemble Tresize, examined by Mr. Lowder, deposed—I am an engineer and manager of the Yokohama Engine and Iron Works. We are repairing the Borneo. The damages sustained included 8 plates—two plates below the water line, formed are three plates in the none. forward, also three plates in the poop. Internally decks and water tanks broken, beam ends in Nuc deces and water tanks proxen, peam engs in Nu-4 hold fractured, also frames damaged. The damage includes the bulwark plating and sails. The after damage on starband side of poop in-cluded, internally, tavatory fittings, frames, decks (iron) and waterway. This was the principal dam-age. I should say from the damages that the Bor-neo had been struck first violently and then again, neo had been struck first violently and then again, causing damage to the two lower plates—damage to the six plates in a vestical line. A third blow occurred at the poop. The tonnage of the Wayo Maru, late Bingloe, 1.854 official tonnage, 1.758 gross, 1.183 net. This is from Lloyd's Register. A ship travelling at the rate of five feet per second would strike a blow of 500 tons, taking her tonnage at 1,000. I should consider that the speed was above 5 feet per second, from the damage done. I have surveyed the bows of the Wayo Maru and made a report of the damage (identified and put in). I also made a sketch of the bows of the Wayo Maru (tracing of sketch put in.) I should say from the damage to the Wayo that she must have struck the Borneo at right in.) I should say from the damage to the Wayo that she must have struck the Borneo at right augles,

angles.

To Mr. Walford—I have no sketch of the damage to the Borneo, nor a photograph. The most toward of the three blows was the most serious. It was a very heavy blow. The second blow was six III eight feet alt. It might have been done by the rehounding or heeling back. The third impact was sixly to eighty feet alt of the second blow. The third blow was slighter than the second. It could not have been done by the Borneo striking the Wayo. The air ports were torn alt, showing that it was a sliding blow from the stem III the Wayo. From the damage done to both ships I concluded that the speed of the Wayo was over five feet per second. I did not take into consideration the speed the Borneo was travelling. ation the speed the Borneo was travelling.

ation the speed the Borneo was travelling.

Kawano Sotara, master of the Wayo Maru, examined by the Count, deposed that the steamer belonged to Hyogo; on the 20th Feb, she arrived at this port from Hyogo and passed the Hondrow Lightship at 6.2 a.m. He passed the lightship on the north side, about 4 to 5 onbles off when abeam. From that punct he steered W. N. 2 points. He was steering direct for the rad lighthouse at the entrance to the harbour. Before arriving at the entrance he did not pass by any other ship. He saw a ship at anchor, and passed on the south side. He did not alter his course to pass the ship; it was not in his way. After passing the ship at anchor he altered his course, about two cables from the white light. He changed the course half a point to starboard, so as just to clear inside, the ted lighthouse. He first saw a steamer about to leave the pier at 6.25 a.m. He was then in the position marked on the chart, and blew a long blast on the whistle. A little further on he saw the steamer in mution leaving the pier. He was then going a little over two namical miles an hour. He continued that course till 6.42; at 6.43 he reversed his engines to go astern. The other ship was then slightly shead of the position marked on the chart when the bow of the Wayo Mark turned slightly to starboard. The Borneo then came on in front and struck the Wayo The Borneo had a good deal of speed on and Kawano Sotaro, master of the Waye Maru, exbowof the Wayo Mark turned slightly to stabband. The Borneo then came on in front and struck the Wayo The Borneo had a good deal of speed on and the wind caught her and she drifted on to the bow of the Wayo Mark. The Borneo have to the left, and was going in full speed. He did not know at the moment the Borneo struck whether the Wayo Mark tea stopped or not. The Wayo Mark tea bounded and then struck the Borneo again slightly. The Borneo then made a curve to the north. Witness was steering for the northern side of the

Digitized by Google

harbour entrance because the harbour inside there was less crowded. When he saw the Borneo leaving the pier witness could not tell whether he would be able to get inside the harbour before the Borneo reached the entrance. Until he reached the week the positions marked D, and E, he could not tell what the Borneo was doing. He heard a short blast from the Borneo's whistle; he did not a short blast from the Borneo's whistle: he did not hear a long blast from the syren. He thought the whistle meant that the Borneo was going to the starbeard. He thought the Borneo was coming out of the barbour; her fore stay-sail wan np. He afterward hard two blasts from the Borneo's whistle: rather more than four minutes after the first. He understood that to mean that the Borneo was altering her course to port. Wilness had been in command of steamers for ten ness had been in command of steamers for ten years, He had seen local regulations with regard to Yokohama harbour. He did not know walting for a vessel going out. On making the port he began to slow down the engines at the lightship. He stopped for daylight about 25 minutes before coming to the lightship. The Waye did not attain full speed before entering the harbour. On passing the lightship he was going a little over 2 knots. The wind was due north, force 2 to 5. The Wayo was fully laden. The time batween reversing the engines and the collision was about 2 minutes. After the first impact of the collision her engines were still going astern. Theton-nage of the Mayo Mark was 1,173 tons. It was a little more than 2 minutes before the collision that he heard the two blasts from the Borned's whistle-He thought to pass the Bornes port to part.

To Mr. Walford-He took a bearing at 5 50 no Mr. Wantord—The took a bearing at 550 a.m. and again at the lighthlip. He never went south of the lighthlip on entering the harbour. On hearing the first blast of the Berneo he ceplied with one blast and altered his course slighty to starboard. He could see about half the hull of the Borneo through the entrance. The Borneo was then distant about half a knot from the Waye Maru. He heard a shout from the Borneo less than a He heard a shout from the Borneo less than a minute before the collision. This occurred at 6.45. When he heard the two whistles he gave the order to go full speed astern. At the time of the collision some speed had been taken off the ship; he could not say if she was still going ahead. He thought it was the Borneo's swering round in the left which caused the second impact. was no third blow

At this point an adjournment was made for tiffin

When the Court resumed the enquiry after siffio :

Kawano Sotaro, in reply to Mr. Lowder, de posed that when he blew a long blast from his histle at 6.25 he intended to notify to the shipping that he was coming in. Among the harbour regulations there was one requiring a vessel com-ing in to steer due west for two cables inside the points of the entrance, inside the harbour. The place of collision was putside the harbour. He had in view this regulation. The times that he had given in his evidence as having taken certain steps were taken from a clock hanging no and written down by the second officer. Rule No. 19 of the Regulations for Preventing Collisions at Sea was in his mind when entering the harbow. This provided that if two ships were crossing their courses in a way likely to cause a collision, the ship which had the other on her own starboard side shall keep out of the way. He also had rule 21 in his mind. The latter was that when one of two ships must avoid the other, the other must

op her course and speed.
To the Court—When the Borneo blew her blasts she was a little to the north of the centre of the fairway.

Hirai Shekichi, second officer of the Wayo Maru, examined by the Court, deposed that on the morning of the 20th February he was on watch at 545 a.m. The ship was then have to. At 550 they got under way and proceeded "slow" by the telegraph, starting at 2 ceeded "slow" by the telegraph, starting at 2 knots in hour and continued at the same speed till they went astern. Writness was on the bridge, and at about 6.25 saw the Borneo at the pier flying the blue peter. He heard a short whistle from the Borneo after she telt the pier and a fittle over 4 minutes after two blasts. At that time the Borneo was near the mouth of the harbour. The two blasts were blown, Il might be, a little over two minutes before the collision. When the two whistles were heard the Captain of the Wase gave The Court then rose,

Borno after she left the pier and a fittle over the minutes after two blasts. At that time the Borne was near the mouth of the harbour. The two blasts were blown, Il might be, a little over two minutes before the collision. When the two whistles were heard the Captain of the Warg gave the order "full speed astern." The two vessels struck twice; the first time severely, and then slightly out the stern of the Warg, going to port.

Yueyama Genhachi, chief engineer of the Warg Mark, testified that he was on duty in the engine room of the steamer on the morning if the engine room of the steamer on the morning if the engine room of the steamer on the morning if the point and preferred by Squire Shires, third engineer of the Warg, going to port.

Yueyama Genhachi, chief engineer of the Warg Mark, testified that he was on duty in the engine room of the steamer on the morning if the engine room of the steamer on the morning if the charge of the the complainant who was a second engineer, and Karston again came up for hearing.

Digitized by

The Court then rose.

The Count then rose.

About half-past seven c'clock this morning, the German ocident has leave and outside the harbour, from Singapore, which port they left on Monday. 28th February. The vessels remained outside the harbour, from Singapore, which port they left on Monday. 28th February. The vessels remained outside the port can define the harbour, from Singapore, which port they left on Monday. 28th Februar

ceeded at 5.32, stopped again at 5.40, and went on again, very slowly, at 5.55. They were making about 28 or 30 revolutions to the minute. The telegraph was indicating slow. They continued at that speed until near the harbour when an apprentice told him he could slack down a little, and he reduced perhaps two or three revolutions. The engines were reversed about 643. The order was given by the telegraph and he carried it out immediately. The engines continued reversed about 5 minutes. Before 5.25 the number of revolutions minutes. Before 5.25 the number of revolutions had been about 32. About two minutes after the reversal of the engines he felt the collision.

The pitch of the propeller was 20 feet.

Captain Lyons, recalled, deposed that the number of his certificate was 04710. The number of passengers they had on board was nine. All his

orders were promptly obeyed.

The master of the Wayo recalled at his own request supplemented his evidence to the effect that in his evidence he had referred to the regulation regarding navigation in narrow channels, where the ship had III keep the starbnard side. He wished it to be noticed that he was awase of this rule,

No. 25.
Oshio Iyosaburo, chief officer of the Wayo Maru, Oshio Iyosaburo, chief officer of the Wayo Maru, testified that he was on duty at the forecastle head at the time of the collision. The Wayo passed the Argyll outside the tathour about 6.30, passing south of her, about two or three cables distance. After the collision witness took a hearing of the position of the Argyll, which was lying East by South of the place where the Wayo Maru was such and Whan he trook the abservation he saw the chored. When he took the observation he saw the chored. When he took the observation he saw the Argyll over the north breakwater. The position of the white lighthouse was S.E., 7 deg. E. from where the Wayo, anchored. The deviation of the compass was 1 deg. W. The bearings of the budy from the Wayo was E. 7 deg. S. He took the hearings a little after 7 a.m. in the 20th Feb. The Wayo was heading N.N.W.

To Mr. Lowder—When witness took the bearing the Argyll was heading northerly; he did not take any special notice. The wind was from the north. He took the bearing at that time because the Borneo had gone in that direction the management and for future reference. He knew and anchored, and for future reference. He knew of the damage to the Wayo Marse then; she was leaking; orders were given to the crew to was leaking; orders were given to the crew to go to the boat stations. It was after seven when he took the bearings but he did not remember exactly. The Argyll followed the Way into the harbour very soon, but witness was en-gaged in other work and did not notice at what time. The Argyll was not getting up her anchor when he took his observation. He had time to take the hearing after coming to anchor before the Argy# was under way.

Captain Lyons, recalled,-It was reported to me e Captain of the Argyll that he was heaving in his anchor when the Borneo was going through the harbour entrance. He might of course have dropped it again. He believed that the Argyll

was inside the harbour when the Borneo came to anchor; she was certainly under way.

The Court then settred to consider its verdici, declining to hear Counsel, and delivered the following finding at about 8 45 p.m. :-

#### FINDING.

After a prelude setting forth the circumstances brought out by the evidence produced, the Court found that the prime cause of the collision was, that the other vessel (the Wayo Maru) attempted to enter the harbour in the direction in which she did, at a high rate of spead, white the Borneo was confined by the shipping and the breakwater in

getting out of the harbon.
The master of the Bornes, Fuzhingh C. A. Lyon. appears to have navigated his vessel in a seam like manner and when a casualty was inevitable to have done everything in his power to mitigate it. The conduct of the officers and crew appears to have been satisfactory and proper discipline maintained. The expenses of the Court were fixed at £16.4.9, which were approved and must be paid by the master, R. C. A. Lyon, as one of the parties thereto.

hit him on the jaw, threw him down, and jumped on him.

In cross-examination complainant denied that

he had challenged defendant to fight because defendant had refused him leave of absence.

Defendant—Did you say several times that you wanted to put a head on me (meaning to knock me down)?

Complainant-Not I; I shouldn't he en silly as

to go for a man twice my size,
William Weatherall, chief officer, said he heard a disturbance, and found defendant on top of the complainant on No. 3 hatch. The defendant was punching complainant about the head and face. Witness Witness got hold of him by the collar and drag-ged him off.

Cross-examined - He did not see the third

engineer take off his coat and challenge defendant to fight.

Defendant asked for an adjournment, as his principal witness, the chief engineer, was ill and could not attend.

could not accesso.

His Bostour—I believe there is a charge against the chief engineer for being absent without leave.

Captain Cameron—Yes; but he came on board stright. This morning he was too ill to came

His Honour—What is the nature of his illness?
The Captain—I believe he is suffering from the effects of drink.
His Honour—Well, I adjourn the case tiff to-

morrow. I suppose 24 hours is sufficient to re-cover from the effects of drink.

Defendants—I don't think so, your Honour.
His Honour—Then it must be very bad. At any rate 48 hours will do.

Eventually, for the convenience of the solicitor, the case was adjourned till Monday.

John Neshit, boilermaker on the sameship, w

John Nosbit, boilermaker on the same ship, was then changed with refusing duty and unlawful neglest of duty from March 8th to March 15th.

The Captain stated that he received complaints from the second officer that defendant declined work of the second officer that defendant declined by the second state orders. Witness spoke to defendant, but the latter said he would take orders from no one but the chief engineer.

Mr. Karston, the second engineer, wave similar

Mr. Karston, the second engineer, gave similar

Mr. Weatherall, the chief officer, was called for the defence, and said he heard the chief engineer say to the defendant on March 8th that he had no more work for defendant III do just then, that he would "boss" defendant, and give him all his arders.

George Thomas Bright, the second officer, gave

similar evidence.

The Captain said it was the recognised thing that the second engineer was the executive officer, and that the other men were under his histructions.

and that the other men were under his instructions. Karston, recalled, said the chief engineer had never mentioned to him anything about releasing the boiler-maker from duty. He had, however, told witness that he was to give orders to the men under him according to his discretion. The chief engineer was now suffering from the effects of drink.

The chief engineer was now suffering from the effects of drink.

His Honour (to defendant)—Technically you may be guilty, but it is clear by the evidence that this is brought on you by the chief engineer giving contradictory orders. I think the captain ought to have enquired into that part of the matter before this case was brought into Count, I don't think I can punish you for the chief engineer's giving these contradictory orders. The evidence shows that at the present time hais intoxicated, and I think that as a question of discipline that is a matter for the captain menquire into. You is a matter for the captain III enquire into. You are discharged. I am told the owner of the ship is in court, and I should like to see him in my private room.

#### PRINCE HENRY AT HONGKONG.

The China Mail of the 8th inst. contains the following account of the landing of Prince Henry at Hongkong :--

**URBANA-CHAMPAIGN** 

high out of the water and her width is disproportionate to her length, so far as shapeliness is concerned, her dimensions being; length 280 ft., beam 62 ft. 4in, and mean draught 24ft. 7in. Although of 7,310 metric tons displacement her normal coal supply in only 710 tons, her speed design being for 14.5 knots and her engines of 5,360 indicated horsepower. Her armament has been brought up to date, and consists of eight 10.2 in, guns, seven 5 yin, guns, nine 3.4 quick-firers, twelve machine guns, and two light guns, whilst she carries five torpedo tubes. The original heavy rig has all gone, and there are now two light fighting maste, fore and main, with a movable mizzon for signalling ourposes that is not at present up. The cobin accommodation is most sumptuous, and the wardroom is a luxurious apartment, white panelled, with elaborate brass electric light fittings. A large photograph of the Kaiser, with his father and grandfather hanging on each side, is one of the prominent features of this apartment. On the opposite will hang the two colebrated allegorical pictures of Wilhelm II., with a pencilled autograph inscription on each. "Meiner Panzorschiffe Deutschland, Wilhelm K, and I." These were presented to the ship by the Kaiser when she left Kiel There is also au autograph portrait presented by the Princess Irene. The Prince's cabins occupy the alterpart of the ironclad, a good-sized dining-room, with a large drawing-room cabin opening into it. Both have white-wood furniture, very nice, but with no special aplendour about them.

The Geffon in quite a modern deck-protected second class twin screw cruiser, and was launched in 1893 at Schiebau. Elbing. She is of 4007 metric tons displacement, and her dimensions are; length 314ft 6in, and beam 48ft. Sin. Her engines of 9,000 in dicated horse power are capable of propelling her in a speed of 20 knots per hour, she has a coal capacity of 950 tons. The armament of the Geffon consists of eight 59 in. guns, ten 4.1 in. quick-firers, six 19 in guns, two machine guns and

Notes from the Otago Witness.

(a) It is difficult to discover the purpose of the move, and the only thing that can be suggested is that it was intended to throw White off his guard which it does.

—which it does.

(b) A bad move. Something similar may occur in the Scotch game, thus:—I—P to K 4, P to K 4; 2—Kt to K B 3, Kt to Q II 3; 3—P to Q 4. P takes P; 4—Kt takes P, B to B 4; 5—Kt to B 5, P to Q 4; 6—Kt takes P ch, K to II sq. and Black gets the best of it. In the present game the move is even worse for White.

(c) If q—Kt to R 5, B to K Kt 5 wins it.

(d) There seems to be no better move.

(e) Black has played the end-game in first class

(f) Black mates in five or six moves.

THE RICE GAMBIT.

Professor Rice has discovered a gambit within a gambit, or, in other words, he sacrifices another piece in the famous Kieseritzky Gambit and secures an overwhelming attack. The Professor has cures an overwhelming attack. The Professor has published his gambit with thorough analysis by Mr. S. Lipschutz. The general idea is as fol

1-P to K 4	t-P to K4
2-PtoKB4	2-P takes P
3-Kt to K B 3	3-P to K Kt 4
4-P to K R 4	4-P to Kt 5
5-Kt to K 5	5-Kt to KB 3
6-B to B 4	 6-P to Q 4
7-P takes P	 7—B to Q 3
8-Castles	8Blakes-Kt

Here is where the gambit comes in. White plays 9-R to K sq, etc. There are very many variations, and in several positions White has only one satisfactory answer, which seems so very no-likely that hardly any player, possibly no one ex-cept Professor Rice or Mr. Lipschuz, would find

takes R P. &c.

(i) A plucky and well-judged mov (k) He should have played P to B 3.
(I) Good again. Black has no answer.

#### NEWS BY THE MAIL.

There is, says Gunaberg, in the St. James's Gazette, a time and a season for everything. A Grazelle, a time and a seasmit for everything. Ayoung player seeks to play matches; an old player, if he be discreet and not too conceited, will avoid playing matches, especially if he can employ his chest talents for the benefit of the public in other directions. At Janowski recently issued a challenge for a match to any player in England. As, however, there are no young players in England. sowever, mere use no young prayers in England, the challenge was not accepted. In the case of the English players there is only one way of getting them to play a chess match, and that is, for those of the public interested in such contests to accarge it for them on a profitable basis.

According to La Stratégie M. Janowski has challenged M. Charonsek to play a match for a minimum stake of 1,500 marks.

The Chess-Editor of The Times-Democrat, New Ocleans, is of the opinion that "if Lasker had to choose between Pillshury and Charousek for the easier adversary, he would choose the latter."

The Westminster Gazette gave this opinion of Charonsek (winner of the first prize at the Bedin Tournament) in 1806:—" We are of the opinion that since Morphy and Kolisch no more promising player has risen in the chess would than Charousek. We can testify that this opinion was shared by all the competitors at the Noremberg Congress, with the exception of one, Lasker, but his evidence was somewhat biassed by the fact that he loat his game with Charousek. We have so much pleasure in recording this fact since the appreciapleasure in recording this fact since the apprecia-tion of Charonsek's genius by the large majority of the Nuremberg competitors was only a corrador in recording this fact since the apprecia ration of our own opinion expressed the very first day of the tournament."

#### PROBLEM COUNTERPEITING.

The Canterbury Times (\* N. Z. paper) takes up the question of counterfeiting problems, and illustrates the plan suggested for its supression by Mr. S. S. Blackburne. The Times says:—"I seems clear therefore that, if problem competitions are to have any value, some guarantee for honesty and originality must in future be insisted on; and we have not yet seen any better proposals than that which two of our composers—Mr. Blackburne and "X,Y,Z,"—independently made in their

letters to us last July. These correspondents sug-that former judges should require every composer to send in with his competing position diagrams showing his problem in its various stages of evo-lution, from the first conception to the finished production."

There can be no doubt that the plan suggested might perhaps be effective for the detection of this very mean kind of fraud. It is hardly to be supposed, however, that such frauds are at all common among problem composers. On the contrary, they are very rare, and it would be an insult to competitors in problem tourneys to treat them as likely to be guilty of such vile conduct, and insist upon their furnishing evidence of honesty and originality of work before permitting them to compete in tourneys. Would it not be better to punish pere in conneys. Would a not be better to phonon the guilty when the guilt is proved? To obtain a prize in a problem fourney by means of a counterfeit problem is clearly an offence against the law; and at the present day it is by no means an easy matter to issue a counterfeit problem without its being detected, especially if it takes a prize out its being detected, especially if it takes a prize in a tourney. Moreover, it does not necessarily follow that all problems go through the same process of evolution as those put forward by Mr. Blackhume. Is it not possible that a billiant conception may sometimes flash upon the mind at one inspiration, as Athena sprang from the head of Zeus full grown and completely aimed? Take Morphy's gamer, and see how many brilliant and charming endings were produced by him—not by an elaborate system of evolution, but on the spur of the moment. May it not also be so in the case of some problems? On the whole it is better that a counterfeit prublem should pass undetected and the utterer escape punishment than that the insult the atterer escape punishment than that the insult of suspicion should be cast upon the great number of honomable men who amuse and delight chessists by their ingenious problem compositions.

## MIRANDA-THE OLD AND THE NEW.

(Tempest, Act IV., scene L) Fair were the match conditions, The contest without grole, The contest winder gane,
When Ferdinand and Miranda
Played chess on Prospero's I.de.
And still their whispers one can hear,
The sudden scene nothiled,
The soft, 'You play me false, I fear,'
I would not for the world!'
Local war not deamy of them.

Luceus was not disanit of then. Nor Ruy with shaven pate, Nor he who left to after men The famous smothered mate; Chess, in whose now entangled maze

One scarce a key discovers,

One scarce a key discovers,

Was in those early, happy days

A paradise for loyers!

Then champions, mild as habes new born, Pursued no private ends, Nor scattered journalistic scorn On rivals and on friends;

They played without a thought of fame,
They recked not of the spoil;
The subtle beauty of the game
Made capture of its toil!

Nay; thus let crutes very cook apthus let critics vent their spicen; Chess is, as it has ever been, The noblest game on earth I We'll modectake, should born a new

Miranda come our way, To teach ber in a month or two The charms of modern play C. C. P. in the British Chess Magazine

#### THE GREATEST WONDERS OF MODERN TIME

#### HOLLOWAY'S PILLS.

DERSONS suffering from weak or debilitatep constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sun Sanua. Bazza, in his work entitled "The Nite Tribut tarice in Abpasinia," says—"I ordered the dragoman Mahomes to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis, in I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an ex-plorar, an possessing unmistakable purgative properties, they create an undersiable effect upon the patient, which satisfies them of their value,"

SIMPLE, SAFE, AND CERTAIN.

#### HOLLOWAY'S OINTMENT

HOLLOWAI S UNIVAMENTAL

Is a certain sensely for had legs, bad breasts, and uncertaines
of all kinds. It acts miraculously in healing olderations, curing
skin diseases, and in arresting sod subduing all inflammations,
Ma.J.T. Coores, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, mills, fowls,
butter, and horse feed ponted in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas,
and the demand become as great that I was obliged to lock not
the small remaining "stock."

## The Japan Meekly Mail.

" PAIRCE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence, Whatever is intended for issertion in the "Jaran Werkly Mail." must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the Manager, and Cheques be made payable to same; and that literary contributions be addressed to the Editor.

YOKOHAMA: SATURDAY, MARCH 26TH, 1898.

#### RIRTH.

Ou March 21st, at 18, Suzukiche, Tekyo, Ma-dame in Vicontesse De Bondy, of a daughter. MARRIAGE.

RAINES-()LIVER:—On the 19th March, at Christ Chunch, Vokohama, by the Rev. E. Champunys Irwise, HAROLD HENRY BANKISTER, second son of the late Hemy Rathes of Hull, to Annis, fourth daughter of the late Edward A. OLIVER, of Landon.

#### SUMMARY OF NEWS.

THURR have been further attacks by rebels on Japanese posts in Formosa, and some losses on

THE services of Mr. Clarence Greathouse, adviser to the Korean Government, are to be dispensed with.

THE Russian advisers and drill instructors in the Korean Government employ have been dismissed and paid off.

A POSTRAN was killed and robbed of 600 yen in his charge by a highway robber at Shiba, Miyazaki, on the 20th inst.

Two fires occurred in Tokyo on the 21-22nd, in one of which the

College, Imperial University, was burned to

Ix is reported in Sonl that M. Waeber is to return as Russian Minister to Kores, M. Speyer being recalled.

A NUMBER of Japanese men-of-war have been engaged during the latter part of the week in manceuvres off Shimizu.

SEVEN fishing boats capsized, and five men were drowned in a gale on the 19th inst, off Habashira-mura, Oshima province.

THE Comte de Pimodan, military attaché of the French Legation, Tokyo, is expected to leave Japan for France on the 13th April.

PRESIDENT MCKINLEY has decided to keep secret for the present the finding of the Court of Inquiry into the Maine tragedy.

A COMPANY called the Tox Kerosene Oil Company has been formed with a capital of 500,000 sen to works wells in the northern provinces.

Tur steamer Zoyoshima Maru, while endeav ouring to get off a small steamer stranded at Takamatsu, ran on a rock and had to be beached.

A CONFLAGRATION occurred in Hongo, Tokyo, on Wednesday morning by which 1,112 houses were destroyed and one fireman was burnt to

Owres to the high price of coal and other commodities the Nippon Yusen Kaisha are raising their rates of freight on coasting lines by 10 per cent.

CHINA is said to have offered the lease to Rus sia of Tailen. She allows the railway, provided that Port Arthur remains Chinese. The report is probably inaccurate.

THE German portion of the Chinese loan has been largely over-subscribed in Berlin. The loan was issued on the 22nd and the list was closed on the 23rd inst.

A CELEBRAT ON of the 30th aniversary of the opening of the port of Kobe is to be held on the 23rd, 24th, and 25th April. The cost of the fete is estimated M II.771 ven.

THE Fine Arts Exhibition in Uyeno Park will be opened on the 1st April. Many fine works of art have been sent for exhibition from the Imperial Household Department.

Two cargo boat coolies in Yokohama have been arrested on a charge of having stolen four bales of silk, valued at \$4,000, from the P.M. and O. & O. steamers during November last.

A MIDSHIPMAN belonging to the Japanese cruiser Parhima Kan was killed in a quarrel among officers of the war-ship at Shimizu, and another officer severely wounded, on the 20th lust.

OWING to the despatch of nearly half the police force of Yokohama to various districts during the election, robberies during the past week or so have largely increased in the town.

Ir is expected that at the half-yearly general meeting of the Nippon Yusen Kaisha to be held on or about the 20th May, a dividend at the rate of 8 per cent, per annum will be declared.

CHINA has absolutely rejected the demands lately preferred by France, and the French Representative has sent a massage to the home

daughter of Professor, Yamagewa of the Medical British Government has intimated to the Chinese Authorities that it is firmly resolved not to allow China to accede to the French demands.

> DAVID LOGAN, keeper of a saloon in Blood Town, Yokohama, has been committed for trial in H.B.M. Court on a charge of cutting and wounding a seal hunter named John Jacobson.

> COUNT YOU LEDDEN, the new German Minister to Japan, arrived in Tokyo on the 22nd inst., and, after a visit to the Legation, proceeded to the Imperial Hotel, where he will reside for a

> A REPORT from Mr. Arakawa, Japanese Consul in London, states that large shipments of merchandise are being made for Japan, in anticipation of the new tsriff coming into operation in July next.

> THE ratifications of the revised treaty between Frence and Japan were exchanged between M. Harmand, French Minister, and Baron Nishi, Foreign Minister, at the Foreign Office on the roth instant.

PRINCE KONOYE TADANIRO, grandfather of Prince Konoye, President of the House of Peers, died on the 19th inst., at the age of 9t years. The funeral took place on the s4th inst., at Kanyei temple, Uyeno, Tokyo.

A FARRWELL dinner was given at the Tokyo Club on the 22nd inst. to Mr. G. A. Lowther, Secretary of H.B.M. Legation in Tokyo, who is about to leave for England on leave, and Baron de Cartier, Secretary of the Belgian Legation, who has been transferred to Peking.

NEGOTIATIONS are proceeding at Paris between M. Hanotaux and the Chinese Minister regarding the fresh demand that China shall not code any portion of the four provinces of Kwantung, Kwangsi, Yunnau, and Kweichau, and shall allow the prolongation of the railway from Lungchau into Yunuun, and a coaling station at Laichau.

THE Import market in Yokohama, which a few weeks ago showed a little activity—in some lines at least—has suffered a relapse and is an lethargic as it was in the closing months of last year. Stocks of all kinds are acof last year. cumulating and running up godown and in-aurance charges, m even cargo imported to order fails to be taken delivery-of by purchasers in many instances, owing to the small demand and the high rates of interest on loans and discounts demanded by the banks. A few sales of yarns are almost all there is to report in the cotion and piece goods market, while metals are almost equally unseleable though arrivale continue on a large scale. In kerosene and augar a small business has been done and there have been large arrivals of foreign rice. In connection with this latter import it is reported that an order has been issued by the Taotai of Canton suspending the export of rice from that port for one month, owing to the considerable rise in the price of the grain caused by the purchases for Japan having resulted in great hardship to the poorer classes of Cauton and its neighbourhood. The larger portion of the rice imported into Japan, liowever, comes from Tongking and Saigon. The Export market is as quiet as the import, though from different causes. The unsettled condition of political affairs in the Far East exercises considerable effect upon silk buyers for Europe, and during the past week there has been scarcely any demand for this staple, while the business done in tes amounts Government to ask for further instructions staple, while the unsures divided piculs. Other ex-Paking telegram to the Jiji states that parts are equally quiet AT

#### SPIKIT OF THE VERNACULAR PRESS.

Now that industrial enterprise is beginning to assume large proportions in Japan, the old question which has so long disturbed society in the West, will inevitably present itself for solution here—the question of capital and labour. Already symptoms of the trouble have showed themselves—for example, the recent strike of the Japan Railway's employes—, and it certainly believes leading men to give timely attention to the problem. The Fift Shimps, from which we are quoting, suggests two remedies. One is cooperation on a limited scale. Workmen should be encouraged to leave mail percentage of their pay in the hands of their employers, and when, by means of compound interest, it has accumulated sufficiently, a share in the business ought to be purchased with it. An employé holding a share might be trusted never to take any part in a strike, or otherwise in imperil the prosperity of the enterprise. The second and not less effective mea-sure is to invoke the aid of religion. The inculcation of the moral law could not fail to educate a disposition opposed to everything in the nature of a strike. Twice or thrice a month arrangements should be made for the delivery of homilies by Buddhist priests. It is the fashion to make a mock of Buddhism, and to say that, so far from being qualified to teach others, the Buddhist priests want to be taught There is some truth in the critithemselves. ciam, but if the Buddhist priests no longer deserve reverence, it is chiefly because, men having ceased to respect them, they no longer respect themselves. Let the public treat them differently, and their own conduct will soon reflect the change. They are the repositories of a beautiful moral code whose observance has proved of great service to Japan in the past, and is capable of conferring no less benefit on her people in the future.

Two articles are devoted by the Nippon to the Far-Eastern Question. They contend that Russia is the only Western Power bent upon the partition of China, and that China needs only a little courage to ensure her safety. Concerning the former point our contemporary has good deal to say, but no new reasons are adduced. The general line of argument is that Russia's recently formulated demands would, if complied with, inevitably make her mistress of Manchuria, and that, since she is herself perfectly well aware of that fact, her intentions can not be mistaken from the moment that she formulates such demands. But she is not in a position to enforce them. China seems w have lost heart completely since her beating by Japan. She appears no longer to place any reliance in her own military capacities. It was that mood of despondency that induced her to bow to the seizure of Kino-chou by Germany. mere handful of German troops undertook the enterprise: a few hundreds. They might ultimately have been increased to a few thou-They might sands, perhaps. But even then China could have swept them into the sea had her resolution been equal to making the effort. Russia is certainly more formidable foe than Germany owing to her geographical position. Her empire borders that of China and she has a considerable force of troops massed in the Amur region and around Viadivostock. But on the most liberal calculation it is doubtful whether she could move more than forcy thousand men across the Manchinian border; which means that, by the time the invading army reached Shan-haikwan, it could not put more than fifteen thousand men into fighting line. The Chinese empire can not be conquered by fifteen thousand men. A slight effort on China's part would easily burl them back. Her seaboard, indeed, would be helplessly exposed; she has no flect to defend it. But she is not valuerable from the sea. Her people do not depend upon foreign countries for their means of sustenance, and Great Britain would take care that the open ports at which the country's

Russia's face it she only takes heart. There is but one Power competent to beat her, and that is Japan, for Japan lies within easy striking distance and could place a large army in China's territory. The defeat that she suffered at territory. The defeat that she suffered at Japan's hands has produced in her the mood of the man in the proverb who blew on his salad because he had found his soup too hot. It China has a spark of courage she can maintain her independence and integrity, but if she dare not raise a finger in self-defence, ber time has assuredly come.

Mr. Kataoka Kenkichi, one of the best known among the Liberal leaders, contributes four articles to the Tokyo Shimbus on the degenerate condition of constitutional government in Japan at present. The Restoration was a work of genuinely unselfish patriotism. The heart of the nation turned towards the change, and so atrong and universal was the sentiment in favour of Imperial administration and the overthrow of feudalism, that a system which had flourished for three hundred years, a system - whose support and maintenance innumerable personal interests pointed, almost without bloodshed. The individual did not figure at all upon the arena of that epoch. The country was everything. The capital was moved from Kyoto to Tokyo without a remonstrance on the part of those whose vested interests were seriously affected by the transfer; the samurai, without a murmur, agreed to lay saide their swords, the badge of their aristocracy and the token of their privileges; the feudal chiefs showed no reluctance to aurrender their fiels; though the step deprived them of wealth and authority and condemned them to obscurity. But unfortunately that self-effacing mood did not last very long. The common proclivities of human nature asserted themselves. Those that had tasted the aweets of office became so unwilling to abandon the feast that they set themselves postpone the introduction of constitutional government, which was the unique goal of the men that planned the Restoration. It was then that a split took place in the ranks of officialdom. Superficial observers detected no reason except the Korean complication. But that was only a proximate cause. The true explanation was that some of the sincere, upright men who had worked for the overthrow of feudalism, could not consent to be associated any longer with colleagues who prostituted their newly acquired power to personal ends. Count Itagasi was among those that broke away, and Mr. Kataoka followed him. They retired to Tosa and applied themselves to propagate the doctrines for the sake of which they had sacrificed office and opulence. It was a hard, and at times it seemed a hopeless, struggle, but they could not forget how recently the leaders of thought had been moved by a genuine and unanimous impulse of patriotism. What had once been might be again. They had to resist temptation and endure oppression. At one moment they were offered money to emigrate to Hokkaido, where, they were told, they might till the soil to much better advantage than they could cultivate constitutional institutions in Japan proper; at another, they were thrown into prison and warned to expect the treatment accorded to rioters and incendiaries. But at last the nation received a constitution and the Diet was opened. sult did not at first seem very admirable. It appeared at though the chief aim of the members was to be avenged on the officials at whose hands they had suffered so much. Possibly, there was some feeling of the kind at work. It would have been natural. But profounder and more potent was the conviction that a keen accuting ought to be undertaken into financial affairs, where great abuses had unquestionably existed, public funds being too often appropriated to private purposes and general confusion having been allowed to obscure the distinction between the property of the State and the per-quisites of the individual. In those early days the members worked conscientiously and disin-But over them also gradually crept terestedly.

sight of in the strife of political parties. Members learned to take prids only in having defeated this bill or passed that, without any reference to the nature of the measures themselves. Then sothi appeared upon the scene, and close on the heels of intimidation followed bribery. Supporters of the Government learned to regard it as a natural thing that they should be rewarded for their support; opponents, that theirvates should be purchased; and electors that they too should be paid for votes which placed men in such valuable positions. The root of the evil must be traced to officialdom, which set the example of purchasing the privilege of remaining in office. Thus the nation has to lament the degeneracy of the constitutional system. It may be said, indeed, that the decadence of con-stitutional systems is a feature of the era, and the cases of Germany, of Austria Hungary, of Italy, and of France may be pointed to. But in each of those countries government by parliament has a bright record: it flourished once if it is now in decay; it achieved great things once if it is now a failure. But in Japan decay has come before vigour was attained; failure has preceded success. Is there no remedy? The remedy consists, first, in the orgaination of parties having a programme of clear principles and pledged to uphold them without hope of reward or recourse to corruption; secondly, in the practical adoption of constitutional principles by the Government. So long as there are no recognised principles to fight for, men will be led away by all kinds of trivial issues, and so long as politicians resort to improper methods to obtain votes, their own parliamentary conduct will not be regulated by the rules of integrity. So long, on the other hand, as the Government shows no respect for the Diet's opinion, the Diet will not respect the Government. There can be no question that the Government has learned to fear the Diet. But it shows its fear by trying to exjole or seduce the members instead of challenging them to an honest scrutiny of its principles and policy, and either bowing manfully to their decisions or frankly appealing to the verdict of the country. Mr. Kataoka elaborates these points at some length. The tone of his articles is somewhat desponding, but they have a ring of sincerity and high purpose.

The Far-Eastern Question occupies the Nichi Nichi Shimbun. Our contemporary deals with the complaint, frequently formulated of late by the vernacular press, that Japan has no fixed policy towards China and that her hand is not seen in the great game which the nations are now playing. Japan's policy towards China has long been perfectly clear. It is a policy directed towards the peaceful development of the great empire. China's resources are enormona. She has been justly called a mine of wealth, and the promotion of commerce and communications with her is the key-note of Japan's policy. Naturally such a policy does not lend itself to striking displays of force or masterfulness. It is a policy in be pursued quietly and steadily. Besides, strong atrokes are never dealt except when the occasion demands them. To that extent the foreign policy of all nations is opportunist. Japan gave sufficiently clear evidence of her policy when she concluded the Shimonoscki Tresty. She stipulated for the opening of new ports in Chies and for other concessions calculated to facilitate the world's trade with the Middle Kingdom and to draw the latter into the path of progress. Her policy may, therefore, be summed up in two words "peaceful competition." That, of course, involves the preservation of China's integrity, Dulies of propinquity, ties of racial kinship and obligations of past intercourse, is say nothing of strategical reasons, impel Japan to maintain that China shall be for the Chinese. There is much talk now of the partition of the great empire, and, at first sight, she seems to lie at the mercy of any Powers anxious to divide her. But the feat would be very different in practice from what it appears to be. The blows China affiguate berginen to her are due to her foreign trade is carried on should not be inter-the bifeful shadow that had so soon marred the China many impact the person to her are due to her ared with. China many impacting the color of the Restoration. Principles were lost own publishments. It is about to suppose

that Germany could have wrested a port from her had the Chinese shown any resolve to withhold it. Any State attempting aggression on a large scale in China must reckon with the con-tingency of China's resistance. The Chinese will not always tamely submit to be swallowed up. No Western State, with, perhaps, the sole exception of England, is in a position to coerce China if China resists enercion. It may be doubted, too, whether any Western State except Russia has serious designs upon Chinese territory, and Russia certainly is not competent at present to undertake a large scheme of territorial aggrandisement. It is generally assumed that when her trans-Asian railway is completed she will be mistress of the Far-Eastern situation on land. But the trans-Asian railway, a single line traversing long stretches of waste regions and having stations separated in some cases by many hours, will not have large potentialities for military pur-The Nichi Nichi argues at some length that Japan's armaments are not destined for any aggressive purpose, and that if she were disposed to seek territorial expansion at China's expense, she might do so immediately without waiting we complete her programme of armed expansion, since she is of all Powers the best prepared for such an enterprise.

A writer signing himself Kinugawa Taichi discusses the subject of maritime enterprise in the columns of the Mainichi Shimbun. After dwelling upon the topographical features of Japan and the natural advantages possessed by her for the purposes of such enterprise, he notes that the Ito Cabinet evidently appreciated the fact when it introduced bills providing encouragement for ship-building and navigation. Japan is not altogether without reasons for activiaction. She already stands fifth on the list of steamer-owning countries, as the following table shows:-

IC SHOWS:								
Country				Number of steamers

Although the United States heads the list as owing the largest number of steamers, the great majority of the vessels flying the stars and atripes ply in inland and home waters. The navigation of the high seas is practically monopolized by England. It is doubtless a worthy ambition that Japan, also, should endeavour to gain a place in the carrying trade of the world, but unquestionably she ought to turn her attention in the first instance to the seas in her own immediate vicinity. There she is threatened with serious competition. The subsidy granted by Russia to sea going steamers is one rouble per nautical mile. With such aid, a vessel is practically independent. Freight and passengers become secondary considerations. Now when the trans-Asian railway is opened, and Vladivostock becomes the eastern outlet of Siberian trade, the conditions of maritime enterprise in this part of the world will be materially changed. Anticipating that event, and relying on the munificent subsidy granted by Russia, certain capitalists are said to have made arrangements for establishing no less than eight steamship services having their basis at Vladivostock. These services will include lines to Shanghai, Hongkong, Chefoo, Newchwang, Korean porta Tientsin, Hankow, Shimonoseki, Kobe, Yoko hama, Petropaulovski, Nikolaievak and so forth.

should be competent to exploit. It becomes then, an important question whether instead of spending large sums to encourage a trans-Pacific carrying trade, and to aid lines to Europe, the Government should not devote the money to assist Far Eastern services. It is between the countries of the Far East that a vest development of commerce may be looked for in the immediate future. If Japan has three or four million yes to appropriate for the encouragement of maritime enterprise, she should use the money for lines in her own neighbourhood before she goes far a field to challenge powerful competitors who have already built up a solid business.

The Kokumin Shimbun has an article on the subject of mixed residence. It admits that there are still a few Japanese who have not fully divested themselves of the narrow-minded love of isolation educated during the Tokugawa era, but it claims that the sentiment of the Japanese nation as a whole is cosmopolitan, and that the fact is clearly proved by history—not the history of the past thirty-five years only, though that in itself should be sufficient evidence, but the history of the country since the most ancient eras. Foreign intercourse was never eschewed by the Impanese in old times. They welcomed strangers, ssociated with them freely and visited all the countries within range of their sea-going caps. cities. They gladly accepted and assimilated everything that foreign nations had to give them in the field of either science, or politics, or art, or philosophy, or religion. Their civilization is permeated with foreign elements, and objects of art from India, from China, from Persia and from Korea are to be found among the Yamato heir-looms. Circumstances, not instinct, were responsible for the policy of isolation adopted in the seventeenth century, and circumstances having radically changed, the nation's instinct has re-asserted itself. Mixed residence comes in the natural sequence of the country's career. The prospect is to be regarded not with appre-hension but with sincere satisfaction. The better Japanese and foreigners know each other and the closer their intercourse, the more completely will all causes of mutual distrust disappear, and the greater will be the mutual profit.

#### CHARITY CONCERT IN TOKYO.

The charity concert in Tokyo on the 19th instant proved a signal success. The large hall of the Music Academy was crowded in every part, and many people could find standing room only. Of course the great features of the performance were the playing of Mr. Junker and Von Koeber, on the violin and plane re-spectively, and the ainging of Mrs. Mollison. Mr. Junker is unquestionably a violinist of very order. Among the artists whom we have had the pleasure of hearing in Japan there has been only one of corresponding rank, and that was Remenyi. It is unnecessary to carry the comparison any further. Junker is still a young man, and it may be that when he reaches Remenyi's years he will have conquered as many worlds. However that may be, it is a rare treat to hear such a master. A little more repose of demeanour seems to be alone wanted to perfect his style. His technique and feeling bave already been spoken of enthusiastically in these columns, and we need not add any further ealogy here. Doubtless many people con-cluded that the gem of the concert was the sixth number on the programme, violin solo with Dr. von Koeber at the piano. Seldom in a life-time-above all, a life-time passed in the East-is it given to any one to hear two such artists play together, and we can not sufficiently express the chagrin universally felt that an occasion so unique should have been marred by the miserable quality of the Music Academy's piano. The instrument is execrable, and truly in the name of every lover of music it is necessary to protest strongly against the sacrilege of asking an artist like Dr. Koeber to use such a piano and a master like Mr. If that scheme matures, Japan will find herself Junker to play to its accompaniment. Dr. excluded from routes which she, of all countries, Koeber, playing a Sonata by Beethoven, some-

times succeeded in making the audience forget the misery of the instrument, so delicate was his touch, so crisp his execution. But when Mr. Ellis undertook to make the decrepit instrument pour out the rushing notes of Mendelisiohn's "Rondo Cappricciosa," the sweet-ness and delicacy of the composition were almost completely lost in the tin kettle clatterings of hammers and strings. Mr. Ellis has a facility really marvellous in one so young. Nature acems to have indicated a public musical career for him. Certainly, if he adopted it, fame would be assured. Mrs. Mollison was down for two numbers on the programme, but on each occasion she was vociferously encored, so that she sang, in all, four songs. Neither among professionals nor amateurs have we ever heard such a voice in Japan during the past thirty years. Its richness, its tenderness, its force, and its flexibility would rouse the enthusi-asm of any audience. Mrs, Garst sang the sad song, " When " in her own charmingly simple, straightforward fashion, and, being warmly en-cored, gave the *chanson* "Lullaby." She was not heard to the best advantage, her voice not having aufficient volume for a building so spacious as the hall of the Music Academy, but nothing could mar the mellow aweetness of her notes: There were two performances of No-Kyogen and one of Japanese music, concerning which we have no criticism to offer, except that the acting in the former was eminently clever, as Japanese acting always is. We must say a word of sincere praise, however, for the opening chorus sung by the Pupils of the Music Academy. It was rendered with perfect accuracy, and if the quality of the in-dividual voice left something to be desired, the dividual voice left something to be desired, the general effect was most pleasing. Before the programme was attacked, one of the Faculty of the Academy delivered a brief address in Japanese and English, stating the objects of the concert, and expressing hearty thanks to those who lent their kind assistance. We may be permitted to echo his words. To Mrs. Mollison, we believe, special resulting land the for without her putting expressions. gratitude is due, for without her matiring exer-tions the project could never have matured. Such generous aid tendered by foreigners for the sake of Japanese charities deserves to be noted and appreciated. We say nothing of the Japanese and foreign ladies in Tokyo who took the initiative and laboured hard in the same benevolent cause, for we understand that it in their wish to be without public witnesses of their good deeds.

#### GARDEN PARTY IN TOKYO.

On the afternoon of the 19th instant, the Vice-President of the Nippon Yusen Kaisha and Mrs. Kuto gave a party in the Koishikawa Botanical Garden to c lebrate the marriage of their daughter, Miss Sumi, to Mr. Kato Masaharn, who, being adopted into the bride's family, takes its name, according to Japanese custom.

The day was cloudy, and rain hung so imminent overhead that many of those invited did not attend, supposing that the party would be postponed until the following day. Nevertheless a large number-about three hundred-were present, and the affair passed off with great colat. Among the guests were Count Okuma, the two Barons Iwasaki, Viscount Enomoto and many other distinguished personages. The bride's costume was very beautiful but to give any detailed description of it is beyond our capacity. There were some picturesque and highly skilled performances of No. Kyogen, and in their intervals a band played. Refreshments were afterwards served, and the genial hospitality of host and hostess supplemented by the excellence of all the arrangements made the guests forget the gloominess of the weather.

A large party of German residents of Kobe met at the Beach House Hotel, Tarumi, on Sunday, where a farewell tiffin was given in honour of Mr. and Mrs. von Krencki, The German Consul and his wife left Kobe for home by the Hohensollern.

#### THE EMPEROR AND THE BEHAVI-OUR OF THE LOWER ORDERS TOWARDS FOREIGNERS.

We read in the Fiji Shimpo that the Emperor has been making inquiries with reference to the conduct of the lower orders towards foreigners. At the beginning of this month, his Majesty questioned the Chief Chamberlain, Marquis Tokudaiji, on the subject, and the Marquis addressed himself for information to Mr. Sonoda, Chief of the Tokyo Metropolitan Mr. Sonoda replied that, so far as concerned the district under his control, there had not been of late any noticeably rough demeanour on the part of the lower orders towards foreigners. On the following day, the Emperor directed that a similar inquiry should be sent to the other open ports. The in-struction was carried out telegraphically, and from Yokohama, Kobe, and Nagasaki answers were received to the effect that no special change had been observed in the sense of the inquiry. The Fiji further says that, on the 16th instant, the Emperor again summoned the Chief of Police to the Palace, and caused Marquis Tokudaiji to question him about the state of the country with regard to the general elections and about the result of the elections. Mr. Sonoda reported that things were, on the whole, quiet and orderly, and that the result of the voting would be reported the moment it was known. The Chief of Police is said to have then addressed his Majesty as follows :-- "Your Majesty always condescends to devote attention to matters at home and abroad and to ask questions about affairs of importance. Your Majesty shows special about those persons who, advocating what they call a 'strong foreign policy,' are so ill-advised as to dislike foreigners and to behave towards them sometimes in an improper manner without regard to the duties of friendly intercourse. Probably the questions addressed to us by Your Majesty on these points were suggested by something that Your Majesty saw in the newspapers or heard in conversation. I venture to assure Your Majesty that the solicitude shown by Your Majesty on all

Assuming the Jiji's information to be correct, it will be seen that although no specially unsatisfactory state of affairs was reported to the Emperor, the chief of the Metropolitan. Police did not attempt to conceal the fact that a rude and improper demeanour is sometimes assumed towards foreigners by the "stalwarts," as they may be called; that is to say, by men whose idea of getting even with the masterful alien, or asserting the prestige of their country, is to shout out opprobrious epithets to any stranger they encounter, and sometimes even to hustle him. In the case of the student and the coolie that kind of mood certainly exhibits itself much too freely for Japan's interests, though not freely enough to call for any open behest from the Throne. The Emperor's purpose in making inquiries is, however, plain enough. It will be very clearly understood by the local authorities at the various open ports that His Majesty is perturbed about the matter, and desires that effective but declared that he would be content if was cast. As a matter of common sense measures shall be adopted to put an end the Treasury set aside a million silver yen that view has much to commend it. But to these happenings.

#### PREMIUM BONDS.

The directors of the Japan Industrial Bank (Nippon Kwangyo Ginko) have been dining and wining an influential section of the Tokyo public, apparently with the idea of giving a good send off to the premium bonds which the Bank has received official permission to issue. The Japanese have taken with remarkable kindliness to the "under-the-mahogany" methods of the West. It can not be said that they show much inclination to adopt our fashions of social intercourse en bloc. The solemn dinner party does not attract them, neither does the ball where young folks go to carry their charms to market and old folks attend to assist the bargain. But the neutral ground of the dining room commends itself very strongly to Japanese business men as a place where politics may be forgotten, or remembered, according to convenience, and where affairs of the pocket may be discussed to great advantage. Like everything else the new fashion seems likely to be carried to excess in the days of its early popularity, but so much the better for hotels and restaurants at all events. We can not understand, for example, what direct or indirect benefit is likely to accrue from the dining together of a hundred persons at the Imperial Hotel simply because the Industrial Bank is about to issue bonds. It is all very well to invite a number of friends to congratulate and make the acquaintance of a newly married couple, but a costly banquet seems a rather clumsy method of "informing the public at large" that a loan is about to be placed on the market. However, 'tis the shareholders' concern, after all. So far as the loan is concerned, the conditions of its issue may be trusted to make it popular without recourse to feasting and speechifying. Twenty thousand bonds are to be issued of a face value of 50 yen, carrying interest at the rate of 5 per cent. They are to be redeemed annually, the operations extending over 40 years. Thus five hundred bonds will be drawn for redemption every year, and to each yearly batch twenty-five prizes will be attached, namely, 1 prize of 500 yen; 2 of 200 yen; 5 of 100 yen and 17 of 50 yen. If is, in fact, a lottery, the prizes aggregating these subjects inspires us with profound 2,250 yen for every 25,000 yen of subscriptions, or 90,000 yes on the total loan of one million. In a word, the bonds carry interest at the rate of 5 per cent., and a further sum, aggregating 9 per cent. of the loan, is to be given away to drawers of prize numbers in the annual lotteries. Of course there will be a demand for bonds of such a character, but whether resort to financial devices of this kind is a wise step from the point of view of public morality many people will be disposed to doubt. However, it is after the fashion of the municipal loans of the city of Paris, and although two wrongs do not make a right, we presume that where the French lead, the Japanese can afford to follow. It was just such a scheme as this that the late Mr. John Robertson, formerly Manager of the Oriental Bank, submitted to the Japanese Government in 1880, as, in his opinion, the only practicable exit from the slough of an inflated and depreciated currency, Mr. Robertson had such faith in his plan that he asked for no direct consideration in the event of his advice being adopted,

between the value of that sum in paper notes at the time when his suggestion was formulated and the value it would have after his scheme had been in operation for five years. The Government turned its back resolutely on the programme. Resort to a lottery seemed, according to official views, to be the only thing wanted to drag Japan's credit finally into the mire. But the times have changed.

#### AN ELECTION QUESTION.

An interesting question has come up for decision in connexion with the recent elections in Tokyo. In the First Election Division of the city the successful caudidote was Mr. Takenouchi Ko, who stood in the Liberal interest. He polled 94 votes against Mr. Suyeyoshi Tadaharu, whose number was 93. It appears that among the ballots there was found one having inscribed upon it the single word "Suyeyoshi," in the place for designating the candidate, and the words "Chiujo Rihei" in the place for the voter's signature. Now the Law of Election provides that "every voter shall at the voting place inscribe upon the voting paper the full name of the person he votes for." The term used in the original is seimei, which signifies family name and personal name together. Hence, by writing "Suyeyoshi" only and failing to add "Tadaharu," Mr. Chiujo Rihei certainly did not comply exactly with the provisions of the Law of Election. On that ground his ballot was adjudged void, and the Liberal candidate came out at the head of the list by one vote. Had the partially inscribed ballot been admitted, the two candidates would have polled an equal number, and Mr. Suyeyoshi would have been returned in virtue of his seniority of He considers that he has been unfairly dealt with, and has appealed to the Tokyo Local Court through his counsel, Messrs. Hatoyama Kazuo and Kishimoto Tatsuo, the action being laid against Mr. Ishizuka Kosuke, Headman of the Election District. At first sight it appears that the Headman, who is ex officio Chairman of Election, had no choice but to reject the imperfect ballot. Looking a little more closely at the Law, howclearly defines the various kinds of ballots which are to be considered void. There are six enumerations, and not one of them can be said to bear directly on the case in point. The only words having any application are these :- " Ballots shall be void on which either the name of the voter or that of the person voted for can not be deciphered on account of erroneous characters used, stains, erasures, or injuries." In short, one plain object of the Law is to ensure that the ballot shall be written in such a manner as to obviate any mistake of identification. Now among the candidates for the First Electoral Division of Tokyo there was only one "Suyeyoshi." Indeed, it is claimed by Mr. Suyeyoshi's counsel that in all Tokyo there is only one person bearing the name of "Suyeyoshi" who is qualified to present himself for election. They therefore contend that the purpose of the Law was fully satisfied, and that there could not have been the slightest doubt as to the identity of the person for whom the ballot and handed over to him the difference it leaves one point out of the account.

The Law is not framed for the sake of the candidate or the election officials only. It is intended to secure the voter also against error. The Chairman of Elections, knowing that there is only one "Suyeyoshi" among the candidates, and that his personal name is "Tadaharu" may think that he is able to identify with certainty the proper destination of a ballot bearing the surname "Suyeyoshi" alone. But who can pretend to say that the voter's purpose was to designate "Suyeyoshi Tadaharu?" The voter alone can settle that point. He may have imagined that there was question of some other Suyeyoshi among the many bearing that surname in Tokyo, and it is conceivable that had he added the personal name, it might have been "Yukichi" or "Tarojiro" or anything else, in which "Tarojiro" or anything eise, in which case his ballot might have been cast for a "Suyeyoshi" not having the due qualifications for election. We may go a step further and imagine that although willing to vote for "Suyeyoshi Yukichi" or "Suyeyoshi Torajiro," he would rather and the Liberal caudidate than have voted for the Liberal candidate than for "Suyeyoshi Tadaharu" After all it seems safest in such cases to stick to the letter of the law. If a voter will not take such a modicum of trouble as to inscribe his ballot paper with the full name of the candidate he wants to support, he does not deserve to have a vote.

#### COTTON SPINNERS OF JAPAN.

It is plain that the cotton spinners of Tapan are awake to the perils threatening their business. There are more than eight hundred thousand spindles at work mow, and their production exceeds the clemand of the home market for the special counts that they turn out. They must look abroad, therefore, to fine buyers of the surplus, and the Chinese are, at present, their only customers. China they have to contend not only against formidable competition on the part of spinning mills established under foreign auspices, but also against un-favourable exchange. Labour in China is now cheaper than labour in Japan; the running expenses of the Shanghai mills are defrayed with currency which is also cheaper than Japanese money; raw material is obtainable more cheaply than it is in Japan, since it has not to pay export duty or freight, and the product of the mills is cheapened for consumers by the expense of the voyage between China and Japan. These facts constitute a serious handicap for Japanese mill-owners, and they have wisely decided to form a combination, so as to be able to command cheap capital, to employ competent experts and a skilled staff, to be in a better position to mani-pulate the market by avoiding com-petion among themselves, to reduce their expenditures by general organization, and to obtain raw material at low prices. Mr. Miyashita appears to be one of the chief promoters of the movement. He is prominent man in the business world, being closely connected with the Mitsui Bank, and with the Miike Cotton Spinning Mill, of which the Mitsui

FAREWELL DINNER TO MR. G. A. LOWTHER AND BARON DE CARTIER.

On the evening of the 22nd instant the members of the Tokyo Club gave a farewell dinner to Mr. G. A. Lowther, Secretary of H.B.M. Legation in Tokyo, who is about to return to England on leave, and to Baron de Cartier, Secretary of the Belgian Legation, who has been transferred to Peking, and will leave for his new post in a few days. Sixty-five members were present at the dinner, including all the Foreign Representatives, with the exception of Sir Ernest Satow, who was unfortunately unable to attend, nearly the whole of the staff of the Legations, the Vice-Minister of State for Foreign Affairs, and many Japanese friends. The Belgian Minister, Japanese friends. The Belgian Minister, M. le Baron d'Anethan, who is one of the Club's foreign Vice-Presidents, occupied the chair, having Mr. Lowther on his right hand, and the Vice-Minister of Foreign Affairs, Mr. Komura, who is the Japanese Vice-President, faced him, with Baron de Cartier on his right. After the health of the Emperor of Japan had been drunk, M. le Baron d'Anethan proposed the toast of

the evening in the following words :-I rise from my seat with a feeling of great emo-tion and pity in my heart. Pity for our guests of to night when I think of the numerous and abun-dant meals that during the last three weeks they have been forced to swallow—they have been break-fasted, tiffined, dired and no doubt they have also often supped far into the solemn hours of the night. Let us hope that their digestions will not have suffered nor that their sweet tempers will be spoiled by the truffles and champague that we have offered to them. We did it for the bestgentlenen. It was our only means of showing our regard, may affection and regret. Pity I also leel for you my fellow-givers of this feast. A few minutes ago I saw you husyant and gay and now I gaze on sad and serious faces. I grieve for you that you have to listen to my speech which, compared to those yofs former Vice-President accustomed you to, must sound halting and weak. He indeed was a Vice-President among a thousand, a capital fellow and a good and dependable friend. All of us who here to night can count onselves as his friends must feel as I do, that Mr. Lowther's departure from among us will leave a void that is not easily filled. He says he is going home on leave, but we all know what that means, when a brilliant Secretary takes his departure from a have suffered nor that their sweet tempers will be not easily med. He says he is going none on leave, but we all know what that means, when a brilliant Secretary takes his departure from a post, and we can hardly hope to see him back amongst as again. He will return pershaps at a future date, but then as Minister. The odds are, it seems to me, that one day we shall see him representing nobly his queen and country in Japan. When that day comes I can predict that he will be very happy, judging by my own sentiments and those of my colleagues who had previously occupied the position of secretary in their younger days. With regard to our other guest, Mr. de Cartier, it is not my place to say all that is in my mind to night. In losing him I am losing a charming colleague and first ate secretary. He has been but five years in the service but those few years have passed brilliantly for him. At each post he came—he saw—he con quered, leaving always behind him a tangible trace of his personality and many regrets. Like his queied, leaving always belind this a tangible trace of his personality and many regrets. Like his colleague Mr. Lowther he has made many friends here and it is indeed a blow to our small community to lose two such good fellows within a few days of each other. And now gentlemen I must not try your patience longer—you have been indeed already wonderfully patient and forbearing. deed already wonderfully patient and following. There is only one thing more I ask you to do and that is to fill your glasses and to join me in drink ing with three cheers a bumper to our guests of this evening.—Hip! Hip! Hurrah!

The toast was drunk with hearty cheers and great enthusiasm. Mr. Lowther.

flattering words in which you have proposed my health, and you all, gentlemen, for the very cordial manner in which you have drunk it. I am fully aware that it is to no merit of mine that I owe the aware that his been done me, but to the warm honour that his been done me, but to the warm and kindly cordiality which distinguishes the members of this Club. A diplomatist for some reason or another is regarded as a person who is in fact somewhat of a hand. The unkind definiin fact somewhat of a feard. The intkind definition has been given of him that he is a gentleman
sent abroad to lie for his country. In general I
deny the soft impeaclment, but as regards myself
to night I must admit that I feel I am rather a
feard. The compliment of a Club dinner is one
that is usually reserved for departing members
who have no immediate intention of relating, but
I have, as I am going on leave—well deserved or
not it is not for me to say—and shall return
in the winter, so that I feel that I am accepting
this dinner under somewhat false preferees. this dinner under somewhat false pretences. Your Vice-President has been good enough in cefer to the duties I fulfilled when I occupied the honourable position he now holds. I was fortunate enough to be in that position during a year tunate enough to be in that position during a year which for the Club proved a very satisfactory one, but I lay no claim to having expended any exceptional energy. I was ably supported by active members of the Committee both Japanese and foreign and there were other factors that assisted us. Notably perhaps the extreme popularity of that very popular institution of the Far East, the Bar. When I first came to Japan I was told all sorts of things which I have since found to have been not quite accurate. Fur instance, I was told that a junikisha was a delightful mode of conveyance, I have not found it so, but that I attribute to my a junikisha was a delightful mode of conveyance, I have not found it so, but that I attribute to my own excessive proportions. I was told that I should find in Japan a delightful climate. Gentlemen, some times in the month of September, when the rains descended and the winds blew for days and days together I have been ted to wonder whether was informant was a strictly truthful person or my informant was a strictly truthful person or whether he was, what is vulgarly called, pulling my leg; on the other hand I was told that there was some thing so peculiar about the wind and the dust of Tokyo that those who arrived with the dust of Tokyo that those who arrived with the tempers of angels became sullen, morose and disagreeable.—I cannot say claim to having evented the temper of an angel but I don't feel that I have suffered in that direction and when I look sound the table to night I can only say that not one of you has been attacked by these strange winds and dust, for I have never met a community more genial and good tempered. I was told that in this town of magnificent distances, social intercourse was a matter of the greatest difficulty. I have not found it so, I have no doubt this Club is in a great measure responsible for this. The world is divided into two classes of persons, those who cannot tolerate their own society this. The world is divided into two classes of persons, those who cannot tolerate their own society and those who adore it. I belong to the former class. And this reminds me of a story of a friend of mine whom I met on the Boulevards in Paris one day. He invited me to dine with him quielly that night, adding "You know, I would sooner dine with a dog than dine alone." I accepted the contreous invitation and enjayed myself. The other class of persons semind me of a chief of mine who throughout a long career had never given a ball. He was at last induced to do so, and all went well till, in the small hours of the morning, he was accosted by a youthful guest who did not ecognize him as the best and thinking he had found a sympathetic spirit accosted him with the temark: "This is an awful hore, is it not." "Yes," replied my chief, "but you have the advantage of me." "How so?" said the young man, "Because you can go away but I, as host, must remain." Gentlemen, in life in general, in love, and even at Chib Dinners, middle age must make way for youth and so I must make way for my friend and colleague M. de Cartier whose health you have also drunk. I have regarded it as specially graifyling that our names should have been joined together te-night, for M. de Cartier, was not only a colleague, but a friend of mine before either of us came to Japan. But I must be brief, but pray do not judge of my gratitude for the honour you have done me by the brevity of my speech. I feel it very highly and shall carry away with me the pleasantest recollections of the members of the Tokyo Club to which I wish every possible success. sons, those who cannot tolerate their own society

Baron de Cartier spoke as follows:

Family are the principal shareholders.

The Extrime Orient reports an explosion of fire-damp at Kebao coal-mine, whereby eleven convict labourers were killed on the spot and seven seriously wounded, some badly as to live far greater embarcassment in thanking you, liave no chance of surviving.

TISING to reply, said:

Mr. Vice-President, and Gentlemen,—It which seem to be the happy privilege of the members of the Tokyo Club. Furthermore M. Lowther in this brillant speech has taken such advantage of everything that was to be said, and besides has so well expressed my own sentiments towards the Members of the Club, that I really feel at a loss of the find or say anything new and original. So I think there is the find or say anything new and original. So I think there is the find or say anything new and original. So I think there is the find or say anything new and original to conclude this long UNIVERSITY OF HIMMORE AT GENTLEMBN,-Never before have I more tespeech and to thank you for the many tokens of friendship I have received from you all, and to assure you that my Club recollections of Tokyo will always rank amongst the very best. Gentlemen, I have the bonour to drink to your very best health and prosperity.

#### THE DUSHISHA.

The Doshisha directors have been successful in their application to have the Ordinary Middle School of the institution placed on the footing of an officially recognished public school. In other words, they have secured for students in the School the privilege of exemption from conscription up to the age of twentyeight. In order to obtain favourable consideration for their application, they were obliged to bring the curriculum of the School into strict conformity with the official standard, and to make a solemn declaration that all religious teaching is excluded from the course. We do not understand how such a declaration could have been conscientiously made, seeing that the School is part of an institution founded and endowed by Christian men and women as an instrument for the spread of Christian morality. been suggested by correspondents in these columns that the Government should have rejected the application on the ground that the Trustees of the Doshisha had broken faith with their American supporters in the matter of religion. We are of opinion that the Government could not reasonably have taken any step of the kind. The Government has no concern with religious questions or disputes. It would be guilty of most improper inter-ference if it undertook to pass unsolicited judgment as to the rights and wrongs of be doing precisely what the Government is specially careful not to do, meddling in matters of religion.

The Doshisha question is attracting much interest at present among for-eigners. Our readers have been fully informed of the action taken by the Japanese Trustees of the institution, and will, therefore, be glad to hear what the present President, Mr. Yokoi, has to say on the subject. A member of the Osaka Mainichi's staff interviewed him recently, and the following is the gist of his explanation, as translated by the Japan Times :-

To refutation of the reproach that the Doshisha has sacrificed its principle in order to secure the privileges of connection with the Government schools by amending its principal rules in comformity to the national measures, Mr. Yokoi diew formity to the national measures, Mr. Yokoi drew a comparison between the history of the institution and the guiding principle it will pursue in the future. There were two different elements in the composition of the Doshisha—one being the cooperation and pecuniary assistance of foreigners and the other those of Japanese, Foreign co-operators did not look upon the institution as a more instrument of propagating the Christian religion, as was shown by various evidence; while Japanese patrons evidently intended that their pecuniary donations to the institution might cone to the development of education in Japan, these premises, Mr. Yokoi concluded that tibute to the development of education in from these premises, Mr. Yokoi concluded that the Dishisha was not a purely mission school. He believed that it was an appropriate step towards securing general advantages to adapt the principles of the institution to the national educational measures; and that to do so was really to perpetuate its principles. He admitted the appropriateness of the arrangement on the part of the Automation with

The Doshian injury to its religious principles. The Doshisha did not abandon its Christian principle because of the exclusion of the Scriptures from its cause of the exclusion of the Scripturas from its class-norms; it had ceased to exist in name but not in deed. Furnished with funds of over half a million, the Doshisha could pursue its end in view directly and independently, but, with the present financial resources, the institution was under the necessity of adopting some suitable means to gain its end. Such a procedure meant the maintenance of the institution, and that in turn was synonymous with the continuance of its principles.

We do not find that Mr. Yokoi touches the real point at all. No one has contended, so far as we are aware, that the Ordinary Middle School of the Doshisha shall be a "purely Mission School," if by that term is meant a school having for its prime purpose the propagandism of the Christian creed. The contention is that the teaching of Christian morality should form part of the curriculum of the school, and that, unless it does form part of it, the school ceases to be the kind of institution for the establishment and endowment of which Christian people in the United States contributed large sums of money. Unless we mis-understand the conditions under which private schools are admitted to the same class as public schools and granted the same privileges, the Director of the Doshisha Jinjo Chiu-gakko has given a pledge that no religious instruction of any kind shall be imparted at the school. If such a pledge has been given, it is useless to contend that "no injury has been done to the school's religious principles." Either the pledge has not been given in good faith, or the paramount object of the school has been abandoned. Either the Japanese Authorities are the victims of a deception, or the American Christian contributors have been deceived. We can not see any exit from that dilemma. If Mr. Yokoi has an intelligible explanation to offer, the public will be delighted to listen to it, for no one desires to pass an unfavourable verdict. As for the excuse that the school's existence was at stake, we have only to say that the demise of a hundred schools would have been better than the preservation of one by means such as seem to have been adopted.

#### MR. KIRKWOOD ON FORMOSA.

The Kokumin Shimbun writes thus: "We have already published some remarks of Mr. Montague Kirkwood, Adviser to the Judicial Department, who, in compliance with instructions from our Government, recently travelled round the colonies in India, Burmah, Ceylon and the Malay Peninsula, inquiring into the causes of the success of Great Britain's colonial administration in those place, and subsequently visited Formosa to inspect the state of affairs in our new territory. We learn that, as the result of his investigations, the following may be regarded as the principal reasons of England's success in colonial administration :- First, she exercises the greatest care in choosing officials for duty in the colonies; secondly, she is cautious not to violate the ancient customs of the people; thirdly, she gives the very privileges which the Convention had people local autonomy and makes them already secured to her, but which she was their own guards; fourthly, she issues pledged not to openly profit by until an laws and ordinances of the most succinct opportune time presented itself. The and lucid character; fifthly, she studiously fact is that the "Cassini Convention" was

affection, of making them contented, and of keeping the public expenditure strictly within the income. Undoubtedly that is the correct view. There is nothing in the nature of chance in England's colonial successes. It can not be questioned that there are here many points which might be advantageously considered with reference to Formosa." The Kohumin then goes on to urge that measures should be taken to secure special qualifications in civil officials for service in Formosa, that they should first be appointed as probationers to study their duties, the language, laws and customs of the country, and that they should then undergo a second examination. Having passed it successfully, they should receive good pay and be able to look forward to generous pensions, and should be required to remain in office for at least fifteen years unless physically incapacitated. The number of officials now serving in Formosa might, also, be largely diminished. All the remainder of Mr. Kirkwood's advice is strongly endorsed by the Kokumin, and its thorough adoption is earnestly recommended.

#### THE CASSINI CANARD.

Nothing could be finer than the pertinacity of the believers in the "Cassini Convention." The Kiao-chou incident ought to have shaken their confidence, but even if it survived that ordeal recent events should have dissipated it utterly. Human nature, however, especially the phase of human nature represented by journalists, finds nothing so painful as to confess an error. The North-China Daily News, which gave the "Cassini Convention" to the world and has ever since stood sponsor for it with noble obduracy, now offers this interpretation of Russia's latest doings:-Russia has demanded an immediate fulfillment of the Cassini Convention." not that delightful? By the "Cassini Convention" China undertook to lease Kiao-chou to Russia for 15 years, but stipulated that Russia should not enter into immediate possession in order to obviate the danger of exciting the jealousy and suspicion of other Powers. Just a year after the conclusion of the "Convention," Germany came along and seized Kiao-chou, and China gave her a ninetynine years lease of it. It had already here leased to Russia but the "Convention of the series of the been leased to Russia by the "Convention" but Russia ultered no word of protest. The same "Convention" gave Russia the right to use Port Arthur and Talien as military bases. The "Conven-tion" was supposed to have been signed at the end of September, 1896, and in October, 1897, Russia asked China's permission to use Port Arthur during one winter as a naval station. She had already acquired the right to use it at all times, yet she was obliged to obtain special leave to use it temporarily | And now, finally, we have Russia coming forward and asking at a most inopportune time for the very privileges which the Convention had the appropriateiess of the arrangement on the part of the Authorities, that the connection with the Government schools, together with the privileges it involved, should not be granted to schools which explicitly proposed to be considered on religious principles. This was necessary to unify the national measures for education. In his opinion this concession on the part of a religious school did not necessarily imply Digitized by

URBANA-CHAMPAIGN

#### THE CHINESE LOAN.

The German moiety of the Chinese loan has been fully subscribed, but the British portion seems to have fallen somewhat flat, and, according to telegrams received yesterday, the whole issue has not been covered. From a purely financial point of view the opposite result might have been expected, nor is it altoether easy to detect the cause of the lifterence. Of course the explanation difference. most readily conceivable is that the British public do not feel easy about China's future, and are disposed to think that her fate will soon be put to the arbitrament of the sword, Russia and France fighting in one camp against Great Britain in the other. It is difficult for people like ourwho see Far-Eastern things in a close foreground, to believe in the immence of any such danger. Russia and France seem to be laying the foundations of claims for future building, rather than getting ready to construct the edifice at once. They are delimiting their prospective spheres of influence and will be content for the present with moral effects. That is what the situation suggests to us at any rate. For neither Russia nor France is prepared to fight in the Far East just now. The outbreak of war would limit them at once to the squadrons already in Eastern waters, and would leave them practically without coaling stations or dockyards. Of course they may be thinking of what they could do in the European arena. That is a hypothesis opening up a very different class of considerations, not, however, more consistent with circumstances, so far as we can see, than the idea of a contest confined to the Far East.

#### FORESHORE RIGHTS AT THE OPEN PORTS.

The Times, commenting upon the question of foreshore rights in Japan, falls into an unfortunate error. With reference to Yokohama, it says:—"At the time the land forming the foreign settlement was set apart, the frontage there was a shingle beach over which a road was gradually formed. The area of the concession was marked off in lots which passed into private ownership by public sale. Front lots commanded, as water lots, higher prices than lots standing farther back; purchasers being under the natural impression that they were acquiring frontage rights. From this position of security they were awakened, first by the the construction of a harbour-works office and observatory on reclaimed land in front of the original water line." The impression produced by this statement is that, when the foreign settlement was staked out, the Japanese Government, or, at any rate, the Japanese owners of the land, sold the site to foreigners, and received prices that varied according to the propinquity of the lots to the foreshore. If that were the case, a moral obligation not to deprive the them and incurable, medical experts have now water lots of their sea-frontage would have devolved on the sellers of the land. But the transaction was not of the nature described by *The Times*. The whole of the original Foreign Settlement, extendfrom the sea in front to Otamachi at the back, was assigned to foreigners without payment. It was not until emensions of lepers from perpetual imprisonment in Original from

Digitized by

the Settlement being found necessary, the isolated settlements where persons were negotiated by special conventions in 1864 and 1866, that the practice of putting up lots for sale came into operation, and even then the funds thus accruing were either devoted, by explicit stipulation, to municipal purposes, or were applied to defray the expenses incurred by the Japanese Authorities in reclaiming the The sole distinction between water land. lots and rear lots was that for every 100 tsubo of the former buildings to the value of 150 yen must be created, and for every Too tsubo of the latter, buildings to the value of 50 yen. In short, the present Bund lots having passed into the possession of their original foreign holders without pecuniary consideration, no claim can now be based on the conditions or circumstances of a sale which never took place. It is generálly admitted now, we believe, that the terms upon which the sea lots were acquired in the first instance do not confer any legally recognisable title to water frontage. During the 39 years that have elapsed since then, however, vested interests of a very tangible character have probably arisen in many cases, and any arrangement which ignored those interests could scarcely be considered equitable.

#### LEPROSY.

An international congress met in Berlin at the close of last year to discuss the subject of leprosy, which appears to be spreading to such an extent as to demand special scientific attention. The subject is particularly interesting in Japan, where this awful disease has had a home for many centuries. Speaking broadly, there are two forms of leprosy; one ending fatally in 9 or 10 years from the time of seizure, the other requiring about 20 years to finish its work. The outward evidences of the former are brownish and red spots round the eyes and on the backs of the hands. The spots swell gradually into knotty growths which finally develop in the internal organs. In the second type, large boils appear, leaving white spots where all sense of feeling is lost, so that burning with hot irons causes no pain. Loss of hands, feet, eyes, and nose are not infrequent results of this form of the malady. The Berlin congress arrived at these conclusions :-

these conclusions:—

"The producer of leprosy, as determined by the modern scientific methods of research, is bacillus lepta, known to the scientific world fur the period of twenty-five years through the investigations of Neisser and liansen. All are agreed that only a human being can be the bearer of this bacillus, and it is a fact that leprosy is contagious. Every leprous person is a source of danger to those around him, and the danger grows the more closely the patient associates with others and the worse the general sanitary conditions are that surround him. For this reason the existence of leprosy is especially dangerous among the power classes. However, it can not be deaied that the transfer of this diseause to people in better circumstances has been observed in more than one case. The opinion that leprosy is harditary has been losing adherents in recent times, while the view that it is contagious has gained advocates. As yet no method of treatment has been found that is effectual in cases of leprosy. Leprosy is incurable."

decided that it is not hereditary. been demonstrated again and again," writes Dr. Stinde, summing up the most recent conclusions on the subject, "that the descendants of leprous parents ing from No. 1 (Yes-ichi) to the Creek and are perfectly healthy and remain so." We

afflicted with the disease have to be con-fined. That consideration derives new importance from the fact that leprosy, which in the Occident used to be limited to Russia, Scandinavia, and Iceland, has now found its way into eastern Prussia. Dr. Stinde's essay, from which, as trans-lated by the Literary Digest, we take these details, concludes thus :-

these details, concludes thus:—

The ways and means in which leprosy is carried from place to place has been made the special subject of study by Sticker, who, as member of the German committee, went to India in late years to study the plague there. His views were warmly approved by the congress. According to his view the part of the body from which all leprous persons during their entire sickness send forth the greatest number of bacilli, and do so with the greatest of regularity and in great abendance, is the nose. On the other hand, it was discovered that the part of the healthy body which is most ready to receive these bacilli, and where the contagion in nearly all instances takes place, is again the nose. Just as tuberculosis begins at the endsof the lungs, so leprosy begins at the ends of the nose.

The congress agreed to agitate for the establishment of leprosy colonies wherever needed. This seems the only means of staying the destruction caused by this "eldest daughter of death," as leprosy is termed in the original text of Job.

#### THE "MAINE" AFFAIR.

President McKinley's resolve to observe temporary secrecy with regard to the finding of the Commission appointed to investigate the Maine catastrophe, is ominous. Had the Commission decided definitely in the sense of an accident, the President would not have lost a moment in making the decision public. The inference is plain. Then we have a Spanish semi-official refusal to endorse the idea that the cause of the explosion was external to the vessel. In everything points at present to foul play. Yet we fail to see why the event should precipitate war. If the explosion was the work of insurgents it must have been contrived with the express object of embroiling Spain and the United States. It would be a miserable result that such a plot should succeed. If, on the other hand, the guilt is with the Spaniards, no one can imagine that officialdom had any concern in it. A fauatic must have been the agent, and States are not held responsible for the deeds of their fanatical subjects or citizens. An idea has been mooted and apparently credited that the ship was blown up by a mine which could not have been fired without access to the battery and without knowledge such as an official expert alone would possess. But how could the vessel have been anchored over a mine. Is it conceivable that she was deliberately invited to occupy such a berth by the harbour authorities?

#### KOKEA.

There is a rumour—whether trustworthy or not we can not tell-that the Russian Government has recalled M. de Speyer and that he will not proceed to Peking. If such be the case, the inference is at once suggested that M. de Speyer exceeded his instructions, and that the recent fiasco in Soul was brought about by his precipitancy. That was our own idea precipitancy. originally, and it is certainly the easiest way of explaining the situation. But M. de Speyer's despatch is very difficult to reconcile with any hypothesis of the kind. Further developments will doubtless help us to a solution of the puzzle.

#### THE FAR-EASTERN SITUATION.

DEUTER'S telegrams certainly furnish Regrounds for considerable uneasiness, if it be not necessary to discount them largely. They attribute to France an attitude which scarcely admits of any interpretation except a deliberate attempt, in combination with Russia, to strike a heavy blow at British interests in China. Two of the demands said to have been addressed by the French Government to Peking are natural enough: those relating to the extension of a railway from Touquin into Yunnan, and the leasing of a site for a coal depôt on the coast of Kwantung at the head of the Gulf of Tonquin. If there be such things as "spheres of foreign interests "in China, the Gulf of Tonquin lies within France's sphere, and if she wants a coal depôt on the northern littoral of the Gulf, no Power except China has any title to say her nay. So, too, of the Mang-hao-Yunnan line. She has long entertained the project of tapping southern and eastern Yunnan from the upper waters of the Songka River, and she has just as much right to pursue that aim as England has to seek railway communication with Western China via Burmah. But the remaining French demands are of a very different complexion. She asks China to guarantee that no part of the provinces of Kwangtung, Kwangsi, and Yunnan shall be ceded to a Foreign Power. What does that mean? Considered cursorily, it appears to be analogous to England's recently obtained guarantee that no part of the Yangtze Valley shall be alienated. But in truth the two conditions are radically different. England's object is to secure the free navigation of China's great waterway, which, with its tributaries, affords access to some sixteen provinces The closing of the Yangtze to British vessels would involve the ruin of British trade with China, and England is determined that it shall be kept open to the ships of all nations and that no foreign Power shall acquire a position from which its navigation could be interrupted, or the freedom of trade on its waters hampered. A guarantee with regard to the three provinces of Kwantung, Kwangsi, and Yunnan can not be construed in any similar sense. It is plainly an attempt to establish a "sphere of influence" with a view to future contingencies. In short, the recent proceedings of Russia and France are obviously directed to the dismemberment of the Chinese empire; Russia taking Manchuria, with, perhaps, the vast project of gradual extension thence in westerly and northerly directions until all the provinces north of the Yellow River, together with Mongolia, are absorbed; France appropriating the three southern provinces, and England being left to work out her destiny in Central China along the Yangtsze Valley, sandwiched between Russia and France. It is a stupendous programme,

Digitized by

but the demands formulated from St. Petersburg and Paris are unmistakable pointers. England, however, already possesses an island lying off the coast of Kwangtung, where she has created the Liverpool of the East. She also possesses a portion of the mainland of Kwangtung, and has been for some time openly thinking of asking for more. She has, further, large tradal operations with Canton, and it was through her enterprise that the West River was opened, which runs through two of the very provinces included in the French demand. It must be presumed that England intends to keep the West River open to the trade of the world just as she intends to keep the Yangtze open. The establishment of French control in Kwangtung and Kwangsi would mean the ruin of Hongkong and the exclusion of British commerce from Canton and the whole of the regions watered by the West River. That would scarcely be tolerable.

With regard to the third demand-the concession of the exclusive right to work mines along the route of the railway from Tonquin into Yunnan-China is precluded by treaty from granting anything of the kind. She has pledged herself not to give to any one Power privileges that she does not extend to all alike. Hence, if France has made such a demand, she has done so in defiance of the Treaty rights of other States. That is a question in which all Western Powers are interested. But the demand relating to the posts is aimed direct at England. Sir ROBERT HART is now in charge of the Chinese postal system. England, of course, had nothing to do with his employment for that purpose; Sir ROBERT HART himself, in choosing the personnel of the Customs and Postal services, makes no attempt to confine his appointments to any one nationality, whether British or what not. It has been stipulated that until the last loan raised by China is paid back, a British subject shall remain at the head of the Customs, since their revenue is pledged as security for the loan. That is a legitimate and perfectly natural arrangement, not dictated by any sentiment of international rivalry or jealousy. But France's demand aims simply at getting the postal business into the hands of Frenchmen qua Frenchmen. It is a distinct effort to strike a blow at British influence and prestige, arbitrarily taking out of the hands of a British subject an enterprise organized by him and conducted in such a manner that a change to other control would be merely capricious. If France has really preferred the demands attributed to her by the telegraph, she is evidently working in combination with Russia for Great Britain's discomfiture.

#### RUSSIA IN KORKA.

RUSSIA'S latest move in Korea is exceedingly difficult to explain. The telegraph seems to be transmitting the truth in this case. The St. Petersburg Government has really signified its intenof withdrawing its financial and military experts lent to Korea. Moreover, we are informed that when Mr. DE SPEYER propounded the question which has been followed by this strange result, he did not accompany it by any veiled menace-as was originally reported-but intimated rather that if Korea signified her desire to dispense with the devices of the experts, measures would be taken for their removal. That, of course, may have been intended to imply a threat, but, judging by what has ensued, such an inference is scarcely reasonable. What are we to think of it all? Russia seemed to be seated firmly enough in the Korean saddle. She was forcing the pace a little unwisely, no doubt, but it certainly did not appear that she was riding for a fall, or that a fall was imminent. Suddenly, however, her Representative challenged the Korean Government to make a declaration of sympathy or autipathy, and when the Government chose the latter, Russia seems to have said :- "Very well, then; since you don't want me you shan't have me. I'll leave you to your own devices." But that is very like a fiasco. It is as though Russia had voluntarily manufactured an extinguisher for her own head, and one does not expect sentimental selfeffacement of that kind on her part. Several explanations offer. The simplest is that Mr. DE SPEYER made a mistake, and that the Russian Government deemed it a point of dignity not to attempt to correct the situation. Russia's line from the first had been that she merely complied with Korea's request in sending drill-instructors and financial advisers to Soul. Possibly when Korea declared publicly that she wished to get rid of those gentlemen, the CZAR considered that to force their continued services upon the Koreans would not have been the part of a great Power. Most people will decline to believe, however, that Mr. DE SPEYER blundered into an impasse. They will think that he acted with eyes fully opened to the consequences and under explicit instructions from St. Petersburg. If that were so, it would appear to follow that Russia has changed her attitude towards Korea, and that she is disposed to step quietly out of the peninsula. But why? Because she finds it a hopeless place? Because experience shows her that she can make nothing of it? Well, but she had at least posted herself in the position to profit by an opportunity, and there was no reason why she should throw away chances acquired with so much trouble. We can not believe for a moment that she has abaudigiechtlisosteld in disgust or despair.

Patience and tenacity have always been characteristic elements of her policy. There is another explanation. It is that circumstances have rendered Korea comparatively useless to her. "If Vladivostock is to be the terminus of her trans-Asian line, it is essential that Korea, which abuts upon a long stretch of the railway, and from whose harbours her maritime communications with Vladivostock could be commanded, should be kept from passing into the possession of any possibly hostile State. But if Shingking is to belong to Russia and if the terminus of the railway is to be in the Liaotung Peninsula, then Viadivostock loses nearly all its importance and Korea ceases to have any special value. There is nothing incredible in such a change of policy except its precipitancy. Can we suppose that Russia has been working along purely experimental lines for the past three years, and that she sees her way clearly only now? It is difficult to be so credulous. Frankly speaking, we find ourselves unable to fit any working theory to the facts.

#### THE DOSHISHA QUESTION.

CINCE the summer of 1896 the Doshisha question has attracted much attention. The Doshisha is a college which was started in Kyoto by the late Mr. NISHIMA -or "NEESIMA," as his name is often written by foreigners. He obtained funds for the purpose from American sources, the explicit intention of the donors being that the institution should be conducted on the lines of Christian morality. Richly endowed with American money and assisted by a number of highly educated American gentlemen who worked as professors and teachers, the Doshisha flourished and acquired a high reputation. But there came a time when freedom of thought, newly born among the Japanese, ceased to be compatible with the comparatively rigid views of the religious Society having direct relations with the college-the American Board Mission. The Japanese Trustees, not considering themselves pledged as educationists to any definite syllabus of Christian doctrine, saw no reason why professorial chairs should not be occupied by men of unorthodox views : the Foreign Faculty objected to anything of the kind. That seems to us to be the fairest and most compendious statement of the case. There were, doubtless, minor causes of friction, but the fundamental difficulty appears to have been what is here set down. By and by, the schism grew so marked that the American Board deemed it necessary to send to Japan a special Committee, charged with the duty of investigating the facts. The this point it could not justly be alleged that first business of this deputation being to the Doshisha had ceased to be tributary to obtain assurances such as would satisfy the growth of the Christian religion. American subscribers that they could still Christianity still continued to be the conscientiously contribute to the support foundation of the moral education furni- course which they have apparently taken. of the Doshisha, the Committee required shed at the institution. But, on the 3rd

Digitized by GOOG

endorse a certain declaration of faith. which exposes them to the gravest sus-The Trustees refused. They said that in picion. They elided from the Constitution their opinion the consequence of the proposed step would be to confound religious propagandism with secular education, eyes of the public a character which its Briefly stated, the meaning of the elision said, at the same time, that, speaking as the foundation of the moral education individuals, they did not hesitate to affirm furnished at the Doshisha's affiliated capacity as Trustees of an educational institution they must decline to make such a profession; and they added that, with regard to the moral atmosphere of the College, seven out of the nine Trustees two were graduates of the College; that all the Deans of the Schools, with one exception, were professing Christians, as Sunday, at which the members of the Faculty and the Students were required Bible was offered to all the students. In propagandism, but simply education permeated with the spirit of Christianity. Now it is emphatically denied on the part of the American Board that religious propagandism was ever the purpose of the Doshisha. The college was intended not to be an instrument of propagandism but and the Trustees. But in practice the Trustees allowed their breadth of view ber of the Japanese Faculty showed offensive antipathy to the missionaries, and that also likely, if unrestrained, to imperil the character of the College. Under these circumstances the connexion between the Board and the College was severed, the latter ceasing to receive any further pecuniary support from the former.

Earnest people could not but regard the incident with profound regret, and foreign critics, knowing the kind of men sent out by the American Board to assist at the Doshisha, were constrained to conclude that the fault lay chiefly with the Japanese Trustees and Faculty. Nevertheless, up to

the Trustees of the College to publicly of last month, the Trustees took a step a clause providing that all schools of the Doshisha Society must have "Doshisha" as a part of their name, and must be governand thus to impart to the Doshisha in the ed by the principles of the Constitution. founder had not intended it to bear. They was that Christianity need no longer be their belief in the articles formulated by schools. The Trustees have not declared the Committee, though in their collective that they intend to abolish that kind of moral education at the schools, but their action scarcely admits of any other interpretation when we consider its ostensible purpose. What is that purpose? The question brings us to not the least were members of Kumini Churches and interesting part of the story. Under the present educational system of Japan the students of all schools classed as "Middle " or " Upper" enjoy the privilege of were also a large majority of the Japanese exemption from military service up to professors and instructors; that chapel their twenty-eighth year. No missionary services were held twice a week and on school has hitherto been admitted to this classification, and it was to obtain admission for the Doshisha's principal school to be present; and that instruction in the that the Trustees laid aside its nominally Christian affinities. Such is the stateshort, they took up the position that the ment made recently in these columns by object of the Doshisha was not religious the Rev. Mr. DAVIS, who was for 21 years a Professor in the school. It amounts to an accusation of the gravest character against the Trustees, for they are placed in the position of having committed something very like a fraud. The funds needed for establishing and endowing the Doshisha were contributed on the distinct consimply to be tributary to the growth of dition that they should be used for religion. Hence there existed no radical purposes of education on the lines of difference of theory between the Board Christian morality. The Trustees have no more right to dispense with the teaching of Christian morality in a Doshisha to exceed the limits of liberty regarded school than they have to obtain money by the Board as permissible, and there under false pretences. Philanthropic Ameseems to be no doubt that one mem- ricans furnished funds to build and support an institution where not merely intellectual education but also moral education the Trustees themselves began to assume founded on Christianity should be provided towards the Board an attitude of in- for Japanese youths. They would never dependence which appeared to the latter have given the money had they anticipated not only improper and ungrateful but such a step as that said to have been now taken by the Trustees. It may be urged on behalf of the Trustees that the Doshisha is no longer in receipt of pecuniary aid from America, and that, in order to make it self-supporting, expediency must be consulted, not moral obligations alone. It may also be urged that from the time when the American Board decided to dissociate itself from the institution, the responsibility of the Trustees towards the original foreign contributors underwent a radical change. If the Trustees rely on these or any other arguments, they should lose no time in making them public. As things now stand, there can be only one verdict : they should rather have closed the Doshisha altogether than adopt the

#### SCHOOLS AND PRIVILEGES.

I N connexion with the subject of the Do-shisha and the application made by its Faculty for official recognition, it may be applies to all religions. A school where useful to set forth some facts which do instruction is given in the Buddhist or not appear to be generally known. Public Schools in Japan are classed as Normal, Upper Middle, Ordinary Middle, and Primary. To the first three classes short, religious training is excluded from the privilege is accorded that students the curricula of all educational institutions entered in their books are exempted from recognised officially in Japan. That is military service up to the age of twenty-Under ordinary circumstances every Japanese youth becomes liable to conscription at the age of nineteen, and, if drafted into the service, has to serve with the colours for three years, a fatal interruption, of course, to the completion of any studies in which he has engaged. He may, indeed, escape with one year's service-and that comparatively lightby entering his name as a volunteer and paying a sum of 100 yen, but we are not speaking here of special exemptions: our concern is with the general rule. is plainly an immense boon to a lad to be sure of escaping conscription until he reaches the age of twenty-eight. By that time he may reasonably hope to have embraced some profession or attained some position in virtue of which final exemption from military service will be procurable, or he may look to be in possession of funds sufficient for the purchase of a volunteer's privilege. At all events he is sure of being able to complete his education, which consummation, we need scarcely say, is the Government's purpose in granting the privilege. By the term " public school" is to be understood an institution having a fixed course of studies, receiving a certain measure of State aid-whether from the Treasury or from communal funds-, and subject to official inspection.

It is evident that if the privilege of exemption from conscription were limited to "public schools," private enterprise in the field of education would be fatally handicapped, for students would unhesitatingly prefer schools to which a privilege so valuable was attached. To prevent injurious discrimination of that kind, it is provided that any private school having a curriculum in strict conformity with the standard prescribed by the Educational Department shall be entitled to rank with a public school of corresponding curriculum. In order to obtain such recognition, application must be duly made to the Department, and a solemn engagement must be given that no religious teaching enters into the scholastic course, or shall enter into it so long as the privilege is enjoyed. Naturally no misobject of missionary schools may not be (\$20,000) and "Surplus from last year" (\$508,t60). The "Government Tax" is morality is taught at them all, and they

are thus incligible to be entered in the Department's list. It should be clearly understood, however, that this rule is not directed against Christianity alone. It Shinto creed finds itself just as effectually debarred from the privilege in question as does a Christian missionary school. In is taken off in view of possible failures of the point to which we would draw attention. Modern intelligence has laid down the broad principle that no State aid should be given to any school unless it is conducted on strictly secular lines. That] principle is based on the obviously just consideration that public money, which is contributed by persons of all shades of belief, can not properly be appropriated for the teaching, or inculcation, of religious doctrines which may be obnexious to many of the contributors. The whole question, as we understand it, turns upon one pivot-pecuniary aid. On the other hand, it is equally incontrovertible that there exist great numbers of people who condemn all school teaching unaccompanied by religious instruction; people who do not believe that there can be any education in the true sense of the word unless it includes an element of religious morality. The Japanese system seems to discriminate unfairly against such people. Its practical effect is that, whereas all persons willing to have their children educated without religious training, are granted twenty-eight years wherein to complete the work, parents who think that secular learning divorced from religious morality is not sufficient for a boy's welfare, are allowed only nineteen years to educate him. If to place a private school officially in the same rank with a public "middle school" involved any contribution of State or communal funds towards its maintenance, the case would be different. But where there is question only of exemption from military service, we fail to see why a youth whose education has comprised religious training should be placed at a very serious disadvantage as compared with a youth whose education has been purely secular.

#### KOREAN FINANCE.

The Korean Budget for 1898 is given in the pages of the Korean Repository. The income is put at \$4,527,476, the expenditure at \$4,525,530, the surplus on the side of the former being less than two thousand dollars. That looks like a close fit, but the fact is that the revenue is estimated on a very low scale. Its principal item is "Government Tax," which furnishes \$3,779,316, the remainder being made up of "Miscellaneous In-

Land Tax	2,227.758
House Tax	229,558
Miscellaneous	24,000
Attears of Taxes	358,000
Imseng Monopoly	150,000
Gold Mines	40,000
Customs	730,000

A curious point is to be noted with respect to the first two items in the above list. The Land Tax, as actually assessed, aggregates \$4,876,475, but a sum of \$420,959 crops, and the remainder is then reduced by one half, on the ground that the basis of the estimate being a three-hundredyear-old survey, can not be trusted, and that many influential folks do not pay. The case of the House Tax is worse, for the true estimate is \$688,674 and only \$229,558 is reckoned as a good asset. There must be magnificent opportunities for tax-collectors in Korea.

With regard to the expenditure, we quote the Repository:-

The detail of the expenditures is so clearly laid down that no comment is necessary. One item; however, we feel, deserves a passing notice of leastly endorsement and approval. It is proposed to organize twenty new government schools in 1898, one in Sönl, one in each of the thirteen provincial capitals, and one in each of the six open ports. The appropriation to each of these schools is \$350. Their number should be increased until them is a use in every term of the content of the content of the six open parts. The detail of the expenditures is so clearly laid parts. The appropriate the increased until there is one in every town of 1,000 or more inhabitants throughout the empire. The following is the table of expenditures :-

In the reason of the

#### RESULT OF THE GENERAL ELECTIONS.

According to our reckoning, the results of the	ĺ
general elections are as follows :-	1

Liberals	103
Progressists	104
National Unionists	27
Business Men	g
Independent	32
Minor Parties	
Total	299

### If we divide these into camps we have the following :- LIBERAL CAMP

LIBERAL CAMP.		
Liberals	103	
National Unionists		
Business Men	9	
	139	
PROGRESSIST CAMP.		
Progressists	104	
Mirror Parties	22	
	_	
	126	٠
Neurona Cano		

But our estimate does not tally with others pub lished by vernacular newspapers, nor are any two of these identical. Here, for example, are

P <sub>t</sub>	0g1655*	Libe-	National
	ists.	tals.	Unionists
Fiji Shimpo	110	99	22
Mainichi	105	92	25
Kokumin	106	111	30
Nippon	105	109	35
Chuo	105	110	53
Yominri	110	95	25
Tokyo Asaki	110	95 98	24
Yoresu Cheho	011	97	25

There discrepancies are due, in some degree, to the fact that each political party has a fringe the colour of which is not quite certain. On the whole, however, we shall not be far wrong if we say that, assuming a coalition between the National Unionists and the Liberals, the Liberal Camp has a strength of 140, and the Progressiat Camp a strength of 130, approximately, and that there are some 29 neutrals. As a general rule the Government can count on the support of the Independents, so that if the Cabinet allies itself with the Liberals, it will probably have a clear majority of about 20 or 25 in the whole House.

It is a noteworthy fact that out of 299 members returned, only 89 sat in the last house. The most marked change in this respect has taken place in the Liberal Party, only 26 of the former members being returned against 77 new members, or 3 new members for 1 old, approximately. The Progressists, on the other other hand, have 43 of their former members gainst 63 new representatives, or something like 3 new members to every 2 old.

If we consider the names of men who have distinguished themselves in debate, we find that all the parties have suffered heavy loss. Thus the Progressists lose :-

Tunnda Shimpei. Kamnchi Tanetsune. Abe Ikito Minoura Katsuto

Hamawo Shigern. Higashio Heitaco. Sazuki Shigeto Orita Kenshi

Kawashima Jun The Liberal losses are :-Ishida Kannosuke Sakurai Tsutomu Takata Sanaye Noguchi Kei Hoshi Toru

Suzuki Juhi Ebashi Ko Misaki Kantenosoke Shigeoka Kunguro

The National Unionists lose:-Facustic Kamen Hayakawa Ryosuke lmai Isoichiro

Among the Independents and Minor Parties we miss the names of :--

Hara Zenzaburo Horikoshi Kwansuke Mochizuki Unai Gamo Sen Konishi Januasake

We do not suppose that very many of our readers will be interested in the above names, but to those that have followed the debates in the Lower House, they are all familiar.

There have been five general elections, since \$300 a month. Digitized by Google

the Diet was first convened, in 1890, and the number of men who have been returned on every one of these occasions and will sit in the new House, is only 22. They are :-

#### PROGRESSISTS.

Shimada Saburo Ozaki Yukio Isugai Ki Minoura Katsundo Nakamara Yaroku Kuda Kakan Rikneln Knro Ohigashi Gitetsu Tanaka Shoze Nakane Buyei Sato Satoji

LIBERALS.

Kurihara Rysichi Ebara Soroku Kaino Kozo Yamada Taizo

NATIONAL UNIONISTS. molusa Asakma Chikatame Hajime Sasaki Shozo Sassa Tomolusa Motoda Hajime

#### MINOR PARTIES

Kono Hironaka (Tohoku Domei-kas) Arai Shozo (Shin-Fiyu-to) Haseba Junko (Sei-rukai)

The Liberals, though they have gained appreciably in numerical strength, have undergone a very marked sifting at the polls. It looks as if the evil reputation attaching to some of their members in the last Diet had followed them to the constituencies.

#### THE JAPANESE NAVY.

The Minister of State for the Navy has caused the following classification of the Japanesc Fleat to be made and posted :-

LINE-OF BATTLE SHIPS.

First class .- 1. Fufi. 2. Yashima. 3. Shikishima. 4. Asahl.

Second class .- 5. Fuso. 6. Chinyen. CRUISERS.

First class .- 7. Asama. 8. Tokiwa. 9. Yakumo. 10. Asuma.

Second class -11. Naniwa. 12. Takachiho. 13. Itsukushima. 14. Matsushima. 15. Hashidate. 16. Yoshino. 17. Takasago. 18. Kasagi. 19. Chilose.

Third class,-20. Isumi. 21. Chiyoda. 22. Akitsusu. 23. Suma. 24. Akashi. COAST-DEFENCE SEIPS.

Third class.—25. Tsukuba. 26. Kongo. 27. Hiyei. 28. Seiyen. 29. Kaimon.

30 Tenyru. 31. Kalsuragi. 32. Yamalo. 33. Musashi. 34. Takao. Gunborts.

First class .- 35. Tsukushi. 36. Heiyen,

Second class.—37. Soko. 38. Hosho.
39. Amaki. 40. Iwaki. 41. Chinto.
42. Chinnan. 43 Chinhoku. 44. Chinsei.
45. Chinchu. 46. Chimpen. 47. Maya.

45. Chinchu. 40. Chimpen. 47. may 48. Toriumi. 49. Alago. 50. Akagi. 51. Oshima.

DESPATCH VESSELS.

52. Yaverama. 53. Talsula. 54. Miyako. 55. Chihaya.

TORPEDO DEPOT SHIP.

#### MONTHLY SUMMARY OF JAPAN. ESE CURRENT LITERATURE.

In the Kyōiku-jiron are given the opinions of the well-known member of the Diet, Mr. Sasa Tomofusa on the rank occupied by Japan among civilised countries. The following is the gist of what Mr. Sasa has to say:-The object of my visit to Europe was to ascertain what Occidental nations actually think in referout Japan's place in the scale of nations without comparing her with the most advanced and powerful States. It is an undoubted fact that her victories in China advertised Japan in the Western world. But exactly to what position in the aver of the world has the here spired? in the eyes of the world has she been raised? That was the question I wished to see answered. I may quote one or two of the opinions of prominent men in Europe on the subject, which, with others, tend to show that the leaders of thought in the Western world have not made up their minds as to what will be the future career of this country. An eminent lecturer at Berlin University not long ago observed that the three great States of the world were America, England, and Russia, and afterwards spoke of Japan as a country that was attracting notice. "As to how far this new Power will advance in the path of Occidental civilisation," observed the lecturer, "is as yet andetermined." The French statesman, M. Clémencsau, made the following remark to me: "It is reported in this part of the world that at the present time your progress is suspended. I can't believe this. In order to settle the question I purpose visiting Japan next year." I hope facilities will be given to this eminent politician and art connoisseur to make athorough investigation. I told M. Ciémenceau that there was nothing that I desired so much as unsparing criticism of our institutions and life. A professor of the Heidelberg University, quoting from Yoko-hams papers, informed the students that since the war Japan had grown conceited and self-satisfied and was making little effort to make berself actually strong. One thing is certain, berself actually strong. One thing is certain, and that is that since the war Occidental nations have ceased to regard Japan an amere child whose pretty ways fascinate all who come into contact with it, but an a formidable rival in the field of industry and commerce. The proof of this is to be seen in the carefulness with which accrets connected with manufactures. are guarded. The German Cement Companies have agreed to refuse permission to any Japanworks. And in France secret instructions have been issued by the Government forbidding Japanese inspection of industrial works or the disclosure to Japanese of industrial secrets. There is no doubt about our having risen in Occidental estimation, but what is important for us to bear in mind is that we have not tor us to bear in minute is that we have risen in foreign estimation to the extent we have risen in our own. We rate ourselves higher than others rate us. The war brought us much good, but it also brought us much evil. We were the means of revealing to the world the weakness of our great Continental neighbour. Western Powers are now resping the benefit of that revelation. And thus we have brought a source of trouble in our very doors.

The KyōiAu-jiran publishes an account of the recently expressed views of the new Minister of Education, Marquis Salonji, from which we extract the following, allowing the Minister to speak for himself:—The late Mr. Mitsukuri commenced a series of works called "Science for the People." We want more of this kind of writing. We are far behind Western nations in the amount of instructive non-technical literature at the disposal of our people. If, instead of perusing silly novels from morning to night, our women were poring over scientific booksworks on domestic economy, etc., how much better qualified to bring up families they would become. I quite anticipate that my assumption of office will be the signal for a good deal of op-Original from

position from the party which professes to champion the cause of patriotism. My steadlast adherence to cosmopolitanism as a principle of action on a former occasion created no small ambrage in certain quarters. I have not changed my mind on this subject. Occidentalised I may be, but as regards patriotism I yield place to none. People's methods of showing their patriotism differ considerably There are those who think that patriotism is best shown by everlastingly vausting the praises of Japan, by representing her me head and shoulders above all other countries. As for me I confess I am strongly in favour of foreign ways. On foreign civilisation and foreign learning we are chiefly dependent for the position we hold in the world. Our only possible chance of success in the future depends on the thoroughness with which we adopt Western civilisation. This being so, is the man unpatriotic who recommends what slone can save his country from degradation? I say now what I said some time ago. We must adopt foreign ways. There is no alternative. We must push on female education. We are addly behind in this matter. The zeal which was displayed a few years ago has cooled down, and there is little earnest effort made to raise our women to a higher standard. There are those who think that the nearness of the time when the new treaties will come into force calls for some special educational measures to meet the new situation. I do not attach such importance to the approaching change as some are inclined to do. We have known all along that Treaty Revision was bound to come and that mixed residence, &c., would follow, and have been preparing for these events. There is no occasion to change the policy of the Department in order to prepare for the new situation For years past we have been working up to the point we are now about to reach. General progress, and not spasmodic effort, is the best preparation for the new era on which we are entering, and that progress has to a certain extent been going

The Rikugo Zasshi, when discussing the views of Mr. Yokoi Tokiwo on nationalism, makes the following observations:—The narrow views of certain writers on what they conceive to be true patriotism are already beginning to work mischief in our newly acquired territory. Japan's method of governing Formosa reminds one of the course followed by England in Ireland a century or Iwo ago. But in Formosa there is not even the affinity of race that exists between the English and the Irish. Permeated with the notion that we are a superior race of people, we treat the Formosans like so many slaves. The fact is that all the narrow-mindedness of islanders clings to us, and there are a very large number of us whose ideas resemble those of the English 300 years ago. Our government of Formosa can never be a success until we learn to forget racial distinctions and treat the Formosans like brothers and sisters.

The Taijo has an interesting article on "Speculators" which it divides into two classes, namely, speculators in shares and speculators in rice. The former are said to be as a rule intelligent and well educated and to belong to the upper strata of society. The latter class consists of a number of different kinds of speculators which the Taiyo distinguishes as follows :-(1) 思蒙師 Omewakushi. The purchases of this class are founded on forecasts of the probable state of the market a few months ahead. No influence likely to affect prices escapes their vigilance. They pay special attention to the weather, to the supply of rice in the market or held in stock ready to be offered for sale when scarcity begins to be felt. The Omowakushi are the boldest of all speand their transactions are usually sufficiently large to yield great gains or involve

those of the Omowakushi. The Mesakishi are for the most part very ignorant, and frequently depend on diviners for information about the future. In connection with these, there are what are called Nakagainin, commission agents or middlemen. Some of these, while doing basi-ness for their employers, carry on a good deal of speculation on their own account. This class speculation on their own account. of speculators bear the name of **脐食**屋, Shōbuya. Then there are what are called 春屋, Nomiya, a class that is dependent on the Sho buya, whose license notices (kamban) they him in order to attract custom. Various tricks hire in order to attract custom. resorted to by this low class of speculators are of a dishonest kind, among them is to be reckoned misquotation of prices.

(3) Next come the n. Sayatori. Many of the classes noticed above deal in rice without actually handling the grain, but the Sayatori purchase rice and move it from one place to another when varying prices allow of a margin of profit.

Added to the above classes are two sets of amblets and cogues known as meguriya and 合百量 gohyakuya, into whose meshes many in nawary country-bumpkin is hauled. They borrow kamban from nakagainin, but only in order to deceive their customers and the police.

According to Mr. Tsubouchi, in the 7 aijo. there is no reason for expecting that the kind of novel which the public demands, the tale that shall cease to reflect the thoughts and desires of the present generation and treat of life objectively in an entertaining manner, will be forthcoming. There are laws which govern the world of literature which nobody can alter. England has no great dramatists now, but she had them in the days of Elizabeth. There are stages in a nation's progress when a variety of influences conduce to the production of great literary works of the non-subjective type, but it is quite clear that Japan is not in that stage now. In the history of Japan, the Genroku era (a.D. 1688-1703) may be said to correspond to the age of Elizabeth as regards dramatic writing. Japan is engaged in too earnest a struggle to allow of her representative men regarding life with the levity and frolicsomeness of the auccessful writer of what is called the witty novel. In the works of Aeba (Kōson) we have samples of what the public desires to have in abundance, but the spirit of the age in against the development of the state of mind necessary for the production of this class of literature. The age in which we live is essentially subjective and egoistic. This is seen as much in art as in literature. Mr. Tsubouchi concludes his remarks on this subject by urging the necessity of introducing the best foreign works here by means of trustworthy translations. [apanese literature can only make rapid strides by the supply of new ideas to the minds of the chief writers.

We observe that the subject of improving the Japanese language is again attracting considerable attention, and it seems to be felt in certain influential quarters to be of imperative necesaity in view of the ever-growing competition with which the Japanese have to contend in their struggle for a place among the foremost nations of the earth. In No. 2 of Vol. V. of the Toyotetsugaku, allusion is made to the discussion on the subject that took place at the Oriental Congress held last autumn in Paris, at which Dr. Inouye Tetsujiro and other apanese were present, and surprise is expressed that a topic which has been taken up so earnestly by foreign linguists should be treated with such indifference by the majority of learned Indancae.

In the Talyo, under the title of "Questions for Consideration after Mixed Residence has begun," Mr. Ueda Mannen has discussed begun," Mr. Ueda Mannen has discussed very fully the changes which it is necessary to

paration on our part necessary for effecting this end? We know of no greater obstacle to the smooth working of the new treaties than the confused state of the Japanese lauguage. Speaking strictly, Japan may be said to be without a distinct language of her own. The existing tougue is so full of contradictions and inconsistencies that it is next to impossible to reduce it to grammatical rules. As for the use of written signs, they convey according to context and general connection the greatest variety of meaning. They may be intended to suggest a sound and convey no meaning, as when used for proper names. They may be used as expressing half of the meaning intended to be conveyed, as do one of the ideographs of the jukuii, or they may be placed as the substitute for a spoken word conveying a distinct idea.

The reforms proposed by Mr. Uede are (t) That the Tôkyô language should be made the national tongue, that all class books and all general literature should be compiled in this dislect. and that there should be no distinction whatever made between the written and spoken language. (2) Pronunciation should be made a special study. The method of pronouncing words hitherto in use should be retained, but in the case of foreign words they should be adopted as they stand, untranslated and untransliterated. (3) In order to effect the desired changes, the Departments of Education and the Imperial Household should combine in creating a special bureau, to consist of the leading linguists of the country.

There is far too great a tendency in Japan, continues Mr. Ueda, to despise the native language and favour some foreign tongue. The unity of a nation depends very much on there being only one language spoken, which all respect and love. There will in the near future be an increasing demand for men acquainted with foreign languages, but this should not induce us to neglect the development of our mother tongue. Mr. Ueda at the conclusion of his article discusses the subject of teaching foreign languages in Japan, observing that there ere a number of poorly qualified instructors in various parts of the country, Germans teaching English with a strong German accent, and so on, but this is quite another subject.

The Kyoiku jiron combats the notion that foreign languages should be taught in all schools as a preparation for mixed residence. Nothing of the kind will be necessary, says this organ. The mass of the people will only need their own language, but this should be rendered more efficient ma method of expressing thought.

Reviewing the progress of Japanese art, the Tenchijin was, Art in the Meiji era may be conveniently divided into three periods. The first period was one of disintegration and destruction, lasting from 1868 1877. At the beginning of the Meiji era Japan's best attists anddenly found themselves deprived of all the support their profession had enjoyed for 1,300 years. Under the Tokugawa Government they were specially favoured. They received regular stipends, were exempted from all taxes and enjoyed other privileges. After the Revolution they found themselves stranded and their condition was pitiable to behold. In order to eke out a living, some turned to other occupations, some tried to learn foreign art. In 1873 at the Vienna Exhibition Japanese painting received favourable notice and this encouraged artists of the old school to renew their efforts to win popular favour. The next period lasted from 1878 18 7, which may be described as a conservative era. But during this period Japanese artists did little more than regain the ground that had been lost during the previous ten years. But mere conservatism cannot hold sway over men's minds for any length of time So in 1888 it gave place to a new influence. There arose a school of artists who felt confident that it was possible to blend the old and enormous losses.

(2) Next to these are the 日光间. Mesakishi.

Theze, as the name implies, are guided by the appearance of things from time to time. Neither their profits nor their gains are equal to

revealed the new tendency. From this time forward we may expect marked progress. Already there are signs of this. Among the pic-tures exhibited last year, according to compe-tent judges, there were some that showed great The mixture of styles and the general chaos in the art world of which so many complain iii in our view the unavoidable prelude of the cosmon that is to be evolved. The creation of the new world has commenced and will go

In No. 2 of the Chugal-firen appears an article entitled Genron Shakai no Keisei oyobi Fimbutsu (Learned discussion and the men who take part in it), which is evidently written by some one who has made a special study of medern ephemeral literature. Reviewing the past, the writer we are quoting calls attention to the enormous progress that has been made nince the days when the late Mr. Baba Tateni and Mr. Kato Hiroyuki published treatises on political and civil rights. The men who have figured most conspicuously as the expo-nents of English political theory and practice are Mesers. Yano (Minister to China), Inukai (a noted member of the Diet), Fujita (dead) Ozaki and the late Mr. Numa. The four Dailies that in former times did so much to en lighten the public on the aubject of advanced politics were the Chopa Shimbun, the Nichi Nichi, the Hochi, and the Mainicht. The first of these expired some years ago, deeply regretted. The last is so changed that its antecedents can hardly be guessed. It has deslecturers and the advertiser of the merits of stage-actors. It exists, and that is all one can The only paper that from early days has pursued its even course and lost none of its vigour and grasp of ever varying political situs. tions in the Nichi Nichi Shimbun, whose editorship is now in the hands of Mr. Assins, writer who in the treatment of political and legal questions has no equal among Japanese, and whose pen combines force with great seriousness of purpose. Mr. Assina is one of the keenest of controversialists, quick to discover flaws in his opponent's armour and careful to reveal no weakness in his own. He has just returned from a two years' visit to Europe and the effects of his study of the latest developments there are revealing themselves in his writing. The position occupied by the Nichi Nichi in politics is filled by the Jiji Shimpo in social and business affairs. Its whole tone and character is derived from the extensive knowledge and gound common sense of its proprietor. Mr. Fukuzawa, whose unsulfied career stretching over more than half a century has won for him a place in the heatts of his fellow-countrymen shared by no other. Next to the above men-

tioned papers in distinctiveness of character

though in some respects out of sympathy with

them, come the Rokumin shimbun and the

The first of these was called into

Nippon. The first of these was called into existence by Mr. Tokutomi, whose brilliant Sho

rai no Nihon (Japan of the Future) attracted the attention of the public many years ago. The Nippon has figured conspicuously on all ques-

tions connected with foreigners as the chauvi-

nistic organ of Japan. It clamoured long for

treaty revision and when that was effected pro-

tested against mixed residence. The Nippon is the champion of national rights and the Koka-

questions the views of these papers have usually

been as opposite as the poles, but recently they

have been drawing nearer each other. Mr. Kuga, the Editor of the Nippon, has advocated

party Cabinets, a thing he would not have done

years ago when he brought out the translation

known as 法治論 Höchiron, and the Kokumin

Shimbun has been arguing in favour of increasing the army and navy, levying new taxes and

the like. Has Mr. Kuga advanced? or is it Mr.

Tokutomi that has made progress? As regards

the future of the two papers, the Nippon's posi-tion is more assured than that of the Kekumin.

Many of the writers formerly connected with the

latter paper no longer belong to its staff, where-Digitized by

min of the rights of man as man.

years ago when it was first established. The subordinate members of the staff are all devoted to the chief and consequently the work of the office goes on smoothly. Leaving out of consideration high-class discussion, as a vigorous and common-sense commentator on passing events, Mr. O-oka of the Chūō Shimbun has few equals. His style lacks the polish to be found elsewhere, but he has the art of vivid description. High among the leading journalists of the day is to be ranked Mr. Takenokoshi, Editor of the Sekal no Nihen, whose talent, extensive knowledge, application and integrity have won for him no small distinction. He has lately been appointed private secretary to the Minister of Education." specialist, a man of wide knowledge and full of practical wisdom, as the master of a rare style and as averse to flattery of every kind, Mr. Taguchi, the editor of the Keisai Zasshi holds a high position. As, among journalists, the only remaining powerful representatives of the old Kaishin-to, Messrs. Nakai and Ishii of the Yomiuri Shimbun are worthy of notice. On them alone do the fortunes of the paper depend at the present time. What there is of subtlety and pointedness in the pages of the Nikonjin comes from the pen of Mr. Shiga. The conclusion reached by the writer we are quoting is that there are only four great papers, the Nicht Nicht, the Yili, the Nihan and the Kekumin Shimbun.

The following table of statistics shows the number of newspapers circulated in the year 1896, or at least those whose circulation exceeded one million copies per annum.

	No. of copies
Name of Paper.	circulated.

Dr. Ariga Nagao has made a specialty of diplomacy. In addition to the magazine which he has lately started called the Gwaito Jiho he has published a valuable work called Kinfi Gaitarhs (a History of Recent Foreign Diplomacy) which covers 700 pages. It is issued by the Tokyo Seminon Gakko and sells at 1 ven 50 sen. For some time Dr. Ariga lectured at the Semmon Gakko and the Military School on these ambjects, and a few years ago he was sent by the Government to the West to study the laws of international intercourse ar practised today. The volume gives a history of all important international transactions in Europe, from the Vienna Congress of 1814 down to the year 1897.

In the opening number of the Gwaiko fiho which is to be a monthly magazine issued by the Tökyö Semmon Gakkö, Dr. Ariga says that foreigners know far more about Japan than Japan-se know about foreign countries and foreign affairs, and yet the importance of Japan's leading men being well acquainted with what is going on in the great outside political arena was never more apparentthan it is to-day, when threatening clouds have begun to darken the Eastern sky. The objects of the new organ Dr. Ariga states to be to throw light on all the chief diplomatic questions of modern times by discussing them historically and to furnish discussing them readers with the latest information on all inter-

The second instance of a journalist being appointed private Secretary to a Minister of State is that the former is started and controlled by the within the past few months, Mr. Zumoto of the Mombusho and the latter is established and configurable of the Original Provincial or Municipal Assemblies.

national topics that in any way affect Japan. The following are the headings of the subjects to be treated :—(1) Facts bearing on international diplomacy. (2) International Law. (3) The diplomacy. (2) International Law. (3) The revised Treaties. (4) Public documents—Treaties, &c. (5) Miscellaueous items of information. Dr. Ariga contributes two lengths. articles to the first number-one on the Franco-Russian Alliance and the other on Japan's connection with recent developments in the Far East. In addition to these is an article by Mr. Fachi Sakutarō on "the Form of Treaties," and an article by Mr. Kojima Genzaburo on the Legal Status of foreigners residing in Foreign Settlements." The text of the "Additional Act modifying the international Copyright Convention of Sept. 9th, 1886, (signed at Paris May 4th, 1896, Ratifications deposited at Paris Sept. oth, 1897) is given and a Japanese translation furnished. The new magazine has been favourably noticed in all literary quarters. It occupies a field of its own and supplies a long felt want.

The following statistics have been culled from the Official Report of the Department of Education for the year 1896, which, for reasons best known to the Department, was only issued a month or two ago. The increase in Elementary School teachers over the previous year amounted to 2,911, in scholars to 207,636 and in graduates to 38,065. The number of children attending school increased by 2.98 per 100 available children. The increase of Ordinary Normal School teachers was 14, of students 736, of graduates 96. The increase of Ordinary Middle Schools was 25, of teachers 398, of scholars 9,907, of graduates 229. The increase in Higher Female Schools was 4, in teachers 51, in scholars 1255, in graduates 101. Industrial schools of various kinds were augmented by the opening of 61 new establishments. In these 242 new teachers were employed, the attendance of scholars in all Industrial schools being increased by 5,558, and the number of graduates by 717 (the result in the war and what followed it, when the need in increased development in the industrial line was emphasised in a special manner). The increase in Local Government Municipal School\* teachers during the year under review was 3.584, in scholars 228,345, and in graduates 41.735. The total number of Local Government Schools throughout the country was in 1896 26,621 and the number of Private Schools was 1,762. The total number of teachers employed in these schools wie 83,229 and the scholars in attendance numbered 4 021.652. Of these 528,388 graduated during the year. The figures show that while the number of Local Government Schools increased by 293, that of Private Schools decreased by 117. The record for Higher Schools shows an incre-se of 32 teachers, 122 students and 48 graduates over the previous year. A among the educational Establishments under the direct control of the Department of Education in 1896 were :- 1 University, 6 Higher Schools, 1 Higher Normal School (for men) 1 Higher Female Normal School, 5 Industrial Art Schools, I School for the Blind, Deaf and Dumb, I Industrial Normal School, I library. Comparison with the previous year shows an increase of r Industrial Art School and a decrease of a Higher Middle School. The total number of teachers in the above normal schools is 785, of students, 9,321 and of graduates during the year 1896 1,819, showing an increase on the previous year of 88 teachers, 445 students and 168 graduates. The increase in expenditure compared with 1895 was 105,738 pen.

In No. 132 of the Tetrugahu Zarth; ispublish-

\* These institutions are called 公立學校, Köritsu Gakkō, which is sometimes rendered Public Schools. This is misleading; as English public schools would in Japanese be called 双立事故, Shiritsu Gakkō (Schools established by private individuals). The only, difference between the Tark Karritsu Gakkō and the Kōrāsu Gakkō white Korāsu Gakkō and the Kor

ed the official report of Dr. Inoue Tetsujito and Dr. Tomii relating to the part they took at the Oriental Congress held in Paris last September, which they attended as Government Delegates. The China and Japan Section of the Congress was presided over by the Chinese Minister to totalle France. At a meeting of this section held on tons. September 7th. Dr. Tomii read a paper entitled Transformation Politiques du Japon. On the following day Dr. Inoue read an essay entitled Sur le développement des idées philosphiques au Japon. And on the 9th a number of Japanese works of art were exhibited and a short history of Japanese art was given by the The titles of other papers read at Delegates. the Congress on Japanese subjects were:—
"The Tokugawa System of Law"; "The Triad of the Original Shinto"; "The Future of the Japanese Language, and the Japanese No." The names of the authors being all given in Rana, we are unable to identify them with certainty. It is to be regretted that Japanese do not transcribe the Roman letters instead of unavoidably misrepresenting them in kana. The next Oriental Congress is to be held in Rome in October, 1899. The invitation to make Tokyo the place of meeting was declined, on the score of distance from the homes of the principal members of the Congress.

A new newspaper called Rodo Schoi (The Labout World) has been started, whose object it is to represent the opinions and grievances of the working classes. One side of the sheet is covered with contributions in English, which in the matter of spelling and grammar leave much to be desired. No. 1 of the new publication contains congratulatory letters from Professor Foxwell and Mr. Garst. Among other things Prefessor Foxwell says, "These labourers, many of whom are young children, demand the serious care of states. men just now. They have entered on a totally new life, that of modern factory work, and as much in need of help as men small boats on an unknown ses .........One thing we know from experience, that either in writing or acting on behalf of labourers, excitement and passion are worse than useless. Sober consideration, common sense, and a desire to be just will solve most difficulties "†
The paper is published formightly and sells at I sen per copy.

. .

In the Aippon Shugi Mr. Kimura Takata o, writing on Japanese art, contends that Japan is wrong in trying to denationalise her art and make it resemble. Occidental art as much mossible, in order to attract notice at foreign exhibitions. The lack of appreciation of Japanese art shown by foreign art critics is to be attributed to ignorance of Japanese ways of think-ing and taste. To give up our own standard in favour of a foreign one is surely a suicidal policy, says Mr. Kimura. Is there such a thing as a standard that applies universally? To study foreign styles and methods for the purpose of perfecting our native art, this, argues Mr. Kimnes, is the course to be adopted. Mr. Kingga has something to say about architecture. music, literature and oil paintings, to the dis-cussion of which he applies his "Nipponism," being one of the most stalwart supporters of the "Nippon Shugi" movement, of which so much has been written.

† Advice very much needed, if we may judge from the heated manner in which labour questions have been discussed of late.

The London correspondent of the Melbourne Argus says that the cost of the French system of governing colonies is causing dismay in Paris. The French colonies and dependencies will this year cost the mother country £3 750,000. French critics contrast this with the limited expenditure upon the vasily larger colonial system of Great Britain, and express surthat Mr. Chamberlain's scheme for Imperial federation and closer contralization should find any support.

JAPANESE FACTS AND COMMENTS.

Information from Hongkong published in the Nicht Nicht announces that the number of Japanese vessels cuteting that port last year totalled 851, their gross tonnage being 297,009

Two cases of cholera are reported by the Tokyo Shimbun to have occurred in Asakusa and Koishikawa districts respectively on the 19th instant. The patients are now under treatment in the hospital.

A statement is presented by the Osaka Mercantile Marine Company with reference to the reduction of its capital. The gross capital of the Company, 10,000,000 yes, is to be reduced to 5,500,000 yes. The 400,000 original shares are to be reduced to 220,000.

In consequence of the recent dissensions in the Japan Railway Company all the principal officers have, the vernacular papers state, tendered their resignations. A special general meeting is shortly to be convened to discuss questions connected with the reform of the Company.

The dwelling house of a medical practitioner in Mayebashi, Gumma prefecture, is reported by the Tokyo Shimbun to have been set on fire twenty times during the past four years. The crime, it is alleged, has at last been traced to the physician's serving maid, twenty-four years of age. She is said to have acted through pique II the scolding of her master.

From the Jiji we learn that the number of prisoners in the Kajibashi Prison awaiting judgment is at present 976—929 men and 47 women. Of these 32 are confined on the charge of armed robbery, another 32 for wilful murder, 23 for incendiarism, 188 for ordinary theft, 235 for fraud, 144 for forgety, and 95 for gambling. Appeals by criminals under sentence of death number 8.

The Yokohama Five Staples Exchange auddenly anspended business on the 17th inst. on account of general depression caused by a law-suit between buyers and sellers. Brokers have in consequence been seriously embarransed, and as no prospect exists for carrying on business smoothly until the dispute is settled, they have resolved, remarks the Tokyo Shimbun, to exert themselves towards bringing the two hostile parties to a compromise.

The recent strike of engineers and other employes of the Nippon Railway Company has brought about serious losses to consignees and the question has arisen whether the Company ought not to be called on for compensation Imperial Ordinance No. 12 of the 20th year of Meiji, furnishes data for determining the point and the Nippon thinks that according to this regulation the responsibility for compensation must be borne by the Com-DARY.

Article XLV, of the Constitution provides that the Diet shall be convoked within five months from the date of its dissolution. There are now only sixty days before this period expires, and Article I of the Laws of the Houses requires the members to be convened at least forty days prior to the limit. The ordinances for the Diet's session will probably, asserts the Main chi, be issued in a few days. The principal subjects of debate are connected with civil, commercial, registration, and census aws, and finance.

"The Government," says the Mainichi, "considered that it would be able to command a working mojerity in the Diet, as it had secured a union between Liberals and National Unionists. Its position, however, is far from being free from auxiety. It has therefore been resolved, at the instance of Baron Ito, Minister of Agricul-ture and Commerce, and Viscount Yoshikawa, Minister of Justice, that steps shall be taken to purchase the Neutrals by paying the coats of Digitized by Google

joining either the Liberals or National Unionats, but will be required to form themselves into a special party to support the Government."
That is a very pretty statement. The Mainicki's regard for truth seems in be quite on a par with the political integrity that it attributes the Government.

A society which was organized at Kanda, Tokyo, under the auspices of two or three aminent lawyers, for the purpose of making necessary arrangements in view of the revised treaties and mixed residence coming into operation, is reported to have resolved upon publishing a monthly magazine for distribution among the members. All the problems connected with civil and judicial administration. commerce, industry, political economy, and mixed residence will be discussed in this publication, and all important questions answered or explained. Admission to membership, says the Chuo, can be obtained by either politicians or business men.

The ten trade of Kobe was almost at a standstill during last month, arrivals reaching 1,400 cattles only. Compared with the corresponding period of last year the figures stand thus :--

31st Year, 30th Year. Decrease. Arrivals ...... 1,400 36,600 35,200 24,300 24,300 13,190 . 32,086

February ......26,500 The amount shipped abroad from the 1st to

the 28th February was as follows:-To Sau Francisco, 14,561 cattles; to Chicago, 84,649 cattles; to New York, 27,668 cattles; total 126,878 cattles.

The Hankaku Railway Company, at its special general meeting in Osaka, resolved upon raising loans on the following terms. The Company being in need of a capital of 1,500,000 ven in addition to the funds already in its possession, the sum of 1.300.000 yes is to be supplied by the issue of bonds, and the remaining 200,000 year to be raised at the period of opening the traffic up to Fuku-chiyama. The payments in arrear—960,000 yen—in respect of shares are to be postpoued till the 32nd year. The principal conditions of the issue of bonds are m follows:—Art. I.—
The bonds shall be registered of the face value of 100 yen each, bearing 10 per cent. interest per annum. (Note .- A number of bonds may be made into one at the request of the subscriber). Art, III.—The issue-value of the bonds shall be over 95 yen for every 100 yen face value, payments being made in May, July, and September. Art. VI.—The bonds shall be retained for one year, after which they will be redeemed within five years by lots. Art. VII.—Whenever necessity arises for increasing the Company's capital at the time of redemption, new shares shall be issued for the liquidation of the old loans.

The gross amount of leaf tobacco collected by the Government up to the end of last month, in accordance with the Tobacco Monopoly Regulations, reached 400,000 kwamme. of stamps, as well as actual payment for the stock held by the tobacco dealers prior to the enforcement of the present regulations, aggregated five million yen, as shown in the latest reports issued by the Finance Department and published in the Tokyo Asahi. The amount in the case of leaf toba: co shows a decrease of almost 40 000 kw mme as compared with the estimates compiled by the Government, but in eash and atamp accounts an increase of double the sum is noticeable, and the gross receipts on the whole will exceed the estimates. Leaf tobacco to the amount of 50,000 or 60,000 Awamme is expected by the end of this month from Fukushima and Tochigi prefectures, but the planting period is generally much later in the north-eastern districts than in Chiugoku and Kiushiu, the whole crop is not likely to be dried within this month, and there can be no doubt that a portion of the stock will have to be their election. The members so purchased will, preserved until next year with the special sancthe Mainichi adds, be strictly probibited from tion of the Government. Of the amount of Original from

400,000 hwamme received last month 350,000 Awamme were sold at the rate of 50 sen per Awamme. This year the largest amount was produced in Takabashi, Okayama prefecture, the gross weight exceeding 110,000 kwamme, representing about one-fourth of the total crop throughout the empire. Next comes Oita prefecture, which is followed by Tsuraki in Ishikawa. Yokohama produced the least quantity. quantity.

The amount of Chikuzen and Buzen coal brought into Wakamatsu port during last month by land and sea exceeded, according to the Osaka Asahi, 300 million catties, showing an increase of 30 million cattles over the pre-vious month. The quantities transported from Wakamatsu m Moji, Osaka, and Kobe, last month aggregated 288,471,892 cattles, showing un increase of 18,750,000 cattles over the previous month. The number of vessels employed in the transport of this coal totalled 2 738,

Immigrants to Hokkaido, asserts the Fomi urt, increase year by year. The figures for this year are reported to have already reached over 10,000, up to the beginning of this month, while every steamer going north continues to carry from 1,000 to 1,300 emigrants. No fewer than 30,000 persons from the interior are expected to emigrate to the North by the end of the year. The immigrants are, as a rule, from Shikoku, Chingoku, and Hokuriku. Those from the first two districts are especially numerous this year owing to the failure of crops in consequence of inundation and injury from worms. But the direct cause is the stimulus given by large lauded proprietors who have endeavoured to enlist tenants for their farms.

From the Fominei we gather that owing to the scarcity of silver coins in Korea not a little inconvenience is experienced in business transactions. The necessity for a large native sactions. The necessity for a large native coinage had thus arisen, but there is neither sufficient bullion to be minted nor funds to buy it with. The Korean Government is reported to have applied to Japan through the Director of the Copper Foundry in Osaka, to which orders have hitherto been given for the manufacture of aubsidiary coins, for a loan of one million yen in bullion. Baron Iwasaki, President of the Bank of Japan, is inclined to grant Korea's request, while some of the Ministers of the Cabinet are also of the same view Count Inouye alone hesitating to accede to the proposal.

The result of the general election is as fol-

<u> </u>	
Liberals	102
Pro-Liberals	14
Total	116

Of the Liberals 102 represent members whose names actually appear in the register kept by the party, while those mentioned as "Pro-Liberals" are, according to the Zokys Shimbun, members who have pledged themselves to co-operate with the Liberal party, though they are not yet formally registered. There are other members who were elected with the aid of Liberals on condition that they would support the cause of the latter, but they are excluded from the above table.

Silk is one of the staple exports of Japan. Its export increases year by year, the value realized being considerable. Quotations rose abnormally last year, but sales were so brisk as to amount to over fifty million yen. Next to reigners and make up our own defects. It will saving. At the time of the Matsukata Cabine raw slik come habutas and silk textiles. Not be of paramount importance to strictly observe the necessity for raising the rate was suggest-many years have elapsed since the commodities principles of friendship. Apart from the UNIVERSITY OF ILLINOIS AT

ties were first exported; but progress han been so great that last year alone the amount realised was thirteen million yen. The turn-over in the silk trade on the whole was about seventy million yen for the year under review. But, says the Mainichi, merchants appear to be contented with the growing export of raw silk, little thinking that the silk exported is again imported in the form of woven goods and other commodities into which it is manu-factured. The native dealers ought to direct their attention to this point. They would be able to reap much more profit by weaving silk at home than by exporting raw silk for foreign manufacture. The amount of silk imported into America from Europe and Asia is reported to have reached 64,000 bales, valued at 28 millions dollars, while the manufactures from silk aggregated over too million dollars. From these facts it may be perceived that manufactured silk as a staple of export yields a greater profit than the raw material.

The first instalment of the premium bonds of the Japan Industrial Bank will, the Nippon assetts, be issued from the 12th to the 22nd April next, on the following terms: -- (1) The premium bond shall not bear the name of the holder, but will have coupons subjoined. (2) The gross amount of bonds shall be 2,000,000 yen in 40,000 shares of 50 yen each. (3) The bonds, the lowest face value of which is 50 yen, will bear interest at the rate of 5 per cent, per annum, payable in January and July. (4)

The amount of redemption M each of the appointed periods shall not be less than 52,500 yen. (5) All bonds issued shall be retained at least until June 30th of the 31st year of Meiji, but during torty years from the 1st July redemptions will be made twice year - June and December-by lot. The premiums for the bonds shall be twenty-five in number, representing 2,250 yen, divided into four different sums, the first and largest of which is to be granted to the person upon whom the lot first falls. The money paid as security on application shall be included in the amount of aubscription, the remainder being paid between the 16th and 3 tst May. If the subscriber fail to pay the requisite amount within two weeks after the expiration of the prescribed period, he shall not be furnished with the bonds, and his security deposit shall be confiscated.

At a social gathering recently held, Viscount Acki is reported by the Tokyo Atahi to have made the following remarks on the subject of mixed residence:—Treaty revision will probably be put in operation from the 14th July of next year. Mixed residence will then take place, and foreigners will be allowed to enjoy the same privileges as natives except in regard to the ownership of landed property. are shrewd in business, and will not hesitate to penetrate into the interior to engage in commercial and industrial undertakings. If natives, in this conjuncture, prove inferior to them in any respect the honour of the country will be impaired. Precautions are absolutely indis-pensable on this point; above all the greatest attention must be paid to that odious anti-foreign spirit which still exists in some parts of the country. In my youth aliens were regarded as brutes no better than dogs or sheep; and it is not unlikely that such an anomalous notion still prevails in remote districts. When travelling through Europe or America, I was everywhere afforded protection as regards life, property, and reputation; such is the general principle of hospitality shown by foreigners whom the Japaneze, thirty years ago, looked upon as brutes. Japan has indeed made remarkable progress since she was open-ed to the world, but she must not be contented with her present development in regard to wealth, the arts, and commerce. "A precious stone owned by another may be utilized to polish one's own," is a proverb well known to as. The opening of the country may be used to assist us to acquire the talents of fo-

enforcement of the law the whole nation ought to exert its atmost energy in protecting the lives and properties of foreigners when mixed residence comes into operation.

The Tokyo Asahi calls attention to the statisamount of coin struck during last month, also the aggregate total from the outset. Thus:

The completion of the above vessels will increase the tomage by 42,300 this year, while specie to the amount of 8,505.410 year will be paid out of the country. Of this amount 756,030 year are reported to have already been disbursed by the Oriental Company. As the Osaka Mercantile Marine Company has also placed orders abroad for a number of vessels, the total outflow of gold in payment for ships will not fall short of eight million yen.

While the interest on loans to individuals has been universally raised to six or seven per cent., the rate adopted by the Postal Savings Banks has remained the same, being fixed at 4.2 per cent. This soon gave rise to the withdrawal of depo-sits by persons who were hitherto interested in

ed to 4.8 per cent. The scheme, however, was suspended on the dissolution of the former Cabinet, but as interest rises steadily and shows no signs of falling, Baron Suyematsu is reported by the Chuo to have made the following suggestions to the Cabinet for approval:-It is in no way desirable that the Postal Savings Banks should endeavour to compete with private institutions of a similar nature by raising the rate of interest. He might suggest, however, that out of the receipts of the Savings Banks what remains after the necessary expenses are subtracted may be appropriated for the encouragement of the spirit of thrift. The scheme is something like that of the premium attached to the Industrial Bonds. It consists in granting a certain amount of money by lots to persons who have deposited a fixed sum during a fixed number of years. The profits arising from the Pos-tal Savings Banks amount at present to about 30,000 yen, a portion of which may be distribut-

t. Any person depositing more than five yen a year for over five years shall be entitled to draw lots for the special dividend. A lot may be drawn

to revery five yen.

2. The special dividend shall vary from 20 yes to 3,000 yen, while the diawing of lots shall take place twice a year.

Referring to the completion of the general elections, Viscount Yoshikawa, Minister for Home Affairs, is reported by the Chuo to have expressed great gratification at the fact that there was no repetition of the scenes and acts of violence that had taken place on former occasions. "These matters," he said, "were deeply considered by the Cabinet, and by the promulgation of a special Imperial Ordinance measures were adopted to place the responsibility of preserving order upon the local governors and Chief Police Inspectors, and instructions were issued to the same effect by the Minister of Justice. These officers faithfully carried out the orders of the Government, and the election was almost entirely free from any cause of complaint. The facts may be recorded as an plaint. The facts may be recorded as an honourable precedent in our constitutional his tory. A few persons of course have violated the Imperial Ordinance as to corruption, while a few others were injured or wounded. latest reports to hand show that the number of persons wounded, either severely or slightly, totalled 29 only, while at the election in the 25th year of Meifi over 210 were wounded and 26 killed. The figures for the 26th year are far more startling, the number wounded being stated as no less than 300. The smallness of the figures on the present occasion may well be regarded as a proof that the public have appreciated the advantages of constitutional government. In order to bring about these favourable results, I have refrained from sleep for several nights, while the Local Governors and police officers were in most cases required to be on duty day and night, and even without food. Some of the candidates have been an unscrupulous as to censure me by stating that the local functionaries were extremely partial and unjust, some of them having even ventured to assis: this or that party. The opposite party, however, has in some cases made a similar representation, and from these facts it may be inferred that the officers of the Government refrained from affording special protection to any particular party or clique. A certain politician commented to me upon the excessive caution with which the arrangements were made by the As each elector was escorted or police. guarded by policemen, he remarked, not a little inconvenience was caused to them, and some were even obliged to give up their right of voting. But it cannot be foreseen where a riot or assault may take place, and every possible precaution is therefore necessary on the part of the Government. That Mr. Takanashi was saved from an armed assailant is the result of the efficiency of the police. The police are organised against an emergency, and their functions are very much like those of an umbrella. The umbrella in one's hand is really a burden to one except when it is raining. But its use is greatly appreciated at the time of a shower. Thus it is with the police. Digitized by Google

#### KOREAN AFFAIRS.

The ferment in Korean political circles seems to have been very active a forinight ago. It has already been related in these columns how the Councillors of State tendered their resignations en bloc because the Vice-Minister of Foreign Affairs, without consulting them, had promised lease a portion of Deer Island to Russia for a coal depôt; how the Vice-Minister endered his resignation at the time; how the Emperor refused the former resignations and accepted the latter, and how his Majesty, immediately afterwards, gave the portfolio of Foreign Affairs to the ex-Vice Minister. This last act on the part of the Sovereign elicited the following memorial from the Councillors of State: -

"A few days ago we, Your Majesty's humble ser-vants, jointly memorialized the Throne, pointing out to You the irregular and modignified manner out to You the irregular and undignified manner in which the former acting Minister of Foreign Affairs, Mim Jongmuk, has decided the Deer Island question. Your Majesty, two days after his resignation, again appointed Min Jongmuk to the position from which he resigned. We have countersigned his reappointment because we consider that if was Your Majester's wish to have him in the that it was Your Majesty's wish to have him in the cabinet again. But if we do not resign our positions under the circumstances, even if we are insignificant beings, we cannot be inconsistent. Moreover we consider that one minister will be enough for transacting all government business, and we ought to leave the government without delay. Therefore we hereby send joint resignations and hope Your Gracious Majesty will accept he same.

Doubtless the translator in responsible for the somewhat "mixed" verbiage of the above document, which we take from the Söul Indipendent, but there is no mistake about the fine irony of the Councillors' suggestion that one Minister will be enough to transact Government business. The Emperor, however, gave the recalcitrant officials a Rowland for their Oliver. He replied :-

"You have already countersigned this re-appointment and again sending in this joint re-signation does not seem to Us to be consistent and and it seems to Us unwise. We are sorry because of your action. You ought to understand Our reason of relieving him temporarily and reap-pointing him again."

The Councillors again tendered their resigna tions and were again told to retain their posts. There the matter seems to have ended, so far as they were concerned. Meanwhile, the Foreign Minister Min Jongmuk, also had resigned, but the Emperor told him that he had been "re-appointed for good reason," and that his desire to go out of office seemed to be due mu inability to bear criticism.

So far as we can see, the action of the Russian Representative in asking the Korean Government to make a declaration of its disposition towards Russia, was partly prompted by the above behaviour on the part of the Conneillors of State and by the memorial which the Independent Club sent to the Throne, as quoted in a previous issue. The sequence of events is not perfectly clear, but it is at all events certain that M. de Speyer's despatch was sent to the Foreign Office on March 7th, and that the two resignations of the State Councillors, as well as the Memorials from the Independence Club to the Throne and to the then Vice-Minister of Foreign Affairs-Min Jongmuk-preceded the sending of the despatch. The following translation of the des-patch is given by the Soul Independent:

"Recently I have been informed that there exists a deplotable condition of affairs in Soul; many ideas among your people, claiming to be gifted politicians, create disturbance by opposing Russian interests. This state of affairs naturally causes great aurprise to my Imperial Sovereign, the Emperor of Russia. At the request of your Imperial Sovereign and your Government, the Russian Government had sent military instructors to drill the soldiers and to guard the palace, and an adviser for your Rusance Department. This action on the part of my Government plainly indicates Russia's intention of helping your country as a neighbour and her desire to strengthen your independence. But your Government did not seem "Recently I have been informed that there

to appreciate the importance of Russia's action at the time and now your Government freely prevents Russia from accomplishing the advantages and beneficial results for your country presents Russia from accomplishing the advan-tages and beneficial results for your country which she intended. The present attitude of your Government is so plain that Russia cannot ending this condition much longer. Therefore endure this condition much longer. Therefore my Emperor has graciously ordered me to report fully to your Emperor and inquire of your Government definitely whether Korea still desires to be benefited by Russia's help or not, and if the military instructors and finance adviser are not considered necessary by your Emperor and your Government, my Government will make some other necessary arrange-ment will make some other necessary arranges. ment according to the circumstances, but your Government must maintain your independence in the future according to its ability. I am awaiting your reply and hope it will be received within twenty-four homs, and I further request Your Excellency to report to your Emperor that I desire to obtain an audience with him for the purpose of informing him of the instructions I have received from my Imperial Sovereign concerning this matter."

The language of this despatch disposes effectually of the hypothesis that M. de Speyer acted on his own responsibility, and that his Government subsequently decided to abide by the consequences of his mistake. It is now plain that he had explicit instructions from St. Petersburg throughout, which fact adds to the perplexity of the situation. But the despatch brings out another point, namely, that M. de Speyer's complaint was not merely against the conduct of 'idlers among the people claiming to be gifted politicians," but also against "the attitude of the Government" itself, which he accuses of "freely (?) preventing Russia from accomplishpoliticians," ing the advantages and beneficial results in-tended by her." Exactly on what grounds this tended by her." Exactly on what grounds this accusation was based we have no information, but it is necessary to assume that M. de Speyer had ample reasons for his conclusion. Doubt-less he telegraphed to St. Petersburg, that both in official and in non-official circles an anti-Russian sentiment had been developed, and that it had assumed proportions demanding some notice from Russia in the interests of her dignity. We may be permitted to doubt, how-ever, whether either the statesmen in St. Petersburg or M. de Speyer expected to receive an answer such as the despatch elicited. The document is pervaded by a tone not actually menacing, perhaps, but certainly portentous. The Koreans are plainly told that Russia's object in supplying them with military and financial experts was to assist them in a neighbourly way and to strengthen their independence, and that if they do not choose to take advantage of her help, they will be left to their own devices and must maintain their independence as best they can. Judging from the experiences of the past filteen years, it would have been a reasonable supposition that such ominous language must throw the Koreans into a state of extreme nervousness, and render them more anxious than ever to take shelter under Russia's wing. Possibly; therefore, a step planned with the intention of drawing the coils more tightly round Koren's neck has unexpectedly resulted in her shaking them off altogether. It is all a matter of conjecture, however. Only one fact emerges distinctly: Korea can no longer reckon on Russian forbearance or sympathy. She must shift for herself, and as that in not a habit of her's, the loneliness of the effort is likely in tax her fortitude severely.

The Korean Government was not left in any doubt as to the sentiments of the people with reference to the answer that should be given to M. de Speyer's despatch. On March 7th the

to the Russian Minister that the people of this country desire to have the Russian military country desire to have the Russian military instructors and financial adviser relieved from instructors and financial adviser selieved from the service of the Korean Government. They said that the people of Korea consider that the controlling of the Military and Finance Department by foreigners is detrimental to the independence of this country. They expressed their thanks for the kind feeling Russia entertains for Korea's welfare, but as to allowing her to control these two most important departments in the Government, the measure were strongly opposed. ment, the masses were strongly opposed.
The following communication was

upon unanimously amidst much excitement and applance, and in to be forwarded:—

applause, and it to be forwarded:—
"To his Excellency the Minister of Foreign Affairs, Min Jongmuk:—
"Stg.—"We, the undersigned, are authorized by the mass meeting of the people of Korea to inform Your Excellency that the people desire the Government to reply to the dispatch of the Russian representative concerning the military instructors and finance adviser that they shall be relieved from their engagements for the sake of maintaining our independent sovereign rights. We pray Your Excellency to consider the wishes of the people in deciding this question. people in deciding this question.

" March 10th, second year of Kangmu.

"Ye Settingman.

Considering the immense number of people assembled the meeting was an orderly one and the addresses were moderate in tone, and any inflamand tesses were indexed as a minediately suppressed by the leaders. These were many foreign spectators, among whom the Russian representative and his staff were interested onlookers.

Not the least curious feature of the whole affair is the publicity given by the Korean Government to its diplomatic correspondence. M. de Speyer's despatch must have been made known generally almost immediately after its reception. It reached the Foreign Office on Monday, and on the following Thursday a mass meeting of citizens was held to make suggestions about the manner of replying to it. Korea may claim the credit of novelty in her manner of conducting inter-State discussions. There is no precedent for such doings. It is not at all improbable, however, that the Soul people's demonstration, supplementing the action of the Independence Club, not only forced the hands of the Government of the supplementation. ment, but also convinced Russia of the advisability of stepping' gracefully out of the turmoil. It is a pity that she ever sent drill instructors and a financial adviser to Soul, and a still greater pity that they did not discharge their functions with a little more circumspection. But who could have anticipated such a display of spirit on the part of the Koreans? They are certainly miles above the Chinese in point of patriotism and national feeling.

The Independence Club has been very much en evidence during this affair. In addition to the documents which we have already publish-ed se emanating from it, we find that it sent the following communication to the Minister of Foreign Affairs, Min Jongmuk :-

"We have received your reply to our communication requesting for information concerning the much talked about question of Deer Island. You state that you have decided the question without consulting the council because while the Government was making the similar concession last year on Rose Island, the Minister of Foreign Affairs at that time did not consult the cabinet concerning that time did not consult the cabinet concerning it. We beg to call your attention to the fact that the rules of the former cabinet and the present council are different. According to the rules of the cabinet then existing, the Minister of Foreign affairs had the right is decide such questions at his own discretion, but the present system of our Council of State has curtailed this power.

"You further state that you have remeated."

similar purpose. Our land does not belong to any particular individual but in morally belongs to the particular individual but II morally belongs to the whole nation. If the Government begins to lend pieces of land any foreign power may claim the same privileges whenever they see that it will be to their advantage to make such a claim. In order to avoid this possible danger the Government must not lend a single inch of land either to Japan or Russia. We therefore suggest that Your Excellency notify the Japanese Government that within a ceasonable space of time she must evacuate the land on Deer Island upon which the Japanese coal go-down has been erected. If the Japanese coal go-down has been erected. If Japanese coal go-down has been erected. If this obnoxious precedent is abolished then it will not hamper Your Excellency in giving a refusal to all similar requests from other Powers. Such action on the part of our Government will be perfectly justifiable, as the land was temporarily leased without a time limit. We hope our suggestion may be approved and accepted by You Excellency.

To this the Minister replied :-non was mavordable, and I consider that it does not deserve such particular criticism from the public. I thank you for your suggestion, but as I am not discharging my duties at the Foreign Office for the reason that I have sent in my resignation to His Majesty, I am not able to consider the question at present."

Another communication tion was unavoidable, and I consider that it does

Another communication was forwarded by the Club to the Minister of Finance :

The public has been informed that the Finance Department diew the deposits of Government money from the two local Korean banks and deposited it in the Russo-Korean bank. Besides deposited it in the Russo-Korean bank. Besides there is a surrour to the effect that your department has transferred a large sum of money from the treasury wault to that of the Russian bank. Furthermore, the said bank has been authorized to collect and disburse all the Government revenues for the Finance Department. This matter concerns the people and they ought to know the facts of the case. If these cumous are true we must consider that the Russo-Korean bank is practically our treasury and your depart ment will be a figure head. We hope this is not true but after hearing such rumours we are, in the tine but after healing sizer rumours we are, in the sense of our moral obligation which we owe to the Government, deeply interested and are auximis to know the exact relation and privileges which said bank has obtained from the Government.

The Finance Minister's answer to the above is not yet published.

The Soul Independent says that the following placard, with reference to the interpreter whose ife was recently threatened, was posted in conspicuous places throughout the Korean capital on the 6th of March :-

"Kim Hangenk is an interpreter in a foreign legation. His only knowledge is the Russian language and his duties are to translate one language into another during interviews between our people and the Russians. But he has overstpped and the Russians. But he has oversupped the province of an interpreter and has been interfering with state affairs concerning both the ones at home and abroad. His deportment has been most outrageous towards both the high and the low and his language insulting in the exteene. The Government is ruled by this one Kim and other ministers of state have become his hired men. He has openly sold Government offices to the highest bidders and has caused the dismissals allower ministers who were not subservient to to those ministers who were not subservient to him. His immoral character shocks the hearts of him. His immoral character shocks the clearly of all decent men. He has manufactured imperial decrees to suit his own advantages and delivered them to the judicial officials in order m imprison dignitaries of state to reverge his personal gric-vances. He has been in control of the palace so that values. He has been in control of the palace so that no other official could have access to the palace without obtaining this man's silent parmission. No country can administer instice when such an on-law controls the state. If he is not served as master the man who faits in this respect is no longer in the Government survice, hence wickedness, deception and underhandedness reign suprement and straightforwardness, patriotism and manliness gradually disappear. Our for bearance manned

several thousand men from different provinces. It looks as though this movement had been pre-mediated by these men because quite a large number of countrymen are coming in daily to join this company.

#### CHINESE NOTES.

A Swiss gentleman travelling from Hongkong to Shanghai by the Loongmoon to enter the service of Messrs. Gensburger & Co., jumped overboard near the Kintoan lightship and was lost.

We find the following in the N.-C. Daily Nesses :-

The following official telegram from Peking has been received at this post;—" Owing to the financial embarrassments of the Central Government it has been found impossible to pay the Japanese Indomnity this year as formally agreed to between our respective countries. Japan, on the other hand, to show her time friendship to China, has forborne from pressing for the Indemnity and a new agreement has been signed extending the payment of the said Indemnity for another flow years."

Our contemporary gives that item of news under date of March 15th, knowing that the issue of the Chinese foreign loan was to take olace within a week.

The Peiho, prematurely declared navigable, had become choked with drift ice on March 10th. That is something very unusual.

Mr. Melton Prior continues "My Visit to Kiao-chou Bay" in the columns of the leading Shanghai journal. It is indeed my visit. There is little but my in it from first to last.

The Governor of Hunan has issued a proclamation calling on the people to extend to Christian missionaries the same treatment they give to Buddhist and Taoist priests, and promis ing that any one violating this precept will be shown no mercy.

The Tientsin correspondent of the N.-C. Daily News, writing on March 9th, says :-

A significant move has recently been made in connection with the camp at Lural. All the German drill instructors have been removed, and connection with the camp at Lutai. All the German drill instructors have been temoved, and a Russian General placed in charge in a most autocratic manner. The Chinese did not ask for this Russian General, nor were they consulted as to making the change. He was sent to be accepted and placed in charge under certain stipulations—five, if I mistake not. All Germans were to be discharged. All future instructors were to be discharged. All future instructors were to be selected by him. He is lent to the Chinese by the Czar so can receive to salary, but they can make him an annual "allowance" for incidental expenses of not less than Tls. 300 per month. He holds equal rank with General Nieh, and matters for reference he will refer to the Russian Minister, and Gen. Nieh to the Tsugli Yambu. His own instructions with the received from the Czar, not from Peking. The case was referred by the Peking officials to Viceroy Wang Wès shae, but he declined opinion or advice, and returned the matter to Peking for decision. The Chinese are not likely to do anything: they will simply let it slide along, accept the present situation, hoping for "something to turn up" to their advantage some time. This is the most high-handed step yet, and it does seem as if all other nations ought to protest in the interest of homourable dealing, and other probable action the most nightnanded step yet, and it does seem as if all other nations ought to protest in the interest of honomrable dealing, and other probable action of the aggressor to the detriment of commerce and good understanding all around. What next?

The Chinese people, hitherto so lightly taxed, are now to feel the effects of their Government's financial embarrassment. The N.-C. Daily reports:-

Conneil of State has custailed this power.

"You further state that you have repeatedly laid the matter before the council herore deciding the question. But according to the joint memorial of the councillors a few days ago they asserted that you had decided it before the council had time to discuss the question. It seems to us that your statement and that of the council at at variance. We have no doubt that the matter will be ultimately cleared up so that it will reveal the guilty party.

You further state that you have decided to loan that land to Russia because our Government and the plant on the above the made a precedent by lending a piece of land on the same island to Japan some years ago for a land to the matter will be the same island to Japan some years ago for a land to the matter this memorial will be signed by the Board of Revenue to fill the depleted exchequer of the Central Government and lately sanctioned by Imperior except the first and we hereby proclaim to loyal citizens of our empire on intention of praying the Throne to drive out all these peaterons insects from the palace and show to the world that our nation is not all composed of such that the matter will be ultimately cleared up so that it will reveal the guilty party.

You further state that you have decided to loan the land to Russia because our Government and the land to Russia because our Government on the above its:

The headquarters of these memorialists is that all shops and institutions dealing in loreign goods of any kind or description, as well as they wrote was to be sent in on the 29th instant, as those selling wholesale ar retail raw or presument and the product of the council had the depleted exchequer of the Central Government and and the legislation of the council had the would that our entire to drive out all these peaterons insects from the palace and show to the world that our entire logistics of our empire out all these peaterons insects from the palace and show to the world that our nation is not all composed of the c

per shop, irrespective of the size or extent of the business of the places so taxed. Another scheme was also put into execution at the same time which was to levy, monthly, to per cent of the rents on houses paying Tls. to and over rent per mensem.

This is a sort of income tax and falls upon house. This is a sort of income tax and falls upon house-holders and landlords throughout the Empire. With reference to the above the promise is given by the Throne that the taxes shall "cease as soon as the foreign debts shall have been paid off," which, under present aspects, means never. It remains now to see how the people of the country will receive this news although, according to northern dispatches, no opposition has so far been met with in the capital, the said taxes being paid without any denure. without any demur.

The report circulated on March 181, that an attack had been made on native Christians in Chuhi, at the close of February, that the missionary chapel had been wrecked, that fatal casualties had occurred and that troops had been sent up to restore order and protect the missionaries, turns out to be wholly groundless.

It is rumoured that the Viceroys and Governors of Chinese provinces have been instructed to be prepared to specially engage, or receive Russian military experts for the instruc-tion of the various provincial armies now being organized after foreign models.

#### FRESH MISSIONARY TROUBLE IN CHINA.

A telegram from Chungking, dated March 16th, to the N.-C. Daily News says :-

The American Mission in the sulmibs has been sacked by a mob. The Chinese medical assistants were maltreated, and one murdered.

Our Shanghal contemporary, which is never disposed to minimize the gravity of any intelligence, comments thus on the above :-

At Changking of late missionaries, of whom At Changking of late missionaries, of whom there are now some forty in the city itself, have been getting along quietly, though, as our correspondents have from time to time informed us, the Methodist Episcopal Mission has had constead trouble at Kiangpell, on the other side of the Siao Ho, or Little River, that runs into the Yangtze at Changking. It will be some time, probably, before we get particulars of this recent riot and its causes; but there is too much reason to fear that it may turn out to be a symptom of the unrest that is felt throughout the Yangtze Valley at the present time. present time.

present time.

For this unrest there are a great many causes. The Yangtze Valley has been for years the favourite recruiting ground of that formidable secret society, the Kolao Hué, which is always threatening to organise a rebellion, but which so far secure to confine itself to local risings, which the authorities easily suppress, as long as they keep their superiority in the armament of their men. But as we mantioned lately arms have been pouring into easily suppress, as long as they keep their superiority in the armament of their men. But as we mentioned lately, some have been pouring into the Yangtze Valley during the last lew months, and it is said that high officials are interested in their introduction. The real ruler of the Yangtze Valley is H. E. Chang Chih-tung, the Viceroy of Hupeh and Hunan, for H. E. Lin Kunyi, the Viceroy of the three lower provinces, Anhoi, Kiangsi, and Kiangsu, is under the sway of Chang's stronger personality; and Chang Chih-tung is, as we have shown lately, disgusted with Peking on account of the decree ordering him to disband his troops, and on account of the weakness of the Government generally, which has left China a helpless carcase for her enemies to divide. It is galling to him, a patriotic Chinaman if there is one, to see that China has no voice at all in the discussion of the question of her own spoliation, which is only postponed by the disputes among her spoilers. Though believed to be personally a man of scengulous honesty, he spends the reson ces of his satiapy recklessly in wild schemes which might become reminerative if there were a practical man to direct them; and being in constant want of money, he does not like the mesopert of having a next of his libit releas rative if there were a practical man to direct them; and being in constant want of money, he does not like the prospect of having a part of his likin taken away, and extra taxes imposed on his people, to pay the interest on loans rendered necessary by the mal-administration at Peking, for which he does not consider himself responsible.

The unrest in the valley of the Yangtze is being maintained and stimulated by a very able native newspaper published, we understand, in Shanghai, which is read by the educated classes, and which is very outspoken in its articles on the necessity of reform. Its motto is apparently "China for the Chinese;" but its opposition at the present time

is directed at the Government of China, more than at the Foreign Powers, whose opportunities for aggression have been provided them by the weakness of the Government. It is understood to have official support, if not backing, and we are told that its atticles, many of which are translations from the foreign journals published in Shanghai, have a wide influence on sublic actions are civil a more of the control of the contro which are the assistance of the integral pointain published in Shanghai, have a wide influence on public opinion, especially among the upper classes, The highest official in the Yangtze Valley is reported to be in sympathy with the aims of this journal; which does not want to dethrone the Emperor, but to make him a constitutional sovereign, the model set before the nation being the British Constitution. As far as we are aware, no definite steps are being taken at the present time towards a revolution, the want of a leader being generally recognised; but, as we have already said, there is a wide-spread feeling that something is going to happen; and all stations in the Yangtze Valley where there are foreigners should be on their guard, lest the evil-disposed take advantage of the existing excitement to foment outrages which the leaders of the reform movement would be the first to deprecate. They are not anti-foreign themselves, but there is the danger that they will molose forces which they will not be able to control. be able to control.

#### AFFRAY ON THE "PATHAN."

Captain Day of the Pathan has furnished the Kobe Chronicle with a few particulars of the conflict which occurred on the ship at Moji between the coolies and the crew. It was caused, he says, through some of the coolies attempting to take the Chief Engineer's tally-book out of his hand when he objected to some cheating which he had perceived in the coal supplied for the bunkers. The Chief Officer and the Fourth Engineer endeavoured to pacify the coolies, who then attacked them with crowbars, broomsticks, &c., and bombarded the Chief Officer in his room for about five minutes with lumps of coal, cutting and bruising him about the head and body. By this time the other officers and engineers, Malay sailors and quarter-masters had armed themselves with the ship's bayonets, and, charging the coolles, drove them off the ship in about five minutes. The one man in the leg. There were about 80 coolies, and only eleven of the ship's company engaged in the row, and the police did not turn up for nearly an hour later.

#### KOREAN STUDENTS.

It is probably fresh in our readers' recollection that the Government in Soul recently stopped all remittances on account of the expenses of the Korean students studying in Japan. The lads had consequently to choose between abandoning their studies or continu ing them at the charges of anyone willing to assist them. Several of them appear to have adopted the latter course, for we note that a charity Bazaar is to be hold next Sunday at the Uyeno Academy of Music in aid of the youths' education. The chief promoter is Mr Takao. Sayeji, editor of the Yorozu Choho, Sanjikken-bori, Kyobashi, Tokyo, and the tickets of admission are 1 yen, 50 cen and 25 ten. From the fact that three grades of ticket are advertised, we infer that some kind of entertainment is contemplated, but the term used in the circular is Fisen-Kai by which a charity bazaar has hitherto been understood.

#### TOKYO LITERARY AND MUSICAL SOCIETY.

The meeting of the Tokyo Literary and Musical Society on Monday, 21st instant, was very successful. H.E. the United States Minister presided, and the following programme was given :-

- 1. Pianoforte Duet Misses Gertrude and

- s. Pianoforte Duet Misses Gentrue Darathy Page, 2. Reading—Miss Terry, 3. Song—Miss Buncombe. 4. Pianoforte Duet—The Misses Page, 5. Reading—The Rev. W. White, 6. Song—Mis. Gaist, 7. Reading—The Rev. W. White.

#### FATAL FIRES IN TOKYO.

About 1.25 a.m. on Tuesday fire broke out in the quarters occupied by Professor Yama-giwa in the Medical College of the Imperial University, Hongo, Tokyo. In the excitement, the Professor's little daughter, nine years of age, appears to have been left in the burning building, and her charred remains were found among the débris after the fire was extinguished,

At about 2.30 the same morning fire broke out in the Takasaka Komaye printing office, in Minami Odawaracho, Kyobashi-ku, Tokyo, and assumed large dimensions, no less than 113 houses being destroyed before the flames were acrested at 4.15 a.m.

#### OVER A THOUSAND HOUSES BURNT.

On Wednesday morning m about 2.30, fire broke out in a store shed at No. 6 Nichome, Harukimachi, Hongo, owned by Mr. Yokomakura Shotaro of Ichome, Harukimachi. The flames, fauned by a strong north-easterly wind, spread very rapidly and 1,112 houses were re-duced to ashes, including the Haruki Theatre and many other important buildings. It was not until 6.30 a.m. that the fire was got under control. During the fire one person is reported to have been burnt to death. The cause of the fire, though not accurately known, is believed to have been incendiarism.

#### NEWS OF THE WEEK.

A well-known butlesque actress was thrown from her wheel in turning the corner of a London street. One of the papers stated that some "painful bruises on the pavement were sustained." The pavement, however, everyone will be pleased to hear, is making fair progress towards recovery.

Towards the end of February the British Isles were visited with very severe weather, the bright, sunny days that had previously characterised the winter turning to days of snow, frost and sleet. London was attacked, at the same time, with an epidemic of measles, the malady being mainly experienced by grown-up people. So severe and wide-spread was the epidemic that in one week alone over twenty balls and receptions had to the postponed.

Señor D. H. de Uriate, Consul General of Spain, has communicated to the N.-C. Daily News the following official telegram :-

Maoile, 13th March, 11 30 p.m.
Disturbances in the North of Luzon, district of Bolinao, entirely local, no importance, caused by hill Indians rescuing criminals being conveyed to prison and assisted by Actas Indians cutting wites. Already severely punished by forces sent, and order re-established. The rest of the Archivelago entirely quiet. pelago entirely quiet.

Kobe is making a record for fires. Another occurred on the 31st inst, when the house of Mr. M. Lossman, on Waterfall Road, was burnt to the ground, and the contents also destroyed. The loss of furniture and effects was covered by a policy for yen 3,000 in the London Assurance Association. The building, the Robe Herald believes, was insured in a Japanese office. The origin of the fire is reported to have been accidental.

Mr. Genzo Akiyama, formerly President of Mr. Genzo Akiyama, tormerly Fresident or the Yokohama Law Court, who was lately promoted to the Chokunin Judgeship of the Court of Cassation, has resigned his position, and proposes to practise in Yokohama and Tokyo as a soliciter and barrister. Mr. Yackichi Inouye, also a former Judge of the same Court, is about m take a similar step.; and Mr. Ryokichi Ozawa, the Court translator, will work in conjunction with them.

The seventh ordinary general meeting of shareholders in the National Bank of China was held in Hongkong on March 12th, Mr. D. Gillies in the chair. In proposing the adoption of the accounts the Chairman stated that the Bank was in a perfectly sound condition. He regretted that the Bank could pay no dividend

for the past year but had hope that at the end of the ensuing twelve-months a more substant tial and creditable report would be submitted. The accounts were adopted, but a proposal to add another European to the Hongkong Board of Directors was negatived.

A Hongkong paper of March 16th published accounts of serious disturbances in Manila. pointing to a recrudescence of the rebethon.

The cable companies issued a notification stating that the Spanish Government land lines beyond Bolinao had been interrupted since Sunday night, oth inst. and from this it was inferred that the rebels were in possession of the country between Bolinso and Manila. H.M.S. Edgar was hurriedly prepared for sea, and ordered to leave for Manila on the 13th.

The record of the Rev. Robert William Duncan, who has died at Liverpool, is probably unique. He was a curate for half a century; he was connected with St. Peter's Parish Church all this time; and his duties were mainly those of baptising and marrying. To solemnise 5,000 baptisms and conduct 1,000 weddings To solemniae as an ordinary year's work; but before 1868, when interments ceased at St. Peter's, he officiated at burials as well. During a cholera visitation which devastated Liverpool, it is stated that he read the burial service over several hundred victims III the same time.

This is to be a year of centenaries. France will have three-the centenary of Jasmin, the barber post, who was born at Agen in 1798, and died in 1864; that of Auguste Comte, founder of the Positivist School, who died in 1857; and that of Jules Michelet, the famous historian, who was born on August 21, 1798. There will be two centenary festivals in Italy, in memory of the post Leopardi and of Savanarola. Besides the centenary celebration of the independence of the Cauton of Vaud, the Swiss will commemorate the fourth centenary of Hans Holheir, the great painter. On May-21 Portugal will commemorate the fourth centenary of the explorer Vasco de Gama.

Ireland is once more united, save the Globe. Considering what they have said of one another and how they have lought, it is certainly very astonishing to find all parties collected in perfect amily in one of the Committee Rooms of the House of Commons. It is even more amazing when one sees Colonel Saunderson elected chairman on the motion of Mr. Dillon, seconded by Mr. John Redmond. It is no wonder if English and Scotch members subbed their eyes and asked each other if the millennium had auddenly arrived. When, however, it was realised that the combination was for the purpose of getting more money out of Great Britain, the wonder ceased.

In H.B.M.'s Court at Kobe, on the 21st inst., before Mr. J. Carey Hall, Consul and Judge, the case against Richard Pubic and Alexander C. Lang, chief and second engineers of the steamer Hing Sang, for assaulting and wounding a Japanese constable, adjourned on the 16th inst., was called. Neither of the defendants, who had been allowed bail on a deposit of \$200 each, put in an appearance, and his Honour, in accordance with Sec. 9 of the Summary Jurisdiction Act, declared the money (yen 400) forfeited und ordered it to be paid account of the Crown. He further directed Mr. Lucas, Court Constable, to continue to use all efforts to find the accused, as the charge could still be prosecuted.

In the Calcutta Review, a stronger case than usual is made out for the claim of the Afghans to be considered the descendants of the lost tribes of Israel. In the first place, the Hebrew aspect of the Afghan is striking, and in the second place all of his commonest names are Biblical. Such are Yusul (Joseph), Yakub (Jacob), and Ishak (Isaac). Aighan tradition, themselves Beni Israel, or Children of Israel. prominently identified with every movement similar way by Russia.

The oldest Afghan customs, moreover, distinctly suggest Israelite origin. Such are the obligamarrying a deceased brother's widow, and the capital punishment of stoning. But the strongest evidence of all is a discovery by Dr. Moore, which ought, if entablished beyond doubt, to settle the question. He states that a number of archaic inscriptions exist in Afghanistan which cannot be interpreted by any other means than transliteration into auclent Hebrew, when their sense becomes clear.

It is stated that Ching has asked for the services of an officer from the British army to raise a force, consisting of six thousand Chinese troops, his head-quarters to be at Pinyang, whence he shall be ready to defend the Chinese capital.

Coffee, it is believed, will cease to be an export of Ceylou in two or three years, the amount exported rapidly decreasing, especially of native coffee. Sir Thomas Lipton, however, says that coffee growing is not played out in Ceylon, and that he finds no difficulty in growing it.

The Nippon Yusen Kaisha's trans Pacific steamers commencing with the steamer Yama-guchi Maru, hence April 2nd, have been authorised by the Imperial Postal Department to carry through mails; this will enable shippers to pass their papers through the Banks and post by the steamer carrying the cargo.

Telegraphic information was received in Yokohama on Thursday that the Reichstag has granted the extra subsidy for the Imperial German Mail fortnightly service to China and Japan, and the same will in future be carried on conjointly with the Nordd-Lloyd and Hamburg-America Line.

The death occurred at the Grand Hotel on Wednesday night, of Mr. James Heelis, a gentleman belonging, we understand, to Manchester, England, who was on a trip round the world. Mr. Heelis arrived in Yokohama from Kobe only a few days ago, suffering from dysentery, and was attended by Dr. Hall. He was to have left for Eugland by the Empress of Japan to-day. Deceased was unaccompanied by any of his relations or friends.

Mr. N. J. Ede, who is shortly retiring from his post as Secretary of the Union Insurance Society of Canton, Limited, which he has held for the last twenty-seven years, has been presented at Hougkong with an address from the members of the Eastern staff of the Society, the address being accompanied by a souvenir in the shape of a gold watch.

An inspection in dock at Hongkoug of the damage austained by the Coptic proves that extensive repairs will be necessary before the ship is ready to proceed to sea again. The three decks of the vessel will have to be removed, and the repairs to the vessel will take more than two months to complete. The Dockyard Company has undertaken the execution of the work for \$120,000.

Tenders for 500 tan of canvas duck and 500 kama of grey shirtings are invited by the Inspection Bureau (Kansa Kyoku) of the Comunications Department; to be opened on March 28th. Tenders are also invited by the Inspec-tion Bureau in the Department of Communications for 15,000 yards of rubber covered wire and sundry other material. Tenders to be submitted to the Treasury Office in the above Bureau before noon on April 4th, Particulars are open to inspection at the same office. ders for 5,000 feet English-made hose-pipe are invited by the Third Section Office (Dai Sanopened at tra.m. on April 4th.

Among the homeward passengers by the Em press of Fapan are Mr. and Mrs. H. L. Baggallay, who leave Japan with no intention of returning. Mr. Baggallay's health has for some

calculated in be of benefit or interest to the whole community, and throughout his ten years' stay he has been one of the most popular residents in the port. His departure is universally regretted, the more especially on account of the cause, and in expressing a hope that the change will lead to his complete recovery, we are but re-echoing the sentiments of every member of the community.

An amusing story used to be told in Bar circles respecting a meeting of the late Baron Pollock and the late Lord Denman. The latter had the night before delivered one of his unutterably prosy speeches in the House of Lords which in the customary manner was disnosed of in the London dailies thus :- 'After lew words from Lord Denman," &c. Baron Pollock overtook his learned colleague in the park, and found him fuming over this latest journalistic indignity. Pollock, in a mildly ironical fashion, coudoled with his friend, and expressed regret that so magnificent an oration was not reported. Lord Denman took the remark seriously, and exclaimed:—"Ah, was not reported.
remark seriously, and exclaimed:—"Ab,
Pollock, it's my firm belief that no person
connected with a newspaper will sver enter

The naval correspondent of the Globe writes: Commander Lewis K. Bell, in command of the sailing training sloop Cruiser, in the Mediterranean, has found time amid his multifarious duties to invent a range finder for use in the navy. I do not know the principle of the instrument, but I hear that on a first aspect it is so satisfactory that the Admiralty have given directions for a series of exhaustive trials to be made with it at Portsmouth." The Singapore Free Press recalls the fact that Commander L. K. Bell was well known on this station in command of the Plover in 1891-92, his officers being that go-shead pair of lieutenants, Brownrigg and Shakespeare, the former of whom is now a sonin-law of Sir Cecil Smith.

The man who brings politics into a love letter must be an enthusiast. In an action brought at Liverpool against a poulterer and fishmonger a letter was read from the ardent swain, in which he says, describing Mr. Chamberlain :-

He stepped on to the platform as if he had walked out of his frame. His sonorous voice was adapted to the building, and in a dramatic, telling manner he emphasised his several points. His earnestness, humour, sarcasm, and ironic praise of his opponents was unequalled in my personal experience. His single eyeglass he wore with refeeshing assurance.

The only satisfaction which a young woman (who probably wanted to read nothing but that her eyes were perfect and her hair adorable) could derive from such a screed was in the subacription :- "Yours by a large majority, Tom,"

The present position of the currency question in Russia is decidedly interesting, says Finance. Russia is one of those countries where the population is so completely used to paper money that they actually prefer it to gold, but a gold standard had to be established, and the thing has been done. The idea was to create thing has been done. a gold standard " similar to the English pound sterling "-and now, instead of the rouble being a fluctuating unit—it is fully established as a definite standard. To get over the difficulty of making the change popular, paper is being gradually withdrawn, particularly the notes of smaller values, and the silver coins are being made mere tokens. At the present time there is 13.1 per cent. more gold than paper in Russia, and at the end of last year, the amount of paper roubles in circulation was 199,000,000. So that it may be taken that Russia has become definitely, if not irrevocably, a monometalist This action is unquestionably procountry. foundly interesting to England as a monometallist nation. It will-modify the relations existing -financial and commercial-between Russia and Asiatic countries, and will, so far as currency in concerned, place the great northern (Jacob), and Ishak (Isaac). Aighan tradition, months post been such as to render the change empire on the same plane as ourselves. The moreover, distinctly alleges an Israelitish descant, and the modern Afghans still call the Chronicle, Mr. Baggallay has always been the silver standard of Asia will be felt in a

Note.—For less important places and for the details as to Customs Declarations, postage, etc. see Notification No. 199 of the Department of Communications of the 29th year of Maiji.

#### BRITISH OFFICERS.

An interesting article, on "British Officers." written by "An Ex. Attaché," appears in the Washington Post. The author quotes the opinion of a German military paper as follows:

"Despite all its bravery, the British Army has shown once again on the Indian frontier that it is as unfit for warlike expeditions as ever. training and even the arming of the infantry are faulty. The organization is cumbersome. Miserable mobilization, confusion in the assembly and preparation of the troops and the reserves, inadequate supply of ammunition and a hadly organized commission. a hadly organized commissariat, render it impossible for a British Army mappear with crushing force. If Russia were to make use of her opportunities, England, powerless make is from a military point of view, would be forced to leave the gates of India in Russia's hands, and to thank her stars if she did not lose India altogether."

"Ex-Attaché" considers the fault has been entirely and admittedly the gross incompetence of the officers, who have displayed a degree of inefficiency that is calling for the most scathing criticism from the English press itself. It is the English officer who, more than anything else, constitutes the weak point of England's weak army. Physically and socially he is superior to most of his Continental comrades. Devoted from his earliest boyhood to athletic sports, and keeping his body both before and after receiving his commission in a constant state of spleudid training, he is, so far as the mere physique is concerned, much better equipped for the hardships of a campaign than even his German colleague. But in military science and tactics he is lamentably inferior to most foreign officers, and the time which the latter devote to the arts of their profession the English officer spends in pig sticking, hunting, polo, and tennis.

"It is owing to this neglect on the part of the British officers that the English army has remained, as the great German field marshal, Count von Molike, was wont to declare, much the same as it was at the battle of Waterloo, more than four score years ago.

"The British officer, by his plack, his physique, and usually by his birth, is well equipped to act times gone by. He does not realize that the successful officer of the present day must be more of the student than of the athlete, more of the cold, calculating mathematician than the warm hearled, generous minded creature of impulse; in one word, that the military leader of the close of the nineteenth century must no longer be a Prince Rupert, but a Molike."

#### CORRESPONDENCE.

#### IAPANESE SAILORS ON THE "MAINE."

TO THE EDITOR OF THE " JAPAN MAIL."

TO THE EDITOR OF THE "JARN MAIL."

SIR,—A complete list of the crew of the ill-slated Maine is given in the Chicago Reader of Feb. 17. In that list I find the names of several Japanese, as follows:—Fusajino Awo, Suke Chingi, Olojino Ishida, Yukuchi Kitagata, Katsusahuro Kushida, Tomekichi Nagamine, Masu Oliye, Isa Sugisaki, and Katsutaro Suniki. Some of these names are rendered unintelligible by typographical or other errors; but all are natives of Japan. Of these Kushida and Awo are the only survivors, and in one paper the latter is said to have been and in one paper the latter is said to have been injured. These two were taken to Key West, Florida, with other survivors.

Yours sincerely,

ERNEST W. CLEMENT. Tukyo, March 17th, 1898.

#### RECENT "COUP DE GRACE" OF THE DOSHISHA.

TO THE EDITOR OF THE " JAPAN MAIL." SIR,—Doctor Davis' very lucid letter in the Fapan Weekly Mail of 12th inst. beings into conspicuous prominence the following important paints which, in the writer's opinion, the Japanese Government is by honour bound to consider deeply before taking any final action in recognizing the Jinjo-Chu-Gakko department of the Doshisha:-

I. The lamented Doctor Neesima during his student life in America conceived the idea of founding a Christian institution of learning in his

beloved native land.

2. For the realization of this grand and noble aim Dr. Neesima, by the consent of the American Board, appealed to the Congregational Churches of the United States.

3. These churches responded with that munificent liberality which has made famous the whole history of their foreign missionary activities for

nearly a century.

4. The basic foundation of the Doshisha is:
Christianity in its moral and spiritual life, i.e. in

Christianity in its moral and spiritual life, i.e. in its totality.

5. This foundation is unalterable.

6. Notwithstanding these facts, immediately after Dr. Neesima's death the trustees who had pledged their honour to uphold the Constitution have betrayed their trust by endeavouring to subvert the fundamental principles upon which the Institution is erected.

7. This attempt to subvert the foundation of the Doshisha is done without heeding, may in beazen defiance of, the vehement protests of the Christian donor repeatedly expressed in a thunder-like

donors repeatedly expressed in a thurder-like voice that can never be misunderstood.

voice that can never be initial deritod.
Undoubtedly there have been in the long history of European education institutious of learning which in course of time have changed the spirit which created and monified them. Most of the modern great Universities of Christendam started centuries ago as monastic institutions when the priesthood monopolized all the learning of the age. Through a slow and gradual process of evolution the universal thought of the constituency underwent a radical transformation, the method of underwent a radical transformation, the method of study was changed and broadened, and the sciences began to occupy the position which formerly had been taken by theology to the ex-clusion of the rest.

clusion of the rest.

But the present case is entirely different. It cannot find a similar one in the whole history of education in the civilized world. It stands unapproclably unique. It is nothing short, in my opinion, of a high-handed robbery.

8. Notwithstanding the illegal action of the trustees in striking the Christian clause out of the Doshisha Constitution, still if the Government will recognize its Jinja-Chu Gakko department deliberately, it commits an action which will terribly pain the motal instinct of humanity. It will leave a deeper stain upon the good reputation of Japan than the Port Arthur massacre. Because there the crime was committed by the common there the crime was committed by the common soldiery, whose buman passions, at the sight of the mutilated corpses of their comrades were heated to a blinding and micontrollable intensity; while here the crime, because it is nothing short of moral crime, is being coolly perpetrated by the culting classes of Japan.

In the same number of the Japan Weekly Mail the writer of the article on "Civilization" finds it very difficult to define satisfactorily the meaning of that great and complicated word. Indeed, it is hard to define it postively. However, there are, in hard to define it postively. However, there are, in my opinion, encourging possibilities to find out the nature and constituent elements of civilization from a negative stand-point, thereby reaching ultimately the same desired goal. In the witer's opinion this Doshisha disgrace is not, a fortieri, the highest manifestation of a civilized human society's activity. Who are the men who are enacting this drama of injustice? They are not common and deprayed felous, They all are men of honour and integrity of character. They are men like Mr. Tokutami, who for more than a decade has stood as the chief guardian of the are men tike Mr. Lokutomi, who for more than a decade has stood as the chief guardian of the moral consciousness of his very intelligent nation. They are men like Mr. Yukoi who, not quite a year ago, was hysterically shouting at the top of his voice about the insufficiency of the present hooks on maral law, and urging the imperative necessity of a new ethical treatise with broader and more which intelligence. on marai aw, and triging the imperative necessity of a new ethical treatise with broader and more sublime ideals of existence. If such representative leaders of Japanese thought and life are liable to fall into such a deplorable condition of extreme moral stupour without the national conscience being stirred to its innermost depths I should not wonder for a moment if civilized nations refused to consider Japan morally a civilized country, in spite of the revised treaties. No civilization is worth a rotten turnip that is not based upon the eternal and immutable ethical law which governs human destiny. I think I am not mistaken if I say that the very honour of Japan and the Japanese is deeply concerned in this Doshisha question. Let the whole nation in its august majesty usize and protest, even if it cannot recitly, this flagrant injustice. The national conscience is above all forms of forensic technicalities. This is a test case for the national conscience to decide; and when the final judgment of that decide; and when the final judgment of that august tribunal is announced then civilized

Digitized by Google

humanity can decide whether Japan is a really civilized country or not,

PHILO-JAPAN.

Yokohama, March 17th, 1898. [It is very difficult to see how the Government question directly or indirectly.-- Ep. 7. M.]

#### THE LATE DR. VERBECK.

TO THE EDITOR OF THE " JAPAN MAIL."

Str,-Although an acknowledgement has been Sign-Atthough an acgnowledgement has been made its the columns of your journal by Miss Verbeck of her sincere thanks for the sympathy and kindness shown by numerous friends and acquaintances in connegion with the lost of her severed father, I esteem it a duty and a privilege to express the gratinde felt by the Members of the Mission and the Church represented by our estemated by the father for the father of the mission and the Church represented by our estemated by the father for the father of the fat teemed bruther for the sympathy shown and assistance afforded by the Members of various Missions and of the U.S. Legation in this sudden and trying visitation, assistance which contributed so much towards the successful carrying out of the fameral services. The assistance rendered to Miss Verbeck by her Legates friends involving and the fameral services. Werbeck by her Japanese friends, including among them Baron Samoniya, Master of Ceremonies of the Imperial Household, Mr. Masujima and others, was invaluable for the right conduct of that part of the obsequies. But H.M. the Emperor's part at the obseques. But II. In the impetor a munificent thoughtfulness in providing for the entire funeral expenses, and the generous contribution, or gratuitous, toan of the but in poly of the but in poly of the part of the Tokyo Ru-City Government—are acts of kindness that call for heartiest expression of thanks not only on the part of the Mission and the body of Christians whom the deceased represented, but on the part of all his own and other nationals with whom H.M.'s Government stands in treaty relations.

The expressions of condulence, coming from offi-cials, thurches, prominent workers, former pupils etc., are both numerous and affecting. In cesponse to the desire expressed for a memorial ser-vice in some place large enough to admit the public vice in some place large enough to admit the public generally, it was thought well such a service should be held to-day, a week later than the funeral, at the Kanda Set Nea Kan. But owing to the fact that those who might be required to take part in such services were very much engaged, and the close of the school year at this season adding to these engagements, it was thought better it should be delayed till a more (avoiable time.

A letter sent in anticipation of such a memorial service by Members of the American Board Mission may be added as testimony from valued fellow-missionary workers of their appreciation of Dr. Verbeck's life and labours.

Kyote, March 17, 1898, In behalf of the American Board Musical, usis to express our great esteem for Dr. Verbeck, and to unite in heart with those who are honouring his memory. Dr. Verbeck was indeed a true lover of God and of man; he gave 38 years of his life to Japan, and we rejuice that he so fully manifested the breadth of the Christian love; he hancefully retailed the Japaness to the control of the Christian love; he thoroughly studied the Japanese language and used his linguistic powers to preach Christ to the Japanese in words easy to be understood and full of life, and also to translate the Psalms into lapanese.

Japanese. Although most of us did not have the opportunity to become well acquainted with him personally, yet we all exteemed him a friend and a brother in Christ. We thank God for the sending of such a man to Japan, and pray that we may be blessed to follow his example.

J. D. DAVIS, Chairman. D. W. LEARNED, Secretary.

I am, Sir, your abedient servant, JAS. H. BALLAGH,

necessarily involves delay, and it may often hap-

necessarily involves delay, and it may often hap-pen that the translation is not quite correct.

All addresses on letters, etc., when written in foreign style should be in clear legible writing, and in Roman letters (not Gothic or other style); and if, in addition, they are properly translated in Japanese writing they are more likely to escape any unnecessary delays or any risk of being lest being lost.

I should also like to suggest that all letters des-tined for Foreign Countries should have the name of that country written in Japanese; otherwise— and especially from summer resorts or places in the interior-such letters may risk being sent to some other Post Office than the one where the special mail desired is being made up.

Tam, sir, yours faithfully,
B. YASUHIRO, Tokyo, 21st March. Director-General of Posts.

#### ON THE RIGHT OF WAY WHEN LEAVING PORT.

TO THE EDITOR OF THE "JAPAN MAIL." SIR,—The question as to the "right of way" awing been brought up before the Court of Indiry, recently held to investigate the circumstances having been b

quiry, recently held to investigate the circumstances attending the collision between the steemers Borneo and Wayo Maru in the fairway to Yokohama harbour, I consider this a most suitable opportunity to bring the matter up for public discussion, and I shall herewith start the same, If you will kindly allow me sufficient space in your valuable paper to express my opinious.

I may at once state that my object in writing is to warn shipmasters against too rashly concluding that of two steamers, one question and

is to warn shipmasters against too rashly concluding that of two steamers, one entering and the other leaving port, the one which is the outgoing vessel has the right of way and that the incoming steamer must give way to her; because the incoming steamer has generally pleuty of searoom, while the other is probably in a narrow roadstead. My opinion is that, unless there are appecial rules, duly made by local authority, relative to the navigation of any harbour or its fair way, the only rules applicable to the navigation of such places are:—The sevised Rules of the Road for preventing Collisions at Sea, if such are not overtuled by the custom of the Port, or Ports.

Before the above-mentioned Court of Inquiry, the

Before the above-mentioned Court of Inquiry, the Chief Officer of the outgoing steamer Borneo is said to have stated that there are no printed rules on the natter; but that it is generally understood that in case of a vessel leaving and a vessel entering a harbour, the vessel entering should give way to the other. On the other hand, the Captain of the incoming steamer Wayo Maru is quoted as having stated that he did not know of the practice of a

stated that he did not know of the practice of a ship entering harbour waiting for a vessel going out. I sincerely trust that the Borneo was not navigated under the idea that she had the right of way, and that the finding of the Court was not in any way affected by the Chief Officer's assertion. To show that the Chief Officer was probably wrong in stating that it is generally understood, in case of a vessel leaving and a vessel entering a harbout, that the vessel entering should give way to the other, I may quote a few sections from the local regulations in force at Belfast, as follows:—

Sect. 67. That, when steam vessels on different courses must unavoidably or necessarily pass so

Courses nitst inavoidably or necessarily pass so near that by continuing their respective courses there would be risk of coming in collision, the helm of each vessel shall be put to port, so that the one shall always pass on the imboard or portside of the other. side of the other.

side of the other.

Also, in the additional Rules it states:

1st. That, when steamers are likely to meet
at, or near, the Holywood Lighthouse, the outgoing steamer, being the one which has the other
on her own steamer has come round far enough to give

Suggestions of Note to Foreigness.

Sir,—With the object of avoiding delays, and complaints arising therefrom, in respect to the delivery of letters and other small matter, the Minister of Communications recently issued some general directions and cautions on this special point; and I now write, by his instructions, to ask you to be good enough to point out to your readers one small, but important, point thereof, so that they may largely prevent such delays by using the precaution of leaving the correct address written in Japanese.

It now lacquently happens that letters for places in Japan (domestic mail matter) are posted with address written in foreign writing only—and in such cases some of the post office staff have to translate and write addresses is—Japanese. This

tions are in force, no captain should a his steamer has any right of way; and if he should be compelled at any time to meet a vessel in the fairway of the harbour he should then so mancovre as to be on the right side of the channel, as required by Article 25 of the Revised Regulations for Preventing Collissions at Sea.

I am, Sir, yours very respectfully,

NAUTILOID.

March 21st, 1898.

#### KYOTO UNIVERSITY LIBRARY.

TO THE EDITOR OF THE " JAPAN MAIL."

Sir,-I beg to express through the medium of Siz.—I beg to express through the medium of your paper my sincere thanks to the following for their valuable donations to the Library of our Institution:—"Anstralasia Picturesque Atlas," 3 vols., donation form Mrs. E. S. Patton; "Handbook for Travellers in Japan," 10 vols., donation from Prof. B. H. Chamberlain; "Joseph te Maistre," 10 vols.; "Philosophie de M. Guerre," 10 vols., "Collection des Meilleurs Auteurs," 20 vols., donations from M. M. Revon.

Vous tudy.

Yours truly.

T. SASAOKA.

#### PURELY PERSONAL.

TO THE EDITOR OF THE " lAPAN MAIL," Sin,-In your last week's issue I find this state-

"We do not agree with the general editor's views about the social evil and do not endorse the Biblical editor's refusal to comply with the laws of his country, and it consequently follows, according to the Shepherd's Votes, that we are bad, radically bad."

cally bad."
The Mail and the Voice have lately been discussing the Social Evil in Japan, a matter that has no relation whatever to my "refusing to comply with the laws of my country." nor has the Voice, in its contention with the Mail, made the slightest reference to the matter in any way whatever; that the Mail, therefore, should go so entirely out of its way as to bring the matter into its contention with the Voice on the Social Evil question is truly surprising. Is it, that being hard pressed by the Voice the Mail wishes to divert attention from the point at issue? May be the Editor is not quite satisfied with his attempted defence of the American Legation and takes this method of trying to get even.

get even.
Since it has been brought before the public Since it has been brought before the public again, I may say I am not the only mass who has found difficulty of late in "complying with the laws of his country." Being at the Legation only a few days ago for the purpose of helping a fellow national about getting a passport, I was told that almost every one had raised objections to the present regulations. The particular friend, under consideration had made a plain, unvarianted statement, representing the facts of his own case. The Legation rejected his application and he had to modify his language before the passport was granted. (Some can do this; I can't.) The complaint is general, and the Legation has felt the force of it so strong as to be under the necessity of issuing a pamphlet of extracts from State papers in self defence.

It is to be sincerely hoped that the Editor of the Mail will not be overly auxious about myself in the future, but will devote himself to such issues as are being immediately pressed upon him; and that he may not be disturbed in mind further about my course I may be permitted in closing to say that I have both a resident and travelling passport and that Uncle Sam and I are getting on beautifully as far as I know.

Most respectfully, J. M. McCALEB.

Tokyo, March 22nd, 1898.

URBANA-CHAMPAIGN

imports, and that they were assisted in this by a number of Chinese and Japanese employés of foreign firms, and of Japanese landing and shipping agents. They did not all work together, however, but in small groups. During November, 1896, four employés of a Chinese firm at No. 27. Kaigan-dori, Nichome, arranged to hand to a tide-waiter named Aso Naritan and a clerk at the Customs House mamed Majima Shotaro the application for an export permit. Export permit forms were then procured by the clerk and tidewaiter, who put upon them, with intent to defraud, the seal of the Customs House and the stamp showing duty paid. The permits were then given to the servants of the Chinese firm, who took them to the Customs House in the usual way and passed the goods as though the duty had been properly paid. In December the same year the head of the Inspection Office at the Customs House discovered the fraud, amounting to yen 79.38, and directed the tide-waites Aso to get the application and collect the duty from the shipper. Aso concerted with the employés of the Chinese firm aforesaid, an application form was stolen, the firm's signature and seal were forged, and the form was presented the same mouth at the Customs House through the medium of Aso.

The Judge found that in February, 1897, an ex-Customs House official had various seals cut

Customs House through the medium of Aso.

The Judge found that in February, 1897, an ex-Customs House official had various seals cut by an engraver, including the seal of the Customs House, the official seal of the Superintendent, the official seal of the Treasury department, and private stamps of employe's in the latter department, the forged seals and stamps being used to defeated the Customs House of its lawful revenue. This defendant (Naito Manji) with accomplices continued to defeated the Customs House until October, 1897, when a dispute arose among the Iraternity concerning the division of the stolen money, and, fearing that this would lead to the discovers of the frauds, Naito destroyed all the forged seals and stamps. The dispute, however, was compromised, and the fauds were continued, the conspirators getting new seals engraved by the conspirators getting new seals engraved by

the conspirators getting new seals engraved by Asa Natitaru.
Forther, the Judge found that two office boys (kosukai) at the Customs House stole between January and October 1897 several hundred forms necessary to the passing of goods through the Customs House, putting on many of them the official seals and stamps. These forms were given to Naito, who concealed them at his house. Naito next prevailed on Matsumoto Scikichi, an employé in firm of Messis. Becker & Co. of No. 8, to join him in defrauding the Customs authorities by using the forged forms. Maisumoto accordingly landed Messis. Becker & Co.'s applications to Naito at certain tea-houses, and on every occasion the forged seals and stamps were affixed by Naito's accomplices, Matsumoto afterwards giving these to his employers as the receipts for duty paid, whereas none had been paid to the Customs House, which in this case had been defrauded of 1.716 yea. The money was divided among the prisoners concerned in the frauds.

Other frauds were perpetuated by Japanese and Chinese employés of other fluns in the same way, the amounts being given as follows:—

period January, 1896, to September, 1897. The employ 6 made false declarations to the nature and value of the goods he was passing through, and the Judge found that this had been done with the con-Judge found that this had been done with the con-sent of the head of the firm, Nakamura Shirokichi. The Customs House had thus been defrauded of 23,516 yen, being the difference between the declared value and proper value, the goods in question being landed for the Japan Sugar Refining Co., Messes, Strachan & Co., the Kwansai Bnyeki Co., Temma Weaving Co., Fushimi Spinning Co., and many other com-panies and merchants. But besides this, the head of the firm and an employed samed Fukui Suteichi of the firm and an employe named Fukui Suteichi defrauded the Customs House of various sums of defranded the Customs House of various sums of money paid in duty on goods imported by customers of the firm, though how these frands were perpetrated has not been definitely ascertained, these sums amounting in the aggregate to 1,539 yen. The facts heretofore cited, the Judge states, have been established by Mr. Egawa, the Superintendent of the Customs, by the evidence of Japanese witnesses, and also by the sankonin (referees), Messis, M. W. Kochen, B. Kummel, H. Clement, V. Lavaery, F. Jonas, Chas, A. Fraser, E. H. Gill, C. Z. Ede, James Green, S. F. Gillum, A. L. Robinson, A. P. Ball, A. E. Sargent, and others, as well as by a number of exhibits, and depositions of the defendants, affidavits produced by owners of goods in question and other evidence.

True bills were returned by the Judge against 31 Japanese and 12 Chinese.

31 Japanese and 12 Chinese.

### THE KIAO-CHOU INCIDENT.

The statement made in the Beichstag by Here The statement made in the Heichatag by Harron Bülow, German Secretary of State, on the Kiao-chou incident is of such interest that we reproduce it in full:—The despatch of a squadron to Kiao chou was not an improvisation, but the expression of a well considered, caim, and clearly-defined policy. It is indisputable that without territorial point d'appni in Eastern Asia we would be simply floating in the air, from an economical, maritime, and political point of view. We required an economical entrance-gate to the Chinese market, as France has in Tong Kiang, England in Hongkong, and Russia in the North. The four hundred million inhabitants of China provide one of the richest markets for imports in the world. hundred million inhabitants of China provide one of the richest markets for imports in the world. Our imports there have trebled themselves in the last ten years. We were, therefore, obliged to endeavour to obtain similar concessions to those enjoyed by other Powers. Without a territorial point d'appus, Germany's intelligence and the country's technical and commercial power would have been wasted, and master as moures for country's technical and commercial power would have been wasted, and meetly as manure for foreign fi-lds without fructifying our own garden. A station for the Fleet was consequently an absolute necessity, in order to make us independent of the good-will of foreign Governments in the matter of repairing and provisioning the dependent of the good-will of lorging documents in the matter of repairing and provisioning the ships we might require in those waters. The prestige and the fighting efficiency of our fleet are doubled when it no longer sails about without a home but has a harbour for its headquarters and its habitation. All the other Powers, including even Spain, Portugal, and the Netherlands, have territorial possessions of their own there, and we had to acquire similar rights if we did not wish to be a Power of the second or third rank in Eastern Asia. In addition to this there is the necessity of protecting the Musions, whose head, Bishop Auzer, declared the occupation of Kiao chou to be a matter of life and death. I think the moment closes for its acquisition marked the right mean between the Scylla of overlaste and the Charybdis of omission. Our relations with other Power shave in nowise head disturbed thereby. We are in harmony with Russia, whose interests do not cross ours anywhere in Europe (cheers), and run parallel to ours in Asia, and whose natural development we, as sincere friends, observe with unenvious sympathy Asia, and whose natural development we, as sincere friends, observe with unenvious sympathy (cheers). We regard the endeavours of France to open fresh outlets for trade in Tong-King as quite natural, and it is far from us to oppose England's just interests in any way, or in any direction (cheers). The contrary view expressed in English organs of the Press is in conflict with the actual state of a fine. English organs of the Press is in conflict with the actual state of affairs. Happily, no doubt exists in authoritative quarters in London that it is only in the interests of the advancement of culture and the peace of the world that we should regard relations of harmonious compensation with Great Britain as beneficial (cheers). Our modest demands did not call for any justifiable objections on the part of China, nor do they menace the integrity of China.

the details already published by the Imperial

the details already published by the Imperial Gasette:—

1.-The Imperial Chinese Government, in order to comply with the justifiable desire of the German Government to possess, like other Powers, a point in East Asiatic waters where German ships can be repaired and equipped, and where materials and supplies for that purpose may be stored and other arrangements for such objects may be made, transfers to the German Government on lease, provisionally for ninety-nine years, a portion of territory situated on both sides of the entrance of Kiao-chon Bay, in South Shanthing, and which is more exactly defined in Paragraph 2, in such a manuer that the German Government shall be at liberty to construct within this territory all necessary buildings and take the requisite measures for their protection.

12.—The territory leased to the German Government consists, on the basis of the English chait

"2.—The territory leased to the German Government consists, on the basis of the English chart of Kiao-chou Bay for 1863 (1) Of the spit of land in the north of the entrance to the bay, hounded on the north-east by a straight line drawn from the north eastern point of Potate Island to the sea coast in the direction of Loshan. (2) Of the spit of land to the south-west by a straight line drawn from the south-west by a straight line drawn from the south-west by a straight line drawn from the south-west by a straight line drawn from the south-west by a straight line bay, situated to the south-west by Chiposan to the sea-coast in the direction of the To-losan Island (Washer's chart). (3) Of the Island of Chiposan and of Potato Island, together with all the islands situated before the entrance to the bay, including To-losan and Sesilentan. Besides this the Chinese Government undertakes not to adopt any measures, nor make any regulations, within a zone of liftly kilometres, circumference around the bay, without the assent of the German Government; and in the assent of the German Government; and in particular not to place any hindrances in the way

particular not to place any hindrances in the way of any regulation or water courses that may become necessary. The Chinese Government further grants German troops the right of marching through the zone in question.

"3.—In order to avert every possibility of conflict, the Chinese Government, for the duration of the lease, will not exercise any sovereign rights in the leased territory, but transfers them, together with the sovereign rights over the whole of the waters of Kiso-chou Bay, to the German Government. The German Government will place bearons, buyer, &c., on the island and shoals near the coms, buoys, &c., on the island and shoals near the entrance to the bay.

entrance to the bay.

"4.—In the event of the territory leased on Kian-chon Bay proving unfitted for the objects of the German Government, the Chinese Government will grant the German Government a more suitable spot, and will take back Kian-chou Bay, at the same time giving compensation for all the expenses incurred there by the German Government,

"5.—A note detailed delimitation of the boundaries of the ceded territory and of the German zones in accordance with local configurations shall be carried by Commissioners of the two Governments."

In addition to the above statement the Minister

In addition to the above statement the Minister made the following explanatory remarks:—
"I.—The leased territory, the exact size of which has not yet been established, will have an area of from thirty to fifty square kilometres, and will thus be considerably larger than the British possession of Hongkong, including the concession on the mainfaid opposite.

"2.—The position of the leased territory and the approximate extent of the German zone is shown in a special map which I have submitted to the Budget Committee. That map has only to be corrected in this particular—namely, that for military reasons, which became known subsequently, the northern land boundary has been pushed forward a trifle faither than is shown on the map.

"3.—Exact information as to the number of infabricants in the German possession is at present

habitants in the German possession is at present lacking. It includes some villages in which there is stated to be a Chinese population of a few thousand heads.

"4 — As regards the size of the bay we have at present no statement based on quite exact measurements. It penetrates into the land for twenty nautical miles. Its entrance even at the narrower point is as much as three thousand metres wide. About tweethirds of the bay, with an area of about fifty equate matrical miles, are available for use as a harbour, including the southern part adjoining our tentiory.

"5.—As to the amount of the rent to be paid to China, nothing has yet been exactly settled. Anyhow, we need not get grey hairs over that. The tent to be paid will in no case be a large one, sinus it is not meant as something paid for the lessed land, but is simply a formality of the nature of what jurists call a "recognition payment, implying an acknowledgment of the continuance "4 -As regards the size of the bay we have at

— URBANA-CHAMPAIGN—

stonement to be made for the munder of German missionaries. I have already had the honour of submitting to the Budget Committee. Finally, as regards railway and mining concessions, the following points have been argreed upon:—The Chinese Government has promised to entrust to a German-Chinese Railway Company, which has yet to be formed, the construction of a railway from Kiao chow, to proceed first in a northerly direction and then westward until it eventually connects with the great Chinese railway system which is projected. The line is to be so laid that it shall, in particular, touch the coalfields of Weih-Sien and Poshan, situated to the north of Kiao-chow. The working of the coal deposits is to be granted to German contractors. The Chinese Government further undertakes to accord the proposed railway company at least as favourable conditions as are received by any other Ruropean-Chinese Railway Company in China. Further negotiations, partly for an extension of these concessions in a certain direction, and partly for the more definite settlement of their details, are still pending, and the position of those negotiations atonement to be made for the murder of German still pending, and the position of those negotiations is by no means unlawousable."

Continuing, the Minister said:—"I wish to state clearly that we sincerely desire the continued existence of the Chinese Empire. Only a few days ago a diplomatist, thirsting for information, asked me how long I thought China would last. I replied:—"China has already existed four thousand three hundred and seventy-seven years, and I see no reason why she should not go on existing for another three thousand."—(Loud and I see no mason why she should not go on existing for another three thousand,"—(Loud laughter.) We have no intention of encroaching in any way on the interests of Japan, whose rapid development inspires us with respect. In Kiaochou, English, Fiench, and Russian interests are all equally far removed, so that our interests there do not touch those of any Power. The reports of reliable authorities agree that Kiaochou is just the kind of place we require as a port and mercantile post. The harroon is easily defended, and is free from sand, affording accommodation for the largest fleet. For the construction of railways and for the necessary harbour works, we rely and for the necessary harbour works, we rely upon the co-operation of German private capital. I believe that the seed we have sown there will bear good fruit. Under any circumstances will carefully cultivate the seed. We shall as far as is possible strive that tisk, profit, investment, and returns shall remain in the proper proportions. We shall proceed step by step, hot as conguistadores, not as calculators, but as able merchants, like the Maccabees of yore, weapon in one hand, trowel in the other. I have raised up no castles in the air. The acquisition of the Christian faith, as well as to the economical development and the political power of the German people."—(Loud cheers.)

#### OUTBREAK IN THE PHILIPPINES.

#### EASTERN TELEGRAPH EMPLOYES' EXCITING EXPERIENCES.

EXPERIENCES.

The Bolinao (Philppine Islands) staff of the Rastern Extension Telegraph Company have had rather an exciting time owing to a rising of the natives against the Spanish Government. The station was besieged by the natives on account of some Spanish soldiers taking refuge there, the telegraph office and staff's quarters being the strongest building offering any chance of defence in the place. The following details, contained in telegrams from Mr. Patite, Superintendent of the company, are given in the Hongskong Dally Press.

kong Daily Press:
"7th March.—About two o'clock this murning "7th March.—About two o'clock this morning the Government landlines to Manila were cut and hundreds of rebels entered the village. They killed two European and one native soldier and the rest of the soldiers, consisting of eight men, escaped to our station, which we barricaded as well as we could. At six o'clock, the rebels sent word that they would not in any way interfere with us, but if the soldiers were in the Station at 4 p.m. they would attack. We told them we would observe strict neutrality, but we could not clear the soldiers out. The Spaniards in the village and priests managed to escape in a boat; the stebels are on their track, and, if they catch them, they will all be killed. Report says that there are about are on their track, and, if they catch them, they will all be killed. Report says that there are about 400 rebels. We cannot get any assistance from Manila, as the line is cut, and I suppose they have cut it in many places. It is the Bolinao people who are in arms, and as we have always been on good terms with them they don't want to hurt us."

Later in the afternoon it was evident that the Later in the afternoon it was evident that the European women and priests had been captured for they were led back to the village, and it appeared that two Spaniards had been killed.

Digitized by

Nothing further happened at the Station after this, and the night of the 7th remained undisturbed.
On the 8th, the sebels sent round again in the morning asking the staff to leave the building, as they intended to attack atten o'clock. This, however, the staff would not do. On the 9th, the report came in from the rebels that the Governor-General had left Manila for Europe, on the 5th, and that the whole of the Philippines had lisen, all the Spaniards had been killed in Manila, and that the country was in the hands of the rebels. The rebels also stated that some Spanish gunboat had been captured. No further move was made by the rebels at Bolinao that day, owing to the absence of the rebel chief, a full-blood native, who was reported to be on his way to them.

was reported to be on his way to them.

On the 10th, the rebels seemed to be increasing—and there was no sign of any help from Manila. The staff were still able to get food from the village, but a servant who had gone out for freewood had not returned. The rebels sent in an ultimatum, that they would attack the Station if arms were not delivered up, and that

Station if arms were not delivered up, and that they would spare the soldiers' lives if this was done. Some parleying went on after this, and on the receipt of a long letter from the rebels, one of the Company's staff went to them to try and arrange matters, and brought back the news that the surrender of the two rebels captured by the soldiers and taken to the Station on the day of the rising was demanded, and that the Company's staff had permission to come and go whenever they liked. If these conditions were not fulfilled they intended carrying out the original plan of attacking the Station. The corporal in charge, whom Mr. Pattie describes as a splendid fellow, though only 2t years of age, refined to surrender the prisoners at any price. No attack was made that night, though all precautions were taken at the Station to meet it.

On the marning of the 11th, one of the Company's staff again went to the rebel camp to say that if the usual fortnightly steamer due the next day did not arrive, the corporal would surrender arms. While these negotiations were proceeding Mr. While these negotiations were proceeding nir. Pattie noticed great commotion amongst therebels and overheard one of the rebels say that a warship was in sight. There was, however, no sign of it from the Station, but it was considered probable, as the rebels had sentries at the mouth of the harbour, whence they could see further. The native

coaft suddenly became very active, and the men-craft suddenly became very active, and the men-al the Station concluded that they were either pre-paring to attack or m leave the place. At 2:40 p.m., a gunboat arrived, much to the relief of all, and after landing 107 marines, the doors of the Station were once more opened, but heavy firing followed between the Station and the

heavy firing followed between the Station and the rebel camp, during which many of the rebels are said to have been killed, the Spaniards losing one soldier. The night passed quietly.

On the 12th, at 8.30 a.m., a merchant steamer and a Spanish cruiser arrived at Bolinao with Mr. Jones, the Company's Manila Superintendent, and Telegraph Operator Wright, on the former.

On the 13th H.M.S. Edgar arrived at Bolingo, and with this and the teinlocements sent by Spanish authorities, the position of the Station

became quite safe.

The General in command of the Sonnish force The General in command of the Spanish force which marched overland to Bulinao reported five engagements with rebels, who suffered heavy losses. The garrison and priests of neighbouring villages had been killed, only six soldiers managing to escape. In some viltages the garrisons surrendered their arms on condition they would be sendered their aims on condition they would be allowed to go to the nearest friendly village. This the rebels agreed to, but after getting their aims the soldiers were killed, this proving that the Bolinao garrison was only spaced on account of the English staff being there. The telegraph line from Lingayen to within a few miles of Bolinao Station had been cut to pieces:

(PROM THE "JAPAN TIMES." THE TRANSVAAL RECALCITRANT ATTITUDE.

London, March 16.

There are strong indications that the Transvaal is prepared to profit by the British entanglements in Europe, and repudiate the suzerainty. President Kruger, speaking at the Volksraad, said the burghers must stand together; nobody knew what might happen. He had replied to Mr. Chamberlain's despatch concerning the suzerainty. His reply would show that we are a government? There are strong indications that the

ENGLAND'S ENTANGLEMENTS. MR. RITCHIE TAKES A HOPEFUL VIEW.

London, March 17.

At the banquet of the London Associated Chambers of Commerce, Mr. Ritchie, President of the Board of Trade, admitted there was considerable ground for anxiety with regard to the foreign situation, but he believed all matters, both concerning China and West Africa, would be settled

# SPAIN ATTEMPTS RAPPROCHE-

WAR, A CRIME AGAINST HUMANITY: UNITED STATES CONTINUE TO

Spain has made friendly representations to Washington, stating that war, considering the circumstances, would be a crime against humanity. Meanwhile preparations in the United States continue.

#### RUSSIA AT PORT ARTHUR.

STATEMENT IN PARLIAMENT.

London, March 18. In the House of Commons, Mr. Curzon said that the Government had no knowledge of any special privileges having been accorded to Russia at Port Arthur.

THE SOUDAN CAMPAIGN.

TROOPS IN SPLENDID CONDITION: DER-VISHES ADVANCING.

The Egyptian position at Atbara is considered impregnable. The Sirdar inspected the whole army in battle array, the troops being in splendid condition. Meantime the Dervishes are advancing steadily northward in battle formation.

## THE COMMUNICATIONS BETWEEN THE BRITISH AND RUSSIAN GOVERNMENTS.

Loudon, March 19, The Honorable George N. Curzon, Under-Secretary of State for Foreign Affairs, declares that Her Majesty's Government has no information whatever as to whether China has granted any privileges to Russia in connexion with Port Arthur.

# SECRECY WITH REGARD TO THE FINDING OF THE "MAINE" INQUIRY COMMITTEE.

It was supposed that the finding of the Committee appointed to inquire into the blowing up of the war-ship Maine would have been published to-day, but President McKinley has decided that it shall be kept secret until the proper time arrives for making it known.

SPAIN AND THE "MAINE."

It has transpired semi-officially that Spain dissents from the statement that the destruction of the Maine was caused by an explosion outside the vessel.

THE FAR EASTERN CRISIS.

CHINA ALLOWS RUSSIA'S CLAIMS, BUT STICKS TO PORT ARTHUR.

London, March 20. China has offered the lease to Russia of Tailen. She allows the railway, provided that Port Arthur remains Chinese.

chau into Yunnan, and a coaling station at Halske.

CHINESE FOREIGN LOAN ISSUED.

The Chinese Loan has been issued in London and Berlin.

FUTURE ADDITIONS TO JAPAN'S NAVY.

In the course of a naval debate in the House of Coumons, Mr. Goschen mentioned that eight battleships and cruisers, and eight torpedo destroyers were being built in English dockyards for Japan, and two vessels for China.

#### BRITISH INDIAN BUDGET. BIG DEFICIT.

London, March 21.

The Indian Budget shows a deficit of five crores and twenty-eight lacs of rupees, the exchange being fixed at 15dg. The Secretary of State will draw sixteen millions, borrowing six millions in England and three crores in India.

THE CHINESE LOAN.

LARGELY TAKEN UP IN BERLIN. London, March 22.

The Chinese loan has been largely over-subscribed in Berlin.

#### LOCAL GOVERNMENT FOR IRELAND.

SECOND READING PASSED.

The Irish Local Government Bill has been read a second time in the House of Commons.

(Received by the Fifi)

RUSSIA ACQUIESCES IN KOREA'S DEMANDS. Soul, March 13.

The Russian Government has acquixed in the Korean demand to disengage the Russian advisers in the service of the Korean Government. Russia therefore will recall Mr. Alexieff and the other gentlemen who are now making preparations for their departure. The Russian Government has intimated to the Korean Emperor not to send any ambassador, as he had desired to do, to specially acknowledge Russia's kindness in despatching advisers to Korea.

FRANCE APPLIES PRESSURE TO CHINA.

Peking, March 17.

France, following in the wake of Russia and Germany, has asked for the following concessions from China;

To guarantee not to concede to any other Power the regions situated south of the Yangtsze.

To lease to France as coaling depot Kwanchao Bay (?) in the vicinity of Leichow, Kwangtung Province.

To concede the extension of railways to Yunnan-fu.

To concede exclusively to France rights of working the mines situated along the railways.

To leave the postal affairs of the districts traversed by the railways in the hands of Frenchmen.

It was on the 13th inst, that the French Government formulated those claims, adding that a definite reply must be of his term of engagement. sent within eight days.

England is strongly opposed to the French demands.

AN ELECTRIC TRAMWAY IN PEKIN

Shanghai, March 17.

A telegram just arrived says that the accede to the French demands. Chinese Government had decided to construct an electric tramway in Pekin, the contract being given to the Japanese that the Chinese loan was issued to-day, Branch of the German firm Siemens and the list to be closed to-morrow.

by the Tokyo branch of Siemens and Halske to supervise the work. electric tramway will run from the terminus of the Government Railway to the wall of Pekin.

AMERICAN MISSIONARY ROBBED AND ASSAULTED.

Shanghai, March 18.

An American missionary in Chun-kiang has been robbed and assaulted and a Chinaman in his employ murdered.

THE FRENCH DEMANDS.

Pekin, March 19. The paragraph in the previous telegram as to the French demand, asking China's guarantee not to concede to any other power the regions situated south of the Yangtze, refers to the three provinces of Kwangtung, Kwangsi, and Yunnan.

#### FRANCE'S DEMANDS DIRECTED AGAINST ENGLAND.

Peking, March 19, 6.30 p.m. With regard to the clause in the French Demands preferred to the Chinese Government which refers to the entrusting of postal business to French citizens, it appears that the reference is not merely to the postal business in Yunnan province, but to the postal business throughout the whole of the Chinese empire. The latter is now in the hands of Sir Robert Hart, The latter and the purpose of France's demand is to take it from him and place it under the management of Frenchmen.

#### CHINA'S FOREIGN LOAN IN JEOPARDY.

Appearances indicate that China's Foreign Loan will not be floated.

OFFICERS FOR PORT ARTHUR.

Soul, March 20.

A company comprising five Russian officers, one surgeon, and 24 marines is to start for Port Arthur within a week's

MINISTER TO RUSSIA.

Mr. Kim Keiro has been appointed of April. Special Ambassador to Russia to thank her for her past favours.

THE RUSSO-CHINESE NEGOTIATIONS.

Pekin, March 21.

Pekin has been selected as the locale of the Russo-Chinese negotiations, although it was rumoured that they would be con-ducted at St. Petersburg. Li Hung-chang and Chang Yinkwan have been appointed commissioners.

#### PAYMENT TO THE RUSSIA DRILL-INSTRUCTORS.

Söul, March 22.

The sum of 33,000 yen to be paid to the Russian drill-instructors who are about to be disengaged was duly handed over yesterday.

#### DR. PHILIP JAISOHN.

Dr. Philip Jaisohn, Adviser to the Privy Council, has decided to return to America, his adopted country, after receiving the salary due him for the remaining period

#### GREAT BRITAIN'S RESOLVE,

Pekin, March 22. The British Government has intimated to the Chinese Authorities that the former is firmly resolved not to allow China to

ISSUE OF THE CHINESE LOAN.

Digitized by Google

An engineer will be despatched DOUBTS CONCERNING THE CHINESE LOAN. Peking, March 22.

The latest intelligence that has reached the British Legation, the Hongkong and Shanghai Bank, and the Chinese Customs from London, states that owing to the occurrence of a panic in economic circles a satisfactory result may not be achieved even if the Chinese loan be issued. The cause is attributed to the anti-Chinese movements of Russia and France.

CHINA REJECTS THE FRENCH DEMANDS.

China has absolutely rejected the demands lately preferred by France, and the French Representative has sent a massage to the home Government to ask for further instructions. France will probably wait till the demands previously asked by Russia shall have been definitely settled.

### MAJOR SAITO.

Söul, March 23. Major Saito, Military Chamberlain to the Emperor, arrived here last night.

THE SOUL POLICE BUREAU.

Söul, March 23.

Mr. Min Yong Kwi has been appointed chief of the Police Bureau in place of Mr. Kim Chai Phung, who has been released from the post.

#### PROBLEM COUNTERFEITING.

TO THE CHESS EDITOR OF THE " JAPAN MAIL." DEAR SIR,-The correspondents of the Canter bury Times (quoted by your last week), who suggest that towney judges should require every composer to send in with his competing position disposer to send in with his competing position diagrams showing his problem in its various stages of evolution, can sirely have had but little experience in the art. At any rate their idea seems to me to be utterly impracticable. In the palmy days of Barbier, Healey, Meyer, mc., a problem rarely reached the stage of publication before having undergone two or three months' private scutting at the hands of fellow composers. Barbier would spend six months over a position, the final aspect of which bore little resemblance to the original idea. How then, if work is to be as thorough as it was in those days, can a composer produce his problem in the various stages of evolution? In my opinion the only deterent of dishonest pracmy opinion the only deterrent of dishonest practices would be to require each competitor to make a declaration of originality, and in the event of fearld being discovered (experts can always decide between intentional and unintentional resemblances), public exposure and exclusion thenceforth from all respectable publications

Yours, etc., Tokyo, 22nd March, 1898.

The chess season in England is now at its height. As gathered from the home papers, a profusion of challenge-cups, handicap and other tournaments are in operation at the different clubs, and all these events are well attended, the entities exceeding twenty, even at the uninor organizations. Matches between different clubs of county associations are of daily occurrence, the teams-numbering from twenty to thirty players each, though matches of fifty a side or more are by no means incommon. The services of expert players are in constant demand, and Teichmann, Blackburne, Gunsberg, etc., are busy with simultaneous and blindfolded performances, lectures, and so on. The number of cliess organizations already in existence is amazing, yet new clubs are constantly istence is amazing, yet new clubs are constantly springing up and they all thrive. The programme of the Ladies' Chess Club includes about forty on the Ladies Chess Chin includes about forty engagements, several being matches of filtern of twenty a side. Lady Newnes is president and the vice-presidents include Lady Thomas, Lady Waterlow, Mrs. Alterley-Jones, Mrs. Julyan, Mrs. L. W. Lewis, and Miss Burrell.

The match between Polishiny and Showalter for the championship of the United States began on 25th of February. Only one game was finished when the mail left, Showalter scoring a well-deserved win in sixty-one moves after six hours

The market generally is very dull. Large arrivals—particularly of sheet iron, plates and bars—continue, and dealers are in many cases unable to take delivery of their orders. Before the accumulated stock can be much reduced considerable reductions will have to be made from corrent quotations. Pig iron has already fallen to a mass-imum of \$2.10 per picul. There is still some de-mand for nails, but no advance, rather a decline must be expected in view of large shipments now on the way out.

Path.	PISUL,

Langkat	_	1,85

There have been considerable arrivals of Brown, including some 11,800 piculs China and Manila, and 23,500 piculs Formusa. Sales since the 12th instraumount to 9,880 piculs China and Manila and 19,500 piculs Formosa; the former at a rise of about 5 sen per picul. The stock of Manila is cleated out, There has been very little done in White refined and prices remain unchanged.

#### EXPORTS. RAW SILK.

There has been next to no demand during the part week and sales only amount to about 50 piculs and quotations are purely nominal. Stock is estimated at about 5,500 piculs, or about 1,000 piculs less than at the same date last season. The Olympia shipped 150 bales and the Empress of Japan 216 bales for America.

#### TEA.

Sales only amount to about 250 piculs, at prices ranging from 26 to 32 yen per picul. There have been next to no arrivals and the remaining stock consists of only 600 piculs, mostly of poor quality. The Gaetic took 7,350 lbs. for America and the Rosetts 4,664 lbs. for Europe. Total settlements for the season to data amount to 215,000 piculs.

#### THE GREATEST WONDERS OF MODERN TIME

#### HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitatep constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sire Samuer Barra, in his work entitled "The Nife Tribut taries in Abyssinia," says—"I ordered the dragoman Mahometo inform the Fakir that I was a Bottor, and I had the beest medicines at the service of the sick, with adversitis. In I should be supplied that I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an experience, as, possessing unmistakable purgative properties, they them of their value,"

SIMPLE, SAFE, AND CERTAIN.

#### HOLLOWAY'S OINTMENT

Is a certain ensely for had legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arcetting and subduing all inflammations, Mr. J. T. Coorea, in his account of his extraordinary travels in China, published in 1871, seys—"I had with me a quantity of Holloway's Ontement. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk-fowles, butter, and horse feed poured in upon us, until at lat-1 exceptional of Olithment was worth a fowl and any quantity of peas, and the demand became no great that I was obliged to lock up the small remaining "stock."

#### SUMMARY OF NEWS.

LORD SALISBORY has left England for the Riviera. THE British squadron liss left Hongkong for

the North. Oxford has won the University boat race by

twelve lengths. THE Spring Fine Art Exhibition at Uyeno Park was opened on 1st April.

Mr. GLADSTONE is very ill and his recovery regarded by the doctors as hopeless.

THE Times counsels a powerful British naval demonstration in the Gull of Petchili.

THE special twelfth session of the Imperial Diet will be convened about the 16th May.

other high officials, a new Club is to be formed in the Bank of England, has been withdrawn in Tokyo, to be called the Shako.

BARON Morioka Musafumi, a Director of the Nippon Yusen Kaisha, died in Tokyo on the

MR. Inoura Katsunosuke, the new Minister to on the 30th ult.

THE laying of telephone wires between Tokyo and Osaka is to be commenced about the middle of April.

THE circulation of one yes silver pieces ceased at the end of last month. The exchange of silver yen for gold is therefore brisk.

In a skirmish between gendarmes and insurgents in Taichiu prefecture, Formosa, on the 23rd ult., two gendermes were killed.

THE Osaka Copper Factory has secured an order from Korea for the coinage of subsidiary silver pieces to the value of yes 100,000.

A MESSAGE from Peking states that the Chinere Government is preparing to pay off the in-demnity due to Japan on the 8th May next.

THE Tokyo Punch, which has hitherto appeared twice a month, will heren'ter be published as a daily paper under the title of the Maicho Shimbuu.

According to a telegram from Soul, Mr. Alexieff, Russian Adviser to Korea, is coming to Japan in the capacity of adviser to the Russian Legation in Tokyo.

Two more fires occured in Tokyo, on Tuesday. In the first 21 houses were destroyed and in the other fire, in Minato cho, Kyobashi, ten houses were burnt down.

THE Court martial which tried Capt, Uryo, of the foundered cruiser Fuse, has found him responsible for the casuality and sentenced him to three months' imprisement,

A STRIKE of employees of the Tokyo Tramway Company was started a few days ago, but was nipped in the bud by the discharge of the ningleaders and a rise of wages all round.

CHINA has granted to Russia a lease of Port Arthur and Talienwan, for 25 years, also rights of way for her railway. The two ports have been occupied by Russian troops and the Russian flag hoisted.

Among the supplementary Budgets of the Department of Agriculture and Commerce is one for the encouragement of the fishing industry in foreign seas, the amount of the subsidy for which is estimated at yen 64,000.

THE Report of the United States commission attributes the Mains explosion to external causes, apparently a submarine mine, but does not fix the responsibility. The Spanish report states the explosion was internal

THE Washington Government has decided to inform Spain that the conditions of misery and stavation in Cuba have become intolerable, and that hostilities in the island must cease. The war preparations in the United States continue, and the scare is unprecedented.

THE latest telegrams regarding Spain and the United Stuter are to the effect that the former refuses to make concessions in Cuba and that there is a strong war feeling in America. Several resolutions have been presented to Congress, demanding intervention in Cuba.

since the close of last year, and at the end of February last only year 2,000,000 remained on deposit. This sum was withdrawn the other day.

A vary sad affair occurred in Yokohama on the MR. Indura Katsunosuke, the new Minister to 31st alt, when a well known resident of Kobe, Germany, left for his post by the French mail Fred. J. Collins, fatally shot himself in the Generally Cemetery. An inquest was held # H.B.M.'s Consulate on Friday when a verdict of suicide while in an unsound state of mind, was returned.

> Mr. Matuning, the newly appointed Russian Charge d'Affaires to Korea, arrived in Yoko-hama on the evening of the 23rd ult. by the French steamer Krnest Simon, and after proceeding to Tokyo, where he stayed a few days with Baron Rosen, the Russian Minister to Japan, left for Korea.

THE Department of Communications is making preparations for the establishment of harbour offices in Yokohama, Kobe and Nagazaki. The Tressury has decided to sanction the necessary expenditure, and the establishments are to come into force soon after the termination of the forthcoming session of the Diet.

On the 28th ult. Marquis Ito celebrated the marriage of his adopted son, Ito Yukichi, by a grand enterteinment at his official residence. Their Imperial Highnesses Prince and Princess Arisugawa and the members of the Corps Diplomatique were among the guests, who numbered some ave hundred.

THE Authorities have sanctioned the expenditure for the constructing of railways in Hokkaido. Mr. Tanabe, Chtef of the Railway Bureau in the Island, who is now in the capital, has wired instructions for the commencement of the undertaking. The work on accord sections of the Tokachi Kitami and other lines will be offered for tender.

MARQUIS ITO gave a banquet on Friday evening the 25th inst, at his official residence to the Representatives of Russia, France, China, Austria, the Netherlands, Portugal, and Spain, Austra, the Reterlands, Portugal, and Spain, Among the guests were also Baron Ito, Minister of Agriculture and Commerce; Viscount Katsura, Minister of War and many other high officials.

THE Japanese warship Akitsushima, while on her voyage to the Bonin Island (Ogasawarsjima) in search of the missing steamer Tainan Mars found upon one island nine shipwrecked men of the Tokuyes Maru, who landed one the 27th January, and six men of the wrecked steamer Kolei Maru, who ianded on the 2nd February, The Akitrushina brought them all to Yokosuka,

THE Import market in Yokohama is about as dull and lifeless as it can be. Whether we look to cotton piece goods, woollens, yarns, or metals, we find the same thing-stocks accumulating, orders not taken up and general stagnancy. In such lines as angar and kerosene there is generally some business going on to meet immediate demands, and such is the condition at present. The only import which appears to be flourishing is that of rice, and of this large shipments continue to arrive from Tongking, Saigon, and China, with the result that quotations have slightly falles. The Export market is also very quiet, a very small business only having been done in raw silk, for America, and nothing whatever in waste silk, while transactions in tea are getting fewer and faither between. A fair business has been done in With a view to encouraging friendly intercourse among Minister of the sale of War Bonds, which was deposited that generally in far from flourishing.

#### SPIRIT OF THE VERNACULAR PRESS.

During 1895 and 1897 the Treasury brought over from London large quantities of gold, the proceeds of the Indemnity and of the sale of war bonds. Hence, although the balance of trade was against Japan, there was no appearance of any outflow of the precious metal. But that abnormal source of supply having now come to an end, the Customs returns show an exodus of gold aggregating over 21 million yes from October to the end of February, and the gold reserve of the Bank of Japan, which stood in the neighbourhood of 100 million yes before this drain commenced, has now been reduced to 80 millions. The Till Shingo, recounting these facis, says that they seem to cause considerable uneasiness, but that if the true functions of a reserve be considered, no one need feel per-The idea that a mere hoard of precious metal adds in the wealth of a country has long been exploded. A gold reserve has only one legitimate object, namely, to secure the convertible notes circulating in the country.

There is some difference of opinion as to the proper ratio that the reserve should bear to the volume of the paper currency, but one to three seems to be the figure endorsed by the most eminent economists. In France the reserve is 83 per cent, of the paper; in Germany 84, and in Russia 132; but Russia's case is altogether exceptional. Japan's reserve is now 44 per cent, of her convertible notes, m that there is still a considerable margin of surplus, and even if the reserve fell to 60 millions there would be no cause for unexamess. As to the danger of excessive imports, concerning which so many writers disquiet themselves at present, it is a matter with which politicians and financiers have no business to meddle. Should it be found that the gold reserve threatens to dwindle below the limits of safety in regard to the volume of convertible notes, then the simple plan is III reduce the latter by raising the rate of interest at the Bank of Japan. So long as the true function of a hard-money reserve is kept clearly in view, the public will not fall into unreasoning alarm about its dimensions.

. . . . The old cry for a strong Cabinet is raised again by the Nippon. That the present Ministry is strong in one sense does not appear to be denied, but the Nippon's contention is that, in a country where con-stitutional institutions exist, no Cabinet can be called "atrong" unless it has the support of a majority of the people's representatives. The trouble with Japanese Cabinets now-a-days is that they are neither one thing nor the other. They are like houses built upon the sand: every political storm overturns them. They are not clan Cabinets and they are not party Cabinets. For administrative purposes they rely on clan influence; for legislative, on party support. Marquis Ito has always been regarded as a prominent opponent of party Cabinets, yet he found it necessary when he was last in office to join hands with the Liberals and to take their leader into the Ministry. After that it ought to have been perfectly clear that political parties could no longer be treated like puppets, to be set dancing or laid aside at the back of the Ministry. The general elections are now over, and it rests with Marquis Ito and his colleagues to determine whether the State shall have a strong Cabinet; a Cabinet competent to deal with the large problems, domestic and foreign, demanding immediate attention. Allianc's funnied on mere sentiment are of no use. If the Government wants the support of a party, it must identify itself clearly with the latter, not merely by com aring platforms, but by admitting the party's leaders to official ranks. So long as Japanese Cabinets continues to librate between party and clan, they can never be really strong.

There is a feeling in Japan that owing to the There is a recting in Japan that owing to the question of the Foreign Office the Indemnity before the 8th of May seems assured, country has fallen outside the circle of the Indemnity before the 8th of May seems assured, the question of Wei hei-wei is again mooted, was in fames shows, it is said, human remains powers controlling the destinies the controlling the destinies the part withdraw her troops or will she not? Digitized by the fire—Daily Press.

East. The Chuo Shimbun undertakes to prove that such can not possibly be the case. In point of fact the balance of power is with Japan. The two giants in the Orient are England and Russia, and Japan's alliance would ensure the victory to either of them. Indeed, if either of them were assured of that alliance, the other must submit without an appeal to force. The arguments adduced by the Chao in support of this view are already very familar. They may be summed up in the statements that England, strong as she is at sea, could not oppose Russia's advance on land without the aid of the Japanese army, and that Russia, even if allied with Gormany and France against England, would be cripped for supplies of all kinds and for dockyards unless Japan were with her. The value of a Japanese alliance to England becomes doubly apparent when we reflect that, in the event of a Russian move against India. Japan could easily lend a hundred thousand men for the defence of the British frontier. The Chuo elaborates these points at some length, but does not advance any new considerations.

\* \* #

The Kokumin Shimbun urges the necessity of large reforms in the railway system of Japau The railways, as at present organized and managed, do not confer anything like a maximum of benefit on the public or bring maximam of profit to the shareholders. They have been introduced from abroad without any discriminating attempt to adapt them to the condi-tions of the country, and their management abounds with defects. Passenger traffic seems to be the prime object, yet the provisions made for the comfort of passengers and for their quick transport are most imperfect, and the method of bandling their baggage is slow and vexatious. Immense improvements are needed in these directions. As for goods traffic, which is at least as important as the carrying of passengers, sometimes even more important, nothing could be worse than its condition. Not only have facilities for the collection and distribution of goods been neglected in choosing terminal points for railways, but little or no attempt has been made to tap the traffic of the intermediate regions, and such delays and difficulties have to be encounted by senders of freight that the advantages of railway carriage become a vanishing The Kokumin appears to think that one prominent cause of failure is the employment of incompetent staffs, the railway directors allowing themselves to be betrayed into the false economy of cutting down wages so that good men do not care to seek their employment.

The Nichi Nichi Shimbun has an article which, though couched in somewhat ambiguous terms, seems intended to convey the meaning that the Liberals and the National Unionistic will be the allies of the present Cabinet. That information is furnished in a vicarious kind of fashion. Our contemporary notes the discrepancies that exist in the various estimates as to the strength of political parties, even when the estimates are made by impartial calculators, and the uncertainty that is displayed in many cases with regard to the political complexion of individuals. But every one appears to be agreed that the Liberals, the National Unionists, individuals. the Business Men and a section of the Independents will vote for the Cabinet, and that the Government will thus command a majority in the Lower House. On the other hand, everybody appears to regard the Progressists as opponents of the Cabinet. But there is nothing definite to show that the Progressists will assume that attitude. All that can be said of them is that their relations with the Government are not so close as the relations of the Liberala and the National Unionists. Our contemporary does not add any list of numbers, but the article is interesting as an indication of the grouping of parties towards the Government,

. . Now that the payment of the balance of the

It is understood that the present Cabinet answers unbesitatingly in the affirmative. But the Hochi Shimbun takes a different view. It considers that lapan has now to decide whether she will pursue a negative or a positive policy in the Far East, and that her procedure with regard to Wei-hai-wei will decide the question. The direct advantages of withdrawing the troops are tr fling. There will be a saving of expense and a concentration of military strength, and there will be less danger of friction with foreign Powers. The indirect consequences, on the contrary, are large: The peace of the Far East hangs in a delicate balance. The arms of the scale are pretty evenly poised, and the with-drawal of a weight from either side may mean immediate disturbance of equilibrium, Japan's presence at Wei-hai-wei certainly exercises an effect on the situation. She acts as a species of guard to the Chinese empire, which may be compared to a house surrounded by robbers warching to effect an entry. If the Japanese troops are withdrawn, the doors will virtually stand open to all burglars. Then, again, so long as Japan maintains her footing, she retains also a right to be consulted about all measures of a radical nature that concern China. Is it a wise policy to surrender these large indirect advantages? Of course the world say that Japan has acted honestly. That will be very pleasant. But will it not be called the honesty of fools?

The Pomiuri has an article on the new Tariff which will go into force, it expects, from October 1st. Our contemporary alleges that while the chief purpose of the increased rates is to provide revenue, there is also the covert aim of fording protection to native manufactures. The number of articles falling under the Conventional Tariff is 34 and the average duty on them is increased from 5 per cent, to over 10 per cent. The number included in the Statutory l'ariff is 497, divided into 16 classes, and the average duty is 12.35 per cent., the highest figure being 40 per cent. and the lowest 5. Under the former Tariff the duty on watches, machinery and glass is raised from 5 per cent. to 25; that on manufactures of gold from 5 to 35; that on articles of apparel from 20 to 30; that on leaf tobacco, to 35; that on cut to-bacco and cigars, to 40; that on beer, 12 25; that on champague, claret, vermonth, etc., m 35, and that on brandy and whisky w 40. The Yomiuri writes about the rise that will immediately take place in the prices charged to consumers of all these articles, but does not seem to apprehend any diminution of conaumntion.

#### YOROHAMA CHAMBERS OF COMMERCE.

A meeting of representatives of the Committee of the Yokohama Foreign and Japanese Chambers of Commerce was held on Friday, the 25th instant, at the rooms of the Foreign Chamber, No. 61, Main Street, at which cordial assurances were given of the desire of both Chambers to be mutually helpful. The special subjects pro-posed by the Foreign Chamber were:—The establishment of an Arbitration Committee to be appointed by the amalgamated Chambers to decide any commercial cases that might be brought by members of either Chamber; and the establishment of Port and Harbour Regulations, The desirability of both these proposals was mutually agreed upon and the details presented to the meeting were to be discussed at a subsequent meeting to be held shortly.

A gentleman who recently paid a visit to Bolinso reports that the Spanish troops have been guilty of terrible cruelty towards many rebels who were injured and fell into their hands. The wounded were thrown into a wooden but in which were a number of rebels who had been killed. The hut was then set fire bands. who had been killed. The hut was then set fire in and the dead and living were burnt almost to

URBANA-CHAMPAIGN

#### LAW FOR ENCOURAGING DIRECT EXPORT OF SILK.

The Government have thought it necessary to issue the Imperial Ordinance required for giving effect to the Law for encouraging the Direct Export of Silk. The Law passed both Houses of the Diet in March, 1897, but whereas the classification of the silk and the amount of bounty to be granted were definitely fixed in the original project, the Diet amended the Bill in the sense that the Government should take the responsibility of determining these points by Ordinance. In recommending this amendment, the Special Committee of the Lower House explained that the silk designated in the Project as " first quality "-namely, finest lustre; 80 tavelles; a deniers of variation, and 30 nibs per catty-was practically unproducible in Japan, and that even the second and third classes contemplated by the drafters of the Bill, were very highgrade silks. On the other hand, it did not seem wise to lower the classification for the whole period throughout which the Law was to be operative. Hence the Government were left to determine the necessary qualifications according to circumstances. In other words, the Committee sought to render the provisions of the Law less onerous; and the bounties correspondingly more accessible. The Imperial Ordinance issued on the 29th instant for the purpose of determining the qualifications shows that the standards of the original Law have been slightly lowered. For the sake of easy comparison, we place the provisions of the Law and those of the Ordinance side by side :~

ORDINANCE.

Class I .- Bounty 50 yen

Class II.—Bounty 30 year Good histor; va

tiation, 4 deniers; 40 tavelles; 100 mbs.

les; 50 miles.

per loo calties. High-est hister; variation, 23 denters; 80 tavel-

ORIGINAL LAW. Class I.—Bounty 50 year per 100 catties. High-est lustre; variation, 2 deniers; 80 tavelles;

Class 1L-Bunuty 30 pen. Good listre; va-riation, 3 deniers; 40 lavelles; 60 nibs.

30 nibs.

Class III .- Baunty 20 Fair lustre; vatistion, 4 densers; 27 tavelles; 90 nibs.

Class III.—Bounty 20 yen. Fair lustre; va-tration, 5 deniers; 27 tavelles; 150 nib-. The fact that this Law should have reemerged at all from the grave to which it seemed to have been deservedly consigned, will be generally regretted. But the Government are unable to exercise any discretion. The Law, as passed by the Diet and sanctioned by the Emperor, was to go into operation from April 1st, 1898, and, since it stands unrepealed, the steps necessary for giving effect to it must, of course, be taken in due order. It is understood that had not the House of Representatives been dissolved at the commencement of the Diet's last session, a Bill for rescinding this Law would have been introduced, and that such a Bill will be submitted to the new Diet in the special session next May. But, in the mean time, the regular routine has to be followed. The Government have no competence to ignore a Law which has been duly enacted, sanctioned, and promulgated. Baron Ito, Minister of State for Agriculture and Commerce, probably regrets that the first thing more need be said. Imperial Ordinance countersigned by him should be of such a nature.

The Fakagawa granaries in Tokyo, the Nichi Nichi states, contain at present 303,592 and 57,874 of foreign production.

#### CHINA'S LOAN AND THE IN-DEMNITY.

The fact that only two millions sterling were subscribed out of the eight millions offered in London on account of the Chinese Loan will not, of course, affect the receipt of the money by China. The whole sum was under-written before the bonds were placed upon the market. Rumour says that the under-writers are now selling at 1 per cent. discount, but what that means exactly there is some difficulty in knowing. The bonds are understood to have been under-written at 83 and put upon the market at 90, so whether one per cent. discount signifies 89 or 82, or, again,  $89\frac{1}{10}$  or  $82\frac{17}{100}$ , we can not tell. It makes no matter to China, however. She receives 83 only, or a total of £13,280,000 out of £16,000,000. With regard to the sum that she has to pay to Japan, we mentioned in a recent issue that the rate of exchange is against the latter country at present. We were mistaken. It appears that the Japanese negotiators, at the time of signing the Shimonoseki Treaty, fixed the rate at an uniform figure for all payments of the Indemnity. They took the average market rate of the preceding three months, which seems to have been a little more than 3s, 3d, to the tael. Their proximate reason for considering the question of rate at all was that China expressed a wish to deliver the installments of the Indemnity in sterling in London, and the Japanese negotiators, before assenting, deemed it wise to provide against the danger of having the market "rigged" against Japan when the periods for receiving the installments arrived. They thesefore stipulated that, in consideration of their consenting to the proposal for sterling payments in London, the conversion of the silver in terms of which the Indemnity was stated should be made at the invariable price of 39.48d, to the tael. has proved a very fortunate stipulation, for the gold price of the same tael at present is only some 33 pence. To show what advantage Japan gains by the arrangement, we have to note that the payment to be made by China on or before the 8th of May is 721 million taels. The actually unpaid remainder of the Indemnity is 831 millions, but from that amount has to be subtracted the various sums of interest hitherto paid by China. These aggregate roa million yen, so that the indebtedness is reduced to 724 millions. that figure has to be added half a million for the maintenance of the Wei-hai-wei garrison, bringing the total to 73 million taels. Seventy-three million taels converted into sterling at 39.48 pence to the tael represents £12,008,857, whereas at 33 pence it represents only £10,037,500. Japan saves £1,971,357, or more than 194 million yen, by her precaution in fixing the rate three years ago. The sum that will actually come into her Treasury in May is 118,850,543 yen. It must be confessed that she showed remarkable prudence in the negotiations of 1895. Of course the ratio between the precious metals might have varied in the other direction, but it has not, and no-

China is the one that fares badly in lions sterling to pay off an obligation to work on the Sabbath, how can it possibly bugs of rice, of which 245,718 are of domestic, cording to market rates. It is true that not oblige any person to work except the the whole amount of sixteen millions does rider?
Original from Digitized by Google

not go to discharge her obligation to Japan, but neither does the whole of it come into her hands for disposal. She receives £13,280,000 as the proceeds of the sixteen-milion loan and she transfers to Japan's account £12,008,857, so that there remains to her a sum of £1,271,143, or, probably, 11 millions sterling after defraying expenses connected with the negotiation of the loan,

These debts incurred to pay debts assume very interesting proportions when we come to calculate them accurately. If China were in a position to discharge the installments of the Indemnity according to the original unabbreviated programme-i.e. in five more installments, the last handed over on May 8th, 1902-, her total remaining payments to Japan, including interest, would be 93% million taels, or £15,422,333, approximately. To wipe out this indebtedness at once by means of a single payment of £12,008,857, she contracts a loan of 16 millions ster-ling, which is to run, we believe, for 5 years unredeemed, and then to be redeemed in 25 years by equal install-ments, the rate of interest being 4½ per cent. Hence at the end of 30 years, China will have paid £28,960,000 (principal and interest) to discharge her debt to England and Germany. On the other hand, there remain to her 11 millions after paying off Japan. Hence the net result is that, in order to liquidate at once an obligation which she might discharge by May 8th, 1902 by payments aggregating £15,422,333, she takes upon her shoulders a debt that will have cost her £27,710,000 by 1928, thus making a loss of £12,287,667. That is the price she pays to get back Wei-hai-wei. How long will she keep it? Her wiser plan would have been to pay Japan for staying there.

#### MISSIONARIES AND BICYCLES.

From correspondence in the Soul Independent we learn that some foreign newspapers in Japan bave commented unfavourably on the use of bicycles by missionaries. That is decidedly intelligent criticism. If to ride a bicycle is improper for a missionary, he certainly ought not to travel by rail or electric tram. He might ride on an ass, perhaps. There is a precedent for that. But as his time is quite valueless and as there is not the least advantage in his extending the sphere of his ministrations, no excuse exists for him to use a bicycle. Even boots and socks, which belong to exactly the same category as a bicycle in so far as they aid locomotion, are superfluous luxuries on the feet of a missionary. Public opinion has learned to tolerate them, however, but a bicycle! Why, a missionary on a bike is as bad as a missionary rowing a boat or as a missionary mounted on a horse. What a singular thing prejudice is! It would be difficult to find anything more splendidly unreasonable and inane objection to missionaries than this mounting bicycles, yet the most liberal folks have not yet persuaded themselves to ride to church on a bike. Were they invited to explain their reluctance, they could not adduce the timiest fragment of a reason, for if it is right to go to church in a carriage, this matter. She incurs a debt of 16 mil- thus compelling horses and a coachman which represents only £10,037,500, ac- be wrong to go on a bicycle, which does

#### "SCOTUS" AND "QUILLET."

"Scotus" appears to have been driven into a fit of dancing exasperation by our recent comments on the sad accident which befel him at Milke in 1888, and by our expressions of satisfaction that the consequences were not more serious. He was quite enchanted by what he saw of Japanese prison life and methods at Milke in 1888, and not only might his eulogies, then placed on journalistic record, have remained permanently deceptive, but he himself might also have been precluded from joining the congenial crusade now inaugurated against the jails of Japan, had not an ex-jail-bird's "meaning smile" led him to discover that during the three hours which elapsed before he gained admission to the Milke prison, the arrangements of the prison, the condition of the prisoners, and, in short, everything that goes to make up a "system," had been radically changed. Could we do less than convey our congratulations to "Scotus" in particular and to the public in general that by the agency of a clue so subtle as a smile a discovery of such interest had been made—the discovery that Japanese prison officials possess an Aladdin's lamp, and can summon genii to metamorphose a building, its inmates, and its contents in the brief space of t80 minutes? "Scotus," however, takes it ill that we should have invited our readers to admire his acumen and to rejoice over his rescue from the glamour of the genii, Neither congratulation nor commiseration fits his fancy, and he appears to have assumed the attitude of his proverbial countryman who sprang into the middle of the road and swore at large. Unlike the latter, however, "Scotus" does not lose the thread of his argument or forget to be relevant. In his carefully kept note-books, where the Japan Mail seems to bulk largely, he finds some venerable entries of bygone years, recording how we once spoke of materies as a plural noun, attributed a saying of La Fontaine to Fénelon, and condemned portions of a book upon the Chinese which we had previously reviewed favourably. The close connexion between these reminiscences and the subject of the Japanese prison system imparts to them a special value in this context, and pleasantly recalls the logic of the school-boys who concluded that their dominie must be ignorant of algebra because they found some stale breadcrumbs in the pocket of his overcoat. We owe "Scotus" an apology, however. We ought to have included his possession of a conscience among our subjects of congratulation. He very justly pleads now that his eulogies of the Miike prison could never have been quoted against his present attitude unless be had himself drawn attention to them, since the journal in which they appeared exists no longer except in a file preserved in Paraguay. That is point deserving of attention because the usual habit of respectable publicists is to ignore all their previous utterances if they can he sure of doing so without inconvenient detection. We owe "Scotus" another appology, also. We left his last article unnoticed for a week. His personality had already acquired such importance ten years ago that the Miike officials invoked their benevolent genii and worked a regarding the latter as an exposition of the former, that is his own affair. We ventitious aids to consideration were shall have him insisting presently that the Shanghai Cricket Club to send a team to Koffe imithal stream. limited to the credentials of an obscure opinions about religion expressed by to Koprini the from UNIVERSITY OF ILLIN

Australian journal and to the wearing of a suit of pyjamas dilapidated by the assaults of a hungry pack-horse. Ill done

was it, therefore, on our part to lose even a day in replying to his article. Concerning "Quillet"—which seems to us the most appropriate epithet for the editor of the Kobe Chroncle, so solemnly does he deal with the gimeracks and whimwhams of controversy—concerning "Quil-let" of the Chronicle we would urge that his standards of accuracy are not attainable by common every-day folks. For sentence, we proceed, in the next, to give our own version in our own words of a certain occasion, we can not, without "Quillet's" teaching, perceive that we are making a "suggestion at variance with the facts." Again, when "Quillet," on the strength of an interview with a sometime inmate of a Japanese jail, commenced a vehement crusade against the prison system of this country, we could scarcely have imagined, without his guidance, that we were "consciously indulging in misrepresentation" because we spoke of his views being "based on the state-ments of a Japanese." It is true that we did not refer to his own subsequent personal observation, but surely our forbearance ought to have been appreciated, inasmuch as what "Quillet" saw at the Hyogo prison obliged him to admit that "from a Japanese point of view there was perhaps little room for criticism." How-ever, "Quillet" playing with puerilities and getting magnificent about minutize is a spectacle which we can not strain our poor intellect to appreciate. It is not Only to one matter of sober fact need we allude, namely, the Government's intention with regard to the treatment of foreigners in Japanese prisons. Having made inquiries in the proper quarter, we were enabled to state authoritatively that it had been decided to make such arrangements as would secure foreign inmates of Japanese jails against being fed with Japanese food, clothed in Japanese costume, and subjected, generally, to the same mode of life as Japanese prisoners, inasmuch as the foreigner's punishment would thereby be greatly and unjustly aggravated. Subsequently, a paragraphist calling himself "Yamato Chuyo," writing in the Fapan Times, employed language which seemed to show that he, personally, did not approve of any such discrimination, and the Robe Chronicle leaped to the very singular conclusion that this paragraphist, using a nom de plume and speaking in the first person, represented the views and intentions of the Japanese Government, "Yamato Chuyo" is believed to be a pseudonym of the present editor of the Japan Times, and "Quillet" professes to be greatly shocked by our suggestion that when an editor purposely steps out of the editorial columns and, by using a non de plume, differentiates himself from the journal he edits, he is plainly ventilating views to which he does not intend to commit the journal. In this case it is a question of fact against opinion—the fact being the

"Yamato Chuyo" and also about foreign politics in the columns of the Japan Times must be considered as the opinions of the Japanese Government, which would certainly be a startling assertion.

#### YOKOHAMA FORE-SHORE.

The question of the fore-shore at Yokehama has found its way into the vernacular press, but no definite opinion is expressed about it, a fact which we regard as significant. Four or five years ago, if any one example, when, having quoted m writer's had advanced a proposal that permission "own words" in inverted comman in one should be given to a foreign company to should be given to a foreign company to reclaim lands from the sea and become their perpetual lessee, there would not what he may be supposed to have seen on have been wanting publicists to denounce the scheme on the ground that alien ownership of Japanese soil must be interdicted. But the people of Japan seem to be reverting to the more liberal and sensible mood which they exhibited when the drafts of the Inouye and Okuma Treaties were prepared. At that time, namely, up to 1890, there was not the slightest opposition to ownership of land by foreigners. The privilege was inserted in the drafts as a matter of course. But when the "strict-enforcement" policy came to be distorted by extremists like Mr. Oi Kentaro, and when it was discovered that not a few foreigners had contrived to become vicarious owners of land outside the settlements, the silly, shallow cry that the soil must always be preserved in native keeping gradually grew into a national shibboleth. It was a temporary fit of delirium, however. A cure has been furnished by the want of foreign capital, and we look to see a more manly and Jarseeing disposition prevail soon. As for given to all to be great in small things, the talk of deepening the harbour and using the dredgings to extend the foreshore to a distance of a hundred yards, it is a very old idea, though none the worse for that. We never had the least doubt that it would some day become an accomplished fact. As the day approaches for the abolition of Treaty Limits and Settlement boundaries, the price of land in the foreign quarter of Yokohama is rapidly rising to the same level as that of the land in the Japanese quarter, and when ground having a value of from 50 to 70 yen per isubo can be reclaimed from the sea at a cost of from 12 to 20 yen, it is not likely that so fruitful an enterprise will be permanently neglected. There is, of course, a sen-timental objection to do away with the Bund, which has been one of the most picturesque features of Yokohama since the birth of the Settlement, but mere prettiness can not be seriously considered. where tradal facilities are in question.

#### KOBE CRICKET CLUB.

The annual meeting of the Kobe Cricket Club was held on Monday evening last, Dr. Thornicraft, President of the Club, presiding. The report and accounts, which were adopted, showed a debit balence of \$182, which, the Chairman explained, was due to the purchase of new gear to the amount of nearly \$600. Dr. Thornicraft was unanimously re-elected President. On the ballot for Captain being taken Mr. F. J. Abbott stood first and Mr. J. Marshall Japanese Government's decision; the opinion, a newspaper paragraphist's individual views. If "Quillet" insists on regarding the latter as an exposition of Messrs. Cam. Lucas, Lightfool, Barto, Edwards, Talland Lucas, Lightfool, Barto, Edwards, Talland Lucas, Lightfool, Barto, Edwards, Talland Lucas, Lightfool, Barto, Edwards, Talland Lucas, Lightfool, Barto, Edwards, Talland Lucas, Lightfool, Barto, Edwards, Talland Lucas, Lightfool, Barto, Edwards, Lucas, Lightfool, Barto, Edwards, Lucas, Luca

#### RUSSIA AND CHINA.

It will be seen from a telegram which we publish elsewhere that the Peking correspondent of the Fifi Shingo continues to speak very positively of an agreement between China and Russia. Telegraphing on the 24th instant, he said that the Court, despairing of any substantial aid from England, had decided to lease Talien and Port Arthur to Russia for 25 years, and to sanction the extension of the Trans-Asian Railway to Lizotung. Telegraphing on the 25th, he gives us the dimensions of the area said to have been leased to Russia-an area 50 miles by 25. If the negotiations have progressed at that rate, they have been remarkably rapid. But, circumstantial as are the statements of the Jiji's correspondent, and accurate as he has hitherto proved himself to be, we can not attach credence to his account on this occasion, inasmuch as no confirmatory telegram seems to have been received officially in Tokyo. It is scarcely possible that, had such an important decision been arrived at, official information of it would not have reached the Japanese capital. The last official news we had was that the negotiations had been removed from St. Petersburg to Peking, and that their Excellencies Li Hung-chang and Chang Yin-yuen-who came to Japan on the fruitless peace mission of January, 1895-had been appointed plenipotentiaries to represent China. It is difficult to believe that the Peking Court would have taken that step had there been no intention of making a struggle against Russia's demands, especially as the answer for which France is waiting must be largely influenced by the decision arrived at in Russia's case.

#### FEATS OF NAVIGATION.

Really we do not see that the passage of the Suez Canal by the Fuji was a feat reflecting any special honour on Japanese seamanship. The *Hochi Shimbun* says that it "startled the naval world;" but how? There was nothing in the performance from the point of view of navigation. It was a mere question of draught. The Fufi and the Yashima were built expressly to be capable of making the voyage vid Suez, and that is all that need be said about the matter so far as the Canal is concerned. We do indeed think that the Japanese officers who brought out the ship deserve the greatest credit. They had never before bandled anything approaching her in size, and when men whose experience has been limited to cruisers of three or four thousand tons are suddenly set to navigate a twelvethousand-ton line-of-battle ship, they require a great deal of nerve and judgment to come through successfully.

The Hochi also speaks of the duty which Commander Nojimoto and his crew have undertaken to perform in navigating the torpedo-destroyer Yugiri from England to Japan. The little vessel is not to be accompanied by a "parent ship" of any kind, but will perform the long voyage all alone. That certainly will be a praiseworthy feat, and the Hochi may well convey the country's applause and good wishes to Commander Nojimoto and his comrades who are soon to start for Eng-Digitized by Google

KOREA'S REPLY TO Mr. DE SPEYER'S diction displayed in the above document. DESPATCH.

thus given by the Soul Independent :-Dear Sir:

I have received your dispatch of the 7th inst. relating to the question of employing Hissian military instructors and financial adviser. I have delayed in replying to your inquires through un-avoidable causes, for which delay I crave your

Since the disturbance of 1896 our government has been in the control of a deceptable lot who have rendered the safety of our country extremely precarious. Our Imperial Majesty went to your legation two years ago where he was safely domiciled and at the same time restored the safety of our Imperial house. Our Imperial Majesty appreciates the kindness of your government and our preciates the actioness by your government, and our people feel grateful for the protection you offered to our Sovereign, and through friendly motives, your Emperor especially dispatched a number of military instructors, and for the benefit of our Finance Department, he detailed an expert here. We all fully realize that he did these for the purpose of strengthening our independence and leading us into the path of progress and enlightenment,

Your despatch states that "there exists a deplorable condition of affairs in Soul, many 

Your inquiry makes our Emperor and our government feel ashamed but our government will be more careful and studious in the discharge of

our responsibilities, so that there will not be any further need of causing anxiety to your Sovereign.
Through your Sovereign's kind motives and your government's friendly disposition our military and financial affairs have made much progress. Both the adviser and instructors diligently and con-scientiously discharged their duties, so that the Imperial guard has been trained satisfactorily and the financial condition of the country placed on a systematic basis. These are all due to the un-ceasing efforts of your government and we will

ceasing efforts of your government and we will never larget your magnanimous spirit.

Our government has decided that we will continue to manage our affairs according to the methods which your officials have so kindly inreduced, though we must place the controlling power of these departments in the hands of our own countrymen. We will not employ any foreign military instructors or advisers. This decision was arrived at by the manimous wishes of the old statesmen, the present government, and the people at large, also through the sulightenment and independent spirit which your government has and independent spirit which your government has so diligently inculcated among us. I am sure that your Imperial Sovereign and your government will be glad to know that our people have become so progressive and enlightened as to desire to maintain their own sovereignty.

Before we were able to manage our own affairs we lead to solicit the assistance of the friendly powers, but at the same time we must consider the advancement and maintenance of our independent and sovereign rights. My Sovereign and the people unanimously desire that the friendly relations between the two nations may become still closer and that no misunderstanding should exist. Your officials have accomplished their work and it is convenient for us to have them'relieved from

it is convenient for us to have them'relieved from our service. I feel grateful to you for suggesting the idea of telieving these officials.

I am ordered by my Imperial Sovereign to thank your government sincerely for what you have done for us, and His Majesty will send an envery to your capital who will carry the personal messages of gratitude from our Emperot to your Sovereign. In the meantime I request your Excellency to inform your government of our decision in this matter, which, as I have stated above, was the manimous desire of our Sovereign and his people.

(Signed.) MIN JONGMUK.

It has evidently suffered a little in translation, but the sense does not appear The reply of the Korean Minister of to have been at all impaired. There is a Foreign Affairs, H. E. Min Jongmuk, to good deal of significance in the wording. Mr. de Speyer's celebrated despatch, is Indirectly, but still unmistakably, the Indirectly, but still unmistakably, the Minister records the fact long ago known to our readers, that the employment of Russian military and financial experts was the result of a promise made by the King of Korea during his sojourn in the Russian Legation. Whether Mr. Min Jongmuk intends to suggest that the arrangement can not be justly described as an outcome of appreciative spontaniety on the King's part, or whether he recalls this curious chapter of history merely by way of appeal to the hospitable feelings displayed at that time by the Russian Repre-sentative, it is hard to tell. But certainly he can scarcely have drifted by pure accident into the subtle sarcasm of the statements that his country's resolve to dispense with the services of the Russian experts was due, in part, to "the enlightenment and independent spirit which your Government has so diligently inculcated among us," and that he is "sure that your Imperial Sovereign and your Government will be glad to know that our people have become so progressive and enlightened as to desire to main-tain their own sovereignty." The bland naïveté of such language penned in reply to such a despatch as that of Mr. de Speyer climbs to quite a pinnacle of artistic irony, and must have excited in the bosom of even the placid and humane Mr. de Speyer an absorbing wish to tweek the nose of Min Jongmuk. It is excellent persiflage, too, to say that the mili-tary and financial experts "have accom-plished their work." The bulk of the officers and non-commissioned officers reached Söul last summer in a casual kind of way. They were understood to be making a tour without any purpose more profound than that of the vacuus viator. The financial adviser was installed in office a few weeks ago. Yet these officials "have accomplished their work." Min Jongmuk does not try even to be specious.

#### AGAIN.

As is usually the case with writers who are perpetually detecting motes in the eyes of other people, the Kobe Chronicle seems quite unconscious of the beam in its own. After a delightfully naïve disserta-tion on our remark that "The standards of accuracy set up by the Kobe Chronicle are not attainable by common every day folk "-which remark it interprets as a serious admission of general inaccuracy on our own part!--, the Kobe journal says:-" We have previously shown that that up to the time we began to draw attention to the question, no steps whatever had been taken to make any such discrimination"-i.e., discrimination between the treatment of foreigners and the treatment of natives in Japanese jails as to food, clothing, etc. Does the Kobe Chronicle claim to know, as a matter of fact, that the Japanese Authorities have not decided to provide foreign diet and foreign costume for foreign prisoners? It can not possibly advance any such claim. Therefore its assertion, as quoted above, does not satisfy the least exacting stand-(Signed.) MIN JONGMUK. ard of truth. But perhaps it means Our readers will understand that we to affirm that although steps for makare not responsible for the curiosities of oppoidiscrimination had not been taken

when it opened its campaign, they have since been taken. If so, what is the use of writing long articles to prove that "Yamato Chuyo's" objections to discrimination are expressions of official opinion, and that the Japan Mail's statements of information obtained from officials are too vague to be trusted? It is a pleasant dilemma. Either the editor of the Kobe Chronicle penned a falsehood when he claimed to have shown that no steps for discrimination had been taken by the Authorities up to a certain time, or he admits that such steps have now been taken. He may impale himself on whichever horn seems less deadly.

#### RECEPTION AND BALL AT THE PRIME MINISTER'S.

Our readers are aware that a reception and ball were to be given by the Prime Minister and Marchioness Ito at the official residence in Nagatacho, Tokyo, on the 28th instant, to celebrate the marriage of Mr. Ito Yukichi and Miss Takashima. The affair proved a brilliant success. Their Imperial Highnesses Prince and Princesses Arisugawa honoured the occasion with their presence, and it goes with-out saying that all the rank and fashion of official and private Japan, all the Foreign Chefs de Mission, together with the staffs of the Legations, and all the principal foreign residents of Tokyo and Yokohama were present. The Marquis and Marchioness and the bride and bridegroom received the guests, who arrived in a continuous stream from 9 to 10 o'clock. The bride wore Japanese costume, as did also the great majority of the Japanese ladies present, a fact which is not unworthy of note where a reception by Marquis Ito is concerned. The decorations were confined to the entrance hall, which had been converted into a grove of bamboos, pines and plum-trees-the triplet of felicitationcontrived with much taste and charming effect. Two large salons en suite, both opening into the ball room, were occupied by the dancers and the onlookers, and upstairs in another wing of the building were smoking-rooms and a gentleman's supper-room, the ladies' supper-room being on the ground floor communicating with the principal salon. This convenient disposition of rooms and the excellence of the general arrangements combined to promote the success of the ball, which was certainly one of the most brilliant ever witnessed in Tokyo. For the first time at an affair of such magnitude in Japan a cotillon was danced, and the difficulties that might have been anticipated in or-ganizing an effort of the kind on so large a scale proved proved quite surmountable. A special train left Shimbashi at one o'clock for the accommodation of the Yokohama guests, and their departure was quickly followed by the dispersal of the brilliant assembly.

#### A DIRECTOR OF THE BANK OF JAPAN.

A Director of the Bank of Japan, Mr. Yamamoto, has published an interesting ramamoto, has published an interesting essay on the economic outlook in Japan. Prominent place in the retinue of the He-has-a-name," "Give-him-a-name," and means ought to be devised for checking on the occasion of the latter's southward suitable for not a few houses, says the Globe. the yearly excess of imports over exports, journey from Yedo (Tokyo) in 1802, when Why so? The fact is that the conditions the Namanugi incident occurred—the of Japan's foreign trade are beginning to incident which cost the life of Mr. Richard-

resemble those of England's. She is becoming a manufacturing country and is consequently importing increased and increasing quantities of raw materials and machinery. Last year, her imports exceeded her exports by 56 million yen. But among the former were included raw cotton, wool, machinery, locomotives, iron and rails to the aggregate value of 67 millions. Looking at the matter a little more closely, we find that if the importation of raw cotton and wool showed an increase of 11 million yen, approximately, in 1897 as compared with 1896, the import of cotton and woollen manufactured stuffs diminished by 9½ millions and the export of cotton yarns and fabrics increased by to millions, so that, under this important heading, there is a balance of 81 million yes in Japan's favour. The increase of imports in 1897 compared with 1896 was entirely due to larger purchases of raw materials, machinery, sugar, rice, peas, and beans. Surely Mr. Yamamoto can not regard those items as regrettable, with the exception of rice, which is attri-butable to a bad harvest. Rice alone is responsible for disturbing the balance of trade to the extent of 172 million yen, and if we add the cost (221 millions) of machinery, locomotives, iron and rails, which represent so much addition to the nation's capital, we at once strike off 40 millions from the adverse balance. To us it seems that there is nothing at all disquieting in the state of the country's foreign trade.

#### THE LATE BARON MORIOKA,

The remains of the late Baron Morioka were interred yesterday in the Aoyama cemetery, Tokyo, and were followed to the grave by a very large concourse of distinguished mourners. Baron Morioka was one of the little band of men who made themselves conspicuous at the time of the re-opening of Japan to foreign intercourse by espousing, in conjunction with his Satsuma fellow-clansmen, Narabara, Kayeda, Matsukata and so on, the cause of the Sonno joi faction-that is to say, the cause of the men who advocated the restoration of the Administration to the Sovereign and the expulsion of foreigners. It is scarcely necessary to say that he soon abandoned the latter part of the programme, and adopted the liberal views of the Meiji era. His first official posts were connected with local government, and in 1880 he served as Governor of Kyoto, where he was very popular. Subsequently he was appointed Vice-Minister of Agriculture and Commerce, and, after a short period of retirement from official life, he became President of the Kyodo Unyu Kaisha, and ultimately of the Nippon Yusen Kaisha. But during recent years he ceased to perform any active duties, and, though sitting in the House of Peers as an Imperial nominee, he took no part in politics, devoting him-self rather to the study of art and the collection of art objects. He was sixtyfive at the time of his death, and the day before his decease the Emperor raised him to the peerage with the rank of Baron.

A specially interesting feature of Baron Morioka's career is that he occupied a

son and resulted in the wounding of Messrs. Marshall and Clark and the narrow escape of Mrs. Borrowdale. writer of this paragraph has heard Baron Morioka speak perfectly frankly of the affair. He said that it was not a question of cutting down foreigners qua foreigners but a question of asserting the right claimed by all the feudal chiefs of Japan at that time-the right of uninterrupted passage along the highway. Had a party of Japanese, mounted on horseback, attempted to make their way through the Prince of Satsuma's procession, as the un-fortunate Mr. Richardson and his friends did, they would have been cut down sooner than the latter were. Such was Baron Morioka's asser-tion. We may have our own mpinion of the rules that sanctioned such violent assertions of aristocratic privilege, but it is interesting to know what was the real motive in the Namanugi case. Mrs. Borrowdale, it will be remembered, had a wonderful escape. A sword-cut was aimed at her which shore off the feather of her hat without touching her head. Asked why the retainers of the Prince had committed the cowardly act of attempting a woman's life, Baron Morioka replied that not for a long time afterwards did any member of the procession suspect that a woman had been among the party of foreigners. They had never previously seen a lady wearing a riding-habit and a hat and seated on a horse, and it did not occur to them for a moment that they were raising their swords against a woman. That is certainly intelligible enough.

#### RACE HORSES STRANGE NAMES.

The names that have been given to horses are many and wonderful. No small ingenuity has sometimes been shown in inventing names which shall have some relation to pedigree. A parti-cularly neat example was due to the inventive genius of the late Earl Stanhope. He was once asked to name a house which had Rubens for sire and Election for dam. He effected an allusion to both parents by naming the offspring Canvas. A well-known racing Duke of Grafton of a handred and forty years ago, who owned a mare Pru-nella, called all her progeny, consisting of eleven good horses, by names beginning with the letter P, after the fashion observed among fox-hounds. The same duke owned a Derhy winner named Tyrant, whose sire went by the strange name of Pot-8-os. The usual explanation is that when Lord Abingdon, who bred the horre, mentioned to his trainer that he proposed to call him Potatoes, a stable boy standing by burst out laughing at the absurdity of the name. "So you don't like the name, my boy, eh?" said his lordship. "Nevertheless, we shall have it, and "—picking up a piece of chalk, and handing if to the boy—"if you can write it up over his com-bin I will give you a crown-piece." The boy seized the chalk and laboriously wrote "Pot 8-os," which so amused his employer that he determined forthwith that no other spelling tioned to his trainer that he proposed to call him he determined forthwith that no other spelling should be adopted. Still more singularly named were three horses belonging to the Earl of Glasgow, who was conspicuous on the turi all through the first half of the present century. The noble sportaman had a strange objection to naming his horses, and many and various were the efforts often made to get him to put a name them. On one occasion, however, his friends succeeded in getting him to name no fewer than three all at once, and these were the titles which figured in Messrs. Weatherby's register—
"He-las-a-name," "Give-him-a-name," and "He-isn't-worth-a-name." The last would be

#### RUSSIA IN KOREA.

T is alleged that there is no truth in the rumour of Mr. DE SPEYER'S recall Mr. DE SPEYER expected, we imagine. by his Government. The programme of He thought that his despatch would imofficial changes is said to be taking place. exactly as originally arranged; that is to his post in Peking, goes on leave to St. Petersburg, and his place in Soul is taken by the new Chargé d'Affaires, Mr. MATU-TINE, who is now on a visit to Tokyo. Of course we are not in a position either facts, but there is a considerable difficulty in crediting it. The state of Russia's relations with China at present does not render it convenient or probable that her new Representative in Peking should take a trip to Europe on leave, instead of proceeding at once to his post. Moreover, as we remarked in a previous issue, the tone of Mr. DE SPEVER'S celebrated despatch to the Korean Government does not suggest that an unfavourable reply was expected. No threats are used, indeed, but the language has a distinctly ominous ring. The irresponsible agitators who "oppose Russian interests," are spoken of as "idlers claiming to be gifted politicians; " the resulting state of affairs is said to "cause great surprise to the Emperor of RUSSIA;" the lending of Russian experts to " drill the Korean soldiers, guard the palace, and advise the Finance Department" is attributed to an intention of "helping your country as a neighbour and strengthening your independence;" the Korean Government is charged with not having "appreciated the importance of Russia's action at the time" and with "now preventing Russia from accomplishing the advantageous and beneficial results contemplated by her for your country;" and finally the Korean Government is called upon to choose whether it "desires Russia's help or not," and is warned that, if it does not, Korea "must maintain her independence in the future according to her own ability." That this despatch was penned with the approval of the Government in St. Petersburg there can be little doubt, but that it was penned with any anticipation of eliciting an unfavourable reply seems most improbable. Upon Mr. DE SPEYER must have devolved the responsibility of advising his Government as to the course that seemed desirable to take under the circumstances of Korea's changing attitude towards Russia, and it would have been for him to predict the probable issue of the course that he recommended. No one can doubt that had such a course been adopted by the Russian Representative in Söul nine months ago-had such a despatch been sent to the Korean Government immediately after Mr. WAEBER'S departure from Soul, for example,—no one can

tinuance of the neighbourly assistance which was working for her independence 1884, the Patents Regulations in 1888 and protection. That is precisely what mediately recall the Koreans to their old mood of deference and dependency, and provision for protecting foreign patents say, Mr. DE SPEYER, before proceeding to he had advised his Government in that or trade marks. We say "as a matter of sense. The result, therefore, falsified his course," for although nearly all European foresight and placed Russia in an embar- States have laws under which a foreigner rassing predicament, for it was evidently can register a patent and obtain protection impossible that she should insist upon the for it within their dominions, and though continued employment of her experts after Japan would doubtless have been willing to deny or to confirm that version of the she had herself publicly invited Korea to to follow their example, it was impossible decide between retaining or rejecting for her to do so, owing to complications them. Thus we arrive once more at the connected with Consular Jurisdiction. simplest, and therefore probably the most It should be remembered, too, that Treaty trustworthy, interpretation of this interest- Revision has been presumably on the ing incident; namely, that the Russian verge of consummation for a great many Representative, confronted by some years, and that, simultaneously with the symptoms of recalcitrancy on Korea's restoration of Japan's judicial autonomy, part, had recourse to a measure which all obstacles to the protection of foreign was intended to tighten the leading patents within the realm could have strings, but had the unlooked for result been removed, so that no special legislaof snapping them altogether. Mr. DE tion on her part seemed necessary. SPEYER'S return to St. Petersburg is easily Meanwhile, the law enabled Japanese understood under such circumstances, subjects to obtain patent privileges Moreover, apart from this particu- for new and useful inventions of their event, there is no gainsaying the fact that the paramount influ-foreign inventions and patent them in ence secured by Russia in Korea prior Japan. The latter point should be specialto Mr. DE SPEYER'S arrival in Soul, ly noted, for it is precisely the feature of dwindled to nothing during his residence the law which is now found to work there. Perhaps the causes of the change to the detriment of foreign inventors. are to be sought in the fickleness of the Koreans themselves and in the hopelessness of moulding their chaotic affairs into any semblance of order. If so, Mr. DE SPEYER deserves much commiseration, since fate condemned him to deal with the crisis of an impossible position. From rangement under the circumstances. But every point of view, however, it is a Russian failure of no small dimensions.

> move was in consequence of an agreement with Japan, or that it was made with would, of course, have approached Japan for Japan and Russia to arrive at some protection for it at all. practically intelligible rendering of the Yamagata-Lobanoff Convention, but it is an opportunity with the making of which no combined contrivance on the part of the two Governments can be credited.

#### FOREIGN PATENTS IN JAPAN.

ME subject of protection for patents I in Japan has been discussed and fully explained more than once in these columns, yet to some people it seems as perplexing as ever. The facts are alteration was not possible pending the very simple. The Patents and Trade abolition of Consular jurisdiction. Of doubt that Korea would have fallen on Marks Regulations now in force in course this is a temporary dilemma

ago-the Trade Mark Regulations in ---solely for the purpose of affording protection to Japanese patents and trade marks. > CLOSING OF THE LATEST CHAP TER OF THE FAR-EASTERN QUESTION.

THE first thought that must present itself to every one in connexion with foundations of a new order of things in the Far East have been laid. It seemed scarcely possible, at one time, that Great Britain, after the high language publicly folded arms while Russia wrested from would have suspended the prosecution of can put her hand at any moment on her design. But, on the other hand, HER an important artery of British commerce, propensity, and some continue to exhibit MAJESTY'S Government probably came to and cut it before effective defence could the conclusion long ago that the consummation of Russia's obvious descorrespondent of the Japan Times has tiny could not always be thwarted suggested that the officials of the Japanese without doing violence to reason; Patents Bureau discriminate invidiously that, in short, she must be suffered against foreigners, and because the Robe to acquire her much-coveted ice-free port. Chronicle has attacked the Japanese law Many Englishmen, Mr. ARTHUR BALFOUR The among the number, have been saying for years that England has no manner of title to prevent another Power's attaining have nominally been entitled to enjoy the what she would peremptorily insist on for herself as a natural right, and it must be confessed that reasonable minds can hardly take any other view of the matter. almost invariably failed in practice to Besides, the ground assumed by British enters the field in the character of a railway-constructor and port-opener, she incident is pregnant with other great was thus placed in a dilem ma between her sense of justice and her traditional policy. just part, whatever may be its worldly stream, will now find herself at some wisdom. The nations in the Far East distance from its bank. In short, the blems which have long pressed with increasing force for solution have been

the inauguration of an era which may by and by bring forth immense results. We can hardly come to any conclusion other than that Manchuria will be a Russian province long before the twenty-five years lease of Talien and Port Arthur expiresa province 800 miles in length and 500-in width, with a superficies of 390,000 square miles; a province very nearly as large as Germany and France joined together. That is a stupendous historical incident. It has been talked of hitherto as a vaguely probable contingency, but it virtually accomplished fact. Of course it will have an almost immediate sequel. England must procure a coaling station in North-Chinese waters. Whatever confidence may be placed in Russia's promises about commercial facilities at Talien, the naval position that she has acquired at Port Arthur gives her the direct command of the tradal route to be organized. We presume that England will ask for Wei-hai-wei. No other suitable station remains. She will probably ask for other things, also, but a naval station is almost a certainty. What is China to do then? She will have to acquiesce, which means that two foreign Powers wiff be posted as sentries on the road by which supplies of food-stuffs reach her capital. Peking will be no longer suitable for the Imperial Court's residence. For China, indeed, the time of unrest has only commenced, but for foreign Powers it has temporarily ceased. The atmosphere is freed from electricity. Russia and Germany have obtained what they wanted, and the development of their new acquisitions will give them ample occupation for several years. The Liao-tung results also. Vladivostock's future is destroyed. The prospect of commercial importance that lay before it as the terminus of the Siberian Railway Manchuria to Talien. Japan, too, which would have stood in the centre of the just been closed will prove the preface of epoch-making changes.

URBANA-CHAMPAIGN

we have to say, and finding nothing new in our correspondents' letters. There is, however, one point which seems to call for another word. It is the Government's have been no obligation on the side of the and complications. We beg to point out to action in the matter. Some of our correspondents are of opinion that there devolved on the Authorities the duty of instituting a scrutiny into the integrity of the Trustees' behaviour before granting their application for official classification. One correspondent says: -" It appears to me that, indirectly it is true, but still undeniably, the Ministry's cachet of approval has been put upon this extraordinary proceeding. The Trustees, in violation of all moral obligations, changed the character of the school in order to make it accord with secular official standards, and the Department of Education, by bestowing upon them the privilege which they coveted, has put a premium upon wrong-doing." Another writes !- "While I thoroughly agree with you that the Government has no concern with religious questions and disputes, it does seem to me that a Government can hardly regard itself as justly absolved from all responsibility on moral questions; and, religion altogether apart, the violation of a most solemn pledge is surely inmoral. The first and chief responsibility for that must surely rest with the Doshisha Trustees, like the chief Priests and Pharisees who demanded the crucifixion of conscience make him a guilty partner in the crime. The Mombusho, with a full knowledge of the binding character of the solemn pledge involved in the Doshisha constitution, has put its imprimatur on the dishonest act of the Trustees, The chief guilt is certainly with the Truscourse, if professing Japanese Christians (or some of them) are as had as this Doshisha business has shown them to be, what better can be expected of the Government? But viewing the matter merely from the standpoint of Japan's international relations, I am convinced that she would have raised herself greatly in the estimation of the moral section of the foreign do in moulding public opinion—if she had ! held out strongly against such a sacrifice of moral opinion as is here involved."

Every one must sympathise with the sentiment underlying the above remarks. Trustees of the Doshisha should have succeeded in obtaining an end which into the pros and cons of the complica- secular basis would never have been

tion between the Japanese Trustees of queried. There is no wise and impartial the Doshisha and the foreigners who course for a Government except to abstract founded the institution. There would itself altogether from such controversies Trustees to answer questions propounded by the Department on that subject, and PILATE and JESUS that the analogy seems there would have been no lawful power on the Department's side to reject the application of the Trustees because they refused to submit to an inquisition into matters with which the Department had no authorized concern. An office of State, however omnipotent it may appear at first sight, must keep between the Doshisha and the American within the limits of the power vested in Board. That question did not come beit by law. The course to be pursued by fore it at all. It was simply asked to extend the Education Department with respect to a private school's application for official classification is clearly defined by regulation. Certain forms have to be complied. with, and certain pledges given, by the persons responsible for the management of the school, and thereafter the Department ceases to have any discretion whatever. Has it occurred to our correspondents to ask themselves how the Department of Education could have proceeded to ac-offence cometh." It is not right, it is complish the purpose they suggest? Would it not have been necessary for the Department to say :- "We gather from statements and facts which have come to our notice that, in pledging themselves to dispense with all religious teaching at the Ordinary Middle School of the Doshisha, our LORD. But though PILATE washed his the Trustees are breaking faith with the hands of the guilt, history and the human foreign Christians who supplied the the cruel choice of exposing their sons greater part of the funds for establishing to conscription at the age of 19, before the Doshisha. Before considering your application to have the school classed as a public institution, we require an explanation of that point, and we shall invite a similar explanation from the foreign Christians so that we may judge whether tees, but I wish the Government had had you are entitled or forbidden to no hand in the dirty business. . . . Of abolish instruction in Christian morality from your curriculum?" Does not It is well understood that anti-religious the mere statement of such an attitude demonstrate its impracticability? Apart from the total incompetence of the Department to institute any investigation of the kind, we can not doubt that the step would have been greatly and injuriously misinterpreted. The public, even the foreign public, would have said that the public-which at least has something to Doshisha was discriminated against, not because the Trustees had broken faith with the Christians, but because they had once been connected with them and were still believed to be in favour of Christian propagandism. The Japanese non-Chris-It is impossible not to regret that the tian public would have said that the action of the Authorities amounted to an indirect avowal of pro-Christian sympathies, since they employed such means to compass, they interfered to prevent a Japanese But we must adhere to our previously ex- school from changing its Christian foundapressed opinion that the Government had tion. The Japanese Christian public would no competence to make any scrutiny into have said that, had the question been, not the matter. The Department of Educa- of Christianity, but of Shinto or Buddtion would have greatly exceeded its law- hism, the independent right of the ful functions had it instituted an inquiry Trustees of a school to place it on a purely

our correspondent who instances the case of very imperfect. PILATE was asked to pronounce sentence of death upon the Nazarene in deference to the clamour of the Jewish leaders. He acceded and became a criminal to all time. The Department of Education was not asked to pronounce any judgment with regard to the dispute a lawful privilege to an institution which, by complying with the requirements of the law, possessed a legal title to demand the privilege. It seems unnecessary to elaborate the point.

We revert, nevertheless, to our original proposition that the prime responsibility for such unhappy and shameful incidents as that of the Doshisha rests with the Government. "Woe unto him by whom the radically wrong, that all Japanese subjects with strong religious convictions should be injuriously discriminated against in the matter of education. Many good men can not believe in the benefits of education divorced from religious moral training. According to the system now prescribed in Japan, such men are condemned to their education is nearly completed, or securing exemption for them up to the age of 28 by banishing moral religious training from their scholastic career. We call it a cruel, a most cruel, choice. The Japanese Government is in the position of having eliminated religion from the educational life of the rising generation. feeling did not prompt this legislation. The motive lies in an unlimited application of the principle that Church and State should be completely separated. But the best of all doctrines may become bad by abuse. Religion and the State are not separated when the latter virtually proscribes the former in the sphere of education. Freedom of conscience does not exist when people whose conscience forbids them to dispense with religion in the education of their children, find themselves excluded from valuable privileges which the State grants to all whose consciences are not troubled by religious scruples. In our opinion every school in Japan which provides satisfactorily for the instruction of students in accordance with the officially indicated curriculum, ought to be classed with, and to receive the same privileges as, a public school, whatever the religion taught there, provided that it be not an immoral form of

#### THE DOSHISHA AND ITS CON-STI2 UTION.

AN OPEN LETTER TO THE TRUSTEES AND FRIENDS OF THE SCHOOL, BY J. D. DIVIS.

[So many Japanese friends of the Doshisha have So many Japanese trieties of the Dominar late recently asked the writer of this letter for the facts in regard to the early history of the school, the formation of its constitution, and the way in which the buildings and endowment were committed to the Doshisha Trustees, that it seems hest to give the facts to the general public, as well as to the parties most interested,—J.D.D.]

In Oct., 1874, when Mr. Necsima, who had spent ten years in the Christian schools of New England, was about to return to Japan, he made an appeal at the Annual Meeting of the American Board of Foreign Missions, at Rutland, Vt., for money to found a Christian school in Japan. ror money to tound a Christian school in Japan. In response to this appeal, about 5,000 dollars was then given by earnest Christian men for this object. The money, however, was placed in the hands of the American Board, in Boaton, until their representatives, the missionaries in Japan, in cooperation with Mr. Nessima should source of its rea for a Christian should source of its rea for a Christian should source of its rea for a Christian should source of its rea for a Christian should source of its rea for a Christian should source of its rea for a Christian should source of its rea for a Christian should source of its real for a Christian should source of its real for a Christian should source of its real for a Christian should source of its real for a Christian should source of its real for a Christian should source of its real for a christian should should be s Neesima, should approve of its use for a Christ-ian school. After his return to Japan Mr. Neesima tried for months in vain to get per-mission to locate the school in Osaka; the Governor refused, because it was to be a Christian school. As it was not thought advisable to locate the school on a foreign Concession either in Osaka or Kobe, Mr. Neesima next tried Kyoto, and finally, in the summer of 1875. he secured permission to locate the school in Mr. Tanaka, the Minister of Educa tion, warned him, however, to be very careful at first in regard to preaching Christianity, until the great prejudice of the people of Kyoto against Christauity and against foreigners should be a little dispelled. As soon as it was known that a missionary had entered Kyoto, and that a building was rented for a Christian school, very great excitement prevailed in the city and the priests sent a strong petition to central Government to have the evil sect expelled from Kyoto. Mr. Tanaka then sent word to the Governor of Kyoto, advising that until the excitement subsided, Christianity and the Bible be taught in the houses of the teachers, or outside of the school. This was done for about two years, although the Bible was read, hymns sung, and prayer offered in the chapel of the school every morning. When all excitement had subsided, the Bible

was used and taught in the class rooms. Soon after this was begun, an official of the Kyoto Fu visited the school, and, finding that the Bible was taught, complaint was made to the Kyoto Fu. The Doshisha, however, stood firm and refused to yield, giving as reasons the fact that, the excitement being gone, the reason for not teaching the Bible did not exist, and that, since the Bible contained the most perfect system of morality, it was made the foundation of the moral teaching of the school, etc. From this time forward, the Bible continued to be taught in all departments of the school until

about two years ago.

At its annual meeting in Kobe, in 1875, the Mission gave its approval for the use of part of the \$5,000, held by the Board in Boston, for the purchase of the land where the main buildings of the school now stand. In June, 1876, at its annual meeting in Osaka, the Mission voted to approve of the erection of the first two cheap buildings for the school, to be paid for from the \$5,000.

From this time forward, with the exception of one or two buildings for the Preparatory Department which were etected with money raised in Japan, the Mission, representing the American Board in Japan, asked the American Board for the appropriations for each of the ten dormitories, for the Recitation Hall, for the Library building, for the Chapel, for buildings for the Girls' School, and those for the Hospital and Training School for Nurses. The money for all these buildings was given by the American Board funds contributed by earnest Christian

in consultation with the Doshisha.

It was distinctly understood by the American Board and by the Mission from the beginning, that the American Board had no legal claims upon this property, because foreigners could not hold land in Kyoto. For this reason a Company was formed to hold the property. The first Constitution was short. The first article stated that the Trustees, as they have always been called in English, who were the Company, should hold the property and see that it was used for the maintenance of Christian schools, and that they should have charge of all business arising between said schools and the Japanese Government.

Auether article said that money contributed by the American Board should be expended under the direction of missionaries of the Board, after consultation with the President and Japanese teachers of the school. In the summer of 1887, some of the missionaries on the ground felt that it was desirable to perfect an arrangement whereby the financial management of the school could be placed entirely in the hands of the Japanese friends, and a committee was appointed by the Mission to confer with the Doshisha with this end in view. The whole matter was discussed by the Trustees and this committee of the Mission, and the present Constitution was proposed and finally adopted.

It had been understood from the beginning that only Christian gentlemen should be mem-bers of the Board of Trustees, and the first five articles of the present Constitution, in which Christianity is declared to be the foundation of the morality taught in the school, were made forever unchangeable. Chapter second of the Constitution refers to the Trustees, their number, etc., and declares that each Trustee on his election must make the following solemn promise: "I promise to labor for the interests of the Company in accordance with its fundamental principles."

With these three safeguards, Christian Trus tees, their solemn promise to labor for the interests of the school in accordance with its fundamental principles, and with Christianity made the unchangeable foundation of the school, the Mission and the American Board, on being consulted, were satisfied, and gave their approval to the Constitution, and then for the first time the American Board consented to pass the financial management entirely over to the Trustees of the school. However, three members of the Mission, nominated by the Mission, were made corresponding mem-bers of the Board of Trustees, to give their advice in reference to all matters pertaining to the school and its finances.

This committal of the management of the school into the hands of the Japanese Board of Trustees was made in good faith, with no expectation of ever receiving it back, but in the belief that this Christian Board of Trustees would be perpetuated and would hold the school true to its original purpose and to the desire of those who had invested their money in it, not for a few years only, but for many

hundred years.
Every dollar of the nearly three hundred thousand dollars which were given by the American friends of the school during twenty one years, was given because of the assurance which Mr. Neesima made at the beginning and reiterated in every appeal sent forth later, whether in America, or in Japan; that it was to be a Christian school, and because this same fact was made one of the fundamental and amalterable principles of the Constitution. Without these assurances, the money for the expensive buildings would never have been given; without these, Mrs. Clarke would never have given her \$11,500 for the Theological Hall; without these, Mr. Harris would never have made his munificent gift of \$100,000 for the Science School. A letter is on file which was received from Mr. Harris after he had made his gift in which he speaks of the great satisfaction he has in having made this gift, because

intendence of the missionaries on the ground, foundation which by its Constitution is unchangeable.

In December, 1895, when the Deputation of the America Board to Japan were about leaving on their return to America, President Kosaki, for the Trustees of the Doshisha, sent them a letter in which he asked them to have confidence in the future management of the achool by the Trustees, and gave m one reason the fact that the fundamental principles of the Constitution were for ever unchangeable, and that they would administer the school in accordance with those

When Mr. Harris made his gift of \$100,000. the question arose whether he should place that endowment in the hands of the Trustees of the Doshisha, to be held by them in trust for the school, or whether he should place it in the hands of the American Board, in Boston, to be held by them in trust for the school, they sending the interest each year to Japan. Harris was at first in doubt and inclined to place it all in America, but some of the missionaries of the American Board in Japan, the writer among the number, wrote to him, calling his attention to the unchangeable articles of the Constitution of the Doshisha, and advised him to trust the Japanese and place the endowment in the hands of the Trustees here in Japan. The result was that he sent \$75,000 to Japan and kept \$25,000 in the United States.

The Doshisha is not a joint-stock company; if it was and the present trustees had themselves contributed all the capital of the Doshisha, they could by a unanimous vote, perhaps by a large majority vote, change the fundamental princi-ples of the Company. But the Doshisha is not a joint stock company. It is a trust company. The Trustees have not contributed the money. The money for nearly all the land and buildings, and a very large proportion of all the endowment funds which are in the hands ill the Trustees, have been contributed and placed in their hands by earnest Christian men, for the purpose of a Christian school, a purpose which was de-clared from the beginning, and which was put into the Constitution as unchangeable. Even the endowment funds for the Department of Jurisprudence, which were raised in Japan, were given after the school had no established reputation everywhere as an extuest Christian school, and in response to printed appeals in the Japanese language in which this fact and purpose were clearly stated.

The Trustees of the Doshisha simply hold these buildings and this money which is thus committed to them in trust for the donors.

It is a sacred trust. They have no right to change the purpose for which the funds were given, or to change the fundamental principles of the school, without the consent of all the parties concerned. The real Doshisha is and always has been far broader than the Doshisha Companythe Trustees. It comprises within it all the Japanese and foreign friends who have contributed to the funds of the school. In one sense, it includes all the graduates of the school, and the Kumi-ai churches which have prayed for it all these years, to say nothing of the broader circle of Christian churches in Japan which are so vitally affected by any fundamental change in the Doshiska school.

In the case of such a public trust, be it hospital, asylum, or school, which has once been started in accordance with the expressed wish of the donors, it is doubtful if any court of equity would recognize the legality of a change of the purpose or of the fundamental principles of the institution even with the consent of the donors. What would a court of equity say to the question of the change of the purpose or of the fundamental principles of such an institution by the Trustees without consultation with, or the consent of, those who committed the funds in trust to the Trustees?

It is true that, being foreigners, who could have no legal property rights in Kyoto, the American Board has from the beginning waived all claim upon the property of the school, and has trusted the Japanese Trustees, believthe buildings were erected under the super- of the Doshisha schools, rested on a Christian tives, the Missionaries in Japan, those Japanese-

Digitized by Google

Trustees would faithfully administer the funds and conduct the school during all the future in accordance with the purpose of its founders as Christian school.

Their aim has not been to make the school aimply a tool for the propagation of Christianity in a narrow way, or simply to train preachers all Christianity. The American Board and the Mission have been in sympathy with the broader purpose of Mr. Neesima from the beginning, realising that Christian teachers, Christian lawyers, Christian stateamen, Christian and the Christian christian Christian judges, Christian physicians, Christian merchants, atc, are just as necessary for the building up a solid and lasting civilization 📑 Japan as are Christian preachers. Thus, the hope of all connected with the achool during the most flourishing period of its history, the hopes of its founder, of the Mission, of the American Board, and of the earnest Christian teachers both foreign and Japanese, who worked side by side barmoniously in and for the school during many years, was that all the young men who entered would come under "the living and powerful principles of Christianity," to quote from Mr. Neesima's appeal which was published in twenty of the leading newspapers of Japan, and that they would go out into Japan, as the best and most loyal citizens of their country, and as faithful earnest Christians in whatever position they were called to fill.

It should also be said that some two years go, the relation previously existing between the Doshisha and the American Board ceased, and the American friends have ceased adding to the funds they had already committed in trust the tends they mud suready committee in trust in the Doshisha. This was contemplated from the beginning. The American Board is only helping Japan in these ways, temporarily. It expected from the beginning to cease its aid sooner or later. In the case of the Doshisha it came aconer than was expected, but when friends have put some hundred of thousands of dollars into the hands of Trustees or a Company, committing the funds to them in use for a specific purpose, which purpose was embodied in every appeal which was made for the com-pany, and which was also put into the fundamental principles of the Company and declared to be for-ever unchangeable, have those Trustees or members of the Company who have received this sacred trust, no obligation to respect the wishes of those donors, nor to keep the fundamen tal principles unchanged, simply because the original donors have ceased to put any more stock into the Company? To ask this question is to answer it: Having come to Kyoto with Mr. Neesima at the beginning, and having been thus connected with the school for twenty one years, and having been all these years one of the representatives of the many thousands of earnest Christians in the United States who have given their prayers and their money to the school, and who are now mourning its defection, and having myself again and again appealed to the American Board and in those friends for money for the buildings, for the yearly grant in aid, also to Mr. Harris and to Mrs. Clarke, the donor of the Theological Hall, I can do no less than state the above facts in reference to the founding of the school and the formation of the present Constitution,

The writer cannot close without an appeal to the Trustees and friends of the Doshisha, for he feels sure that unless this recent action of the Trustees is reversed, and the school brought back to its original foundation, it will not only seriously affect the Doshisha, which can compete with the government schools only in one thing, namely, its Christian morality, but that it will also seriously affect Christianity in Japan, and, still further, that it will damage the reputation of Japan, as a whole, with Western nations. The Doshisha is a household word throughout the length and breadth of the United States, it is known more or less widely among many of the nations of Europe. The writer is glad to see the protests which are appearing, not only from the Christians of Japan, but also in the secular papers. The more of these protests the less than a radical change in the present Doshisha can save the school, and Christianity in Japan, and the reputation of Japan, from serious mjury.

For these reasons, and because of these convictions, the writer makes bold to appeal to the Trustees of the Doshisha, to its alumni, to the Kumi-ai churches and the other churches in Japan, and to all the friends of the school, to restore the achool to its original foundation and spirit, to give it a Board of Trustees composed of earnest evangelical Christian men, who shall be elected for a term of years, instead of for life, subject to reflection, and to place the appointing power of the Trustees in the hands of some responsible body of men who will com-mand the confidence of all interested in the achool.

For example, if one half the Board were elected by the Sokwai of the Kumi-ai churches and one half by the general triennial Conference of all the evangelical Christians in Japan, all the friends of the school, Japanese and foreign, Christian and non-Christian, would have confidence in the achool. After all that has happened, the writer feels sure that no compromise or change less radical than something like that indicated above can restore confidence in the school or give it lasting success.

#### JAPANESE TEA IN FRANCE.

The Mainichi publishes the latest report received from the honorary Japanese Consul at Marseilles. It states that in France there are only two wholesale tea merchants, and one joint stock company which was lately organised with a capital of 500,000 year for the purpose of importing teas from China, India, and other countries. The tea trade in France is not yet conducted on a large scale, but it is suggested that if proper schemes be adopted large orders may be received in France from Switzerland, Italy, and Spain.

The leaf which has hitherto been imported into France in chiefly from China and India, the demand in 1895 amounting to 728,000 kilogrammes, an increase of 250,000 kilogrammes an compared with ten years ago. That fair m compared with ten years ago. That fair prospects exist for the ten trade in France may easily be perceived from these facts. It may be worth while to note, the Mainichi adds, the answers given by the dealers to the Consul's

Question t.—How is the Pormosan lea to be cruciesed as compared with other leaf? Ans.—Very few persons are acquainted with the Formosan leaf.

Q.—Is there any hope of extending the sale of

Q .- How can sales be extended? A .only necessary to send samples and indicate the prices as against the teas from other countries.

Q.—With respect to teas the import of which has hitherto been withheld, but of which prospects exist for securing a market, how can their sale be undertaken? A.—The best way is to establish an agency or agencies in France and to sell the commodity at the lowest possible price.

Q.—Of the teas imported from Japan, Foo-chow, Amoy, and Ceylon, which is best suited to the French? A.—Up to the present Indian and Chinese teas, especially that of Foochow, appear to have secured the public taste.

Q.—Are there branches or agencies in the various parts of the country for China and Indian tea?

Q -Do the French tea dealers carry on their trade on credit? A .- They buy direct from Chi-

Q.—Are abundant stocks laid in all one period for the purpose of selling the ten at the most favourable time which presents itself, or in the trade conducted on the system of "contract bargains"?

A.—The latter process of business is the case.

Q —What is the condition of trade compared with the previous years? A.—Since 1885 the rate of increase has been from 20,000 to 25,000 kilogrammes per year.

Q.—What are the principal cities or towns in which Formosan tea is consumed? A.—Formobetter for the reputation of Christianity and of sau tea is not at all suited to the French, though Japan. The writer feels, however, that nothing it is much used by the English.

GREAT BRITAIN AND THE DIS-MEMBERMENT OF CHINA.

The following article it published in the Toniuri as representing the gist of remarks made by a certain eminent diplomatist with regard to the situation of China:—China is so seriously embarrassed by the exorbitant claims of France and Russia that site has found herself utterly unable to determine what course to take. In this state of perplexity she looks upon England as the only Power which may serve to lighten her burden by making a strong protest against the proceedings of the two other Governments. England has indeed assumed or retained of opposition against the demands of France and against the occupation of Port Arthur by Russia. But her opposition is entirely based on her commercial interests, and Il is quite natural that she should have con-sidered that any bloodshed in the interior of China would damage her trade in proportion to the extent of the conflict. England justifies herself in taking a hostile attitude wherever her commercial relations are impaired. She had intimated that, should the Chinese Government consent to lease any portion of its territory to other Powers, she would likewise insist upon a similar privilege for herself. Her stand on this question seems to have been based on military considerations, but it involved no other motive than the desire to prevent such aggressive Powers as Russia and France from formulating any extra-vagant demands against China; her main object is simply to consolidate her commercial interests in the Middle Kingdom. To attain this end however, it is absolutely necessary for her to protect China from being dismembered by other nations. If England had had in view the acquisition of a territory for military purposes, she would have taken steps similar to those taken by Russia and France, and would have brought the complications to a speedy conclusion. indifference in this respect is an unmistakable proof of her unwillingness to take part in the proof of the unwittingness to take part in the race for territorial acquisition, profit being her sole aim in her dealings with China. In the present state of affairs it is quite impossible to predict how far England will go in protest against the unreasonableness of territorial claims advanced by Russia and France. One thing is certain, and that is that she will refrain from taking arms until emergencies shall compel her to take such a decisive step in consequence of her commercial situation being en-dangered. Yet it is certain that she will never hesitate to take, either in the form of commercial privileges or of territory, as much as other Powers manage to secure; nay, will even endeavout in obtain four or five times the amount procured by her rivals. China, at such a juncture, must only expect to see her vast territory completely dismembered by the influential Powers with which she now holds diplomatic relations. Nor is it improbable that a dispute may arise between these Powers on the subject of the inequality of their acquisitions in China, and that they may attempt to decide the question by force of arms. Even supposing that there is little probability of a deliberate purpose to fight on the part of any Power, it cannot be denied that a casus belli may at any time be furnished by the action of the different squadrons at present demonstrating in the Far East. At any rate one thing is certain; China is doomed to humiliation and diamemberment.

#### CHARTERED BANK OF INDIA. AUSTRALIA & CHINA

The Agent of the Chartered Bank of India, etc., informs us that he received, yesterday morning, telegraphic advice from the Bank's London Office that, at the approaching meeting of shareholders of the Bank, the Directors will recommend a dividend for the half-year ended 31 December last at the rate of 10 per cent. per annum, free of Income Tax, placing £75,000 to the Reserve Fund, which will then stand at £450,000, and carrying forward £12,000.

### SENSATIONAL AFFAIR IN SIAM.

A NEWSPAPER EDITOR ORDERED TO LEAVE.

The Bangkok Times of the 12th March contains the translation of a decree by the King of Siam ordering the expulsion from the country of Mr. J. J. Lillie, editor and proprietor of the Siam Free Press, within seven days. It appears from the Bangkok Times that Mr. Lillie has been acting as the representative of the A'ero Fork Herald, and, as stated in the decree, he has, in that capacity, been forwarding to Paris reports distanteful to the Siamese Government. Some few days before the issue of the decree, Mr. Lillie sent to the Telegraph Office a message which the Department refused to despatch.
The Banghok Times says:—

The Banghek Times says:

Mr. Lillie, we understand, protested to Mr. Graville, and telegraphed to the New York Herald that his measage had been atopped in contravention of all treaties and conventions. Then diplomacy got to work, and, having first received the consent of the British Government, the Siamese Government issued their special decree. This, we believe, Mr. Lillie refused to accept on the ground that he was not a Siamese subject or amenable to Siamese law. But Mr. Greville formally withdrew his right to British protection, stating in his letter that, in consequence of several insulting articles against the King of Siam in the Free Press, he was advised by H.B.M. Government to withdraw the protection of the British Legalian, if the Siamese Government, deemed fit to expel Mr. Lillie from Siamese territory. There the matter rests. The British Minister-Resident, we may say, has acted throughout an interpretate from them. Siamese territory. There the matter rests. The British Minister-Resident, we may say, has acted throughout on instructions from the Home Go-

TRANSLATION OF THE DECREE OF EXPULSION.

We, Chulalongkorn, King of Siam, etc. To all whom these presents shall come, know

ye;— Whereas Mr. J. J. Lillie, a foreign resident of Bangkok, and Editor of the Sam Free Press, has repeatedly published in the said paper insults against the Sovereign, the Government, and the

pagnist the Sovereigh, the Government, and the people of Siam:—
And whereas the said Mr. Lillie has repeatedly telegraphed from Bangkok to Europe, with the purport of having it reproduced in foreign newspapers, false news which might result in disturbing friendly relations between Siam and foreign States:—
And whereas the said Mr. Lillie also repeated.

ly sent from Bangkok to Europe, with the purpose of having them reproduced in foreign newspapers, alauming communications whereby it was falsely asserted that Siam was in a hopelessly disordered asserted that Siam was in a hopelessly disordered state, that the rights of foreigners were systematically violated and that there was no security either for persons or for their property.

And whereas it is the right and duty of the Siamese Government not to tolerate any longer the residence on Siamese territory of a loreigner who makes such malicious and injurious use of the hospitality granted to him:

It is hereby enacted, under the authority of the King of Siam, and by the advice of His Council, as follows:—

(1) Mr. J. J. Lillie shall leave the kingdom of

(1) Mr. J. J. Lillie shall leave the kingdom of Siam within seven days after the notification of the present decree, and, in case of his failing to

the present decree, and, in case of its do so, he shall be expelled from the kingdom.

(2) The present decree shall be notified to Mr. J.J. Lillie, and in so far as it is necessary, executed by the Inspector General of the Police of Bangkok.

Bangkok, Friday, the 11th day of March, 1898. -China Mail.

We (Fapan Mail) have not had an opportunity of examining the evidence upon which Mr. Lillie's guilt is based. His writings in the Siam Free Press have occasionally attracted our attention, but, recognising in them merely the splenetic vapoutings of the callow publicist, a figure so familiar in Far-Eastern communities —the man who feeds on fault finding, battens upon slander, and bristles with prejudice-we have paid little attention in them. His fate will, of course, elevate him to the martyr's seat in the eyes of some people, but, for our own part, we heartily congratulate the Siamese Government on its courage. The fact that the British Representative in Bangkok, acting under in-structions from London, withdrew his protec-tion from Mr. Lillie, is quite sufficient proof that the latter had exceeded all reasonable bounds as a journalist and correspondent. Had there been any possibility if protecting

him, his special privileges as a British subject would never have been taken from him with the consent of Het Majesty's Government. truth is that a most extravagant and absurd theory has gradually received public recog-nition with regard to journalism. Let a man be once placed in an editorial chair, and he becomes absolved from all obligations towards the canons that regulate ordinary conduct. He may be grossly unjust, he may cir culate falsehoods, he may devote his pen to the dissemination of partial views, he may enrich himself by the sale of sensational fabrications, he may stir up international strife, he may sow seeds of enmity and mischief broadcast in a community, he may, in short, pursue a course which would bring execration and ostracism on the head of any private citizen, but, merely because he is a newspaper-man, the sacred liberty of the press is held to excuse all his immoral licence. Public opinion will sooner or later rebel against such an unreasonable state of affairs. Great Britain is conspicuously free from it, but her colonies and foreign settlemeuts can not boast any such immunity. Mr. Little's fate may, perhaps, prove a wholesome lesson. By all means let us have freedom of apeech and pen, but on condition that the very large obligations it involves are duly recognised and respected.

#### ELSIE ADAIR'S FAREWELL.

A bumper house assembled at the Public Hall last night on the occasion of the farewell performance of the popular comedienne Miss Elsie Adair, assisted by a number of local amateurs, and a capital evening's entertainment and fun was provided. The programme was departed from in several instances, but this detracted little from the satisfaction of the audience, who were enthusiastic in their applause throughout. The first part opened with a well executed trio for violin, 'cello, and piano, by Messrs. H. A. Poole, E. C. Davis and C. F. Rhine, which was followed by a very amusing comedicita in one act, "A Happy Pair," which, it is needless to say, was played with plenty of verve and spirit by the fair beneficiaire and our leading comedian, Mr. W. G. Bayne. A character song and dance, "Chin Chin Chinaman," by Mr. L. Plummer was the next item, and was warmly encored, and was followed by a capitally randered song by Mr. A. M. Gale, "In Happy Moments," from Maritana. A "coon" song by Mr. F. M. Gowey, "My gal is a high born lady," was equally well received and the first part was brought to a conclusion by several songs by Miss Elsie Adair, which included the popular favourites, "Four fingers and a thumb," and "I want you, my honey." The singer was repeatedly recalled, and was not allowed to retire from the stage until she had sung four songs. In the second part, Mr. Gale gave another song, "She's plain Molly O," with good effect; Mr. E. Morse contributed two comic sings, and the entertainment was brought to an end with a clever musical sketch by Miss Elsie Adair and Mr. L. E. McChesney, in which a number of songs and dances were introduced. Mr. Lionel Jupp and Mr. Rhine rendered good service at the piano during the evening.

#### AN INTERPRETATION OF THE KOREAN AFFAIR.

Shanghai would not be true to itself did it not supply a sensational rendering of the latest events in the political arens. The North China Daily News tells us that Russia's action in withdrawing her military and financial experts from Korea was the result of an agreement with Japan. The latter Power is m have a free hand in Kores, and Russia is to enter into possession of Wei hai-wei-" as the Cassini Consession of Wei hai wei — "as the Cassim Convention allows her to do "—when its present occupants have left it. The Shanghai journal does not seem to place implicit confidence in this presentment of the situation, but nevertheless thinks it worthy of a leading article. are disposed, for our own part, to class it as another " Cassini."

TAPANE E FACTS AND COMMENTS.

The Tokyo Arahi states that the analysis of coins at the Osaka Mint will take place on the 1st proximo, by a process different from that adopted in ordinary years. The new five yen gold pieces, silver subsidiaries, and nickel coins will be tested by the new system. The analysis entails considerable trouble.

The brisk demand for coal has led to a rapid enhancement of its value. The freight between Kobe and Wakamatsu, remarks the Osaka Asa-In 1802 hi, has also been considerably raised. the rate was 3.50 ren per ton; in 1893 the rate was 3.50 ren per ton; in 1893, 4.50 ren. By 1894, however, it was increased to 6.50 ren, and this was retained till the end of the following year. In 1896 it was further increased to 7 ren, while this year 8 ren is the ardinary rate. ordinary rate.

The report of the Agricultural and Commercial Department published in the Mainlehi shows the extent of the failure in the rice crop last year. The average amount of production per lan was 1.209 koku in the case of ordinary rice, 1.077 koku in the case of mochi rice, and 0 707 Roku for upland grain, the general average being 0 997 koku. Compared with the past several years the difference is extra-ordinary. The figure for 1896 was 1 44 koku and that for the previous year 1-53 koku.

Hokkaido might have been considered unfit for the cultivation of tobacco on account of the severity of its climate. The Government's investigation, however, proves the con-trary. The soil, says the Tokyo Shimbun, retains warmtir sufficient for tobacco growing, no portion of Hokkaido being either geologically or topographically unsuitable. The tobacco larms at present do not exceed 84 che, but leaf is imported from the interior to the value of over 890,000 ren, while the demand is rapidly increasing. Tobacco farming in the North can hardly fail to be profitable.

From the Jifi we learn that a conference was lately held between the engineers and stokers of the Japan Railway Company and those on the Government lines, for the purpose of organiaing a society to be designated the Railway Association. A committee is now busily engaged in drawing up the prospectus and regulations of the society. Its main object is reported to be to preserve strict discipline among the engine drivers, and to secure a standard of efficiency among them. The association will give certificates of character to members whose services are required by Chinese, Korean, or Formosan railway companies.

Silver yen pieces will cease to be circulated on 1st April next, but have still an ex-changeable period of five years. The necessity of shortening this period is beyond question. Among the yen pieces now in circulation counterfeit coins are not infrequently found, and these are proved to he not entirely of Japaness make. The lengthy period for exchange facilitates the manufacture in foreign countries, especially in Shanghai, of large quantities of spurious pieces. Coinage, in fact, may be undertaken abroad, by the sid of perfect machinery, in such a manner as to secure uniformity with Japanese coins as regards weight, size, quality, &c. Such an enterptise, if it were carried out, would not only seriously affect Japan's financial administration, but would tend to impair the system of gold currency. The authorities have, under these circumstances, resolved to present a Bill for diminishing the exchangeable period. The Bill will take precedence of all other measures in the forthcoming session of the Diet,

A suggestion has been made in Kobe as to the necessity of cultivating friendly intercourse between Japanese and foreigners in view of the approach of mixed residence. The Kobe approach of mixed residence. The Kobe Chamber of Commerce, asserts the Yomiuri, seems to have taken keen interest in this auspicious movement, and lately issued a circular to the following effect:

"There can be no doubt that friendly inter-

course and mutual understanding between natives and foreigners will be attended not only with considerable advantage, but with impor-tant diplomatic consequences. The Kobe tant diplomatic consequences. Chamber of Commerce has, therefore, after consulting with the President of the similar institution in the Settlement, pledged itself to residual in the Sectioness, proceed according to the latter in future. Steps are further being taken to secure cooperation with the Chambers of Commerce abroad. The Kobe Chamber of Commerce proposes to invite the foreign merchants in the Settlement to dinner and requests the ununimous approval of the native dealers in the town. The cultivation of friendship with foreigners is a duty devolving upon the people in the open ports throughout the empire."

Acts of barbarity are still resorted to in various parts of the country under the influence of superstities. A girl named Sada, in Yokota town, Akita prefecture, was lately found to be demented. One of her relatives concluded that she was possessed by a fox, and declared that unless steps were immediately taken for exorcising it he would withdraw the farm leased to her family. He then prepared to drive away the fox, and with a dagger unsteathed treated her so rudely that she exclaimed, "Cursed be my family and my relations! Never shall I be pacified until I kill them all!"
As soon as she had spoken these words she received fifty sword cuts over the body, and immediately succumbed.

The Tokyo Poor Asylum has under its protection at present 552 persons, of whom, according to the Tokyo Azahi, 244 are paupers; 105 are persons who fell sick while travelling; 135 are foundlings, 67 lost children, and, one a released prisoner. These unfortunate creatures are amported by the interest on the maintenance funds and outlays from the municipal and rural districts of the capital, at the rate of 12 ren a day for an adult and to ten for youths. Males above seven years of age are kept in a different room from women while a separation is also made between sick persons and those is health. As the able-bodied are not generally admitted into the asylum, the majority are sick or children.

According to the Nichi Nichi, the financial programme for the 31st fiscal year was for-mulated at a special meeting of the Cabinet on the 18th instant, when the amount of expenditure for the various Government Departments was determined. The ten-year programme for-mulated by the last Cabinet has had necessarily to be altered, but it is a serious error to supbas adopted a mere negative policy of curtailment. The necessity of post bellum undertakings is fully recognised by him. He is the earnest advocate of schemes for the country's progress as well as its peace. He will, therefore, proceed with the programme of armament expansion, but in a gradual manner which will avoid financial embarrassment and the disorganisation of the economic system. Several curtailments have been made, but not to the extent of affecting the post bellum programme as a whole, the items having been altered only so as to meet the requirements of the present financial scheme.

The porcelain industry in Japan has, the Mainichi asserts, failed to make any remarkable advance, owing to abuses that are still practised by manufacturers. Apart from these considerations, however, insufficiency of capital seems to be the direct cause of the want of progress. A technical school in Tokyo has, through various experiments, proved the possibility of economising considerably by the use of coal in the manufacture of porcelain. The estimated saving in this respect was no less than 60 per cent. HE compared with ordinary fuel. The porcelain enterprise in now chiefly carried on by small capitalists whose joint funds are barely sufficient to provide a kiln. To introduce improvements is, with these, a matter of impossibility. Yet, = the keramic art of Japan makes a valuable addition

to her export trade, the manufacture of porcelain wares ought to be conducted in a manner calculated to extend their popularity in foreign countries. The Morimura Firm seems to have succeeded in acquiring considerable profits by securing a special contract with the manufacturers, which provides that wates imported from America shall always be used as models for production. Other manufacturers, however, are lamentably ignorant of foreign conditions. The chief factor being the scarcity of capital, it is necessary that sufficient funds should be invested in this important branch of industry, as its development could not fail to be a source of immense wealth to Japan.

Referring to the investigations of the Finance Department with regard to the rates of interest during the three months from October to December last, the Kokumin remarks that of the sixty-five main districts where national and private banks are established, the most prominent in respect of high interest are Miyasaki, Iwate, Hiogo, and Nagasaki, the rates paid varying from 16.2 to 18.2 per cent. for loans for three months. The lowest schedule is noticeable in Ishikawa, Kagawa, and Oita prefectures, where loans are issued for a period of three months at rates varying from 5.8 to 7 per cent. Other localities indicate 16 per cent, for the maximum, and 8 per cent, for the minimum interest. Below is a comparative table showing the rates of interest for the last

uarter of the phat the years,				
	Maxi	en um.	Mink	ANTI.
	joth year. Per cent.	enth year. Per cent.	Both year. Per cent,	Per cent.
October	.13 35	13.45	10.32	9.69
November	.13.71	13 67	10.45	9.16
December		14.03	10.53	9.90

As for interest on deposits Takasu stands highest with 7 2 to 8 per cent., and is followed by Toyama with 7.5 per cent, for three months. The minimum monthly rate is 3 per cent., paid in Shizuoka and Ichinoseki. In other districts the maximum is put at 7 per cent, and the minimum at 3.5. The highest daily in-terest is paid in Saycki, six sen being the rate for 100 ren. Nabeoka pays 5.6 sen, Himeji and Kochi 5.5 sen, while Hakodate, Akashi, Saseho, Akita, Tsuchizaki, Tsuwano, and Takamatsu retain the rate of five sen. Yawata and Sayeki are conspicuous for the lowest rate, 2 sen-other districts paying 4.9 sen for the maximum and 2.1 sen for the minimum.

The Osaka Asahi saye that the Osaka Harbour Bonds, amounting to 17,038 000 year, were originally to be raised within eight years at a minimum price of 100 yen. The money market, however, showed at that time an aspect almost of panic, and it was rightly considered that subscriptions to bonds at per 100 yen could not be secured m present. In these circumstances the Public Bonds Regulations were altered, and the limit of 100 ven face value was lowered to 95 yen; and the various banks in the city possessed of more than 500,000 rea in capital were requested to float the bonds by forming a syndicate. In the meantime the 3rd National Bank in Tokyo proposed to take delivery of the whole amount, the 1st installment—1,000 000 yen—for the 30th year being accepted at the rate of 98.18 yen. The selling price for the 2nd portion was to be determined by a special conference between the Bank and the Osaka Municipal Council, and, upon failure to arrive at an understanding, by arbitration. The amount to be raised for the 31st year is 1,800,000 pen, but after negotiating with the Bank; the Council found it impossible, in the present state of affairs, to issue its bonds at a price of 95 yes. The public bonds for Yokohama, Kobe, and Nagasaki were successfully issued III 95 ren with 6 per cent, interest; and the failure on the part of Osaka to obtain a similar standard is a reflection on its municipal credit. It was resolved that despite the contract made with the 3rd Bank for its monopoly of the Osaka Harbour Bonds for eight years, the amount for this year should be raised by a general appeal to investors Bluff residents, who, while pleased throughout the empire. Five per cent. Water promotion, will regret to lose him.

Works Bonds at one time attained the price of 110 yen, and though they have gradually fallen they still stand at 96 yes. In the light of this, 6 per cent. Harbour Bonds should surely secure a rate above 95 yen.

### SAD FATALITY IN YOKOHAMA CEMETERY.

The foreign community in Yokohama was shocked on Thursday by the news of a peculiarly painful tragedy. About it a.m., some children heard the report of a revolver in the General Cemetery, and ran and informed the momban of the fact. The latter, on arrival, found the body of a European, which was afterwards identified as that of Mr. Frederick Joseph Collins, general merchant, of Kobs. Mr. Collins, who was well-known in Yokohama, where he was educated, had been staying for several weeks past in the house of Mr. C. V. Schmidt, 206, Bluff. He went to Kobe about a week ago, and had only been back in Yokohama a few days. When last seen alive he appeared to be in excellent spirits, and he was naturally of a cheerful and somewhat vivacious disposition; indeed on Wednesday evening he was particularly bright, and, referring to some business worsies, declared that he should get through them within two mouths. So for the present no motive can be assigned, but the inquest, which is to be held this morning, will probably throw some light on the matter. The weapon used was a fairly large six chambered revolver, which was found beside decensed with one cartridge The body itself was lying beside discharged. a grave, which on examination proved to be that of the dead man's mother,

### THE FOUNDER OF TALE.

A writer in an Indian paper rescuses from obliviou a number of facts in the life of Elihu Yale, a man who, though little remembered, enjoyed the rare distinction of fame in four continents at a time when travel was a luxury for the very few.

"Born in America, in Europe bred. In Africa travelled, and in Asia wed ; Where long he lived and thrived, in London

Are the opening lines on his grave in the churchyard of Wrexham, North Wales, ten miles from Hawarden. His name as a traveller in Africa is now completely forgotten, and in England the record from which we have quoted was only saved from obliteration by a party of Americans who visited Wrexham churchyard, and, finding the quaint lines almost effaced, caused them to be recut. Similarly, in India, the name of Elihu Vale, as one who filled the high office of Governor of Madras, has passed from public memory, save in connection with the ancedore—doubtless apocryphal—that he hanged his butler for leaving his service without giving him notice. In America, however, the name of Yale will live as long as the United States endure in the Yale University, named after its benefactor in 1718. As Yale was a Welshman by origin, though born in America, it is probable that the name of Fort St David, which the European official and military portion of Madraa City bears to this day, was given by him. More than two centuries have passed since Yale governed in Madras, and it is natural that he should have become a shadow of memory in a land which has gone through so many vicinitudes. But in America his name will be evergreen in the achievements of famous students of Yale.—The Globe.

Mr. Ikariyama, for eight years Chief In-spector II the Bluff Police Station, is to-day promoted to the chief inspectorship of the Kotobukiche Police Station. While at the Bluff Station his able and courteous conduct of affairs gained him the respect and confidence of all Bluff residents, who, while pleased to hear of his

### CHRISTIANITY IN CHINA.

(CONTRIBUTED BY "WILL PATTILLO.")

It is a strange fact that men as a rule do not understand or believe history until it is a century old. Few men are capable of reading current history correctly, for their prejudices often prevent them from observing some of the silent but mighty currents that are passing before their eyes. China to-day presents a good illustration. There are many clever men, and women too, who believe that Christian Missions in China are nothing less than a useless expenditure of money. The only results they see are riots, murders, and international complications. Such people are not to be blamed or censured for not seeing more. for it is just as true now as it was in the days of Christ that people have ears that hear not, eyes that see not. Dr. L. S. Baldwin, now of New York, but for thirty years a missionary in Foochow, China, has recently been to China to assist in the celebrations of the jubilee exercises of the Methodist Mission at Foodhow. who get tired of reading what the European Powers are doing or are not doing in the Middle Kingdom will be glad to read a few extracts from Dr. Baldwin's letter in the New York Christian Advocate. In describing his speech before a vast audience he said :-

The old dialect seemed familiar as I used it to tell of what God had done during these fifty years, When I called upon the first Foothow man who When I called upon the first Foochow man who was ever baptized to stand up, and Ting ling Kaw, who was immersed with the Rev. James Colder in the harbour of Hongkong, arose, and then called upon the first child baptized in our Mission to arise, and Mis, Yek ling Kwang stood up, the interest was intense. I recalled the time of my coming to the Mission, when there were only twelve members in the Mission, and spoke of the thirteen thousand and more in the Foochow and Hinghua Missions to-day, and about twenty-two thousand in all our China Missions. Our heats were filled with gratitude to God for His blessing upon the labours of His servants.

Readers of the Taban Mail have seen several

Readers of the Japan Mail have seen several notices during the past year about an Anti foot-binding Society in Shanghai. The following action taken by the Foochow Conference will be of much interest to lovers of humanity in general and especially to those interested in

Then Dr. Ha King Eng presented the resolu-tions on font binding which were, (1) that no Christians should bind the feet of their daughters; (2) that no Christians should betroth their sons to bound-facted girls; (3) that all Christian women whose feet have been bound should unbind them. whose feet have been bound should unbind them. The first resolution has been the rule of the Conference for many years, and the practice of unbinding feet that have been bound has been growing rapidly of lateralthough it was thought at first that it could not be done. So the Conference was quite ready. No debate was needed, and the resolutions were manimously passed. One notable fact spoken of was that the leading gentry of Foother have recently made public declaration against foot-binding, and that the high mandarins of the city have petitioned the emperor to prohibit both foot binding and early bettoflats. This is one of the important matters in which Christian influence has been making itself felt far beyond the body of Christian chinches.

Another extract from Dr. Baldwin's letter gives.

Another extract from Dr. Baldwin's letter gives a vivid insight into the really marvellous changes that are coming over the Chinese people in their attitude to women;—

their attitude to women;—

A spirited Epworth League anniversary was held in the evening. The addresses were by Brother Miner and Dr. Hü King Eng. I was much pleased to hear the earnest words of this young Christian physician, who addressed the large audience with entire self-possession and in a clear, distinct voice, so that she was heard by all. She closed with a very earnest prayer; and it was difficult for me to realize that the little girl whom I baptized thirty years ago was leading a whole congregation in prayer in a place where no woman would have dared to be seen in a public audience at the time she was born, or for many years afterward.

Then the Doctor closes his interesting letter

amazing. The numbers have already been men-tioned, but they are only a feeble indication of what has been accomplished. From the old days of a partitioned corner for the few women who would veiture to come to church, to this large, open church, with three hundred women and girls all ready to take part in the service, and speaking joyonsly in the great congregation of their own layously in the great congregation of their own happy experience, is indeed a wast stride. From the days when the feet of our leading women were tightly bound, and they thought their daughters would be degraded for life if their feet were not bound, to these times when ninety-seven women who have unbound their feet rise in one audience. and both the Women's Conference and the Annual and both the Women's Conference and the Annual Conference pass unanimously resolutions that all binding of feet shall be prohibited and that all bound feet shall be unbound, is indeed another vast advance. From the time when the mandarius were all unfriendly, to these days when the Tartat general kindly loans a crane from the arsenal to lift the immense timbers of our new church into place, is another great change. The good cheer and confidence with which our preachers step out into the second half century is an augury of success and victory. cess and victory.

If any one can read these extracts and still assert that Christian Missions are a failure or that they are making no progress in China, then such a person is incapable of understanding truth unless it lie parallel with his prejudices or previous beliefs.

### KOREAN NOTES.

A scene in Soul, as reported by the Independ-

Last Saturday afternoon a few officers of the Imperial guard and a dozen or so of the Ham-kyeng Du contingent (most of whem speak Russian) assembled on the balcony of the Cotton Ex-change in Chongno and announced that they wanted to address the people on political questions. This announcement prought out several thousand people from all parts of the city and before many This announcement brought out several thousand people from all parts of the city and before many minutes the whole street was simply packed with immanity of all descriptions who were eager to hear what these Northern orators had to say. But for some inexplicable reason these orators did not deliver their speeches. The populace became impatient and called loudly for speeches, but the Northern Demostheres continued to assume the attitude of a sphinx. An old citizen with a flowing white heard west up to the balcony and said that he came there to hear some speeches from the Northern friends, but the would-be orators were sushy that he would say a few words if the audience permitted him. The request was truanimously granted. The old man started his speech by making scorching remarks against the interpreter of the Russian legation, Rim Hongnish. The officer of the Imperial guard, who was acting as a sort of chairman, ordered himdenly to seize the speaker and take him down from the stage. The outrageous action of the officer enraged the audience. They lunded stones at the assembly of the Hamkyeng contingents and shouts of "down them" terrified the indiscrept amy officer. He begged the pardon of the populace for his hasty action and escorted the old man up to the balcony again. The restored speaker thanked the audience for the vindication of his rights and completed his speech amidst great applause. The officer detained the old man un the balcony and told his men to take him along to the barracks. The intention of the officer was great applause. The officer detained the old man in the balcony and told his men to take him along to the barracks. The intention of the officer was known to the people and they again threw stones at the assembly on the balcony and some of them rished up the stairs with shorts of "villany." The army officer and his braves hastily made their exit through the back windows of the exchange. Thus ended the mass meeting of last Saturday.

The Independent, has nothing but hearty praise for Russia's sympathetic consideration in giving Korea an opportunity to dispense with foreign aid; It accepts the whole arrangement in good faith, and defies "the correspondents of foreign papers to find an ulterior motive for the honorable way in which Russia bas acted."

The members of the Independence Club in Soul have submitted the following memorial to

Excellencies. We, on behalf of our twelve million Excellencies. We, on behall of our twelve million fellow citizens, desire to express our gratitude to you and assure you that we are one and all rejoiced over the wise decision your Excellencies have reached in the matter. We pray that your Excellencies will more carefully consider the future policy of our government with the object of ameliorating the condition of our people.

Mr. de Speyer's reply to the despatch of the Korean Minister of Foreign Affairs, intimating Korea's desire to dispense with the services of the Russian experts, was as follows :-

Sir,-I wish to acknowledge the receipt of your Sir, -- I wish to acknowledge the receipt of your despatch of the 12th inst. in which communication you have intimated to me that your government intends to send an ambassador to St. Petersburg. I have just been instructed by my Imperiat Surgerial to inform you that the sending of the envoy in not at all necessary and the Russian Government does not care to receive any mesage of thanks. Russia only desireste extend the friendliness, but she never cares to force it noon anyone. Your government asked us to send military instructors and a finance adviser and we anyone. Your government asked us to send military instructors and a finance adviser and we military instructors and a finance adviser and we complied. But now your government considers that Russian officials are no longer needed, and you state that Rosea can manage ther own affairs without aid from Russia. Russia only congratulates Rosea upon having made such progress in so abort a time that she is able to maintain her independence unassisted by foreign instructors and advisers.

I have already instructed our military officers and finance adviser to discontinue their duties in the Korean service.

(signed) (dated)

A. DE SPEYER. March 17th 1898.

A pro-Russian party has been organized in Korea. Its beginnings are thus described :-

About eight Koreans from Hampkyeng province, most of them having a smattering know-ledge of Russian, have organized a sort of society vince, most of them having a smattering know-ledge of Russian, have organized a sort of society among themselves for the purpose of propagating the doctine that Korea must be under the protection of Russia. The leader of this movement is said to be a man named Kwou Dongsu, who is a native of Fusan. He went to Japan some years ago and attempted to murder the late Mr. Kim Okkiun and his friends with Hong Jongwo, Ye Seijik and others. Hong succeeded in murdering Mr. Kim in Shanghai and Kwou and Yerciedtheir luck in Japan on the life of Prince Pak Yunghio, but failed. After the Japan-China was Kwou went to Vladivostock and attempted to muster out some Russianized Koreans for the purpose of attacking the then existing government, but he failed again in that enterprise. Kwon has now become the leader of this movement and he is said to be sanguine as to the success of his present scheme. They intend to memorialize the Throne first, incoming His Majesty of the necessity of Korea's becoming a protectorate of Russia. Then he will send out his orators to convert the people to his theory. Hong Jong wo and his comiades are said to he organizing another memorialist crowd in Sadong of this city with the intention of praying His Majesty to kill off all the traitors who were connected with the affair of October, 1895.

### CHINESE NOTES.

Apparently the discovery has been made in Shanghai that China's "rejection of the offer of a guaranteed British Ioan was because no bribes were forthcoming." This "startling revelation," as the N.-C. Dasly News calls it, furnishes the text of a very violent article in that journal, wherein Chinese corruption and so forth are denounced in aweeping terms, and the Foreign Representatives in Peking are accused of "al-Representatives in Peking are accused of "allowing themselves, after a few undignified atruggles, to be securely entangled in the folds of the soporific net whose meshes are woven of plausibility and bluff." It is quite pleasant and edifying to read the distribes of Far-Eastern editors gifted with the divine afflatus of diplomacy. If only they could be placed in charge of British interests, how splendidly the affairs of the little island would proposed. the affairs of the little island would prosper! We may observe, en passant, that the British Government never made an "offer of a guar-anteed loan to China." What happened was with these striking words:—

It has been every way a worthy celebration of an important epoch. It is nearly thirty-nine years since I entered upon work here. The progress is

hably only a "hypnotised diplomat" would trouble himself about such distinctions.

On February 28th the blacklegs of Hengshan (in Hunnan) took advantage of a festival, when the atreets were crowded, to raid the Christian mission in that city and pull down the house. No personal injury was suffered by any of the Caristians. Dr. Griffith John thinks that the incident will bear good fruit. In fact, these occurrences have the effect of invoking official interference on behalf of the Christians.

There seems to be no doubt that a large portion of the likin hitherto collected by local authorities in China and devoted to local purposes, is now to be taken for the use of the central Government. Viceroy Liu of Nanking has been ordered to close all the tea, salt, and other likin stations throughout his jurisdiction, preparatory to the transfer of the duty of collecting that revenue to the Imperial Maritime Customs.

### NEWS OF THE WEEK.

On Saturday Marquis Ito received from the bands of M. Harmand, the French Minister, the decoration of the Legion of Honour couferred on the Premier by the French Government.

The Scotch proverb, "A thocht can cure and a thocht can kill" is fully borne out by modern science. Worry, which often begins in a single, troubling idea, injures the cells of the brain beyond repair, and as the brain is the nutritive and controlling centre of the body, the other organs are gradually impaired, disease ensues, and finally death.

Wherever an Englishman has set his foot there also a beer bottle can generally be found.

A two-dozen case of Bass is reported to have been discovered by some of the officers of the British Squadron at Chusan in a cobbler's shop at Tinghai the other day. It had been there since Chusan was occupied by a British force over fifty years ago.

Answering a question put to him in the House of Commons on February 11th, Mr. Curzon, Under Secretary of State for Foreign Affairs Shanghai, would undertake the duties of Commercial Attaché in China; but a similar arrangement could not be made in Japan.

A home paper of last month says:—The tidings of the demolition of No. 15 Furnival's Inn, where Pickwick was conceived, should fill admirers of Dickens with regret. A few days ago the Society of Arts tablet was removed, and now the workman's pick-axe and crowbar are rapidly destroying the building-indeed, one can scarcely distinguish the outline of the doorway for the mortar dust with which the . Inn yard is filled.

Mr. Ernest Clement, hon, librarian of the Asiatic Society of Japan, writes that in accordance with the instructions of the Council of the Asiatic Society of Japan, he gives notice that the Library of the Society will be open daily (Sundays excepted), beginning on Friday, April 1, from 3 to 5 o'clock p.m., for the use of members only. The Library is in the south wing of the Parish Building, 54 Tsukiji, Tokyo.

Yokohama was alive with alarming bunders on Wednesday afternoon, from some of which if any credence were placed in them, we should be forced to believe that war had been declared between Great Britain and Russia. The canards appear to have been founded on certain private telegrams said to have been received in town and the purport of which naturally became grossly exaggerated in course of circulation

Australia, went ashore on the 24th instant at Perim. The mails and passengers were transferred to the Carthage, belonging to the same Company, which left on Saturday for Brindisi and London. There were no casualties either sing London. Takes were about the latter are supposed to be several from the Far East, who joined the *China* at Colombo, including Capt. Pollock and Mrs. More from Yokohama. No details, however, are to hand.

The Indian Planters' Gasette has the following amusing hit at Lord William Beresford :-"England has cause to be proud of such men as Wellington, Nelson and-es-iny brother Charlie!" (Spontaneous remark of a popular Charlie 1" (Spontaneous remark of a popular noble lord, over heard in a railway carriage, as reported by Mr. John Coulett.) Brother Charlie ought now to turn round and say "India han cause to be proud of such men as Warren Hastings, Bobs, and-er-my brother Bill !

A new steam-launch for the Club Hotel, Ltd., has just been launched by the Yokohama Engine and Iron Works. The new launch is a staunch and trim little craft, with a commodious cabin forward. She is 50 ft. in length overall, 47 ft. beiween perpendiculars, 9 ft in, extreme breadth aud 5 tt. 9 in, deep. The boiler is return multitubular; the engines are compound surface condensing, and with a working pressure of 120 lbs. to the inch. The propeller is 3 ft. 6 in. in diameter and it is expected the launch will attain a speed of over en knots.

It will interest many besides the Freemasons of Japan, says the Hisgo News, to know that in a letter just received here, Mr. J. Morrison Mc-Leod (Secretary of the Royal Masonic Insutation for Boys) writes:—"The boy Dallas, who is in our school and whose father belonged to your district, is doing very well, and has just passed the preliminary examination conducted by the Cambridge University, gaining a secondclass honour, which is very creditable for a boy of his youth." The School is celebrating its Centenary Festival in June, and one of the Stewards thereat will be the present W.M. of the Rising Sun Lodge (Kobe). His list of do-nations, practically all subscribed in Kobe, already exceeds £50, and there are some few sums still expected ere he in compelled to close it.

Oxford has now won the 'Varsity boat race for the ninth year running, Cambridge not having seen its colours carried to the front since 1889, when it won the race in 20m. 148ecs., by three lengths. The senior University has now 32 wins to its credit and Cambridge 22. An explanation recently given by a well-known oarsman for the long continued ancreas of Oxford in these inter-university contests is the of these litter-university contests is the migration of all the best Eton oars to the "city of churches and spires," only a very few Eton rowing-men going up to Cambridge. There is a lot in this theory; while of course it must not be forgotten that the Cam is a mere ditch even compared with the Isis. The wonder is that with such a tiny stream on which to practise, Cambridge succeeds in turning out paramen at all.

Yet another fire in Kobe. Early on Tuesday morning the house on the Hill occupied by Mr. Arnold Moia, near the Church Mission school, was burnt to the ground, and scarcely a particle of the furniture could be saved. Mr. Mola, the Chronicle learns, about two o'clock detected smoke in his room, and on proceeding to ascertain the cause found it to emanate from his wife's room, where a lamp had apparently exploded. Alarmed by the flames, Mr. Mola's first consideration was to remove his wife and child m a place of safety, and all the inmates had to escape scantily clothed, taking refuge in the house of a neighbour. In the course of an hour the house, which stood in its own grounds, was completely guited. The flames had leaped grossly exaggerated in course of circulation from mouth to mouth.

A cable has been received the the Yakohama office of the P. & O. Company to the effect that the mail steamer China, homeward bound from the mail steamer China, homeward bound from the mail steamer China, homeward bound from the preparation of the property of the save the house. Mr. Mola, we understand it is insuted for \$5,000, but we lear his loss will not be covered by that amount. The house about this sound O-tani: who she was, when I visited the island for the propose of doing missionary work, I went to the save the house. Mr. Mola, we understand it is insuted for \$5,000, but we lear his loss will receive the save the house. The house belonged to Mrs. Nankivell and was insured.

### ANOTHER BIG FIRE AT TOKYO.

Another fire broke out in the neighbourhood of Hongo, Tokyo-at No. 15 Sanchome. Tenjin-cho-on the 25th, at 11 15 p.m. The strong northerly wind rapidly spread the flames, and over 150 houses were reduced to ashes.

Five firemen and two engineers attached to the engine-pumps were injured. The loss suffered by the Tokyo Fire Insurance Company amounted to yen 10,000 for 26 houses insured, and the Meiji Fire Insurance Company lost ren 1,300 for 4 houses.

On Wednesday shortly before noon a fire occurred in Kuruma cho, Tsukuda jima, Nihoubashi, Tokyo, and some 36 houses were burnt to the ground.

### FAPANESE SILK REGULATIONS.

The Official Gasette of the 29th contains the following notifications:-

We hereby give sanction to the provisions rewe necesty give sanction to the provisions re-garding the inspection as well as the classification of raw silk, and the amount of encouragement funds to be granted in accordance with Law No. 48 issued in the 30th year of Meiji, embodying the Regulations for the encouragement of the direct export of silk, and direct the same to be pro-mulgated.

(Imperial Sign Manual and Great Seal.) March 26 hof the 31st year of Meiji Count INDUYS KAORU, (Counter signed.)

Minister of Finance. Baron Ito Miyout, Minister of Agriculture and Commerce.

IMPERIAL ORDINANCE No. 51.

Art. L.-The inspection of raw silk shall be undertaken at the Raw Silk Inspection Office with reference to the items insultanted helow ;—

1. Original weight.

4. Fineness. 5. Nibs.

a. Lustre.
3 Re recling.

Act. II -Silk will be held to have passed ex-Art. If -3 in will be near to have passed ex-amination as to the above particulars when more than 500 catties of raw silk are found to fulfil the following provisions:--(a) Lustre and clean-ness to be uniform throughout; number of breaks, ness to be uniform throughout; number of breaks, not more than 3; diff-cence in fineness, 2.5 denier; number of ribs not more than 50. (b) Lustre and cleanness to be uniform; number of breaks, not more than 6; difference in fineness, 4 denier; nibs not more than 100. (c) Uniformity of the content of the c 4 denier; usts not more than 100. (c) United-nity of lustre and cleanness; breaks not more than 9; difference in fineness, 5 denier; inde not more than 150.

Art. 111.—The amount of encouragement finels

Art. III.—The amount of encouragement funds shall be calculated or determined according to the following classification, bactions of a carty being excluded from the calculation :-

### CORRESPONDENCE.

### JAPANESE LORE OF THE SEA.

To the Editor of the "Japan Mail."

Sir,—With reference to the query in the article "Japanese Lore of the Sea," published in your issue of the 19th inst., as to where a legendary woman's island is to be found in Japan, I may state that on the east coast of Oshima (Vries Island), whost one unde north from Habu minato, there stands an old shring on the seashore, enclosed by a stone walk which is known as "O tam's shrine," and where women from Habu still go and offer prayers and securities. closed by a stone wall, which is known as "O tami's shrine," and where women from Habu still go and offer prayers and sacrifice. Near by, only a few yards from the beach, there rises above the water a rock (it could searcely be called an island, properly) some 20 feet in height and probably measuring 8 or 10 feet in diameter; this is known as "O-tani's Island."

and enshrined, etc., but no one knew anything beyond that she was a woman (and that is indeed inscribed on the shrine) and had died on this spot, some lundieds of years age. Whether she died on the spot where the shrine stands or out on that rock, is not known, as either place is held sacred in her memory.

The rock being almost perpendicular on all sides, it is impossible m climb it without special aid. There is nothing on it suggestive of its being held sacred, but the islanders all know it by the name mentioned.

Had I been sufficiently interested in the matter at the time extensive inquiries might have revealed all the details concerning this traditional woman, but my object at present is simply to answer the writer's query:—" Where is any legendary woman's island to be found," leaving the rest for the person interested to find out.

Hoping this little information may in some degree prove serviceable to you. Had I been sufficiently interested in the matter

I remain, yours truly, F. O. BERGSTROM. Takayama, Hida, March 23rd, 1898.

### A CRY FOR HELP.

TO THE EDITOR OF THE "JAPAN MAIL."

Six,-Your tenders are aware of the disastrous is which swept over a large section of Hongo on Wednesday morning, carrying away over a thou-sand houses, and leaving hundreds of people homeless. The local authorities have been doing homeless. The local authorities have been doing their utmost to provide for the most needy, and already private charity has been coming to their relief; but much still remains to be done. Arrangements are being made to organize a Relief Committee among the Japanese; and I venture to solicit contributions from any of the foreign community who are disposed to help in this time of

As the officials of the Hongo Ward Office are best acquainted with the actual condition of the sufferers, all sums sent me will be acknowledged and handed to them for distribution.

Kindly address me at the Central Tabernacle, Hongo, Tokyo.

Very sincerely yours,

HARPER H. COATES.

Tokyo, March 25th, 1898.

### YOKOHAMA FORESHORE.

TO THE EDITOR OF THE "JAPAN MAIL."

Str.-Your article upon the Yokohama Foreshore again suggests to me a scheme for the im-provement of this harbour which ought to be urged provement of this harbour which ought to be urged upon the proper authorities. It is this:—Widen the northern breakwater, build warehouses upon it, and connect it by rail with the Tokaido road. Stips could then go alongside, cargoes would require but one handling here, lighterage and damage would be lessened, and the capacity of the port multiplied. There would be no difficulty in such a work, and abundant foreign capital unbe obtained for it, provided a proper concession be accorded. accorded.

The foreshore of the Bund ought not to be filled . It should be diedged. The harbour is too small now.

G.H.S.

Yokohama, March 28th, 1898.

### A HINT TO STUDENTS.

TO THE EDITOR OF THE " JAPAN MAIL!

SIR.—Every foreigner attempting to gain a fair acquaintance with the Japanese language is under great obligations to Mr. Lay for his work on Chinese characters. Through its aid the number of those able to read newspapers and books without the kana will some day be reckned by without the kana will some day be reckened by tens instead of units. In convenience of reference the second edition is a marked improvement on the first, and yet I have found that by means of a supplemental marking I can use the book with twice as much ease and rapidity. This I venture to recommend to others through your columns.

My custom in searching for a character is to grasp the leaves in my left hand and roll them from noder my thumb to find first the radical:

grasp the leaves in my left hand and roll them from under my thumb, to find first the radical; but thus I can only take in at a single glauco, the radicals in the left hand margin. It is very inconvenient to keep glancing from the left mand in the right. So going to a print life in margin to the right. So going to a print inglit hand margin, and with size presenting in the right hand margin, and with size present directly opposite in the margin on the left. Thus, when rapidly twirling the leaves, while keeping my eye fixed in one direction, I can spot my radio.

cal in an instant, and know by the colour if its characters chance to be on the right-hand page.

From the printers I took the ten numeral types home with me, and at the upper left hand corner of this same left hand page, all through the book, printed with red the number of strokes in the radicals appearing on that page. Thus from 心 m 大 it would be 图 at the head of the marginal radicals, and from to to from I also stamped the proper numeral in the margin and in its square, by the first of the one stoke, two stroke, three stoke, &c., ladicals.

As I twin the leaves from the back of the book toward the front, it is desirable to know when about to pass from the six stroke radicals to the fives, and forms the fives to focus. Re. and I minted a star-

from the fives to fours, &cc, so I printed a star by the numbers where the six first appeared, by the numbers where the six first appeared, two stars on the next page to the right where it next appeared, three on the next, and so on up to five stars, doing this for each set of different stroked radicals. Thus rishimben (192) would have at the top of the page [1]\*\*, the next page [1]\*\*, the next [1]\*\*\*, &cc., up to five stars.

I have gone further recently, and following the example of the next edictionaries, I have, under the radicals whose characters cover more than a page, indicated where the characters of five, eight,

page, indicated where the characters of five, eight, en, and thirteen strokes in addition to the radical

begin.
If I have made myself clear, and the reader will be able If I have made myself clear, and the reader will put three or four hours into this, he will be able after some practice to find a Chinesa character almost as quickly as a word in Hepburn's Dictionary. Of the above by far the most important, of course, is the transferring all radicals to the left hand margin, and putting the number of strokes in the radical at the head of the column at the upper left corner of the printed marginal line.

SOJOURNER. Yours truly, SC Kagoshima, March 25th, 1898.

### THE DOSHISHA

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—After carefully considering the Doshisha affair, I am compelled to come to certain conclusions which seem to me inevitable to any person of normal moral faculties. If I am incorrect, I should like to have pointed out wherein.

I.—It seems to me that the American Board and its Missionaries who have given so many years

I.—It seems to me that the American Board and its Missionaries who have given so many years of consecrated service in Japan, and the general donors who have given so much wealth unselfishing and philanthropically for what they deemed would be the greatest good of an alien people, are entitled to the sympathy of every fair minded person over the miscarriage of their plans and their disappointment, and especially when brought about by methods (and by men) which must render the disappointment doubly keen. It seems to me a question not of theology but of morals and common honesty. But while it does not relieve the guilty at the same time must in not be conceded that the donors were not sufficiently specific in defining the purposes and pohy of the school, and not sufficiently careful in selection of those in whom to repose confidence? Was they not too confiding? Yet out of their sad experience may not good be derived: namely, that donors of property to charitable and religious purposes in the future will be more careful in defining their purposes, and in repusing confidence? Furtunately, as I am informed, the new Code goes into effect in June, which allows a donor for religious and charitable uses to make almost any reasonable restrictions and conditions he may please as to the use of the property, and the Courts will see that the will of the donor is carried out. use of the property, and the Courts will see that the will of the donor is carried out.

2 .- Although it is conceivable that the Trustees might have conducted a Christian School though not in harmony with the ideas of the donors and of the Missionaries, and thus have obeyed the letter of their trust, it would seem that monscionations trustee would endeavour to give effect to the intention of the trust as nearly as possible, and only depart from it so far as it became really impossible to carry it out. A true ethic is governed by the spirit, rather than by the letter. It will not take refuge behind a mere verbal technicality; and when it can no longer in accordance with conscientious convictions carry out a trust, it will re-

sign it to those who can,
3-I have read Mr. Yokoi's defense of his action
and that of the trustees, and, judged impartially,

victually says, then they are playing falsely with the Government. So in either case it appears that they are acting contrary to sound ethical principles, and are condemned by Mr. Yoko's own

argument.

His pleading is characterized by too much of that shiftiness and subtlety and lack of "commercial morality" which some foreigners complain is too prevalent in the Japanese character; though it must be confessed not to be without some emis-

than prevalent in the Japanese character; though it must be confessed not to be without some eminent examples in other countries. But this latter fact it no justification; it is wong all the same. Some seem to think the responsibility for the action of the Doshisha Trustees will not fall upon the Japanese nation, but it will, nevertheless, whether sightly or wrongly.

It will affect confidence in this nation abroad. People will argue:—"We know that the natural and logical effect of Christian training is to produce a high moral ideal. Here are certain men as good naturally as the average, more likely better than the average, of their people. They have had years of Christian training, were honoured and trusted by their teachers far years; some of them have had the advantage of the best training in foreign colleges, and yet, after all this, they have disappointed our expectations concerning their moral action. Whom then can we trust? This action can not be said to be the result of their Christian training for it is not in harmony with it."

4.—The action of the Government in the matter of granting exemption from conscription seems hardly according to the said to be the present action of the Constitution teams the said to be the result of their Christian training for it is not in barmony with it."

mony with it."

4.—The action of the Government in the matter of granting exemption from conscription seems hardly according to that article of the Constitution which grants religious liberty in Japan, breause the Government seems to have discriminated against this school expressly on the ground that it was a Christian School, but when the Christian principles of the School were abandoued, then it was admirted to the privilege of exemption. Hearn from the Fopan Hail that the Government this discriminates not only against Christianity in this manner, but against all seligious! So it would seem that the Government regard not only Christianity, but religion of any kind whatever, as undesirable in the State, and proposes not to be merely recotal, or non-religious, but anti-religious; a very different matter. This is not religious freedom, but religious oppression. I can see it would be allowable for the State to tolerate all religious that do not teach men in his bad men. I can onceive the State might, as a protection against ignorance, require a certain standard of excellence in schools recognized and assisted by the State, but I can not see why it should concern itself luther than to see that its secular demands are carried out. I do not see why it should adopt the cause of anti-religious secularism as its own. I have heard from time to time of students being expelled from Government schools, or life made miserable for them because they were Christianis, I have heard of public school teachers redicting and opposing not simply Christianity, but all religion: because they were Christians, I have heard of public school teachers ridicating and opposing not simply Christianity, but all religion; of children being persecuted by their school mates and teachers for attending temple, Chinch, or Sunday Schools; I have heard of Mission Schools being vexed and bothered by petry officials; but I had supposed that this was merely social persecution which the Constitution and the laws can not wholly prevent, or the work of petry officials, so obscure that the Government could not be supposed to be aware of their action—I did not suppose it to be the policy of the D nationary of suppose it to be the policy of the D partment of Education. But now it seems to be the policy of Education. But now it seems to be the policy of the Government, that if students will attend a non-celigious or anti-religious school, they shall be exempt for conscription from the age of 19 to 28, but if they or their parents prefer that religious instruction and training shall be mingled with their secular education, then they are to be subject to a penalty of 9 year's service in the army, deprived for that length of time of opportunity for instruction both secular and religious. And yet the Constitution guarantees liberty of religious belief.

I prefer to attribute this strange and inconsistent state of things eather to the fact that those in authority have not yet got used to working free institutions and hence do not yet understand how to treat the subject of religion justly in its relations to the State, rather than to any deliberate purpose

to treat the subject of religion justly in its relations to the State, rather than to any deliberate purpose to violate the constitutional provisions concerning religious liberty, which wan for Japan the confidence of the world and secured her admission among the sisterbood of civilized nations.

Rev. J. D. Davis in your columns a week ago, is too full of significance and involves too many issues to be passed over lightly by serious-minded observers of the course of events in this country, I am not connected with missions in any way, but nevertheless I have watched the Dō hisha experiment with considerable interest from year vear and was personally known to the late Mi. Niijima. I suppose that now the whole scheme may be regarded as a lings failure. It is a costly hit of experience for those concerned, and I for one heartily sympathise with Mr. Davis and his fellows werkers, and hold that no terms are too strong to apply to the methods adopted by the present trustees of the Döshisha. I think Mr. Davis was quite right in giving us the whole truthabout the affair, though his action is condemned by certain missionaries on the ground that the weakness of the Christian Church should not be exposed to the gaze of imbelievers. Mr. Davis has told us a great deal; but there in more that we want in know. How are the trustees of the Döshish ear and was personally known to the late Mr. want in know. How are the trustees of the Do hi-sha appointed ? How comes it that a body of men who are disloyal to the fundamental principles of the Association are entrusted with its manage-ment? Has the Doshisha no legal status whatment? Has the Doshisha no tegar transcribered ever? Has the American Buard of Foreign Missions no documents in its possession which guarantee that the money subscribed by it should be expended in the attainment of certain fixed

objects?
The names of the trustees whose recent action has caused such a stir are not given by Mr. Davis nas caused such a sur are not given by Mr. Davis.
A Christian journal furnishes the following names:
—Messrs Yebina Danjō, Tsumashima Kakichi,
Kanamori Tsu in, Tokutomi I-ichirō, Morita
Kumatō, Miyoshi Taizō and Yokoi Tokio---all Kumato, Miyoshi Taizo and Yokoi Tokio---all well-known men in the Christian Church. Now it is only fair to inform those of your readers who regard this episode as of a piece with the Japanese commercial distonesty will which they are so painfully familiar, that the action of the trustees is almost universally condemned by Japanese Christians as absolutely dishonest. The comments of tians as absolutely dishonest. The comments of the religious press on the affair will doubtless be reproduced in your columns later on. But one question still remains to be answered, how is in possible that a number of Christian men could bring themselves to act in definince of the most ordinary and palpable principles of justice? That erdinary and paspable principles of justice? That they have acted without deliberation is not for a moment to be supposed. They are not men unendowed with reasoning faculties. In point of intellect they have few if any superiors in the Christian Church. They no doubt weighed the pros and caus of the gourse they proposed adopting before taking action. That in moral sense they are lacking goes without saying.

ing goes without saying.

In order to throw a little light on what has occurred, without in any way attempting to palliate the beinductures of the offence against justice committed, I will go back to the time of the establishment of the Döshisha by Mr. Niiji ma. In its early days I had long talks with that gentleman about its prospects, and I was at that time in close communication with Japanese who knew the whole history of the founding of the school. Mr. Davis gives us one side of Mr. Niiji ma's character. He was undoubtedly a very devoted and sincere Christian and the teas that, added to other considerations, induced his audience to subscribe towards the school were no doubt the result of strong religious feeling. When he was in America he hardly realised the difficulty of the enterprise on which he had embarked. Subsequent intercorres with his own embarked. Subsequent intercourse with his own countrymen convinced him that in order to make the Doshisha succeed it was necessary that he should enlist the sympathy of leading non-Christian Japanese. In order to do that it became necessary for him to emphasive the educational adto be offered by the prospective school and to forber from saying too much about its function as a great proselitising agency. Much of the money given by Japanese towards the school was not subseribed out of any regard for Christianity. Thus it came about that from the very first the aims and objects of the supporters of the supporters of the support in the school have not been about the school have not been afternoon. the school have not been in entire accord. This the been repeatedly pointed out by Japanese and was emphasised in your columns some years ago. It is a view to which certain Board Missionaries strongly object, but on what rational grounds I strongly dispect, but on what rational grounds a lingue never been able to ascertain. Some mouths ago the Fukuin Shimpo gave this explanation of the dissension in the Doshisha in an article which was thus summarised in your columns—" Mr. Niijima played at cumulag with the lare and hunting with the beauth in turn. To Chistians he in laye never been able to ascertain. Some months ago the Firkerin Skimps gave this explanation of the dissension in the Doshisha in an article which was thus summarised in your columns—" Mr. Nitigina played at unning with the hare and hunting with the hare and hunting with the hare and hunting with the horizon in turn. To Christians he institution should be made there support on this understanding. But before non-Christians the past it has failed to prove itself to be a rise on this understanding. But before non-Christians and obtained their support on this understanding. But before non-Christians and not prove itself to be a rise on the placed the education of and particle which it institution offered and led them to think that con-

siderable freedom of belief would be allowed, and on this understanding obtained their pecuniary support. By adopting this course he combined two elements that never could blend, he called into existence two antagonistic influences whose power has been felt ever since, Mr. Kosaki for some time followed the same course. This is the real reason of the institution's turning out so un-

satisfactory from a Christian standpoint." Mr. Nijjima was human and he was a Japanese and, moreover, he had a hobby. Having said this I have accounted for his resort to com-profilise. It is the experience of us all that life is more or less made up of a series of compro-mises. It is not a case of doing what we would, but only what we can. Mr. Niijima was a Japan-ese and no stickler for dogmas and strict prin-ciples in the way that is exemplified every day in the West. It is an undoubted fact that Japanese Christianty is of an entirely different type to what we foreignets have known in Europe or America. Even the most bigoted missionaries will admit this at their own firesides, if no enemy of missions be listening. Mr. Nijima had a hobby. There is no saying into what indiscretions men with hobbies may be betrayed. Notwithstanding all this Mr. Nijima was a very fire man, and had he lived he might have found means of saving the

Do-hisha from its present degradation.

To sum up the result of the foregoing observations, we see that the position of affairs is complicated. The present trustees maintain that they
represent the secularian element among the subscribers to the institution and that they are Christ isn in all essential respects. They say that the management of the institution has been entrusted to them at a time when all foreign support has been them at a time when all loreign support has been suddenly withdrawn and that the measures they have taken and are about to take are with a view of enabling the institution to survive its troubles, and so on. But nothing that can be said in their favour hides the fact that they have no right to property purchased with mission money and only held in trust by them for a specific purpose agreed upon by the representatives of the Mission and the original trustees. There is not you have taken to the contraction of the mission and the original trustees. is only one honourable course open to the present trustees; and it is to be hoped that, as a result of the agitation which is being set on foot all over the country, they will follow it—namely, to self the whole property and pay back to the American Board of Foreign Missions the sums received from them, or such part of the money as they are able to pay, and to start afresh on their own account,

on their own account.

Unfortunately this Döshisha affair is not the only case by any means of glaring Christian dishonesty. By Christian dishonesty I mean of course the dishonesty of professing Christians. Numerous are the cobbrries that have taken place in Christian schools. Some of these have been perpetrated by persons who had obtained the confidence of foreign missionaries in charge. I do not mean to imply by this that there is no genuine Christianity; far from it. There is no doubt a good fleat of genuine Christianity, but a large number of missionaries seem to me to be poor judges of what Japanese human nature is made of, and hence are easily imposed on. Then made of, and hence are easily imposed on. Then the fact of their holding the purse strings of the Mission and of their having it in their power to provide cash for this and that tempts designing professors of Christianity to study how best to get svar then

This Döshisha affair again brings the question to the front, how high is the standard to which Japanese Christians have been raised? Is the average professor of Christianity superior or including the average Japanese to be met with all over the country? With every desire to say all that can be truthfully said of the beneficial effects of Christianity on the majority of those who can feet. Christianity on the majority of those who profess to believe in it in this country, honesty obliges me to affirm that I would rather trust a good old-ashioned Japanese who has known nothing but his native code of honour and who lollows traditional ideals of virtue, than any of the thousands of the semi-Christianised men and women who before they came into contact with foreign missio-naries had no conception of what virtue meant,

In nothing I have said above do I wish to imply that the whole of the Christian Church is to be blamed for the dishonesty of some of its members, but the question I should like 🗯 see answered is,

need no inducements to morality founded on religious grounds. With their acknowledged want of need so inducements to morality founded on religious grounds. With their acknowledged want of susceptibility to seligious influences, it is hardly to be wondered that religion does not reach the depths of Japanese hearts and that leading professors of Christianity are found acting in a way that would be quite impossible in the case of devoted Christians in the West. Impartial Japaness are of opinion that the highest type of man in this country is not of Christian moulding, and intimate intercours with all classes extending over intimate intercourse with all classes extending over we decades has led me to the same conclusion,

I am, yours, etc., OBSERVER. March 21st, 1898.

TO THE EDITOR OF THE " JAPAN MALL" S1R,-The caudid criticism by "Observer," in your issue of to-day on the Moral Status of Christians in this country needs, I think, a word of ex-planation or answer lest it should be taken, which planation or answer lest it should be laken, which would of course be far from his intention, as a wholesale condemnation of mission work. The answer I would find is in the words of Christ Himself;—"I came not to call the righteous but inners to repentance." Thank God no community or society has ever been without many just and right-thinking men who are so far a law unto themselves, and who are to be indeed by the means of these and who are to be judged by the measure of their ubedience. In no country pechaps has there been a larger number of such than in Japan itself. But the message of Christianity is not, in the first place, to such as these. It is not to the elect, but to the mass of men. To the now, the suffering to the nessage of Constrainty is not, in the first prace, to such as these. It is not to the elect, but to the mass of men. To the poor, the suffering, to the publicans and sincers. And the question is not whether outside of the body of Christians there may be found men whose attained standard of moral conduct in higher than that of individual Christians that what Christianian is deline with these she ans; but, what Christianity is doing with those she has gathered in, it may be, even from the streets and bye-ways of society,—Are they better than they were before she touched them? Is she raisthey were before she touched them? Is she satisfied them? Is she giving them new hopes, new ideals, new strength, or new life. A longer acquaintance even than that of "Observer," with the oricumstances and conditions of life here, enables me III answer emphatically that she is doing ables me in answer emphatically that she is doing so, and that not only in the lives of individuals but in the general life of society she is exercising an ever-widening influence for good. And, let me remind "Observer" that under new conditions of life in Japan that standard of moral excellence which he and I equally admire is weakening. It is been and is crumbling fast away. What is to take its place? I number myself What is to take its place? I number myself among whom those of whom you speak in your issue of to-day, who neither from the point of view of theory nor of experience can believe in the benefits of education divorced from religious moralbetterns of education divolced from ferigiotis storial-training, and I therefore look with some amount of jealousy upon an attack, by one evidently se falt-minded as "Observer," upon what to my mind is the only possible source which we can look in the future for the basis of a new standard of moral life for Japan.

Tokyo, March 28th.

### THE FRENCH REVISED TREATY.

Sa Majesté l'Empereur du Japon et le Président de la République Française, animés d'un égal désir de maintmir les bous rapports déjà heureusement de mainimir les nous rapports nels neureusements établis entre sus en étendant et en augmentant les relations entre leux États respectifs, et persuadés que ce but ne saurait être mieux atteint que par la révision des Traités jusqu'ici en viguent entre les deux Pays, unt résolu de procéde à cette de la comment tévision sur les bases de l'équité et de l'uné-ét mutuels et ont nommé à cet effet pour Leuis Pénipotentiaires, savoir :

Pénipotentiaires, savoir:

Sa Majesté l'Empereur du Japon.

M. Sonn Arasune, son Envoyé Extraordinaire et Ministre Pénipotentiaire près le Gouvernement de la République Française;

Et le président de la République Française,
Son Excellence M. Gabriel Hanotaux,
Ministre de Affaires Etrangères,

Lesquels, après s'ène communiqué leurs pleins pauvoirs trouvés en bonne et due forme, ont arrêté M conclu les articles suivants :

### ARTICLE PREMIER.

Il y aura téciproquement pleine et entière liberté de commerce et de unvigation entre les États et possessions des deux Hautes Parties Contractautes.

Les Japonais en France et les Français au Japon junicont de la plus complète et constante otection pour leurs personnes et leurs pro-

pourront iéciproquement, Ils pourront tecrproquement, can't toute l'étendus des États III possessions respectifs, voyager, técides, et se livrer à l'exercice de leurs professions, acquérir, posséder, et transmettre par succession, par testament, donation ou de toute succession, par testament, donation ou de totte autre manière que ce soit, des biens, valeus, et effets mobiliers de toutes soites; ils juuiront à cet effet des mêmes privilèges, liberté, et droits que les nationaux on les resontissants de la nation la plus favorisée, sans pouvoir être tenus à acquittes des impôts ou taxes autres ou plus élevés.

Ils auront un libre et facile accès auprès des tribunaux de justice tant pour téclamer que pour délendre leurs droits en toute instance et à tous les degrés de juridiction établis par les lois. Ils seront libres de choisir et d'employer dans toutes les circonstances les législes, avoité, avocats, et agents de toute classe qu'ils jugeraient à propos, et jouront sous ce rapport des mêmes droits et privilèges que ceux qui sont ou seront accorderaux nationaux. Digitized by

Article 2 .- Les ressortissants des deux Hautes Parties Contractantes jouiront dans toute l'étendue des États et possessions de l'autre Partie Contracdes Blats et possessions de l'autre Partie Contrac-tante d'une entière liberté de conscience, et pour-ront, en se conformant aux Lois, Ordonnances, et Règlements du pays, élever et possédet des égli-ses, se livrer à l'exercice privé ou public de leur culte; ils jouront aussi, sons les mêmes condi-tions, du droit d'être inhumés suivant leurs cou-lannes religieuses dans des cimatières convenzble-ent, situé, leureste seront, établis, durc les ent situés, lesquels seront établis dans le cas où il n'en existerait point et seront soignensement entretenas.

Article 3—Les Japonais en France et les Français au Japon ne seront contraints, sous aucun prétexte, à subir des charges on à payer autem protecte, a sum des charges on a payer des laxes, impôts, contributions, on patentes, sons quelque décommation que ce soit, autres ou plus plus élevés que ceux qui sont ou seront perçus sur les nationanx ou les ressortissants de la nation la

Ils ne seront astraints à ancun service obligatone, soit dans les armées de terre ou de mer, soit dans les gardes on milices nationales. Ils seront exempts de tontes contributions imposées en lieu et place du service personnel, de tons emprunts

forcés, et de toute autre contribution extraordinaire de quelque nature que an soit. Article 4.—Les ressortissants de chacune des Hautes Parties Contractantes pourront, en quelque lieu que ce soit des Etats et Possessions de l'autre Partie, exercer toute espèce d'industrie ou de métier, faire le commerce fant en gros qu'en détail de tous produits, objets fabriqués ou manufacturés, de tous articles de commerce licite, soit en personne, soit par leurs agents, seuls on en entrant en so-ciété commerciale avec des étrangers on avec des nationaux; ils pour rout posséder, louer, même par bail emphytéutique, et occuper les maisons et boutiques qui leur seront nécessaires, louer des terres, les prendre à bail emphytéotique; le tout en se conformant, comme les nationaux euxmemes et les ressortissants de la nation la plus favorisée, aux Lois et Règlements des pays respectifs.

aux Lois et Regionneuts des pays respectits.

Il est enleudu qu'en tout ce qui concerne l'agriculture et le droit de propriéé sur les biens insumbiliers, les Japonais en França and les Français
au Japon journout du même traitement que les

sujets ou citoyens de la nation la plus favoriseé.
Article 5—Les Japonais en France et les
Français an Japon auront pleine liberté d'entrer
avec leurs navires et leurs cargaisons dans tous
les ports, monillages, et rivières de leurs territoires respectifs qui sont ou pourront être ouverts au commerce ex étieur et jouitout, en matière de commerce et de navigation, du même traitement que les nationaux et resportissants de la nation la plus favorisée, sans avoir à payer aucurs impôts, taxes on droits de guelque nature on de quelque dénomination que ce soit, perçus au nom ou au profit du Gouvernement, de fonc-tionnaires publics, de particuliers, de corpora-tions ou établissements quelconques, antres ou plus életés que ceux imposés aux nationanx ou ressortissants de la nation la plus favorisée, le tout en se conformant aux Lois, Ordonnances et Règlements des pays respectifs.

Article 6.—Les habitations, magasina et bouti-ques des sujets on citoyens de chacune des Hantes Parties Contractantes, ainsi que leurs dépen-

dances, seront respectés.

Il ne sera point permis d'y procéder à des perquisitions on visites domiciliaires non plus que dexaminer on d'inspecter les livres, papiers on comptee, sauf dans les conditions et formes pre-scrites par les Lois, O donnances et Règlements applicables aux nationanx.

Article 7.-Les droits de douane perçus à l'en-trée au Japon et en Prance sur les produits de l'autre pays ne pomonet être autres ou plus élevé-que ceux imposés aux marchandises similaires originaires du pays le plus favori-é 🔳 en prove nant dans les mêmes conditions.

Les droits perçus à la sortie du Japon et de France sur les produits destinés à l'autre pays ne pourront également être autres ou plus élevées que ceux imposés aux mêmes produits destinés au pays le plus favori-é.

pays te puis ravorte.

Les Hautes Parties Contractantes s'engagent, en outre, à n'établir aucune restriction ou prohibition d'importation ou d'exportation qui ne soit, en même temps, applicable aux autres nations.

Article 8.—Les ressortissants de chacune des Hautes Parties Contractantes jouinout, dans les fints a Desparation de l'autres de l'accounting de l'accou

Etats et Possessions de l'antre, de l'exemption de tour droits de transit quelconques et d'une parfaite égalité de traitement avec les nationaux pour tout ce qui concerne le magasinage, les primes, les primes, les facilités et les drawbacks.

Les marchandises de toute nature originaires de

ceux qui grèvent ou grèveraient les marchandises similaires de production nationale.

Art. 9.—Les droits de douane perçus à l'entrée ou à la sortie des territoires de chacine des Hautes Parties Contractantes, les primes et les drawbacks secont les mêmes que les importations on les exportations aient lieu par les navires japonais on français on par des navires de toute

Art. 10,—Ancuns droits de tonnage, de port, de pilotage, de phare, de quarantaine ou autres droits similaires on analogues, de quelque nature ou sons quelque dénomination que ce sont, levés au nom ou an profit du Gouvernement, de fonctionnaires publics, de particuliers, de corporations ou d'établissements quelconques, qui ne seraient également el sous les mêmes conditions imporés en pareil cas sur les navires nationaux en général de la parent cas sur les navires nationaix en generat de la nation la plus favorisée, ue seront imporés dans les ports des États et Possessions de chacun des deux Pays sur les navires de l'autre pays. Cette égalité de traitement sera appliquée réciproquement aux navires respectifs, de quelque endroit qu'ils arrivent et quel que soit le lieu de destination.

Art. 11.-En ce qui concerne le placement des Att. II.—En ce qui concerne le placement des navires, leur chargement dans les ports, rades, havres, bassins, docks ou rivières des Etals et Possessions des deux Pays, il ne sera accordé aux navires nationaux aucun privilège ni aucune faveur qui ne le soit également aux navires de l'autre Puissance, la volonté des Hantes Parties Contractantes étant que, sous ce rapport aussi, les bâtiments japonais et français scient respec-tivement traités sur le pied d'une parfaite égalité.

tivement traités sur le pied d'une parlaite égalités. Act. 12.—Il est fait exception aux dispositions du présent traité pour le cabotage dont le régime reste soumis aux Lois, Ordonnances et Règlements du Japon et de la France respectivement. Il est entendu toutefois que les Japonais en France et les Francais au Japon jouiront, pour tout ce qui concerne le cabotage, des droits et privilèges qui sont ou seront accordés par ces mêmes Lois, Ordonnances et Règlements aux ressortissants de tout autre pays.

tout autre pays.

Tout navire japonais chargé au Japon ou à Tont navice japonais chargé au Japon ou à l'étranger d'une cargaisou destinée en tout au en partie à deux on plusieurs ports de France et tout avire français chargé en France ou à l'étranger d'une cargaison destinée en tout ou en partie à deux ou pluiseurs ports du Japon pourra, en se conformant aux Lois et aux Règlements de douane du pays, décharger une partie de sa cargaison dans un port, et continuer son voyage pour l'autre ou les antres ports de destination, dans le but d'y décharger une autre partie nu le reste de sa cargaison d'origine.

Le Gouvemement Japonais contêde en outre aux navires francais le droit de continuer, comme par le passé, et pour toute la durée du présent traité, à transporter des cargaisons entre les ports

par le passé, et pour toute la durée du présent trairé, à transporter des cargaisons entre les porta onverts de l'Empire, à l'exception des ports d'Osaka, de Niigare, et d'Ebisuminato.

Asticle 13.—Tout navire de commerce de l'une des deux Hautes Parties Contractantes qui sersit forcé par le mauvais temps on pour toute autre raison de se réfugier dans un port de l'autre Partie Contractante num la liberté de s'y faire réparer, de s'y pouvoir de tous les approvisionnements dont il aura besoin et de reprendre la mer sans payer d'autres droits que ceux qui seraient aconitée en pareille circonstance par les bâtiacquittés en pareille circonstance par les trâti-ments nationaux. Dans le cas cependant où le capitainé d'un navire de commerce se trouveraix dans la récessité de vendre une partie de sa car-gaison pour payer les frais, il sera obligé de se conformer aux Règlements m Tarifs du lieu « à il aurait relâché.

S'il arrive qu'un navire quelconque de l'une des S'il arrive qu'in n'avire que conque de l'ine des Hautes Parties Contractantes échone ou lassa naufrage sur les côtes de l'autre Partie, les auto-rités locales en informeront saus retàrd le Consul Général, le Cousti, le Vice-Consul ou l'Agent consulaire de la nationalité du naviro le plus voisin, legnet sera admis à intervenir en sa qualité pour procurer toute l'assistance nécessaire

Toutes les opérations relatives au sauvetage des navires japonais naufragés ou échoués dans les eaux territoriales de la France auront lieu conformément aux Lois, Ordonnances et Règlements français, m réciproquement, toutes les mesures de sauvetage relatives aux navires français naufragés ou échonés dans les eaux territoriales du Japon aurant lieu conformément aux Lois, Ordonnances et Règlements japonais.

Tous navires ou vaisseaux ainsi échonés ou man-fragés, tous débris et accessoires, toutes fournitures teur appartenant el tous effets et marchandises sauvé desdits navires ou vaisseaux y compris ceux qui auraient été jetés à la me, ou les produits desdits objects, s'ils sont vendus, ainsi que tous papiers trouvés à bord de ces navires ou vaisseaux Les maichandases de troute traine de granda de la maine de papiers trouvés à bord de ces navires ou vaisseaux pour de cas papiers de la maine de la ma les lieux, lesdits produits on objects seront remis Consuls généraux, Cousuls, Vice-Consuls ou Agents consulaires respectifs et ces officiers consulaires, proprétaires ou représentants payeront seulement les dépenses occasionnées pour la conservation desdits objects ainsi que les frais de sauvetage ou antres dépenses anaquels seraient sonnis, en cas de naufrage, les navires nationaux. Les effets et marchandises sauvés du naufrage seront exempts de tous droits de douane, à moits qu'ils n'entrent dans la consommation intérieure. Art. 14—Les navires de guerre de l'une des deux Phissances pour ont entrer, répouner et arradonber dans ceux des ports de l'autre Puissance dout l'accès est perufis aux navires de guerre de la nation la plus lavoriée; ils y seront soumis aux pêmes règles et y joutiont des mêmes homeurs, avantages, privilèges et exemptions concé lés à cette dernète. les lieux, lesdits produits on objects seront remis Consuls généraux, Consuls, Vice-Consuls ou

avantages, privinges et exemptions conte les acette deruièles.

Art. 15 — Les paquehots chargés d'un service postal et appartenant à des compagnies subveniumés par l'un des deux Erats Contrartacts ne pourrent être, dans les ports de l'autre Érat, dé tournés de leur destination ni être sujets à saisie, autèr, embargo ou arrêt du Prince.

Article 16 — Tous les navires qui, confornément aux Lois japonaises, sont considé és comme navires japonais et tous les navires qui, conformément aux Lois francaire, sont considéres comme navires francaire, seront respectivement considé és comme japanais et leacais pour l'application du présent Trairé.

Article 17 — Les Consuls gé éraux, Consuls, Vice-Consuls et Agents consulanes de chacune des Hautes Parties Contractantes résidant dans les Etats et Possessions de l'autre Partie receveront de autorités locales, pour la recherche, saise et

de autorités lucales, pour la recherche, saisie et acrestation des déserteurs des navires de leur pays

nerestation des desetteurs des navies de leur pays respectif, unite aide et assistance du pour out leur étre données conformémeen aux lois lest entendu que cette stipulation de s'appli-quera pas aux ressortissants du Pays ou la dé section aura lien.

### LATEST TELEGRAPHIC NEWS.

(FROM THE " JAPAN TIMES")

### THE RUSSIAN DEMANDS.

London, March 26.

The Times publishes a telegram from Pekin, stating that China has agreed to all of Russia's demands.

UNITED STATES AND SPAIN. President McKinley has informed the leaders of Congress that he is determined to uphold peace if possible.

London, March 28. Spain has addressed a note in reply to the American representations, stating that she cannot make further concessions, nor admit encroachments on her Sovereignty in the West Indies.

London, March 30. Despatches received from Washington indicate that Spain is willing to make large concessions, and the situation is decidedly more hopeful.

THE "MAINE" EXPLOSION. London, March 27.

The Report of the United States commission attributed the Maine explosion to external causes, apparently a submarine mine, but does not fix the responsibility. The Spanish report states the explosion was internal. The Washington Government has decided to inform Spain, that the conditions of misery and starvation in Cuba have become intolerable, and that hostilities in the island must cease. The war preparations in the United States continue, and the scare is unprecedented.

THE CRISIS IN THE FAR EAST.

The Times counsels an immediate powerful naval demonstration in the Gulf of Pechili.

THE OXFORD AND CAMBRIDGE BOAT RACE.

The Oxford and Cambridge Boat race has been won by Oxford, by twelve lengths.

RUSSIAN OCCUPATION OF POR ARTHUR AND TALIENWAN.

The Times publishes a telegram stating that the Russians have occupied Port Arthur and Talienwan.

ENGLAND'S CHINESE POLICY.

Mr. Balfour will make his statement on the Chinese policy before Easter.

MR. GLADSTONE.

The doctors regard Mr. Gladstone's recovery as impossible.

GERMAN NAVY BILL PASSED.

The Navy Bill has been finally passed by the Reichstag.

SPANISH CONCESSIONS UNCON-FIRMED.

London, March 31.

The optimist reports of Spanish concessions are not confirmed. There is a vigorous revival of the war feeling in America. Numerous resolutions have been presented to Congress, demanding intervention in Cuba.

LORD SALISBURY'S HEALTH. Lord Salisbury has started for the Riviera.

(Special Correspondent of the Jiji Shimpo).

Peking, 9.20 a.m. March 25th. The limits of the land obtained by Russia from China on lease in the Liaotung Peninsula are 150 or 160 li in a

northerly direction from the hills, and 70 or 80 li eastward and westward. Chinchow Bay and Pitsz wo are not to be leased, but the portion of the sea-coast to which the railway is carried from the vicinity of the leased area will also be leased. The name of this portion of coast is not yet clearly designated, however. It is expected that the convention will be signed on the 27th instant.

(Received by the Fill.)

THE RUSSO-CHINESE TREATY SANCTIONED.

Peking, March 26.

The Russo-Chinese treaty received the Emperor's sanction this morning.

TALIEN AND CUSTOMS DUTIES.

Peking, March 26. Russia is to open Talien for foreign commerce, the rates of customs duties to be exactly the same as in the Chinese

Russia, to be subsequently delivered to

BRITISH MEN-OF-WAR.

Chemulpo, March 26. The British cruisers Powerful and Graf-

ton have cast anchor here, arriving from Chefoo, this morning.

MR. PAK GHONG YANG.

Soul, March 26

Mr. Pak Chöng Yang was to-day ap-pointed Minister President of State. VE CHAISUN RELEASED.

Söul, March 28.

Ye Chaisun, who was arrested in con-nection with the Kim Heung-yuk affair, has been released.

DEPARTURE OF BRITISH WARSHIPS.

Jinsen, March 28. The British men-of-war Powerful, Grafton, and Narcissus cleared from this port

to-day. ENGLAND SENDS ANOTHER WARNING. Peking, March 28.

England has again addressed warning advice to China in the sense that if China acquiesces in the demands of Russia, the result will be the disturbance of the balance of power in the Far East.

THE RUSSO-CHINESE TREATY SIGNED.

The Russo-Chinese Treaty was signed yesterday.

RUSSIA'S GOVERNOR FOR THE LEASEO TERRITORY.

Col. Olgok (Wogack?) will probably be appointed Governor of the territory leased by Russia.

RUSSIAN TROOPS REPLACING CHINESE AT PORT ARTHUR AND TALIENWAN.

The Chinese troops stationed at Port Arthur and Talienwan, have evacuated those places, which are now occupied by Russian troops. The Russian flag has been hoisted at both ports.

THE BRITISH SQUADRON READY FOR EMERGENCIES.

Hongkong, March 28. The British war-vessels here, with the single exception of the Edgar, have received orders to make preparations for a cruise to the north. All the vessels are hurriedly loading provisions and other necessaries. The special emergency docks were all opened yesterday.

THE NEW RUSSIAN MINISTER TO KOREA.

Nagasaki, March 31.
Mr. Matunine, new Russian Minister to Korea, arrived here this mountag by the steamer Genkat Maru, en route for Koren.

The notes are from the Westminster Budget. (a) Kt to K Kt 5 is no doubt the beginning of e uttack, but as it is not quite transparent for what purpose the text-move was intended, if Black had replied 8-Kt to B3, we suspect that Charon anticipated Black's indifferent P to E R3. combination, however, is so pretry that it was worth trying for—and it came off.

(b) Black attempted an ineffectual counter-at (b) Black attempted an nearconal commercat-tack with 11—Q to R 5, but 11—R to K 2; 12—Q takes Kt (the alternative) would not have been much better. As a matter of fact, 8—P to K R3 lost the game. The conclusion is exceptionally pretty.

### NOTES FROM ABROAD.

"All chess life seems to be with America," writes an estermed and particularly well-posted English correspondent of the Times Democras. " A English correspondent of the Times Democrat. "A great change has come over English chess. The old masters are dying out. The new horn-strength of amateurs has slaughtered them. They have no prostige. Names once of weight are now spoken of with contempt. No new Blackburnes or Birds. The 'nimble shifling' for which the old professionals played at the Divan is now too hardly earned. The country joskins know the openings and the principles, and instead of Bird giving a nonem and winning 20 names in an hour, as I have onem and winning 20 names in an hour, as I have queen and winning 20 games in an hour, as I have seen he plays on even terms, and of five games wins only the odd one and a shilling. The ancient 'Shilling Gambit' is no longer a thing of dead. Young men from Birmingham walk into the Divan without awe and speak of giving odds,"

For the International Cabb. Match, the British Team has been selected, and it is, probably, the strongest that can be found in Great Britain. The redoubtable Blackburne leads the host; then The redoubtable Blackburroe leads the host; then comes Amos Burro, one of the best the Britishers laye; E. M. Jackson, who won both his games in the other cable-matches; C. D. Locook, who rocks among the first non-professionals; D. Y. Mills, the Scotch champion; H. E. Atkins, the London crack; C. E. H. Bellingham, only twentythee years of age, but a tournament-winner to 1896; Herbert Jacobs, a fine amateur player; two new men—M. L. Caro, who made a record at Bertin, losing only four out of the mineteen games; and H. W. Treuchard, a veteran who will give a good account of himself. good account of himself.

The Team to represent the United States, has also been chosen. Pillsbury and Showalter need no introduction; Barry, the Boston crack, won both lis games in '96 and '97; Ed. Hymes held his own in the other matches; Delmar, the veteran, is known everywhere as a brilliant player; Hodges always gives a good account of himself. The other four are Franklin K. Young, of Boston, specially recommended by Pillsbury and Barry; John A. Galbreath, of New Orleans, who is ranked as one of the strongest players of the South; D. G. Baird, one of the Greater New York's experts; and Alfred R. Robinson, of the Franchlin Chess-Club, Philadelphia, who excels in careint's accurate play. The two substitutes are Major Hanham and Louis Schmidt, both of New York City. The general impression, among those able to give an opinion, is that the British Team is slightly stronger than the American, or, at least, that the chances are in favour of the Englishmen.

Literary Digest. The Team to represent the United States, has also -Literary Digest.

Steinitz was recently presented with a cheque for £100 by his American friends,

Lasker will shortly return to London, his adopted home. No doubt the big Vienna tournament will draw the champion, as the first prize is fixed at £400, with other good sewards for the remaining five positions.

J. H. Blackhume recently fulfilled a most successful engagement at Hereford, his record being thirty-five victories against no defeats and two draws in simultaneous play, and five successes and a draw in the blindfold exhibition. to one of the six games played simultaneously and without sight of board or men Blackburne sacrificed a keight on the twentieth move, and upon its acceptance, to the astonishment of the spectators, not only announced mate in six moves, but proceeded, to their further amagement, to call out with the utmost randity variation after variations. out with the atmost rapidity variation after varianoi until the position was thoroughly exhausted.

According to a recent report from Russia, Count Tolstoy has lately taken up thess, and taken it up vigorously, like all his other hobbies. He makes his family play with him all day long, and has cuted off a cliessboard on almost every table in his house at Moscow. Even his dogs and cats have been christened with the names of cliess pirces.

### LATEST COMMERCIAL.

### IMPORTS.

There is little or on demand and stocks of all kinds of piece good continue to accumulate, while very few sales of yaros have been effected. Some business has been done in raw cotton for the spinning mills, but as several of these are in defficulties owing to over-production, the demand is not large. Quotations are all nominal.

NOTICE TO CORRESPONDENTS.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence, Whatever is intended for insertion in the "JAPAN Warkity Malt!" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all latters on business be addressed to the Manager, and Cheques be made payable to same: and that literary contributions be addressed to the EDITOR.

VORDHAMA: SATURDAY, APRIL 974, 1898.

### BIRTH.

On the 5th inst., at No. 243-A. Bluff, the wife of H. Pollak, of a daughter.

### SUMMARY OF NEWS.

THE Hole Maru loundered off Tokohara on the and inst.

THE British squadron was to assemble on the 5th inst. at Cheloo.

On the 3 tat ult. 15 Formosan Chinese were killed at Shintenkei by aborigines.

IT is reported that several Japanese fishermen have been killed in a fracas with natives near Mokoho, Koren.

By Imperial Ordinance the Special Session of the Diet is convened for 14th May and the session will last #1 days.

GERMANY has demanded of the Chinese Government an enlargement of the limits of the lessed land at Kisochou.

Tuz revised treaty between Siam and Japan signed in March last, was received at the Foreign Office on the 3rd instant.

WITH a view to developing a tasta for fine

SEVERAL cases of choleraic seizure have occut-red in Tokyo and Yokohama. Therehas so far been only one fatal case in each city.

THE regattas of the Imperial University and the Higher Commercial School will take place on the Sumida River on the 9th and 10th inst,

THE Naval Court Martial has given judgment on Captain Uryu, of the atranded Fuse, and sentenced him in three months' minor confinement.

Texas Majesties the Emperor and Empress bave contributed yen 600 for the relief of sufferers by the five at Honge, Tokyo, on the agrd ultimo.

M. MURAVIEFF, Russian Foreign Minister, has assured Great Britain that Port Arthur and Talien will be open to foreign trade like other Chinese ports.

Marquis Saigo, Minister of the Navy, who was in a critical condition of health, has progressed so far that he will be able to attend the Office within a week.

The crews commissioned to bring home several of the torpedo destroyers from England will leave Yokohama by the Nippon Yusen Kaisha's steamer Zamba Maru.

THE Chinese Government has officially reported to the Japanese Legation that the arrears of the judemnity to Japan will be fully paid on May 6th next.

A GRAND celebration of the thirtieth anniversary of the removal of the capital to Tokyo is to take place on the 10th instant. The Emperor will he present during part of the ceremony.

THE Russian Ambassador at Constantinople has informed the Sultan that 20,000 recruits for the Far East would shortly traverse the Dardanelles in vessels of the Volunteer Fleet,

THE battle-ship Fuji, now at anchor in Yokosuka, was opened for inspection to the members of the Red Cross Society from the 5th inst., the number per day being timted to two thousand.

Aran extraordinary meeting of members of the Y. U. Club held on Wednerday afternoon it was decided to build a new Club house on Lot 4-B, adjoining the present premises, which will be occupied until the new building is erected.

Rumouns are affort in Yokohama that the American ship William H. Mercy, which left New York on 10th November last for Yokohama, has been in collision with a steamer on her way to this port, and received damage to her hull.

In connection with the strained relations between the United States and Spain a message has been received by a firm in the Settlement, Yokohama, from New York, instructing them that the purchase of silk should be postponded until further notice.

On the 4th inst. a man named Sakurai Shiro, who had been dismissed from the service of a money lender in Tokyo, attacked and wounded his former employer, his wife and maid servant, with a sword. The girl is likely to die. The man has been arrested.

SINCE last year the Communications Department has been constructing two great telegraph crisis between the United States and Spain pre-lines, one from Tokyo to Sapporo, through ventually purchases for the present. UNIVERSITY OF ILLINOIS AT

tion is to be held in the premises of the Eunai Exhibition, Kyoto, from the rath inst, to the from the capital to Kagoshima, via Nagoya, 15th May. to be finished by March next year.

> THE French Minister Resident III Peking Ins formally announced that in the event of the British claim for the lease of Wei-hai-wei being accepted by the Chinese Government, France would necessarily occupy some other ports in order to preserve the balance of power.

> China has conceded the British demand for the lease of Wei-hai-wei on its evacuation by the Japanese. It is believed that Japan regards the idea favourably. The Chinese Government has announced the opening to foreign trade of the three ports of Funing, Yochan, and Chin-WRUE.

A LONDON telegram of the 5th inst. says togarding the relations between the United States and Spain ;-Spanish and American statesmen express the gravest fear about the situation, Work in the two armies and navies is continu-ing day and night. The Spanish army is ready for mobilisation at any moment.

THE Times publishes a telegram stating that China has agreed to the French demands for a railway to Yunnan, the lease of a coaling station at Kwangchwan, the non-alienation of the Previnces of Kwangtung, Kwangei, and Yunnan, and the appointment of a Frenchman as director of the Imperial

THE steamer Esashi Maru, of Hakodate, struck a submerged rock early on the 26th ult, while on her way to Otaru, and is said to be breaking up. Fourteen of the passengers are reported in have been safely landed, while the remainder, whose number is not stated, are reported to have been drowned.

Owing to nearly all the available steamers being engaged in the transport of foreign rice to Japan, the cotton spinners are now greatly inconvenienced by lack of steam transport for cotton from Bumbay, and recently Mr. Wata-nabe, Director of the Cotton Spinning Association, came up to the capital to negotiate with the Nippon Yusen Kaisha for the special dispatch of a steamer to Bombay.

ALL hopes of peace bet ween Spain and the United States are reported to have been abandoned. The Spanish Cabinet has informed the American Minister that Spain must adhere to her resolve to wait until the insurgents ask for an armistice. Spanish patriotism # thoroughly aroused. Numbers of Spanish shipowners are applying for letters of marque, and privateering will be an important factor of the war.

THE Import market generally is as suggish as it was last week, the high rates of interest demanded by the banks and the unsettled state of affairs in the Far East contributing largely to this end. Cotton piece goods, yarns and woollens are only dealt in for immediate requirements, while in almost all lines of metals stocks are accumulating and many orders remain unexecuted owing to the inability of the dealers to pay up and take delivery. In kerosene and sugar some little business has been done, but not on a large scale. Numerous shipments of rice from Saigon, Bangkok, Rangoon and Tongking have arrived both at this port and Kobe. The quotations for this rice vary from yen 5.10 uncleaned to yen 5.90 cleaned. Exports have been very light during the week, nothing being done in ton and very little in silk, the

### SPIRIT OF THE VERNACULAR PRESS.

Under a constitutional government no secrecy ought to be observed with regard to affairs of domestic administration. Finance, education, and such matters ought to be managed on lines perfectly clear and intelligible to all. But a different rule applies to foreign politics. In that region it in the custom of all Governments to observe secrecy. England is to some extent an exception. Replying to questions put in the House of Commons, or delivering speeches on public occasions, the Ministers of the Crown occasionally make declarations as to the Goverament's foreign policy. That, however, is an exception. The general rule is secrecy. Experience shows it to be a necessary rule, and its necessity is recognised in practice by all intelligent nations. Look at Russia's case, for example. Until quite recently she seemed to have complete command of the situation in Korea. By cajolety at first, by a more or less arbitrary display of strength afterwards, she succeeded in making her influence paramount. et she suddenly stepped aside, abaudoned all the advantages the had gained, and virtually effaced herself. It does not appear, however, that the Russian people show any impatience or that they clamour for an explanation. They understand perfectly well that their Government is not acting unadvisedly; that it has some pro-found purpose in view, and that it must be trusted to carry out its plans. In truth foreign politics and domestic politics are radically different in one important respect. A mistake in the former is, for the most part, irretrievable, Japan has never got over the terrible blunder made by Viscount Minra; it will stand against her for many a day. Hence it is that everything resembling precipitancy, every premature adop-tion of a hard-and-last line, must be carefully avoided. Foreign politics are a series of compromises. A nation yields in one direction to gain in another; retreats at one point to ad-vance at another. The Ministers entrusted with the direction of foreign politics must be left a free hand, and not embarrassed by popular in-quisitiveness. Affairs in the Far East have reached a parlous condition. Germany has reacted a parious condition. Germany has obtained a commercial pied à terre at Kiso-chou; Russia has virtually established herself in Lizotung; England and France show signs of corresponding activity. In such a crisis Japan's policy requires the most skilful and circumspect direction. The people appreciate the fact and are remaining silent, trusting the Government to adopt wise courses. But their silence must not be consumed as evidence of thoughtlessness or indifference. They are keenly auxious and are not without atrong opinious. But they recognise that the Government must not be embarrassed by inconvenient inquiries and rash demonstrations

The above in an epitome of the Fift Shimpo's views. Evidently our contemporary's purpose is to encourage and maintain the state of reticence and self-restraint which it represents as already existing.

The Kokumin has an article urging the importunce of educating a spirit of maritime enterprise among the people of Japan. Apparently the ultimate purpose of the writer is to attract attention to the advisability of naval expansion, and to correct the old-fashioned tendency to attach paramount value to the land forces—a tendency which had its origin in pre-Restoration days when the laws interdicted over-sea voyages and the building of oceangoing ships, and when fighting was practically confined to the army. The Rokumin's thesis extends, however, to commercial maritime enterprise also. Its chief contention is that the only domain where Japan can hope to accomplish great things is the sea. Territorial expansion is not possible for her, but the ocean touches her on every side and invites her to profit by the innumerable routes and opportunities that it offers. Sundry statistics are adduced to prove that there will soon he as space for the Japan. Is it purely a selfish purpose? Possibly ese in Japan and that agriculture man not conherence in the sequel of a secret arrangement.

The recent complications at the Fine Arts time to occupy the people's attention or taken in the sequel of a secret arrangement.

School resulting in the resignation of Mr. Digitized by Google

supply their wants. But as the figures are distinctly erroneous in some important instances, re refrain from introducing them. Indeed, the interest of the article centres entirely upon the evidence it affords of the growing disposition to advocate naval expansion.

People talk of Russia in though she were immensely powerful and invincibly resolute. Powerful she certainly is in Europe, but her strength in the Far East is insignificant. quote from the Yomiuri Shimbun). From the moment that war breaks out, her communications with this part of the world are virtually severed. Her ships could not pass the Suez Canal, and could not obtain supplies of fuel for the voyage. It is precisely because she is so weak that she desires to obtain Talien and Port Arthur, for the possession of those places would enable her to establish an independent route from Europe and to mass a strong naval force in these seas. At present her condition would more correctly be described as one of weakness than as one of strength. With regard, again, to the character of invincible resolution attributed to her, history does not endorse the impression. The advantages gained by her in her war with Turkey in 1774 had to be surrendered in 1857, and the concessions embodied in the Treaty of San Stefano in 1877 had to be materially reduced at the Berlin Conference immediately afterwards. Russia's grip in not unrelaxable. She yields to necessity as do all Powers. Nothing is more essential to the successful conduct of foreign affairs than to look at both sides of every problem. Russia, studied attentively, is not the invincible giant that the Japanese have been wont to count ber since the retrocession of Liaotung. For the rest, no single State can take its own way in these times without regard to the interests, direct and indirect, of others. The records of Ito Cabinets do not dispel all apprehension that the country may incur loss through the pusilisnimity of its statesmen or disappointment through their imperfect grasp of the situation. It is to be hoped that such fears will not be realized on the present occasion.

The Hochi Shimbun has an article commiserating the Chinese inhabitants of Wei haiwei because they are about to lose the protection of the Japanese. It would appear that not until the Japanese occupation of the place did the Chinese become acquainted with the delights of living under just and upright admi-nistrators, and being secured against the extortion and corruption of which they are the constant victims under their own officials. It would have been better for them had they never had a glimpse of sunshine, for the darkness which is again about to fall upon them would then have been less unendarable. The Hochi says that they are much perturbed at the prospect of the Japanese evacuation in May.

\* \* \* The duty of preserving the peace of the world devolves upon all countries, says the *Tokyo Asahi*, but not in an equal degree. China and Korea, for example, can not even secure tranquillity for themselves, and are, of course, incompetent to take any practical thought for the peace of other countries. Then, again, geographical considerations come into the question. Events occurring in Africa can not possibly be counted within the range of Japan's purview. But in the Far East, she has a responsibility to discharge and a duty to fulfill. What ought to be her attitude under existing circumstances? It is stated that Great Britain has organized a naval demonstration in the Gulf of Petchili and has asked China for a lease of Wei-hai-wei. That port is at present in Japanese occupation, and England has paid due attention to the fact by making the lease which she nake for conditional upon the evacuation of the place by Japan after the payment of the Indomnity. apan has no reason to complain on that score, But what is the purpose of England's policy?

with Japan. Pussibly it is in the nature of a Japanese recognition of Eugland's services in supplying funds for the discharge of the Indemnity. Leaving aside such conjectures, however, the public would like to know the motives of Great Britain's procedure. After the acquisition of Kiao-chon by Germany and Port Arthur by Russia some measure to redress the balance of power became plainly necessary. But Japan's continued occupation of Wei-huiwei would have been such a measure, and it does not appear that less imperative reasons presented themselves for her remaining in posses. sion than for England's entering into it. Is England cooperating with Japan in this matter? Or has Japan made up her mind to retire from the place incontinently on receipt of the residue of the Indemnity? If the latter be the case, Japan is not discharging her responsibility as one of the guardians of the perce in the Far

The Nippon writes in characteristic style about the opening of the country and mixed residence. It says that the problem presents no difficulties at all so far as foreigners are coucerned. The trouble will be with the Japanese themselves, who may show a want of discretion. In business matters there is nothing to be apprehended. The Japanese can easily form guilds and take care of their interests. Great advantages may be anticipated from the experience of foreigners and from their capital, The more numerous they are the better. Paltey matters of official management and local administration need not perturb any one. As for the prisons, they certainly require improvement. Old abuses have not been swept away. But it is absurd to say that improvements should be effected for the sake of foreigners. The law considers the crime, not the criminal. It makes no distinction of persons. Very likely a foreign prisoner would find barley diet diengreeable. So, too, a Japanese imprisoned under Russian regimen in Siberia or under French in New Caledonia would suffer much more than if he were imprisoned in Japan. Such things can not be helped. Circumstances alter cases. To expect that they should not would be extravagant. There is much talk, too, about the necessity of studying foreign languages. That is all very well, but what for? As a mere question of erudition? Or for the convenience of foreign visitors? Erndition is a capital thing, but it is a little ridiculous that people who can not read newspapers in their own language should want to study foreign tongues in order to bring themselves into touch with the affairs of the world. The average man can get all the information he needs about such matters by perusing the vernacular newspapers. At all events, there is no occasion for liurry. Mixed residence does not make eradition more essential than it is already again, the idea be to promote the convenience of foreign visitors, it seems a little too goodnatured. The opening of the country is not like the opening of an international exhibition to which people are invited from all quarters as guests. Business intercourse is the chief thing to be considered, and for purposes of business the best thing is "pidjin English," unless a man can recken on two or three years of dif-gent study. "Pidjin English" goes a long way and seldom betrays one into mistakes. Instead of floundering among intricacies of case, tenre, prepositions and so on, it is easy and safe to say "me go Yokohama," "me arrange No. 1." Ordinary folks had better take the simplest and most convenient conte instead of overtasking their strength. Interpreters, of course, will be in demand. Just as the need of shorthand was not appreciated fully until after the Diet met, so the need of interpreters will be felt very keenly when the country is opened. But there will be nothing andden. No great ingress of foreigners is to be anticipated. In short, the Nippon treats the whole question as coming quite within the range of every-day work, and an not deserving of any anxious attention.

Okakara, the President of the School, are commented on by the Nichi Nichs Shimbun. teference is made to the exact causes of the trouble. The Nichi Nichi deals rather with the general subject. It denies that Japan has hitherto had any "fine art" (junsei bijuisu). in the true acceptation of the term. Her art has been simply decorative, or applied (koger bifutsu). It has been much praised by foreigners, and doubtless it possesses many excellent qualities; but it is, after all, an art of narrow range, rather peculiar than noble. There have been persons who, with axes of their own to grind—the Nichi Nichi mentions Professor Fenollosa among the number—insisted that Japanese art had some specially excellent features which placed it above foreign art and entitled it to independent culture. But that view will not bear candid examination. The Japanese people. are not artists, in the true sense of the Their gift is manual dexterity. They should cultivate that for all it is worth, but, at the same time, should study the fine art of the West. The mistake made at the so-called "Ait School" is that fine art and applied art have been confounded. The two should be kept sepa-Painting, architecture, and sculpture should be the subjects of instruction at a fine art school; other accomplishments should be cultivated at a school of applied arts, which might, if necessary, he adjoined to the fine art school. It is much to be regretted that the names of those honoured as "Imperial Artists" (Teishitsu gigei-in) do not include any sculp tor or painter in Western style. Artists of the Occidental school have struggled long and manfally against adverse circumstances since Mr. Takahashi Yuichi and Mr. Goseda Heriu started an academy at the beginning of the Miff era. Their achievements have not been great and their conduct has not always been free from causes of censure, but, on the other hand, their difficulties and embarrassments have been painful. They deserve the sympathy and support of wealthy men. The whole subject demands to be viewed differently by the Authorities, and the culture of the arts should be placed on a new footing.

### JAPAN WOMEN'S CHRISTIAN TEMPERANCE UNION.

The annual convention of the Japan Women's Christian Temperance Union opened on Saturday morning at the Union Church, Yokohama. The Union, which has done much good work among the Japanese, has for its president Mrs. Yajima, principal of the Joshi Gakuin, and Mrs. Inagaku and Miss Pairish, the representative of the American Section of the movement, are among its controlling splitts, while Mr. Ando Taro, ex-Minister at Hawsii, Judge Miyoshi, Mr. Tsuda Sen, Mr. Ninomiya, Mr. Hayashi Shigern (President of the Yokohama Temperance Society) and others have greatly interested themselves in its opera-The present occasion was more than usually interesting on account of the banner presented by the Union for the largest proportional increase of membership having this year come to Japan-a fact which says much for the energy of the management and thoroughness of the propagandist work.

The convention opened with a prayer meeting and a business session, when addresses of welcome from the churches and lay organisations, were read, and Committees, &c. appointed. In the afternoon the various reports were presented, showing good progress in all directions' and poems, papers, and music were given by the girls, while the Hon-Taro Ando delivered an impressive address on the evils of intenperance.

The evening meeting was largely attended. After an organ voluntary by Mr. Edward Gauntlett and devotional exercises. Miss Parrish prevented the banner with a few appropriate remarks of praise and encouragement. It was a beautiful expanse of while silk, and represented woman holding up the world-as appropriate emblem of the potency of feminine with age. Although remarkably wily they hope their representations are not regarded they have influence in the affairs of the human tace. On to bag him before long. influence in the affairs of the hyman race. On to bag him before long.

either side of this central figure were the words "For Gud, and home, and every land" and "Not willing that any should perish," while below was the inscription "World's prize Banner, 1897." Mrs. Kaji Yajima and Mr. K. Ito also spoke, and the Rev. G.H. Ballagh, in a neat speech, congratulated the Union on its achievement. Vocal sols were given by Miss Tsune Yamada, Misses Allen and Spencer, and Mrs. Garst. The church was beautifully decorated with palms, evergreeus, magnolias and Japan-eae flags, while a large picture of the late Miss Frances Willard, the President of the times, was displayed.

On Sunday morning a sermon was given at 9 a.m by the Rev. Hosokawa, and Dr. Meacham preached on the subject of "The relation of women to the Temperance Reform," making special allusion to the life work of Miss Willard. In the afternoon a memorial service for Miss Willard was held, and in the evening a mass meeting, at which addresses were given by the Pastors of the Settlement, took place.

### THE JOSHI GAKUIN.

A correspondent writes :- The opening of the session of the above Institution took place last week in the commodious Chapel, No. 33 Kami Nibancho, Tokyo. The hall was filled with pupils, graduates, friends, and patrons of the School. An interesting programme was gone through very successfully, the pupils evincing great proficiency in music, essays, recitations etc. Two English essays of considerable merit wate modestly and distinctly read by Miss Tesu Motaki of the graduating class. The address of the Rev. S. I. Milliken, a Presbyterion clergyman of Philadelphia, U.S.A., on a visit with his wife to a daughter, long a teacher and director of the School, was a happy effort, giving the young ladies high and lofty ideals of their Mission in life, and how best to meet them. conncelled them not to be dissatisfied with their environment but rather to make the home, the school, the community in which they are placed, the sphere for the accomplishment of the sweet-est and holiest duties of life. "Better to fill the home with sunshine, than to shine as a star in society."

The achool has the reputation of doing therough work, without attempts at, or striving for effect. One modest little girl was pointed out as not making a single mistake in her English grammar examination. The beautiful voices of several of the pupils gave evidence of unusual natural gifts and careful training. Mrs. Ya-jima, Japanese Principal, presented diplomas and certificates to twenty-six pupils and graduates of the different departments of the School. A feature of some interest was the singing twice over of the beautiful verse of H.M. the Empress' poem on education, and a class song composed by a member of the graduating class and sung beautifully by the four graduates.

The programme was as follows:

The programme was as follows:

Piano Duet, Sonatine, Diabelli; Misses M.

Yoshikawa, and K. Matsuda; Churus, "Christ
the Lord is Risen;" Essay, "A Japanese Heroine," Miss T. Nakann; Vocal Trin, "The
Gift of Spring," Smart; "Misses T. J. Kushihe,
M. Yoshikawa, and T. Mitseli; Piano Sola,
"Expectation," Concone, Miss T. Nagano;
Essay, "Shikuji," Miss N. Fujimoto; Chorus,
"Thon Hast Ascended;" Piano Solo, "Spring
Song," G. Merkel, Miss Y. Tsuda; Essay,
"Shiji," Miss J. Kushihe; Organ Solo, Voluntary, Löw, Miss Y. Kushibe; Vocal Solo, Chorus,
"Sweet is Thy Mercy," Barnhy, Miss J. Kushibe,
and others; Essay, "Friends," Miss T. Moteki,
and others; Essay, "Friends," Viocent, Misses
Y. Kushibe, and K. Karo; Song composed by the
Empress; Class Song, "Saniku," Words by Miss
M. Omori; Address, Rev. S. J. Miliken; Chorus,
"Halleluyah," Schubert.

A tiger, measuring 74 feet in length and weighing 210lbs, has been brought down from Kuliang and sold for \$80. It had been killed by one of the trap guns. The native hunters report having seen a very old tiger, nearly white

## CRISIS.

At a conference of Progressists held at the Kairaku-en, Nilionbashi, Tokyo, on the 4th inst. the following resolutions were passed unanim-

1. With a view to securing the peace of the Far East, with which idea Japan withdraw from Lisanas, with which her japan within the Lind-ning, strong protests must be made against the action of Russia and Germany.

2. In case Russia and Germany do not beed

aur profests the Japanese Covernment must take up a strong attitude regarding the evacuation of

After the resolution was approved an acting committee was chosen, Messrs. Shiga Juko, Kudo Kokao, Oishi Masami, Faguchi Ukichi, Kono Hironaka, Suzuki Shigeto, Komuchi Tomotsune, and two members of the Upper and Lower Houses being elected. This committee will wait on the Premier shortly, and if

### JAPANENE PUBLIC OPINION ON THE SITUATION.

The Jiji Shimpo, placing credit in the telegram that the British fleet has occupied Port Arthur, and that Her Ma-jesty's Government has declared Great Britain's intention of seizing the place unless China agrees to lease Wei-hai-wei unless China agrees to lease to England, says that Great Britain evidently entertains apprehensions about the by the Japanese. China's inability to retain possession of it is a foregone conclusion, and if it falls into the hands of some State other than England, the balance of power in the Far East will be completely upset. Great Britain gave to China the clearest possible warning that, should the latter agree to Russia's demands, the balance of Power would be disturbed and England would have to adopt measures for redressing it. There could be no doubt, therefore, that under the circumstances England was com-pelled to take some step. The step that she has taken is very exceptional. Port she has taken is very exceptional. Arthur virtually belongs to Russia. China has leased it to her, and she has entered into possession. Hence the demonstration made by the British fleet and the declaration made by the British Government amount to an announcement that England will not respect any arrangements concluded without her consent and in defiance of her protests. It is now quite plain that the movements of the British ships are not intended as a demonstration against China alone, but as a proclamation to all countries that Great Britain is determined to make her voice heard. If Germany obtained Kiao-chou by moving two or three ships, and Russia procured the Liaotung Peninsula without marching a soldier, it is not to be supposed that such a Power as England could have the slightest difficulty in getting a lease of Wei-hai-wei. The strong naval movements now in progress are consequently intended for the information of Western Powers, not for the information of China. If England could be sure of Japan's continued occupation of Wei-hai-wei, she might be content to let matters stand so far as that place is concerned. Her fears are for the ate of the port after Japan evacuated it. Her present attitude is one of extraordinary resolution. Some may regard it as an attitude calculated to precipitate war, but such an unmistakable display of determination is in truth the best way to bring about a solution of the present difficulties.

The Jiff writes also on the subject of the attitude that the Japanese people should maintain. It reviews the history of the retrocession of Liaotung, and says that the Japanese were not able to understand why their country's occupation of a portion of Manchuria should have constituted a menace to the peace of the East, as the three Powers affirmed that it would, Nevertheless, since Japan's original purpose in making war had been to establish conditions conducing to permanent peace, she refrained from obstinately adhering to acquisitions of Manchurian territory at the cost of a fresh appeal to arms, and acquiesced quietly in a material reduction of the fruits of her victories. It is not to be supposed, however, that her tacit acquiescence signified content or approval. On the

Doubtless the arbitrary and unjustifiable are the three Powers possessing incomaggressions of European States in the very regions from which Japan was required to withdraw must produce a strong effect upon the mind of the country, and recently. But Russia has obtained Talien may even lead to a recrudescence of anti- and Port Arthur, and England is on the foreign feeling. But all anti-foreign de-verge of obtaining Wei-hai-wei. China's monstrations would be perfectly futile communications with her two capitals, monstrations would be perfectly futile communications with her two capitals, and might be mischievous. The people rouse trust their statesmen to do the best manded by foreign States. In short, the

The Yomiuri Shimbun expresses great Great Britain and Russia will be equalized, admiration for the rapid and resolute Japan, on the contrary, will be left out methods of England's foreign policy. It altogether in the cold. She will have lost notes that when Russia entered the everything. field as a claimant for the Liaotung Peninsula, England refrained from making any direct protest to Russia, and contented herself with warning China that if the Russian demands were acceded to, the balance of power would be disturbed in the Far East and England must take steps to redress it. The motive of British procedure on that occasion was quite plain. Russia is a formidable adversary, and the perils of defying her are much greater than the profits to be acquired by defeating her. But China can be easily coerced, and considerable results can be obtained at small cost. England therefore selected China as vis-à-vis in preference to Russia, and her demand for a lease of Wei-hai-wei was perfectly in accord with that line of policy. But now comes the news that her ships have entered Port Arthur, and that she intends to hold the place, quite irrespectively of its lease to Russia, until China gives a pledge to lease Wei-hai-wei. That is a striking example of boldness and celerity. Russia sees herself confronted by the contingency of war with a Power far stronger than she is at sea. The only way to avoid the war is to induce China to accede to England's de-mand. Therefore Russia will bring all possible pressure to hear on the Peking Government in order to induce it to promise the lease of Wei-hai-wei. People are fond of talking of the weakness and want of ability that characterise Great Britain's foreign policy. There may be some grounds for such a criticism in ordinary times, but let England's interest be seriously menaced, and she steps out at once, defying the whole world and plainly showing her contempt for other nations (shriye ni nirami-tsukeru is the expression used by the Yomauri, which signifies "to glare at contemptuously over one's shoulder"). What a contrast she presents to Japan! Wei-hai-wei is at present in Japan's possession. She is under promise to surrender it as soon as the Indemnity is entirely paid off. But the promise was made under conditions totally different from those now existing. Japan would be perfectly justified in seeking to prolong her occupation of the port, Yet her statesmen have not made the slightest move in that direction. They seem bent upon evacuating Wei-hai-wei without a word. In short, Japan makes no figure at all in all these complications. She has a strong army; she has a strong navy; she has forty millions of patriotic people; but she has no foreign policy.

The Kokumin Shimbun has a short article insisting that Japan should either re-tain Wei-hai-wei or obtain some other contrary, the feelings of the people were port in exchange for it. Our contempostrongly excited, and they curbed them raty's line of argument is that Japan is with difficulty. That is the wisest course allowing herself to be effaced altogether reputation alone, but also to the cause

to pursue on the present occasion also, at this crisis. England, Russia, and Japan parably the largest interests in the Far East. They stood on an equality, so far as their rights were concerned, until quite that is possible under the circumstances. General position in the Far East will be by the Japanese. China's inability to

> We have already stated that public opinion in Japan begins to show signs of considerable excitement with reference to the Far-Eastern problem. The growing: sentiment is, of course, reflected in the columns of the vernacular press. politicians of the Opposition are evidenty disposed to make the Government's self-contained policy an object of violent attack, and to rouse the nation to strong protest.

The Mainichi Shimbun (Progressist) everts to the story of the retrocession of Liaotung and represents the incident in a light calculated to create indignation in the minds of readers. The gist of our contemporary's article is that, whereas the pretext employed to drive Japan out of Liaotung was that her occupation of the place would endanger the peace of the East by rendering the situation of Peking precarious, the very countries by whom that pretext was employed are now engaged in seizing the same territory for themselves. It was never a prudent policy on Japan's part to become the possessor of a large treat of territory in Manchuria. Her resources would have been severely taxed to maintain herself there, and the advantages would not have been commensurate. But she certainly needed a naval station, and the peninsula ought not to have been surrendered without some acquisition in that sense: Above all it ought not to have been surrendered without a clear understanding as to the principle involved. If Japanese tenure of the place endangered the peace of the Orient and menaced the security of the China capital, tenure by any other foreign Power must have the same consequences. In restoring the territory to China, the Japanese Government ought to have insisted on international recognition of the principle that no subsequent alienation of the same territory should take place. It ought, in fact, to have been made quite clear that Japan abandoned the fruits of her victories for the sake of securing the integrity of the Chinese empire and thereby preventing any dis-turbance of the peace of the East, and to that end the three Powers which interested themselves directly in the matter should have been required to give a guarantee that not only would they themselves abstain from encroachments upon the regions in question, but that they would also combine to protect them against encroachment from other quarters, as they had combined to protect them against Japan. Had that course been adopted by the Japanese Government, China would have recognised the sincerity and uprightness of this coun-

for which she lad fought, the tranquillity of the Orient. Unfortunately nothing of the kind was done. This country simply bowed its head to the mandate of the three Powers, and accepted a money payment in lieu of its territorial acquisitions and of the moral rights obtained in the war. The net result of Japan's victories was that she exposed China's weakness to the world, and then left hey neighbour to be preyed upon by everr aggressive Power that chose to stretch out hands of spoliation. She is now a spectator of the results of her blunders.

The Mainichi heightens the effect of its sensational writing—which already derives sufficient force from the truths it embodies-by reporting that the Cabinet, at its meeting on the 2nd instant, resolved not to interfere in any way in the complications now occurring but to play the part of an uninterested spectator. It is admitted that this version of the Cabinet's decision is based on hearsay only, but the Mainichi thinks that it is just what might be expected from the present Ministry. For what purpose, then, asks our contemporary, has Japan spent hundreds of mil-lions of yen on her army and navy?

The Hochi Shimbun (Progressist) writes even more strongly than the journal we have just quoted. Its language is directly incentive to war with Russia. There should not be the least difficulty, it saysin determining Japan's policy at the present juncture. The situation is precisely analogous to that which existed at the time of the war with China. Japan entered upon that war for the purpose of establishing the independence of Korea, which was rendered illusory by the attitude of China. Japan believed that the peace of the East could not be maintained unless the independence of Korea were secured, and she did not shrink from war to attain that end. Russia now occupies the place that China held in 1894, and the China of to-day is the Korea of that time. Unless the integrity and independence of China are maintained, the peace of the East can not possibly be preserved. But China is being torn to pieces. The integrity and independence of her empire will soon be idle words. Who is the aggressor? Who is the destroyer of peace? Who was it that drove Japan out of Manchuria? Who is it that has now seized Mancheria? If Japan did not hesitate to enter the lists against her neighbour, her kinsman, her natural friend, China, why should she hesitate when an alien aggressor, Russia, has to be faced? To be true to herself she must stand forth boldly now. A greater task faces her, but that simply means a greater effort on her part. She must be consistent in her policy. Whatever reasons existed to fight China in 1884 exist with incomparably greater force to fight Russia to-day. There is no excuse, no palliation, for Russia's conduct in Manchuria. To look back upon the events connected with the retrocession of Liaotung and to contrast them with the events that are occurring now must make every Japanese thrill with indignation. If ever there was a time when the country should assert itself, now is the time.

The Nippon also writes in an indignant strain. The gist of its contention is that, by sitting quiet throughout this crisis, will soon come. There are other Powers Japan has allowed herself to be completely effaced. The coast of northern China less. When she gave Kiao-chou to Ger- his confederates at its true value, for he has passed, or is about to pass into the many, she had to anticipate Russian Ukinging the month of the Devil and compares UNIVERSITY OF ILLINOIS AT

tion, including the valley of the Yangtsze, have been brought within the sphere of England's influence. Chusan is in effect has to anticipate French demands, and British, and Samsha also will soon have the Union Jack floating over it. In short, from Shantung to Hongkong, Great Britain is paramount, and southward of Hongkong France may be said to be mistress. Japan is totally excluded. Her position in Formosa and the Pescadores counts for nothing. Germany's seizure of Kiao-chou was an act of piracy. Russia's action in Liaotung is in direct contradiction of the grounds upon which she procured the retrocession of the place by Japan. Great Britain's procedure with regard to Weihai-wei, which is now in Japan's possession, belongs to the same category of proceedings. The Government must choose one of two courses. It must enter an emphatic protest against the action of Germany and Russia, and it must announce its refusal to agree to the unconditional lease of Wei-hai-wei to England. The alternative course is to abandon all expansion of armaments and step out of the Far-Eastern arena altogether.

The Chuo Shimbun (National Unionist organ) writes in a different strain. It does not offer any definite advice as to the course that the Japanese Government ought to take, but it represents Russia as having intrigued by every means in her power to prevent the leasing of Wei-haiwei to England. Wei-hai-wei in British occupation would destroy the usefulness of Port Arthur as a Russian naval station. Russia knows, however, that even in combination with France she would have no chance against England in the Far East if swords were drawn. She has been obliged, therefore, to resort to intrigue, endeayouring, on the one hand, to excite Japanese public opinion, and, on the other, to prevent China from paying the remainder of the Indemnity. France is abetting Russia by threatening that if China accedes to Great Britain's demands, a catalogue of French demands also will have to be considered. But England pays no attention to these obstacles. She steadily pursues her path, and already her demand for Wei-hai-wei, subsequently to its evacuation by the Japanese, has been acceded to by China. The Chinese Government is like a baby among grown people. It has to do exactly what it is told to do. At last, however, it is realizing the necessities of the situation and adopting the only method of preserving some of its belongings—placing them at the service of all nations as marts of general trade.

The Kokumin Shimbun (pro-Progressist) reviews the course of recent events briefly and strikingly. Germany probably took Russia into her confidence before seizing Kiao-chou, but the seizure nevertheless disturbed the balance of power from Russia's point of view. Hence Russia's measures with regard to Liaotung. But with Russia at Port Arthur and Talien the situation became intolerable for England. Hence her action with regard to Wei-hai-wei. These three Powers, then, have redressed the balance so as to suit their convenience. France remains, and France has given notice that her turn

guardianship of Russia, Germany, and demands, and they came. When she gave England. The shores of the central por- Liaotung to Russia, she had to anticipate Liaotung to Russia, she had to anticipate British demands, and they came. When she gives Wei-hai-wei to England, she they will come. All these Powers have interests in the Far East. But to Japan it is a question of more than interest: it is a question of life and death. Yet the Japanese Government is not heard from. What does it propose to do?

### " SCOTUS."

It is gratifying to observe that we furnish healthy and lucrative occupation to our friends. "Scotus" peppers us with broadside after broadside of his popguns through a column and a half of the Kobe Chronicle, and seems to be quite pleased with his own performance. We like to see him amused, and trust that his readers also enjoy the spectacle of his fumes and flashes. At the end of his numerous salvoes of blank ammunition, he gravely advises the Kobe Chronicle to leave us alone. Perhaps that would be wisest, and as "Scotus" is a goodnatured sort of soul, we presume that, like the lecturer on temperance who made himself tipsy by way of awful example to his audience, "Scotus" has been displaying in his own person the consequences of attacking us, We have already had occasion to eulogise his logic. We now extend the compliment to his consistency. He says that all his assaults upon Caliban, the coolie and the jails; all his talks about "meaning smiles" and the dreadful conduct of Japanese students; all his threats about appealing to a wider audience to procure the universal condemnation of these rude lads and truculent labourers, have been simply a trap to draw the Mail, and to obtain materials for a pamplet wherein our controversial methods might be shown up. A little hard upon Caliban, the coolies, and the students, perhaps, to be made the corpus vile of such a device. But let that pass. The evidence of our snarer's consistency is that while he himself complacently claims, to have been setting traps to draw us, he declares that the sin of "stirring up needless strife" lies at our door. Those two propositions hang together artistically. Had "Scotus" stopped there, he would have made quite a pretty little display of fireworks. But why does he spoil the effect by borrowing that rusty old blunderbus so often discharged at our head by our sporting local contemporaries? Why does he endorse their plaintive plea that if the Mail had never checked their liberty of abuse, they would not have degenerated into licence; if the Mail had not protested against their prejudice, they would never have been precipitated into useless attacks upon the Japanese?" Truly does "Scotus" call them "useless attacks;" yet he would fain persuade the public that to have suffered controversial defeat at the hands of the Mail justifies an editor in sticking knives into the Japanese. Vicarious revenge of that kind may be pleasing to the rudimentary passions, but to us it suggests the notion of a man who should contend that because a constable prevented him from stealing Paul's coat, no one could blame him for cutting Peter's throat. There is reason to suspect, however, that "Scotus" is indulging in saccasm, and to be considered, however. China is help- that he appraises this stock excuse of

the Fapan Mail with the parson who lived by rebuking the imp of darkness. Still we are paised by any lapse from logical methods on the part of such a scholar as "Scotus"-a logician who, while charging that one of our devices is to "rely on our own clientèle never see-ing the other journal" which we controvert, is himself careful to conduct all his assaults upon the Yokohama Mail in the columns of the Kobe Chronicle. enough. We must not contribute any more copy for the Damoclean pamphlet. Having fallen headlong into the trap set for us, and being now in imminent danger of execution in a brochure-which everybody will read, of course—we have only one hope left, namely, that "Scotus" will not finally enlist in the chorus of irresponsible revilers. A pleasant little sparring match is good in its way, but we seem to discern signs of moral degeneracy about our old vis-à-vis when he shelters himself under the backneyed and hypocritical pretext of the local drawpluckers-the plea that a benevolent desire to improve the Japanese is their motive for vivisecting them. Did he ever hear the story of the Cornish miner who, having fallen down a shaft and been shattered out of all human shape, was re-minded by the parson that "whom the Lord loveth he chasteneth." "Then," whispered the dying man, " Gawd Amighty must ha' been very fond o' we uns.

### GREAT BRITAIN AND RUSSIA.

It is scarcely necessary, we imagine, to point out the utter incredibility of the telegram published by the Yis Shimpo from its special correspondent in Peking, to the effect that British ships have been sent into Port Arthur, and that the British Government has declared its intention of seizing the place, irrespectively of its having been previously leased to another Power, if China refuses to lease Weihai-wei to England. Unless we conclude that Her Majesty's Government has been carried away by a sudden vertigo, it is impossible to place any faith in such in-telligence. The step attributed to England would be a wanton precipitation of war. Russia would have no exit from the situation except to fight her way out of it. She has obtained a lease of Port Arthur and has entered into occupation of the place. She could not tamely allow England to wrest it from her, any more than England could allow Russia to deprive her of Hongkong by force. Besides, the procedure described by the Jiji Shimpo's correspondent would be the clumsiest policy conceivable in so far as its influence on China is concerned. China is threatened with the loss of all her good naval ports in the north. She could scarcely, under any circumstances, suffer greater loss than that now confronting her, and she might not only derive considerable satisfaction from seeing her enemies fight over the spoils, but might even hope to emerge with one of them for protector and ally. The idea that she should cut up her empire in order to prevent those that cover the pieces from flying at each other's throats is too romantic for every-day politicians. We can not doubt that the Fiji Shampo's correspondent has been misinformed. The British fleet is probably at Chefoo, and Her Majesty's Government is awaiting China's answer about Wei-hai-wei. As singularly perverted views that prevail in to the nature of the answer, there can be some quarters with respect to intercourse very little question.

### PERILS BY FLOOD AND FIRLD.

A more wholesome state of affairs would be inaugurated, we venture to think, if a Japanese was not elevated to the pedestal of a hero by the local press. There have been two rather interesting illustrations within the past few days. Mr. E. B. lones, riding along one of the streets of Yokohama, found himself unable to pass four drunken men who occupied the road. Mr. Jones rode against one of them, and a row ensued, the upshot being that one of the Japanese came out with a blackeye, and Mr. Jones had a rather rough time on his way to the police-station. Now the obvious reflection is that Mr. Jones should have dismounted. If the men blocked the road, he had no manner of right to attempt to ride through them. According to his own account, he was riding very slowly. He could, therefore, have dis-mounted without any difficulty. When a cyclist runs into pedestrians under such circumstances, the consequences can not be predicted. It is absurd to infer any general hostility to foreign cyclists on the part of the Japanese lower orders.

The second case is more striking. Four cyclists, attempting to pass the bridge at Enoshima, were asked to pay 6 sen each by way of toll. They considered the charge exorbitant, declined to pay, and when the toll-keeper, assisted by some other Japanese, attempted to prevent them from passing, they aside all resistance and broke through." The toll-keeper followed them to their tea-house; the laudlord of the latter assured them that the charge was correct; but they still declined to pay. On their way home, the demand was again preferred at the bridge and again refused, whereupon the toll-keeper and his friends seized one of the bicycles and a kind of struggle ensued, which ended in a compromise for 3 sen. The newspaper by which the incident is recounted says: "The leader of the party had unfortuna-tely forgotten to bring his revolver, or the affair might have ended very differentty, Apparently this journal thinks that a dispute about the propriety of paying a bridge-toll of two farthings or three farthings per man and per bicycle would have been a proper occasion for using a revolver! Apart from that, however, what is quite plain is that these four cyclists were wholly in the wrong. If they considered the rate of toll too high, they had their proper remedy-complaint subsequently to a policeman. But to "thrust aside all resistance and break through" is an utterly unjustifiable course, which they would not have ventured to take in in any European country. There can be no second opinion about the matter. So far from sympathising with the four cyclists, we do not hesitate to say that conduct like theirs is largely responsible for the bad blood that has been created between foreigners and Japanese in and about the settlements. There was a right way of proceeding and there was a wrong way, and they adopted the wrong way, pursuing it to the bitter end. That they should be held up as heroes by a local journal is merely an indication of the batyesin foreigners and Japanese.

### THE BOOMERANG.

The "deadly parallel" is a very effective weapon when skilfully employed, but every foreigner coming into collision with it has boomerang qualities troublesome to the tyro. For example, a few months ago we took occasion to denounce a theory propounded by the Japan Gazette that England had entered into collusion with Germany, Russia, and France for the partition of China. We said that such an accusation was a monstrous misconception of English character and of the methods of British statesmanship. A few days ago, commenting on England's action in demanding a lease of Wei-hai-wei, we said that some people would probably accuse her of having joined the game of grab, but that such an interpretation of her proceedings would be quite erroneous. The Japan Gasette prints these two statements in parallel columns, intending to suggest that they are contradictory. Does the Tapan Gazette adhere, then, to its assertion of last November that Great Britain has entered into an agreement with Germany, France, and Russia for the partition of China? Does it mean to allege that England's application for a lease of Wei-hai-wei is made in consequence of such an agreement? If not, how can it possibly pretend to think that the present situation bears out its accusation of collusion between England, Germany, France, and Russia for the spoliation of China? A great many strange things have appeared in the columns of the Japan Gasette, but none quite so strange as this pretence that Great Britain, Russia, Germany, and France have formed a partnership for slicing up China. If, on the other hand, the Gazette has abandoned that extremely silly notion, what on earth is the meaning of the parallel it now attempts to draw?

### THE DEMONSTRATION.

Our loyal evening contemporaies seem determined to prove that Great Britain is making herself ridiculous by her naval demonstration. They laugh at every motive perceived by others for her actions, but are careful not to suggest any explanation themselves. In short they would have the public believe that Her Majesty's Government has ordered an idle and silly display, which can not possibly serve any useful purpose and is merely designed to over a pusillanimous retreat made by Great Britain during the recent complications. Doubtless the statesmen now entrusted with the administration of the British empire's affairs would be well advised if they took ship with all speed and came to Yokohama in order to sit at the feet of the journalistic Gamaliels of this Settlement and learn the rudiments of statecraft in our sapient local school. Such of us, however, as do not happen to be gifted with the magnificent insight of the Solons of the editorial stool, may find comfort in the reflection that foreign Powers do not experience any difficulty whatever in deciphering the significance of Great Britain's demonstrations, and that the contempt which her own patriotic subjects take pleasure in heaping upon her actions, is not felt in any measure by other national Cinal from

### THE CELEBRATION ON THE TENTH INSTANT.

A change has been made in the programme for celebrating the thirtieth anniversary of the transfer of the capital to Tokyo, which falls on the 10th instant. The original idea was to organize the chief part of the fête in Uyeno Park, whither it was hoped that the Emperor would proceed and receive an address from the citizens. But for reasons which are not explained, it has now been decided that the ceremony shall take place in the large space opposite the front entrance to the Palace—that is to say, the space within the Sakurada Gate and on the east of Niju-bashi, which, as some of our readers are doubtless aware, is the name of the onter bridge into the Palace enclosure. The Emperor has signified his intention of being present, and, after receiving an address from the citizens, his Majesty will drive through the streets of Tokyo. We understand that very extensive preparations are on foot, and that, among other interesting spectacles, there will be a procession of several hundred geisha from Shimbashi to the Sakurada Gate, Particulars as to time and so forth will doubtless be published during the course of the next two or three days.

It has been given out that the Emperor intended to drive through the streets of Tokyo on the 10th instant, after receiving an address from the citizens in the grounds opposite the Niju Bridge of the Palace. The Nachi Nuchi Shimbun says, however, that the Imperial Household Department has prayed the Emperor to abandon the intention, inasmuch as influenza is very prevalent in the city, and the presence of crowds of people in the immediate vicinity of his Majesty's carriage might prove dangerous. The Nichi Nichi suggests that, under the circumstances, either steps should be taken to withdraw the petition asking his Majesty to honour the ceremony with his attendance, or the celebration should be postponed to a more favourable time. Postponement would certainly seem the wisest course, for the prospect of a fine day is not great. According to indications accepted as conby Japanese weather-prophets, rainy days are likely to be largely in the majority throughout the month.

His Majesty the Emperor has signified his intention of her gpresent at the principal event of the ceremony on the 10th instant, which takes place on the east of the main entrance to the Palace. The Imperial progress through the city will, however, he dispensed with. Preparations are now being made on a considerable scale, large sums having been subscribed by the citizens.

### THE SITUATION.

The British fleet appears to be assembling at Chefoo. Intelligence received yesterday (4th) in Tokyo indicates that eight vessels were anchored there on the 3rd. There was a rumour in Chefoo that the ships are ultimately to proceed to Port Arthur, but nothing appears less likely. Of course the sensational telegram of the 2nd instant from Peking turns out to be quite baseless. Some people suggest that the story of a British occupation of Port Arthur was purposely circulated in Peking with the idea of alarming the Chinese Government, or the part of the decard had been consigned to their last resting place, made a short buffeeling oration over the grave, expressing the deep sorrow felt by all piesent for the esteemed departed. In this small community it did not often occur to have to lay to rest a loving and devoted wife and mother, as well as a gould and sympathetic friend such as decased had been consigned to their last resting place, made a short buffeeling oration over the grave, expressing the deep sorrow felt by all piesent for the esteemed departed. In this small community it did not often occur to have to lay to rest a loving and devoted wife and mother, as well as a gould and sympathetic friend such as decased had been consigned to their last resting place, made a short buffeeling oration over the grave, expressing the deep sorrow felt by all piesent for the dead of the English Church, was concluded by the various service for the dead, of the English Church, was concluded by the various expension, and they are the mortal remains of the decased had been consigned to their last resting place, made a short buffeeling oration over the grave, expressing the deep sorrow felt by all piesent for the mortal remains of the decased had been consigned to their last resting place, made a short the mortal remains of the decased had been consigned to their last resting place, made a short the mortal remains of the decased had been consigned to their last resting place, made a short the mortal remains of the decased had

Majesty's Representative in that city, desiring to hasten a favorable decision with regard to Wei-hai-wei, suggested the possibility of some such extreme step. But, for our own part, we deem the story a veritable "bunder." British officials do not resort to such devices. The demonstration can have no object except to emphasise England's intentions on the subject of Wei-hai-wei.

### THE BUDGET.

In the list which we published on the 6th instant, showing the decreases effected by the Minister of State for Finance in the various items of the Budget for 1808-o. it will have been observed that a reduction of twenty-four million yen occurs under the heading of "Expansion," and a reduction of five millions under the heading of "Army Expansion." These figures are not to be interpreted as signifying that the programme of Armaments Expansion has been radically altered. In the case of the appropriation for the Navy, the greater part of the reduction is to be referred to the Engineers' Strike in England last year, which so seriously delayed the work on the ships under construction for Japan in British yards that payments which would otherwise have been due have been postponed. In the case of the Army, we are not able to speak with certainty, but we believe that there will be a certain measure of slackening in the rate of progress originally planned, so far as things not absolutely essential are concerned.

The Budget for the 31st year has at last been determined. Below are the details of the decreases:—

	Yen.
Riparian Improvement Funds decreases	
Monopoly of leaf tobacco	3,000,000
Miditary Armantent expansion	5,186,206
Naval expansion	
Organization of Iron Foundry	500,400

### FUNERAL OF MRS. E. 7. MOSS.

The funeral of the late Mrs. E. J. Moss took place on Saturday afternoon. A large number of friends of the deceased lady and her family, including several ladies, assembled at 2 o'clock at the residence. Woodside, Bluff, where the first part of the burisl service was conducted by the Rev. E. Champneys Irwine. Upon the coffin being conveyed to the hearne a long procession of friends and sympathisers, repre-sentative of all classes and nationalities of the community, formed in line, extending almost to the gates of the Cemelery.

The bereaved bushand, Mr. E. J. Moss, and his two sons followed the hearse as chief mourners, and Dr. Wheeler, Messrs, C.D. Moss, Andrew Patterson, E. Powys, J. B. McKinnell and J. W. Hall, acted as pall bearers. On the arrival of the cortege at the Cemetery, where a further large number of persons were assembled, the beautiful service for the dead, of the English Church, was concluded by Mr. Itwine, who, after the morial remains of the deceased had been consigned to their last resting place, made a short but feeling oration over the grave, expressing the deep sorrow felt by all present for the esteemed departed. In this small community it did not often occur to have to lay to rest a loving and devoted wife and mother, as well as a gentle

from the burial service, and the impressive ceremony was over. The grave and the banks around it were covered with masses of beautiful white wreaths, crosses, and chaplets of flowers carried thither or sent by the following sympathising friends:—

# THE PRESIDENT OF THE HOUSE OF REPRESENTATIVES.

It is stated that the candidates put forward by the various parties for the much coveted post of President of the new House of Representatives will be Mesars, Kataoka Koukichi and Hayashi Yuzu on the part of the Liberals; Mr. Hatoyama, on the part of the Progressists, and Messre. Sassa Fomotiusa and Motoda Hajime on the part of the National Unionists. All these names must be well known to readers of the Dief's debates, especially that of Mr. Hatoyama Kadzuo, a distinguished barrister, who held the post of President in the last House.

### ENGLAND IN THE FAR EAST.

the Far East, that England is impotent, that and jibes. It is the fashion, we know, in her diplomatists are old women and that some quarters to laud these displays as her pretensions to sway the situation are fine exhibition of the Englishman's love mere vapouring. concessions or privileges from whose enjoyment British subjects are excluded. The responsibility of adhering to the treaty devolves primarily upon China. England is not called upon to bolster up the Chinese empire simply because it has become a party to a commercial bargain. Her role is limited to insisting that China's ability to implement the bargain shall not Powers. It was, therefore, perfectly consistent on England's part to offer no opposition to Germany's lease of Kiaoopen to the world's trade. She had not because the island, under Japanese rule, would be a free mart for all nations. What, then, should have been her attitude toward Russia's Manchurian proposals, and what has actually been her attitude? Was she to say to Russia:-"If you attempt to procure from China any concessions in the nature of open ports, naval stations, or railway building, you must be prepared for my armed resistance. It is true that I did not interfere between Japan and China under similar circumstances; it is true that I did not interfere between Germany and China. But when there is a question of Russia and China, I intend to to the sword rather than what I have already permitted to Japan such an attitude shows its unreason and unreasonable not absurd. She called the attention of the St. Petersburg Government to the fact that she was already in suffer their disturbance. The St. Petersburg Government replied that a proposal, not accompanied by any menace-the At the same made by it to Russia or any other Power, China's guardian, and to make an invidious and insulting distinction between Russia would have given judgment against ber, maintaining it is very simple. She has a But she could not tainely suffer herself to UNIVERSITY OF ILLINOIS AT

considers that one of two courses must be

be discriminated against merely because her expansion constitutes a shadowy menace to Great Britain's supremacy. A very cursory inspection reveals the immense difficulties of the situation, and shows that England could not have acted differently with any show of reason or prudence. She will have to take steps for equalizing the situation, and since China is thus placed between the devil and the deep sea, there will doubtless be plenty of sneerers to say, as the Japan Times says, that England has joined the game of grab instead of asserting her objections to it at the point of the sword. We would ask these critics whether they consider that China ought to be guaranteed against all the consequences of her stagnation and self-entailed impotence. Do they think that England should have forbidden the opening of Talien at Russia's instance, whereas she had actually expressed a desire to have it opened at her own; and that she should have fought to prevent the laying of railways by Russia in Liaotung and Manchuria because China was not ready, and might not have been ready for another cycle, to lay them herself? The real origin of all these complications is China's unhappy condition. She is like the withered tree of the fable. The nations have been digging about her roots and applying fertilizers for the past fifty years, and they have now reached the more drastic stage of lopping off her branches. It may come to cutting down the trunk also, but that is still a distant contingency. England has no mission to keep the mossy old tree standing. On the contrary, England has always been the leader of the campaign against its sterility. From a political point of view, Russia's presence in Manchuria and Liaotung greatly disturbs the balance of power in the Far East. But that can be redressed. From a commercial point of viewand it is in connexion with commerce only that England has asserted her rightsan open port at Talien and railways in Shingking mean development and progress. England can not reasonably oppose such consummations. It would be within her competence to protest against the grant of railway-building privileges to any one nation exclusively, but she did not protest against Germany's obtaining that privilege at Kiaochou, and she has made no secret of her intention to ask for it on her own account in Yunnan if circumstances be favourable. All these things combine to break down the barriers of China's exclusiveness, and to drag her into the path of progress. China is not helpless. Her fate is still in her own hands. But if she is obstinately bent on not helping herself, England has no commission from Providence to help her.

JAPANESE PUBLIC OPINION.

HERE are evidences that public opinion in Japan is becoming considerably excited about the Far-Eastern situation, and that the country's attitude of apparent quiescence will soon be changed. The Progressists and their political allies are making themselves particularly active. They have held a meeting at which Major-General (retired) Baron OZAWA, of the House of Peers, Mr. TOMITA (ex-Governor of Tokyo), Messrs. Suzuki Shigeto, KONO HIRONAKA, TAGUCHI UKICHI, KO-MURA TOMOTSUNE, HATOYAMA KAZUO, and other well known politicians were present, and have decided to agitate vigorously in favour of their policy. information, unusual secrecy being observed, but there can not be much doubt that the retention of Wei-hai-wei is advocated as essential to the maintenance of Japan's influence in the councils of the nations. It is understood that a deputation waited upon Marquis ITO on the evening of the 4th instant, and advocated the adoption of a strong foreign policy, but of course the Premier's reply is not symptoms of umbrage in connexion with Great Britain's doings. The Tokyo Shimbus, for example, from which, as an organ of the Liberal Party we should not have expected such utterances, accuses England of utilizing the talk of an Anglo-Japanese alliance for the consummation of her own treacherous purposes, and calls upon eth people of the country to rise up and go to the assistance of their distressed neighbour. The same journal's language about Russia is still more emphatic. It speaks in the bitterest terms of her action in driving the Japanese from territory which they had purchased with their blood -driving them out on the plea that their presence there would endanger the peace of the East, and then deliberately disturbing that peace by stepping into the same territory herself. Such doings, says the Tokyo Shimbun, can not be discussed from the point of view of any code of morals and must be condemned by the world as outrageous. The Mainichi Shimbun (Progressist organ) attacks the Cabinet vehemently. It says that Marquis ITO'S policy of retreat is steadily destroying all the prestige gained by Japan in the war with China. She was entitled to protest when Germany took Kiao-chou; still more when Russia obtained Talien and Port Arthur. But the Government remained silent on Mainichí. If the Cabinet now adopt a resolute policy, the nation may still be papa-

adopted: either Germany and Russia must be induced to surrender the acquisitions they have made, or Japan must seek to obtain some advantages which shall equalize the situation for her. But it must be confessed that the tone of the Mainichi's utterances deprive them of much of their value as a sober expression of opinion. They are disfigured by almost morbid hostility to Marquis ITO, whom the writer charges with sacrificing the interests of the country to his own personal ends, and with entertaining fashionable folk at dancing parties, however, acute the crisis in the Far East. The Hochi Shimbun is more dispassionate. It admits that England's hand has been forced and that she could What that policy is we have no definite scarcely have acted differently, but it avers that the situation has become almost desperate for China, and that Japan can no longer stand an idle spectator, like one watching a fire on the opposite bank of a river. There appears to be = general impression that, at a meeting held on the 2nd instant, the Cabinet resolved to refrain from any interference and to evacuate Wei-hai-wei quietly on receipt of the remaining portion of the Indemnity. published. There are naturally some It is to that impression that the present outburst of excitement seems to be chiefly due. Politicians and publicists were not without strong convictions, as the J*iji Shimpo* intimated in a recent issue, but they refrained from any open demonstration, being persuaded that the Government had a plan for steering the country to some harbour of success or compensation. The Yomiuri Shimbun advocates a conspicuously resolute policy, but addresses its advice to the Chinese Government. It thinks that if Wei-hai-wei goes to England, the Gulf of Petchili will be completely dominated by foreign Powers, and China will have to remove the capital from Peking, a step which would probably involve the downfall of the present dynasty. The only course, then, for the ancient empire, once so powerful and respected, still so immense, populous, and potential, is to refuse to accede to England's demand, on the plea that if Weihai-wei passes into the latter's hands. China will be entirely without a naval basis in the north. At the same time the Peking Ministry should address itself to Russia, pointing out that her demands in connexion with the Liaotung Peninsula are responsible for this crisis; that China. having acceded to Russian and German proposals, can not reject England's, yet is unable to grant them without sacrificboth occasions. The impending fate of ing her own naval capacities, and that Wei-hai-wei has at length shown the true Russia's restoration of Talien and Port nature of the situation, continues the Arthur becomes, under the circumstances, unavoidable. Germany should be approached in the same sense. Great cified, but if "drifting" is still to be the Britain will fight, rather than be left out in order of the day, public-spirited men will the cold, and Russia will not venture to have to take measures for rousing the fight an obviously losing battle. So the Ministry from its lethargy. The Mainicht status you will be restored. The Yomuri

is one of the leading journals. Its advice, draw, and that a declaration of competition however unpractical, deserves to be quoted. on her part at this eleventh hour would grams received, and, having once formed

that desire be translated into action a instalment; she has allowed the time for the payment to approach within some vernment must be that England is already in the field as an applicant, and that, unless she withdraws, no other Power's ese politician to whom these practical facts will fail to make themselves intelligible. If Japan, at this eleventh hour, becomes a competitor for Wei-hai-wei, she will be placing herself in direct and fruitless antagonism to Great Britain. She will be assuming a wantonly unfriendly attitude towards England-unfriendly because without the possession of Weihai-wei England can not secure her tradal route to the Peiho and the littoral of the Gulf of Petchili; wanton, because it is out of the question to suppose that England, having priority of claim, will withdraw her demand for a place of such that city has officially informed the Chivital importance to her, in deference to the subsequent application of a State to which the place is of comparatively no importance. Great Britain can not consent to be eliminated from the waters of North is not absolutely trustworthy, but we China. She must have Wei-hai-wei. No deem it very credible. No other course other port will serve her purpose. Had seems to be open to England. There has Japan anticipated the British Government been a generally entertained idea that she in approaching Peking with a proposal for a lease of Wei-hai-wei, she would never have found a competitor in England, and it can not be denied that some But Japan, giving no sign of any such grounds for such a belief existed at the purpose, has allowed herself to be auti- outset. But this is precisely another ex- tion might have assumed a very different cipated. It must be plain to her that the ample of what we have often commented complexion, but with conjectures of that

### ENGLAND AND WEI-HAI-WEI.

HE 'fifi Shimpo's Peking correspondent telegraphs, over date of the 31st ultimo, that the British Representative in nese Government that when Japan, on receipt of the remainder of the Indemnity, evacuates Wei-hai-wei, Great Britain wishes to lease the port. The intelligence intended to strenuously oppose the acquisition of Talien and Port Arthur by Russia,

public models its beliefs on the first telewas that she had demanded certain concessions from China, threatening, in the event of a refusal, to resort to the ultuna ratio, and allowing only five days for China to make reply. Now inasmuch as responsible British Ministers had previously declared, in effect, that England would not suffer any acts of aggression against China such as might restrict the commerce carried on enjoyed by them under treaty, it seemed that, in preferring the above demands, Russia was throwing her gauntlet in England's face. Hence people concluded and Manchuria could not pass into the Russian "sphere of influence" without an appeal to the sword. But the fact is, as we explained very fully in a leading article published on the 14th ultimo, that the probability of England's armed resistance to Russia's demands became exceedingly small after the communications Petersburg at that time. In response VIEFF, it will be remembered, informed HER MAJESTY'S Representative in St. Petersburg that Russia was negotiating for the lease of Port Arthur and Talien for a certain number of years, as well as for a railway across Manchuria, but that she had not demanded Sovereign rights or threatened to send troops, and that, if the ports were leased, they should be opened to foreign trade. That reply from Russia virtually put at end to Great Britain's opposition, for, as we pointed out on the 4th ultimo, the St. Petersburg Government was thus acting strictly within its rights. Russia, in short, was simply following the example set by England in the past, and it was out of the question that the latter Power should claim for itself liberty of procedure which it denied to the former. After M. MURAVIEFF'S representations, then, England had to choose between leaving Russia a free hand and opposing her in an arbitrary and unreasonable manner. Naturally she chose the former course, but, at the same time, she frankly and explicitly warned the Peking Ministry that if it made to Russia any concessions calculated to disturb the balance of power in the Far East, Great Britain would be compelled to ask for some corresponding concessions to restore the balance. Thus China's eyes were fully opened as to what lay before her if she acceded to the St. Petersburg proposals. Had she mustered sufficient courage to resist them, the situa-British Government can not now with on in these columns, namely, that the kind we need not soncern ourselves at

present. She vielded, and it now devolves on HER MAJESTY'S Government to see that Great Britain's position is not seriously impaired. The first step to that end seems to have been a strong naval demonstration in the Gulf of Petchili. Strange to say, the object of the demonstration appears to be greatly misunderstood. It is regarded by some as a menace to China; by others, as a kind of empty parade of force after the occasion to employ it usefully is past. It is, of course, neither the one thing nor the other. It is an emphatic declaration that Great Britain intends to maintain her right of access to the Gulf of Petchili, and that any Power or Powers essaying to oppose the steps which she intends to take for the purpose of securing that right, will have to discuss the question with her in the lists. What, then, are those steps? Apparently the acquisition of Wei-hai-wei as a naval station is one of them. Weibai-wei is incomparably the finest harbour in the north of China. Port Arthur affords space for only nine vessels' anchorage, at present; Wei-hai-wei can accommodate a large fleet. With Wei-hai-wei in her possession, England could not be shut out of the Gulf of Petchili. That is what she has to provide against. The situation has been forced for her, so to speak. It will seem strange, of course, that a proposal for the lease of Wei-hei-wei should be submitted before Japan has evacuated the place, but difficulties of that nature are always susceptible of adjustment. We repeat the belief expressed in these columns some days ago, namely, that the crisis in the Far East is over, and that, so far as the questions recently agitating the public mind are concerned, an era of tranquillity may be looked for.

### FOREIGN PATENTS IN JAPAN.

T is often remarked that by the time a question has been bandied about by the local journals, any confusion originally experienced in solving it becomes worse confounded. The complaint is just. "Superficies" was a case in point, As a legal novelty it perplexed the average Britisher. Still, after full and clear explanation had been given in these columns there could have been no difficulty in understanding it, had not a controversy been started by some of our contemporaries, and out of the consequent war of words bewilderment and uncertainty emerged. The problem of foreign patents is another example. Long ago, and more than once, we presented to our readers a simple statement of the facts, and we patents solely for the purpose of her own venture to say that our articles could not subjects. It is necessarily and properly ordinarily intelligent person. Yet now patent for an article which, having already in almost as much obscurity as ever restriction renders the law useless for the Emigration to Hawaii and America, owing to The main question is, who did Japanes purposes of foreign inventors unless they Obiginal chinginal chingin

legislators, in 1888, enact a law which put their invention into use originally in failed to extend protection to foreign Japan. If they come to Japan and seek a patents? The answer is, because, so long patent for an article which has already as Consular Jurisdiction existed-in other been in use in their own country, they are words, so long as the Treaties remained barred by the terms of the Law. Gerunrevised-a Japanese law extending many nevertheless insisted that whatever protection to foreign patents could not measure of protection the Law afforded have been operative. This statement has already been made, but the Kobe Chronicle out waiting for the abolition of Consular calls it "absolute nonsense." Well, in Jurisdiction, and the result is an imperfect truth the "extraterritorial system" is a arrangement which seems to be causing strange thing and its anomalies may well discontent rather than conferring facilities. puzzle our contemporary, or any one else Mr. Silver Hall, writing in the Japan for the matter of that. However, this is Times, pokes fun at the Law and says how the case stands:-Suppose that a law that it deserves to be patented for its of the desired kind had been enacted-a novelty. But Mr. HALL will now perceive law granting to foreign patents registered that his own misconception is the cause in Japan protection within Japanese domi- of his surprise. The by an Englishman in Yokohama, for example, applies to the Kanagawa Consular Court to restrain and punish the any how! But what will our Kobe conviolation, the Court is compelled to answer: -" We can not accept this application. We take no cognisance of Japanese law which protects the patent in Japan, and registration in England protects it within the limits of HER MAJESTY'S realm only." Singular as that may sound, it is the plain the nature of her laws when she concluded Consular Courts, but of all, or nearly all, the other Consular Courts, those of the United States excepted. In short, while Japan might have extended the protection of her laws to foreign patents registered in Tokyo, she could not have obtained reciprocal protection for her own patents registered abroad so long as the Treaties remained unrevised. It can not justly be claimed, we think, that she should have inaugurated a one-sided system of that nature. Her only course was to wait for the abolition of Consular Jurisdiction. When that becomes an accomplished fact she will join the International Union for the Protection of Patents, &c. In the meanwhile, she has enacted a law of have left any doubt in the mind of an worded so as to prevent the granting of a the matter has come again upon the tapis, been in use in a foreign country, is not a and, so far as we can judge, it is enveloped Japanese invention. Was Germany also ignorant of fact. And it is true not only of British her agreement with Japan, or did the German Government play a trick upon the Japanese? But we need not dwell upon points of that kind. The German Government and all other Governments had had the full text of the Japanese Law in their hands for eight years. They ought not to have been ignorant or easily "tricked." It should be remarked, however, that the concession stipulated for by Germany is not by any means barren. The above difficulty does not apply to trade marks, and many of these have been registered in Japan since the German Treaty was ratified. Pending the abolition of Consular Jurisdiction, however, it can not reasonably be expected that the Japanese should modify their law to suit the convenience of nations which do not guarantee reciprocal privileges to Japanese subjects.

> The recent abnormal rise in the price of rice and other commodities has brought about serious embairassment among the poorer classes.

### JAPAN'S FOREIGN POLICY.

 $\Gamma$ ROM the epitomized contents of leading vernacular journals produced elsewhere in our columns, readers will learn that Japanese public opinion is now divided along the lines of party politics. With one exception, the journals from which we quote are all either Opposition organs or closely allied with the Opposition. The exception is the Chuo Shimbun, which represents the National Unionists, and the Chuo, it will be observed, refrains from any direct discussion of the situation, confining itself to some adroit comments which, while they plainly indicate the trend of its sympathies, are not refused to submit tamely to the second calculated to provoke discussion. It is significant that journals like the Jiji Shimpe and the Nichi Nichi remain silent. They evidently entertain views contrary to those of the Progressist organs, but though its results may prove compenhave no disposition to interfere hastily in salory, did not include direct opposition the controversy. In short, the situation to Russia's projects in Manchuria, may be summed up by saying that the politicians of the Opposition-that is to if it were desirable, to reverse the say, the Progressists-advocate a strong situation. Japan is confronted by accomforeign policy and are organizing an attack upon the Cabinet in connexion with its attitude; whereas the politicians of the other camp-namely, the Liberals and the National Unionists- in common, it may think of inducing England to turn round be assumed, with officials and the bulk of and assist in driving Russia from Manthe independent public, are in favour of churia. A step which Her Majesty's refraining from direct interference in the Chinese question. The point ultimately at issue is, of course, Wei-hai-wei. does not appear that any section of public at Japan's instance. The leaders of the opinion is hostile to the occupation of the place by England qua England. What the leaders of the Opposition think is that Japan should retain the port for herself unless Russia can be induced to abandon the acquisitions she has made in Manchuria. Hence the course they re-proached, as it was approached by Gercommend is that Japan must protest vehemently against Russia's retention of Liaotong, and that, if her protest prove unsuccessful, she must insist on continuing to occupy Wei-hai-wei. The Government and its political supporters, on the contrary, are disposed to acquiesce in the situation as it is now developing in China, and to seek compensatory too late to entertain any proposition from advantages for Japan in another directanother Power now." Thus far the outagitation just set on foot by the Progressists will produce any tangible results so far as the country's foreign policy is concerned. Whether active self-assertion do they recommend when China refuses, on Japan's part would have been wise and useful had it been exercised when Russia lease of Wei-hai-wei to Japan? Do they first formulated her proposals in Peking, is a difficult question. Considering the matter carefully, the conclusion suggests already secured title? If that is their itself that any protest, to be really effect plan, they ought to tell the country so in That was the opening act of the drama of seems futile and inept, for if it succeeds, apparent gratitude it must assuredly land the country in an also impressed him.

them subsequently. Japan was deceived THE HON. J. N. HARRIS, THE HARRIS SCIENCE SCHOOL, AND THE RECENT ACTION OF THE DOSHISHA TRUSTEES.

(CONMUNICATED.)

The Doshisha School, conceived in the Christian and patriotic heart of Joseph Neesima, was born in Rutland, Vermont, U.S.A., at the annual meeting of the American Board in 1874. The child was welcomed by the acclaumtions of the hundreds of earnest Christians gathered there, and beginning with a gift of \$1,000 from the Governor of Vermont, nearly five thousand dollars were raised on the spot as a hirthday present. The christening came a year later in the city of Kyoto, where Neesima and Kakuma Yamamoto, uniting their bearts in a common purpose, named the child "Doshisha"-Same-Purpose. This Yamamoto, the blind and lame connsellor of the Kyoto government, although not yet in the full light of Christianity, had, as he once told the present writer, come to teel profoundly two things, (1) "The hearts of our people must be changed," and (2) "Christianity alone can reach and renovate the very spring of the human heart." The name Doshisha not only expressed the union of purpose between these two men who christened the young child but also signified the same union between its native and foreign friends.

On the 29th of November of the same year this young child (with two teachers and eight undents) took its first step in the journey of life, and from that day on it received the friendly aid of many persons both in the United States and in Japan, and soon attained thereby

both strength and vigor.

But of all those who befriended it no one not even Mr. Necaima's noble benefactor, Mr. Hardy-did so much for it at the Hon. J. N. Harris of New London, Conn. Wno was Mr. Harris and why did he give more than \$100,000 to build up this school in a land which he never visited? Mr. Harris was a man of wealth whose fortune was not inherited but was almost entirely a result of his own indus-ity, sagacity, and honourable dealing. He therefore knew the value of his wealth. he was a Christian man who in his career made God one of his partners; attributed his success to God's blessing, and set spart his profits to the building up of God's Kingdom of love among his fellow men.

Why did he choose the Doshisha as the ob-ject of his gifts, as the means of advancing God's Kingdom?

1. One reason was that he was a great friend of education. His own education was limited and he sought to give to others the education of which he felt the loss. For this reason he gave to schools: \$50,000 to Mr. Moody's school for Girls in Northfield, Mass, and gifts to other schools the amount of which I do not know,

2. He was specially interested in Japan and the Japanese. He was greatly impressed by tive, must have been lodged before Ger-plain terms. If it is not their plan, then the rapid progress made since the Restoration, the rapid progress made since the Restoration. many obtained her lease of Kiao-chou. the agitation they are now organizing students whom he met in America impressed him favourably, and, as he has told me, the apparent gratitude of the Japanese for his sid

3. He gining the Doshisha partly because of

his personal interest in missionaries. One of the Doshisha professors came from New London, the city in which Mr. Harris lived, and it was mainly if not entirely through the influence of his letters that Mr. Harris began giving to the Doshisha. Mr. Harris also gladly welcomed to his home missionaries returned from Japan, and one was his guest and had just told him much about Japan and the Doshisha on the night when he decided to give \$10,000 to the school. Writing to a Japanese professor who had criticised the missionaries he said:—"All that I have done for Japan was through the kindly advice of the missionaries in that country. I consulted with many of them, and all without exception advised me to do what I did."

4. More than all else Mr. Harris gave this money in the Doshisha because he was a Christian. In a letter which he wrote to me in 1894 he says:—"All my money is and has been for many years dedicated to the advancement of God's Kingdom on the earth, through our Lord Jesus Christ and that for the benefit of the race. Whosoever receives money from me for the purpose of education, does so with the distinct understanding that it belongs to Christ and is given that the world may know Him."

In accordance with this when he gave \$100.000 to the Doshisha, the opening words of his letter of gift were "In the hope of promoting the cause of Christ in Japan and of providing opportunities for instruction in science under the best Christian influences, I devote one hundred thousand, etc." And the next sent-ence declared:—"This School of Science is to constitute a part of a Christian University." Again in his second letter of gift he says: "This school is to be maintained as an Evangelical Christian School of Science."

5. The unchangeable character of the constitution of the Doshisha appealed strongly to him. In Dr. Neesima's appeal to American friends for aid in establishing a Christian University, he declared it to be the hope of the Doshisha to send out not only scholars but young men of strong and noble character by which they can use their learning for the good of their fellow men," and declared the conviction that this could be done only by the living and powerful principles of Christianity, and therefore we adopt these principles as the unchangeable foundation of our educational work." This appeal greatly moved Mr. Harris and probably did more than anything else to lead him to give the \$100,000 to the Doshisha.

And this thought of permanence evidently continued to hold an important place in his mind. In a letter to the Deputation from the American Board as it was about to start for Japan he wrote as follows:—"I would also take this opportunity to convey to the Japanese breihren (the Trustees) my great pleasure over the Constitution of the Doshisha, with its five fundamental and unchangeable articles, which makes Christianity the foundation of the moral aducation promoted by the action, and which exacts from every trustee the promiss to labor for the Doshisha in accordance with these fundamental principles. Whatever departure there may be from the evangelical faith in which the Doshisha was founded, whatever of perplexity and doubt may come over the Christians of Japan in these days of theological transition and consequent skepticiem, I, with all others in my land who have contributed in anywise to the upbuilding of this University, earnestly pray the president and trustees to hold the Science School, with all other departments, to these unchangeable principles which have been their glory hitherto, and which alone can make this collection of schools the greatest blessing to the empire of Japan."

Such a man was Mr. Harris and such were his desires and hopes and purpose in giving \$100,000 to the Doshisha.

Have the Doshisha Trustees respected his hardly conceivable, says this organ, that men purpose and are they trying to carry out his who have given the most solemn promises that wishes? Truth compels the reply that they they will be faithful to the principles on which have been utterly indifferent to the wishes of his benevolent heart, and have violated the promises that they will be faithful to the principles on which have renounced the society was based should have renounced those principles in such a shameless manner. The Kirisuto-kyo Shimbun calls for energetic succumb to foreign influence, when they have UNIVERSITY OF ILLINOIS AT

He gave "in the hope of promoting the cause of Christ in Japan." He intended that the Science School should be "an Evangelical Christian School of Science," "a part of a Christian University."

Under the guidance of the Trustees the Science School to-day is no help to the cause of Christ, the Doshisha is not a Christian University, and there are no evangelical Christian teachers in the achool. Even President Yokoi says that they have taken down the Christian sign, Kirisulo Kyo no Kamban.

Again, Mr. Harris intended his school to teach Science to the graduates of the Doshisha college department, or two others of equal scholarship. He also wrote: "The Doshisha is not to absorb the Science School, That school was founded for a special purpose definited in the letter of gift. No part of it (the fund) can be diverted from the uses for which it was established."

The Trustees are not using the fund exclusively to teach science, they are not using it for graduates or even for students of the collegiste department, they have decided to use it in part at least for the general benefit of the Ordinary Middle School and the young boys who

are its students.

Finally Mr. Harris urged the Trustees that whatever departure from the Christian Faith might happen in Japan, they would never allow the five articles of its constitution to be changed, as these articles had been the glory of the past and on them depended the hope of its usefulness in the future.

The recent action of the trustees has shown that these wishes of Mr. Harris have not a feather's weight in their estimation. The five "fundamental and unchangeable articles" are no longer either fundamental or unchangeable. They are not the fundation of the Harris School of Science, they have been changed already and they may be changed further or entirely abolished any day.

I have been told that one of the oldest of the

I have been told that one of the oldest of the trustees of the Doshisha, one who was not present at the meeting in Tokyo when this decision was made, has sent in his resignation, one principal reason being that the Trustees have used the Harris Fund in an illegal and immoral way. I cannot wonder at his action. My wonder is that all do not resign.

M. L. GORDON. Kyoto, March 25th, 1898.

### MONTHLY SUMMARY OF THE RELIGIOUS PRESS,

The recent action of the Döshisha, commented on in these columns by the Rev. J. D. mented on in these columns by the Rev. J. D. Davis in an article entitled The Recent Coup de grace of the Dörhisha, is carnestly discussed in several Christian organs. We think there is little doubt that it will be condemned in 1010 by the unjority of leading members of the Christian Church. This measure is regarded as the result of the influence of Mr. Yokoi Their who the result of the influence of Mr. Tokio, who has constantly argued in favour of confining the teaching of Christianity to a Divinity School attached to the Döshishs and of releasing all other institutions connected with the Society from any obligation as to Christianity. Among those present at the meeting of Frustees held on February 23rd, when the important decision referred to by Mr. Davis was arrived at, were Messrs Yebina Danjo, Tanuashima Kakichi, Kanamoti Taurin, Tokutomi I-ichiro, Morita Kumato, Miyoshi Taizo, and Yokoi Tokio. The Kirisulo-Ayo Shimbun strongly protests against the course followed by the Trustees, which it declares involves the most glaring dishonesty vis à vis the American Board of Foreign Missions and which renders entirely void the one reason for the existence of schools of the Doshisha type. It is hardly conceivable, says this organ, that men who have given the most solemn promises that they will be faithful to the principles on which the Society was based should have renounced

action on the part of all interested in the progress of Christianity.

An opposition meeting was held at the Young Meu's Christian Association Hall, Kanda, Tökyö, on March 6th; the chief promoters of which were Mesers. Kosski Hiromichi, Kishimoto Nobuta, Ukita Kazutami, and Dr. Motora Yūjitō. A resolution was unanimously passed to the effect that the action of the Trustees was lawless  $(fah\bar{o})$ , and that in adopting such a course they had exceeded their powers as trustees. The course recommended was for the Churches to pass a vote of want of confidence in these Trustees and bring about their resignation,

The Hōchi Shimbus condemns the Mombushō for requiring a change in the principles of the Dōshisha and President Yokoi for responding to such an unreasonable demand. It is quite plain even to the most ordinary people, says the Hōchi, that persons who join a Society subject themselves to its Rules of Association, and that their becoming members of the Directorate does not in any way entitle them to alter the constitution of the Society or modify any of its fundamental principles. When the present Trustees took office, they did so on that understanding; hence they are undoubtedly disloyal to their oaths. The Gokpō (Methodist) says that the immorality and arbitroriness of the proceeding are acknowledged on all sides.

It will be remembered by some of our readers that some time ago the Fukuin Shimpo pointed out that from very early days there ments of discord in the ranks of the Doshisha, that there was an undesirable combination of the Christian and the non-Christian, of men interested solely in secular education and of men who wished to use education as the means of attaining what to them appeared to be a higher end than that aimed at by secular educationalists. Commenting on the culmination which this discord has reached, the Fukuin Shimpo savs the, recent action of the Doshisha, the removal of the golden notice board on which was moval of the golden notice board on which was transcribed the proof of their adherence to Christianity, at the suggestion of the Mombusho, is nothing but what was to be expected from a body of men whose central principle has for a very long time not been Christianity pure and simple. Nothing that is done by the pure and simple. Nothing that is done by the men into whose hands the management of the Dothisha has been committed causes us any surprise. That they have acted ultra vires is patent to everybody. Their method of procedure can only be compared to that of a man who should throw down a house that did not belong to him, remove all its foundations, and erect de novo a structure of his own on the stolen site. In place of the stone and iron used in the original building, they have made use of material that will soon crumble to pieces.

The Trustees will no doubt have a good deal to say in reply in the grave charges brought against them. As there has not been time for their answer to appear, we must postpone a fuller notice of the affair to the next summary.

Commenting on the nervousness shown by certain Buddhists at the near approach of mixed residence, the Rikugo Zaschi says the Buddhist anticipation of coming evil is no less weak than ignorant. Are their converts so frail that they need to be shielded from all passing currents and influences? Are the pricate afraid to allow their followers to hear strange doctrines lest they might be converted? Buddhist fears are founded on ignorance. The Buddhists say that under the new treaties numbers of Christian foreigners will settle in the interior, and that the result of this will be bad. But in it not more likely that non-Christian foreigners will find their way to the provinces and corrupt the morals of our people? One thing is certain, that though the increase of Christian foreigners in the interior may be bad for Buddhism, it will be very good for Japan. But is not the assumption that the propagation of Christianity needs the impetus given by the presence of Christian foreigners in the interior in order to prove effective altogether derogatory? Is it not insulting to the intelli-gence of our people to insinuate that they will
